Arrangements have been made with the Shaw, Savill & Albion Co., the New Zealand Shipping Co., and the Federal Steam Navigation Co., for **REDUCED FARES** for 2nd and 3rd Class Passages to persons possessing small capital and approved by the High Commissioner for the Colony. Eligible Single Women, Domestic Servants, are granted reduced rate passages without the "capital" qualification. For application forms and further information apply to the High Commissioner for New Zealand, 13, Victoria Street, London, or the Agents in the United Kingdom of the above Shipping Companies.

NEW ZEALAND.
Pick and Shovel Men.

Grants of reduced rate passages to Navvies and Pick and Shovel Men have been discontinued.

NEW ZEALAND GOVERNMENT OFFICES, 25th June, 1906.

AN INFLAMED TENDON NEEDS COOLING.

ABSORBINE (YOUNG'S)

will do it and restore the circulation, assist nature to repair strained, ruptured ligaments more successfully than Firing. No blister, no hair gone, and you can use the horse. 8s. 3d. per bottle, delivered.

Book 2/6 free.

ABSORBINE, J.R., for making, 4s. 6d. bottle. Cures Strained, Torn Ligaments, Varicose Veins, Varicocoe, Hydrocele enlarged Glands and Ulcers. Allays Pain quickly. **W. F. YOUNG, P.D.F., Springfield, Mass., U.S.A.** Sole Agents for United Kingdom: **THO. CHURSTY & CO., 4, Old Swan Lane, London, E.C.**

ROUGH-RATS

A large Lithograph of the above "Rough on Rats" illustration (Household Troubles) which has convulsed the world with laughter, mailed free to any address. **FRANCIS NEWBERT & SONS, LTD., 27, Charterhouse Square, London, England.**

The Unbeatable Rat Exterminator.

Why Continue to Feed Rats? "Rough on Rats" kills them. Rats are smart, but "Rough on Rats" beats them. Rats and Mice instinctively avoid the familiar forms of traps, and "Rough on Rats" completely outwitting them. One Shilling box will make or spread fifty or more little cakes that will kill fifty or more Rats and Mice. Originally designed for Rats and Mice, experience has demonstrated it the most effective of all exterminators of Roaches, Ants, and Bed Bugs. The only thing at all effective against the large Black Cockroach or Beetle. Always does the work and does it right. Poole the Rats, Mice, and Bugs, but never disappoints or fools the buyer. Safely used 30 years. Sold by **Chemists only** everywhere in 7d., 2s., 4s., and 5s. boxes.

The Trade Only supplied by **F. NEWBERT & SONS LTD., 27, CHARTERHOUSE SQUARE, LONDON, E.C., E. S. WELLS, Chemist, JERSEY CITY, N.J., U.S.A.**

Thunderstorms.

A TYPICAL English summer has been described, somewhat sarcastically, as consisting of two fine days and a order of rotation. Whatever our climate may have done in the past to earn this description it has, through the spell of splendid summer weather we have enjoyed of late, done something to win for itself a better reputation. All the same, the inevitable thunderstorms have made themselves felt in some districts with marked severity, and in several instances they have been responsible for fatal results. If it were possible, farmers could well dispense with thunderstorms, for no matter how badly rain is needed, when accompanied by thunder and lightning, it usually comes down in such torrents that a good deal of the moisture runs away before it has time to soak into the parched earth, and again, the weight and force of the rain batters the corn about, lays it flat, and makes cutting a difficult operation. Some misguided instinct leads cattle to seek shelter under trees when a thunderstorm is on, and, as everyone knows, this is a risky thing to do. Happily there have been comparatively few calamities amongst cattle through lightning this summer, but farmers naturally have anxiety for stock in the fields when the heavens are belching forth artillery of fire and thunder.

Dung versus Artificial for Early Potatoes.

IN A recent issue of the MARK LANE EXPRESS a report was given of a trial of early potatoes conducted at Dobbie's seed farm, at Marks Tey, in Essex. One item in the experiment, and a very important one, resulted in the triumph of animal manure over artificial in the culture of potatoes. Twenty-five varieties were selected, and of each sixty sets were grown with dung at the rate of about 30 tons per acre, and sixty sets with artificial at the rate of 8 cwt. to the acre. The certified report shows that in every case the crop was considerably heavier where farmyard manure was used than in the case of artificial, and the figures are well worth studying by everyone interested in potato culture. In passing, it may be observed that the dry season has not been favourable for getting the most out of artificial manure, but this does not detract from the superior value of dung. It rather points to the fact that if a person has the choice of dung and artificial for potatoes he had better take the former; but in the trial at Marks Tey we should like to have seen sixty other sets of each variety manured with a lighter dressing of dung supplemented by a moderate application of artificial. In our opinion the great value of artificial manure is as a supplement to, rather than a substitute for, dung. We are growing this season

twenty odd varieties of potatoes with dung supplemented by artificial, and the results so far are so satisfactory as to confirm us more than ever to the opinion that with potatoes, as with other crops, the most rational form of manuring is to lay the foundation with nature's plant food and give artificial as a supplement.

The Effect of Insecticides on Hops.

IT is not cheerful news to learn from a responsible authority that the Kentish hop crop this season promises to be the smallest for over twenty years, or since 1882, the memorable year of the great blight. The cause of this gloomy state of affairs appears to be twofold. In the first place the present season is a record one for vermin, and growers know to their sorrow how much this has increased the cost of cultivation. There has been no help for it; the hops have had to be washed, washed and washed again, and here we come to the second cause of the disappointing results. The repeated applications of insecticides have had the effect of sterilising the bine, and even in gardens where there appears to be a good growth much of the bine is said to be blind from the effects of continual washing. Thus the hop-grower has been placed between two fires. He has had to wash repeatedly to save his crop from dire destruction, but his efforts to save have been made at a sacrifice. The one redeeming hope in the whole transaction is that, returns being light, prices ought to be above the average. It will take something, however, to make up for the gardens from which probably a basket of hops will not be picked.

A CHANGE has come over the face of the country during the past week or two, and meadows which at the close of the hay harvest were glaring in their bareness are now pleasantly green through the growth of the aftermath. Herds of cows show an intelligence that is almost human in their choice of pasture. You may drive them into a field that is dried up and destitute of keep, but they go reluctantly and show plainly that they are going against their will; but open the gate of a meadow where there is a good bite of fresh, sweet grass and the cows want no persuading. On the other hand, they hurry to get to the meal, graze with a relish, and the result is seen

are growing more than ever in demand, and would be still further "boomed" if regularly advertised in the "Mark Lane Express."

when they next come up to the shed to be milked. In some districts the dry weather has been against the growth of grass in recently-mown meadows, but keep is getting more plentiful now. For this farmers are thankful, because pasture lands are bare and the shortage of milk-producing herbage has not failed to leave its mark. Aftermath grass was never more welcome than this year.

OF course, thatching is not the business now as it was in the days before hay barns were introduced, but still it is an important item in connection with the yearly round of farm work. A well-kept stackyard with ricks neatly trimmed and well thatched is a sign of good farming, but one also sees yards in which the stacks are mere lumps of fodder, loose hay is trampled about and wasted, and no efforts are made to protect the ricks against the weather. By their works shall ye know them, and generally one can form a fairly good estimate of the business character of a farmer by the state of his stackyard. Thatching a hay-rick is not included amongst the fine arts, but it is not every man who is able to do it, and the operation may be fairly included amongst the items of skilled labour on the farm. We call a man a really good thatcher who can put a good roof on a rick with a minimum of material, because straw is an expensive item nowadays. Next to this, neatness and good workmanship are points to be considered, and you can always tell by the way the rick is finished off whether the thatcher is master of his business.

BY common consent charlock is the worst weed which farmers have to deal. Its tenacity has scarcely any limit, and in districts where it flourishes prolifically the struggle to deal with it is long, weary and apparently never ending. We have had some experience, however, of late of a weed which, though fortunately not common in all districts, is a terrible pest and hard to get rid of. We refer to *Aquilegia arvensis*, known locally as "cat-tail," perhaps because it owns as many lives as the owner of the latter appendage. "Cat-tail" appears to prefer a soil that is inclined to be light or sandy, and while the asparagus-like heads are pushed through the surface of the ground, the roots go a long way down and are difficult to get out. When working a piece of ground infested with "cat-tail," it is worth all the time and trouble to pick out the roots and burn them, but the pest is not cleared out by this method alone. A quantity of the weed will be sure to come up later on, and if pulling is impossible frequent hoeing is the next best method, as this is a means of weakening the root.

The Progress of Harvest. THE tropical sunshine experienced of late has had its effect on the ripening of the corn, and harvesting operations are being carried on so rapidly that there will be little but bare stubbles when the sportsmen commence to shoot partridges in September. Farmers as a whole have reasons for feeling happy about the harvest this year, for in most cases both straw, ear, and grain are good. It is true that in some districts heavy storms have played havoc; but, happily, we have not suffered, and it is good to see the golden yellow tint of the grain when rubbed from the ear. Most of the corn is cut with the reaper and binder now, but the reaping hook at work in small fields reminds one of the harvests of other days. We are led by observation to think labourers in the cornfield are not so careful as stocks, or thraves, as they are called in some districts, and we are inclined to this opinion by seeing so many of the shocks scattered about after being set up a day or two. Is this simple operation, like some others, getting to be a lost art in agriculture?

Sport in the Harvest Field. ALL through the summer rabbits and also hares (where the latter have not been persecuted to the point of extinction) have found covert and perfect safety in the fields of standing corn, and they resent the ruthless disturbance when harvesting operations begin. As the reaper and binder pursues its way round the field the rabbits retreat further and further into the centre until the harbourage gets so small that they have no other course but to make a bolt for it. This is a moment of excitement, and the way a good dog will pick up a rabbit on its way to the nearest hedgerow beats anything we have seen in the way of rabbit coursing. Corn cutting often affords an opportunity for a bit of quick shooting, but it is not unattended by danger, because labourers have a habit of losing their heads on such occasions, and may often be seen blundering over the prostrate sheaves after a bolting rabbit, and entirely spoiling the chances of anyone with a gun. There is no mistake about the spirit of sport moving the muscles, even amongst the old hands stiff joints and rheumatics are forgotten when rabbits are bolting quickly from the corn.

British Possessions beyond the Seas

AND THEIR

London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

jetsam which the General has called into existence in the hope that there the repentant wastrel of the towns might be able to revive its latent manhood, would have an economic importance as an example. Here you would have, in a sense, skilled men, whose physical texture had been tested and not found wanting.

Agricultural Politics.

BY A LOBBYIST.

Lord Carrington and Crown Lands.

Lord Carrington has, of course, practically admitted that the Crown lands could not all be utilised for small holdings or even for agriculture. Much of these lands have, for instance, mineral qualities which it would be unwise to disregard, even though regard conflict for the moment with moral anxiety. Apart, however, from this mineral land, there are considerable areas which are ill-adapted for the efforts of the small holder. The suggestion has been made in this column that a part of this particular land might be well set apart for experimental culture, and, more particularly, for the culture of sugar-beet on the lines approved by the Lincolnshire deputation to Germany. Why should not, too, a part of it be set aside for afforestation? There are considerable areas in Wales—and, pray remember, that Crown lands are really national lands, the Crown having relinquished its right in them for a civil list of £350,000—which are admirably adapted for this purpose, and which now practically lie fallow. As a fact, the Royal Commission on Welsh Lands deliberately advised that the Department of Woods and Forests should take steps to compile a statement of the areas of their estate suitable for afforestation. Some part of the Crown lands have been recently declared not to be worth more than half-a-crown an acre. Perhaps not in their present neglected and derided condition. Both Spain and Norway—and I deduce these illustrations because they can be said to be modern in their character—once possessed land as useless, as valueless, and, because of neglected cultivation, as fallow. This land has by afforestation become among the valued assets of the nation's. Norway's waste land, which was within recent years valued at 4s. 5d. per acre, is now held to be, when planted with trees, worth 38s. 5d. This piquant fact I commend to the Minister for Agriculture.

Why not Reclamation for Out o' Works?

The reforming visionaries of our towns, who are eternally on the quest for agrarian employment for the out-o'-works of the street corners, cannot be expected to wax enthusiastic over the suggested establishment of a wide system of experimental culture. Experimental culture requires skill, and skill and knowledge are what their protégés do not possess. Of course, though a system of afforestation would naturally provide employment for unskilled labour, it would in its development require skill, intelligence, and experience. But Earl Carrington could, with a sympathetic Government anxious to enlarge his opportunities, provide work even for these urban out-o'-works, who are said only to need an area which is unladen with the fetid pungencies of the great towns to blossom into diligent, self-respecting citizens. Nay, I should say that even without securing extended powers, the Earl could, in a measure, provide this opportunity for work. In suggesting that extended powers might be secured, I had in my view the initiation of a considerable policy of foreshore reclamation. However, it is averred that on a large part of

the Crown estates foreshore reclamation is necessary in order to safeguard and rescue a national property. To what extent this may be so cannot be definitely said; but, at all events, the prevention of encroachment upon Crown lands would undeniably provide considerable opportunities for work for the protégés who now, I fear, are happiest when they are permitted to lustily bawl their grievances amid the effervescent enthusiasm of a Hyde Park demonstration. May I also commend this suggestion to the Earl Carrington!

Holland Butter and the Customs.

There is one incident in the annual report of the Commissioner of Customs which is of moment to the English butter industry. It certainly says something for the increased circumspection of the exporters of foreign-made butter to this country that of the 1,875 samples examined by the Customs' officials only seventy-eight were found to infringe the provisions of the law. However, what is of more significance than even this fact is that no less than seventy-seven of these adulterated consignments came from Holland. This argues, of course, either that the Customs' officials are for some inexplicable reason inclined to associate a greater espionage with the reception of Dutch goods, or that the gentle and domesticated Dutchman is more prone to habits to which the English law-givers now turn a stern and remorselessly unsympathetic face. At all events, I mean that most of my readers will be ready to accept the incident as a reason for the stern application of the provisions of the Butter Bill, when they become active, to the products of our Lutheran friends in the Netherlands. Not that any part of the competitive sphere should be passed by, but Holland must emphatically not be neglected.

General Booth as Home Colonist.

Excellent is it that General Booth is not so enamoured of his over-sea colonisation that he is unwilling to try the experiment here at home. General Booth's method, after all, is somewhat different to that of the vicarious Socialist philanthropists who, playing gaily and with lofty generosity with the finances of the State or municipality, are willing to draft loafer, physical ne'er-do well or mentally incapable on to the land in order that they may at once indulge—and, of course, successfully indulge—in the most scientific of all artisan pursuits. The General does not believe that the mere bestowal of a Socialistic smile upon an unfortunate or an incapable is the one means by which that unfortunate or that incapable evolves into a sedulous, early-rising, intelligent, reconciled-to-his-surroundings rural worker. He believes, unlike our philanthropists of the type who have made themselves pretty assertive in the towns of late, that it is not enough to label the out of work a Booth protégé; that, in other words, he must have both some prefactory training and some temperamental and physical qualifications. A series of Booth small holdings colonies, which would, of course, be very different to the colonies of human flotsam and

Why Export our Brawn and Muscle?

Should the brawn and muscle of the British rural areas be sent out to the Transvaal and the Orange Colony in order that, in the Legislature to be given to those erstwhile Republics, a British and loyalist majority might be secured? That a loyalist and British majority should be secured is of course in every way desirable—it may even be conceded that it is in that direction Imperial safety lies; but I put it to Mr. Rider Haggard whether this cannot be accomplished by some other means than the denudation of our rural areas? Mr. Rider Haggard—whose knowledge of South African economics is close and intimate, and has, moreover, associated with it an admirable intelligence and insight—would probably reply that the deliberate denudation of our rural areas is by no means necessary to his scheme of land settlements. We live in an atmosphere of back-to-the-land emotion; our statecraft hopes to relieve the appalling congestion of our greater towns by inducing the men who have divorced themselves from their natural village life to return to that life. And what is more, the villages thirst for this ungrateful labour, which has found itself stranded and bereft in the hustling centres of our life. Even supposing it is only this labour which Mr. Rider Haggard would see drafted to the sub-continent—and apparently he attaches so much significance to the matter that he would associate with it something of State discipline—the rural areas would, in the present emotional state of public opinion, suffer. It cannot be said of Mr. Rider Haggard that his vision is so extended that he neglects the prospect at his feet. No man has given a wider advocacy to the small holdings movement. Still, this continued anxiety to deport our own thaws and muscle is not altogether a reassurance. We may be willing to bear many sacrifices for Empire's sake; but is this particular sacrifice necessary?

Are these Peers Wise?

There is a wisdom that is greater than daring. Methinks those enthusiastic peers and Parliamentary antagonists of land reform who are already seeking to organise a peers' crusade against the Tenure Bill in the House of Lords on the lines of the campaign in the Commons, might wisely do something very different to wrecking the measure, or even than despoiling it, to use the words of one of its antagonists, of its fangs. No observer of the Parliamentary temper can pretend for a moment to say that this Bill has realised the expectations of the assertive Radical section. The Labour men, to be frank, regard it as little more than pottering. There is a powerful palax—powerful because of the insistence and persistence of its members—which frankly says that nothing short of an English reproduction of the new Scotch Crofters Bill will suffice. There is a more considerable body among the Liberal county M.P.'s, who say outright that they do not think that this Bill will accomplish as much as Mr. Channing's Bill would have accomplished. Mr. Channing's Bill, by the way, is more in harmony with their temper because of the more emphatic manner in which it would deal with the shooting and game rights of tenants. If the present Bill be despoiled in the Lords, if it be reduced to a nullity, this achievement will, believe me, be only held to be a justification for the renewal of the agitation.

THE WEEK'S SHOWS.

Warrington.

A first-class show spoiled by rain was the general verdict of those who braved the stormy elements and attended the show of the Warrington and District Agricultural Society, held in Sir Gilbert Greenall's beautiful grounds at Walton Hall on Thursday.

Apart from the weather the show was a pronounced success. Admirably managed, and supported whole-heartedly by the large agricultural district of which Warrington is the centre, it has grown in importance year by year. For this healthy development much is owing to Sir Gilbert Greenall, the society's president. His fame as a horse-breeder attracts many entries, and Walton Park, which has for years been the show-ground, is sufficiently beautiful in itself to repay a visit. The entries last week numbered 466, the highest total yet reached. Of these more than half were horses. The Shires numbered 132, Hunters ninety-six, Hackneys sixty-nine, Harness horses forty, and tradesmen's and tenant farmers' turnouts twenty-seven.

With hardly an exception, the classes in the horse sections were well filled. In some of the Hunter classes the number of entries was almost embarrassing, and the judges had a prolonged and difficult task in making their awards. There were twenty-nine competitors in one open class, twelve in another, sixteen in a third, and thirteen in a fourth. A five-year-old bay gelding owned by Mr. John Drage, of Chapel Brampton, won in the open class for novice Hunters to carry 13 st. The heavy-weight novice class was led by a chestnut gelding of excellent proportions shown by Mr. J. H. Stokes, of Great Bowden, Market Harborough, who took chief prize in the next class for Hunters to carry from 13 st. to 11 st. 7 lb., and in a fourth competition for heavy-weights.

The Hackneys were an interesting lot. Here again competition was keen, the chief animals paraded being known in show rings throughout the country. Mr. John Makeague, of Newton-le-Willows, secured first place in no fewer than five classes and also the Hackney Horse Society's silver medal. In the open competitions for Harness horses a couple of animals from the stable of Sir Gilbert Greenall, and now owned by Sheffield and Wimbledon exhibitors, were successful. The Harness section is recognised as one of the best in the country, and here Mr. Caleb Jones, Sheffield, won the premier award, and the Hackney Horse Society's Silver Medal, for the best mare or gelding in single harness. Other leading winners were Mr. Howard Frank, Wimbledon Common; Mr. G. Pimlott, Altrincham; Mr. J. Sadler Sykes, Hawkestone Park, Shropshire; and Messrs. Carr and Co., Carlisle.

The jumping deserved all the popularity it aroused. With prizes of £20, £15, £10, and £5 offered, a good entry was assured, and though rain stopped the competitions twice, the finish was such that first and second awards were divided equally between Mr. F. V. Grange, of Fardon, Cheshire, and Mr. George Ledson, of Bromborough, Messrs. Whittingham Brothers, of Burton-on-Trent, taking third place.

The Shires showed that the breeding of big-boned, useful animals has not fallen away in Lancashire or Cheshire, for in the open as in the district classes many successful competitors hailed from one or other of these counties. Mr. J. Gould was the most successful exhibitor in this section, he taking three firsts and one second prize.

The cattle were a creditable lot, but nothing out of the ordinary. All the entries wore of a type which bore unmistakable signs of utility. Lord Lilford's cup for the best cow went to Mr. T. Billington, Prestonbrook, Warrington. Pigs were few but good, and none but Whites were shown. The butter and cheese sections were not large nor the competitors numerous, but quality was good.

Ryedale and Pickering.

The Ryedale and Pickering Agricultural Society, one of the most popular in Yorkshire, is held in rotation at Pickering, Kirbymoorside, and Helmsley, and last week it fell to the lot of Kirbymoorside to welcome the show, and this they did right loyally, for there was a good attendance of visitors, whilst the entries were the best on record as regards numbers, and quality, too, was as good as in any other year, taken all round. The total was 488, an increase of eighty on last year's show, and of fifty-five at Pickering in 1904; whilst it was twenty-four more than the previous best—namely, 464 in 1903, when the show was at Kirbymoorside. Horses were, as usual, the strongest section, numbering 217. Coaches and Cleveland Bays were a particularly good lot, and the Shires appeared equal to anything seen at district shows this season. Mr. John Webster, of Harome, had several notable wins in the coaching classes with bay two-year-old Harome Bell II., which entered the honours list both at the Royal and the Yorkshire. Several other Yorkshire winners repeated

their successes. The Shire horse silver medal went to Messrs. R. and J. Davidson, of Newton, for a nice bay filly by Caliph, and the Hackney Society's medal was gained by Mr. Bentham King, of Helmsley. Sheep were an excellent lot, whilst the Shortorns were a very good display, including as they did many animals of the highest quality. There was also a fair show of pigs and implement.

Penrith.

The Penrith Agricultural Society's sixty-third annual show was held at Penrith on Tuesday, and although rain somewhat marred the proceedings, there was a very large attendance of visitors, who had much to interest and instruct them, for there were good entries in all departments. Cattle were, perhaps, the feature of the show. The three-year-old Shorthorn bull, Moonstone, with which Mr. Toppin, of Musgrave Hall, took a first and the championship, is a well-known prize winner, as is Mr. Harris's Lady Dufon 10th, which carried off the female championship as well as the first award in her class. Yearlings made a particularly good show, and another strong class was that for Short-horn cows or heifers, in which first honours went to the Earl of Lonsdale. Lord Brougham was also amongst the successful competitors, his lordship taking a second in a strong two-year-old Shorthorn heifer class. Of the horses the best were those in the agricultural classes, in which the

fancier by many. Mr. Winans' Marmion also attracted notice by the splendid way in which it cleared the hurdles and 15 ft. fin, water jump. Later on, however, it spoiled a good chance by fouling the gate. At the second trial, Mr. Walter Grundy's Finstall, Mr. J. Coleman's White Rose, and Grasshopper were the only three to clear all the fences. White Rose was eventually given premier award, but Sirdar, Tip Top (another of Mr. J. Coleman's), and Finstall were called out again for a deciding trial for second and third prizes at the timber fences. Finstall had rather hard luck in losing second place, having exhibited splendid form throughout. Sirdar was a popular second. The judging, in the opinion of the experts, was the best that has ever been seen at the Worthing Show. White Rose had a double victory, taking first prize also in the United Hunts' jumping competition. This year some local classes for driving and trade turn-outs were introduced into the show, and these added greatly to the interest. The handsome challenge cup for best Harness horse in the show was won for the third time, and the second year in succession, by Mrs. Hartley Butt with Maid of Newton. Mrs. Butt thus secured it outright.

Banwell and Weston-super-Mare.

The Banwell and Weston-super-Mare Horse and Agricultural Association were not altogether fortunate as regards the weather experience for their show on Wednesday, as rain made its unwelcome appearance at intervals throughout the day. The show itself, however, was a highly creditable one, the entries, despite the elimination of the fat stock and pig classes, being nine more

MR. O. T. PRICE'S POLO PONY MARE, MOORTOWN.
Winner of several prizes, including First at the Royal Agricultural Society's Show at Derby.

male championship went to Mr. Mansell's bay yearling colt by Baron Solway, while the best mare was found in Mr. Wood's Cedric Princess. There was also a fairly good display of harness horses and of hunters—the harness championship going to Dr. Dalston-Ewanke's Affection, and the hunter championship to Mr. J. S. Rigg, of Appleby, for his six-year-old bay horse, Cousin Job. Sheep were well represented, the breeds shown including Border Leicesters, Oxford Downs, Blackfaced Mountain, and Herdwicks.

Worthing Horse.

The Worthing and West Sussex Horse Show, held at Worthing on Wednesday, was, happily, a decided success, both as regards from the show point of view—the entries being a record in number and the quality as good as ever—and also from a financial standpoint, for though a deluge of rain was experienced in the morning, the afternoon turned out fine, and there was a very large attendance. The society should therefore be able to wipe off the deficit on last year's show, which was spoiled by bad weather. The chief interest in last Wednesday's show centred, as is usually the case, in the two jumping competitions, in each of which there were seventeen entries. The first of these—the open jumping—occupied the best part of the afternoon, and provided some capital sport. Last year's first and second prize winners—Mouarb and Grasshopper, both belonging to Mr. A. Nixey Smith—were again the popular favourites. Both did fairly well in the first round, but Mr. Walter Winans' Sirdar, a horse with plenty of spirit and good action, was a strong competitor, and was

than last year, several departments showing satisfactory increases, notably the colts, the farmers' classes, and the Caerphilly cheese class. Horses always have been the main feature of the show, and the reputation of the society was maintained in this respect. The cattle and sheep were well up to the average quality exhibited at Banwell, whilst there was a fine lot of cheese forward.

Bognor Horse.

That the Bognor Horse Show increases in popularity both with exhibitors and visitors was proved on Thursday, when the eighth annual show was held, for the entries were the largest on record and certainly the best in quality, which was very high, whilst the attendance was on a very large scale. Classes were provided for heavy horses, Hackney, and Harness horses, Hunters, jumpers, and hacks, and tradesmen's turnouts, the last named being particularly popular, whilst the riding and jumping naturally interested the crowd most. The show was a good one all round, and testified to the services of those responsible for it.

Whitby.

The annual show at Whitby was at one time confined to horses, but during the last few years classes for cattle, sheep, and produce have crept in, so that the show now has the title of the Whitby Agricultural, instead of Horse, Show. Horses, however, still hold their own, for last week they numbered 201, as against 31 cattle, and they were all round a good lot, Cleveland Bays and Coaching horses being particularly strong, including as they did, many well-known winners.

Agricultural horses made a good show, as did Hunters and Hackneys, but the cattle classes were rather poorly filled, although they were a nice lot. There was more competition in the sheep section, the Leicesters being especially noteworthy, whilst the sheep dog trials evoked a good deal of interest. Unfortunately, rain fell heavily in the afternoon and affected the attendance, which, however, was fairly good.

Durham.

The Durham County Agricultural Society firmly believe in the migratory show system, and they carry out their opinions in a practical manner by visiting each year some different parts of the county. Last year South Shields was the town chosen, and this year Wolsingham, and a bigger contrast in the two sites it would be difficult to find. At South Shields all is bustle and excitement, whilst Wolsingham is a small market town among the hills and far away from the coal-pits with which the county abounds. The change was a good one, and brought success in its train, for though the entries (1,300) were not so numerous as last year (1,474), they were about an average lot, and the attendance of visitors was very good.

A very fine collection of Shorthorns came before the judges, for they included some of the choicest members of Mr. George Harrison's famous Gainford herd. His two-year-old white bull, Royal Ensign, which was first at the Yorkshire, carried all before it, winning not only the chief premium in its class, but a challenge cup also. Second to it was Mr. William Bell's roan bull Baron Hopeful, a son of the same owner's famous Baron Abbotford. Mr. Harrison's young red bull, Admiral, never shown before, achieved a remarkable success. He was not only at the head of a strong class of thirteen, but was awarded the special district prize of £10 given by the Shorthorn Society for the best bull calved in 1905. Admiral is, for his age, a massive animal, of lovely shape, and is a most promising animal. Other stock from Mr. Harrison's herd which were successful included his well-known roan cow Ursula Raglan, second at the Yorkshire and reserve at the Royal.

In the Polled Angus classes the entries were not so large as in the Shorthorns, twos and threes in each being the rule. Another well-known breeder, Mr. T. H. Bainbridge, who makes a speciality of the "Doddies," was the chief prize-winner, his animals being at the top of every class save one.

Just 100 sheep were penned, and the feature of the section was the black-faced sheep, which are common to the hillsides of Durham. Mr. John Robson's flocks accounted for most of the prizes; whilst for Border Leicesters Messrs. Nicholson, Lancaster, and Messrs. J. Annandale and Sons, Rowland's Gill, R.S.O., were the winners.

Unfortunately the horses showed a marked decline in numbers as compared with last year's show. Clydesdales were, however, a fine show, and only slightly fewer. Among the brood mares the Seaham Harbour Stud's Rusk, placed second in the same class at Newcastle, won easily, Lady Raffan, a well-known winner at the principal shows, failing to catch the judge's eye on this occasion. In these classes special prizes were given for animals owned by tenant farmers. There was a more than average show both of colts and fillies, Lord Durham and the Seaham Harbour Stud being prominent in these classes. The Seaham Stud were best for yearling fillies with the same animal that scored second in the same class at Newcastle, and beat competitors which had won at numerous local shows this year. Mr. Townson, of Bishop Auckland, was second with his Silver Baroness. The Seaham Stud continued their successes in the class for yearling colts, but Mr. Park, of Swallow, showed the best two-year-old colt, and took both firsts. Mr. Holmes, of Whitburn, was first for two-year-old fillies, and Messrs. Graham, of Elwick, near Belford, for geldings of the same age. In a strong class of three-year-old fillies the Seaham Stud scored again with Silver Princess, which had earned winning brackets this year at the Royal, Highland, and Northumberland shows. Second to her came Mr. Townson, of Hilton Moor, who took the tenant farmers' prize in the class. Three-year-old geldings were small in number, but a grand class of draught mares found the Seaham Harbour Stud and Mr. Fenwick Wilson, of Whitley Bay, first and second respectively—the same positions as they occupied in the same class at Newcastle last month.

Hunters were a good lot, and though just about the same in number as last year, were less than they used to be a few years ago. Mr. Harrison, of Easingwold, was first in a smart lot of brood mares. The foals were only few, Mr. Ingledew coming first with a colt and Mr. David Deuchar, of Warkworth, second with a filly. Mr. Deuchar was first for yearling fillies and two-year-old geldings. Mr. R. G. Heslop's bay gelding, an exceedingly pretty animal, was the best shown by a tenant farmer, and accordingly took the special prize, Mr. F. Walton Smith coming second.

The Hackney classes showed a decline, and seem to have lost ground of late years. Most prominent amongst the winners here was Mr. Thomas Boddie, of Glenton Farm, West Auckland, who took the champion challenge cup for the best horse in these classes and five of the fifteen other prizes offered. Mr. Stephen Cliff, of Easingwold, was first for brood mares and foals. There was a splendid show of Dales ponies, one of the pure breeds of horses still left, but there was a big falling off in the Harness classes, where the entries were just about a fourth of last year's.

The other departments of the show were all satisfactory. The sheep dog trials excited great interest, and the show of dairy produce was the best ever held by the Society. Dogs were about the same in number as last year, and poultry made a very fine display.

Harrogate.

As in the case of other shows held on Thursday, the Harrogate Agricultural Society's exhibition was considerably marred by rain, which at times fell in torrents. The show of stock was an exceptionally good one, and deserving of better treatment than it received at the hands of the Clerk of the Weather. The society offered £500 in prizes, a good increase on last year's total, and this drew a better entry, sheep and pigs in particular showing a gratifying increase. The former numbered 150 as against 104, and pigs 93 as compared with 34 in 1905. Cattle accounted for just over 100 entries, and horses for 177, these being much the same as last year. Short-horns made a good show, and included Mr. Cass's (Ribston) beautiful roan heifer, which won first at the Yorkshire Show, and she now had no difficulty in taking the special prize offered by Mr. Lynch, M.P., for the best Shorthorn brought from a radius of twelve miles of the town. The horse classes were fairly well filled and contained some first-class animals, whilst for the first time pigeons were included in the catalogue, and these added considerably to the entry total.

Penistone.

The Penistone Agricultural Society were unfortunate enough to have wet weather for their show on Thursday, rain falling continuously, whilst, to add to the discomfort, the wind was now and then like an hurricane. The bad weather was the more aggravating because from the point of view both of quality and numbers the show was one of the best the society has yet held. It is purely a local show in the sense that the awards are scarcely big enough to attract the professional exhibitor of stock, and for that reason, perhaps, it serves a more useful purpose than otherwise. It caters for all sorts of fancies, there being in addition to horses, cattle, sheep, and pigs, classes for dogs, poultry, pigeons, rabbits, cats, and horticulture. So that the interest it arouses is very general and very keen. In view of the entries were good, but the unceasing rain marred the proceedings altogether, and the members of the society, as well as the exhibitors, are to be commiserated with on their bad luck.

Lytham.

The Lytham Agricultural and Horticultural Society's Show, held in the grounds of Lytham Hall on Thursday, was a complete success, the entries, which numbered 1,166, being 200 more than in any previous year, whilst early in the morning people from all over the district began to pour into the town, and notwithstanding the heavy showers just before noon the attendance was good. Every section was well filled, and the horses were particularly good. Mr. Henry Jagger, of Poulton, secured the Royal Lancashire Agricultural Society's silver medal for the best draught mare or filly, and also the Shire Horse Society's medal for Shire mare, foal, or filly. Mr. R. R. Rothwell, one of the most successful exhibitors of the day, carried off the honours for best cow or heifer. One of the most interesting events of the day to the visitors proved to be the sheep-dog trials.

On Wednesday South Lincolnshire was visited by a heavy thunderstorm and some drenching downpours in the afternoon, harvest operations being completely stopped, and corn crops still further damaged. At Weston, near Spalding, a valuable bullock, belonging to a farmer named Grummitt, was struck by lightning and killed. It was one of a herd, but none of the others were injured. Other damage was done in the district, the storm stripping large quantities of fruit from the orchards.

Thirsk Harvest HIRINGS.—There was a good demand for both English and Irish harvest labourers at these hirings, on Monday and steady English drivers obtained 4s. to 4s. 6d. per day, English labourers 3s. 6d. to 4s. per day. Irish labourers, all-round men (able to stack and thatch), got £5 10s. to £5 12s. 6d., and for really good men £6 was obtained for the harvest month, with milk, potatoes, and temporary lodgings found. Boys capable of driving (carts) got from 2s. to 2s. 6d. per day.

PUBLICATIONS RECEIVED.

Messrs. Little and Ballantyne's Bulb Catalogue for 1906 is not on such a pretentious scale as some others, but it contains many illustrations and all the details one wishes to know when making a selection of bulbs.

Volume XVII. of the English Herd Book and Register of Pure Bred Jersey Cattle contains the pedigrees of 1,226 cows and 361 bulls, as well as details of births in the herds of members of the society; a list of prizewinners at the principal shows and better test awards; details of important sales by auction and other information for the year 1905.

The two latest volumes in Mr. Heinemann's (21, Bedford Street, London, W.C.) excellent Garden Library are "Roses" and "Ferns," and they tell in simple language all that the average gardener wishes to know about these two popular garden subjects. The volumes are nicely and freely illuminated, and are uniform in size and binding. The price is 2s. 6d.

The series of articles on "Systems of Land Tenure," by Mr. J. Macdonald, secretary of the Highland and Ayr Society, which appeared in one of the Scotch dailies, have been issued in pamphlet form by Messrs. Blackwood and Sons, Edinburgh and London. Mr. Macdonald has not attempted to deal fully with the subject, but restricted himself to a consideration of the economic aspects of the question, and his remarks afford most interesting reading at a time when land tenure is so much to the fore.

The picturesque Longhorn cattle are not so popular and numerous as they deserve to be, and their Herd Book makes a very small volume compared with others. In volume 5, there are the pedigrees of eighty-nine cows and heifers and forty-four bulls, together with details of births, prize winners at shows, sales by auction, &c.; but the whole only make just over fifty pages. It is published by the Longhorn Cattle Society, the hon. secretary of which is Mr. T. H. Weetman, Atherton.

The complexion of the garden is fast changing, and signs are abundant that summer and autumn flowers will shortly come to an end. It is therefore time to face the requirements of winter, and for the coming months, so far as gardens are concerned, we are limited to those flowers which are capable of enduring the rigours of our climate. Here bulbs prove of immense service. They have an astonishing range of magnificent colours, whilst they are perfectly hardy and of simple culture. These remarks are called forth by the receipt of Messrs. Sutton and Sons' most interesting bulb catalogue for 1906. It is, as usual, a most artistic production, an illustration on almost every page, and from it gardeners can make a selection which, for beauty of colouring, &c., would be hard to excel.

Multurn in parvo would seem to be the motto of the Royal Lancashire Agricultural Society when dealing with their Journal, for the articles and some of the other details are set in somewhat small type, which to many eyes proves trying after a little reading. A little larger lettering would, we feel sure, be more appreciated; it need not take any more space, for a little less display in the prize list of the previous year's show, which very few want at all, would obviate the need of extra pages. However, perhaps the hardy farmers of Lancashire have better eyesight than we poor Southerners, so that the remarks above will not appeal to them. As to the Journal, its contents are chiefly a record of the society's doings in 1905, including reports of meetings, a description, with illustrations, of the Liverpool show and a full prize list, the articles being only four in number—viz., "State Farm Colonies," by the veteran Joseph Darby, who describes them as "the nation's urgent need"; "Sewage Sludge Disposal and Utilisation," by James Ashton, F.C.S., &c.; an article on the Fertilisers and Feeding Stuffs Act, by Alfred Smetman, F.C.S., F.I.C., the society's consulting analytical chemist; and "Modern Methods of Utility Poultry Keeping," by Miss M. Brown, of the Lancashire County Council Farm. The last-named article will, we think, prove the most popular. The Journal, which is nicely bound, is published at 5s. net.

The Cornwall County Council have passed a by-law forbidding any person to uproot or destroy any ferns growing in public places, under a penalty of £5. The by-law will not apply to persons collecting specimens in small quantities for private or scientific use, but to those who have been in the habit of sending large quantities to London and other big centres.

SHOW GOSSIP.

Northern Notes.

The prize schedule of the Smithfield Club's show on December 10 and four following days is practically on the same lines as last year, but there are one or two alterations to be noted. For instance, no Cup for the best Cotswold sheep figures in the schedule, whereas all the other breeds have a Breed Cup, and one was given for Cotswolds last year. We wonder whether it is a printer's error or whether the Cup is withdrawn because only one breeder (Mr. W. T. Garne) supported the section last year? Then there is an alteration to note in the Mountain breeds sheep classes, a separate class being this year provided for Welsh Mountain wethers of any age; but this extra class is made up for by the withdrawal of one of the pig classes, Small Whites or Small Blacks being given only one class—for two pigs over nine and not exceeding twelve months old—as against one for pigs not exceeding nine months old, and another for those over nine and not exceeding twelve months old, last year. The schedule, however, contains one more class than that of 1905, for a new one is provided for porkers—viz., pens of two pigs of any breed or cross, not exceeding six months old, suitable for the London pork trade, with prizes of £10 5s. 3d., probably a fourth of ten entries are received. This new class should, we think, prove a popular one.

The only other alteration we have to note is that in the pig carcass classes the animals are not only classed according to weight as last year, but an age limit is introduced, thus pigs not exceeding 100 lb. live weight must not be over six months old; pigs between 100 and 222 lb. must not exceed nine months; and those between 220 lb and 300 lb. must not be more than twelve months old.

The total amount offered by the club in prizes is this year £4,152 6s. 2d., as compared with £4,133 1s. 4d. last year, so that there is only the difference of 15s. 2d. The cattle classes get £2,013, sheep £1,154, pigs £457, carcass competition £281; and table poultry, £121 18s.; whilst those popular prizes for feeders of the first prize animals absorb £125 8s. 2d. In the majority of the cattle classes the prizes are: first £25, second £15, and third £10, whilst in any cases where there are ten entries the judges may, if there be sufficient merit, award a fourth prize. This also applies to the sheep and pig sections. The sheep class prizes range from £15 to £25, and pigs from £10 to £25, whilst in addition there are the usual numerous and valuable special awards as well as the popular Breed Cups.

How valuable are the prizes offered may be judged when it is stated that it is possible for a steer or ox to win as much as £260, for a heifer £255, a pen of three long or short woolled sheep to win £110, and for a pen of two pigs to win £70. The poultry section is the same as last year in every detail, and for poultry the prizes are:—First £22, second £11, third 10s., fourth 5s., fifth 3s., whilst for geese and turkeys there are no fifth prizes, but the others are increased in value, being respectively £3, £1 10s., 15s., and 5s. Prize schedules, entry forms, &c., can be had of the secretary, Mr. E. J. Powell, 12, Hanover Square, London, W.

The fifty-eighth annual show of the Bakewell Farmers' Club takes place on Wednesday next, and should prove a successful event, for a good prize schedule was arranged in which a variety of sections figured, all of which should have their

interest, whilst for the benefit of the town visitors there will be a trotting handicap and also a pony race.

The East Berkshire Horse Show Society have received highly satisfactory entries for their show at Hawthorn Hill, near Maidenhead, on Thursday next, and, given fine weather, the show should be most successful. One of the chief features of the show will be the Hunter and Shire Produce Classes, for which a large number of entries have been received from all the best known breeders.

SHOW SECRETARIES.

Mr. T. TURNER,
Cleveford Agricultural Society.

The Jubilee Show of the Essex Agricultural Society has been fixed to take place at Chelmsford on Wednesday and Thursday, June 12 and 13, 1907, and it is hoped that it will prove a record all round, and thus fittingly mark fifty years' successful work of the society.

It is stated that the whole of the money wanted as a guarantee fund for the proposed International Horse Show, to be held at Olympia next spring, has been raised without the least difficulty. Americans were prepared to find the whole amount, but so generous was the response to the appeal issued after the meeting held in London some months ago, that acceptance of the offer was not necessary.

An excellent entry has been received for the Royal Dublin Society's Horse and Sheep Show at Ball's Bridge, Dublin, on the 28th, 29th, 30th, and 31st, and there is every prospect of the event proving one of the most successful on record.

TWO Yorkshire farmers met in a market this week. One asked his friend if he had done any threshing yet, and with what result. The answer was affirmative; but the elements had accomplished the threshing of fifty acres of oats. This is the experience of more than half a dozen large farmers in the east of Yorkshire, where such a storm raged (in parts) on Monday night as has not been experienced within the memory of man for forty years past. Crops in the villages of Garton (the breeding place of some famous Hackneys), Kirkburn, Tibthorpe, Emswell, and Southburn were devastated by hailstones of phenomenal size; and the farmers make reports, which are only too well authenticated, of £200 up to £500 damage on their several holdings. Farmers I have conversed with, men after whom one can speak with assurance, tell me that on their holdings the damage to growing crops in a few minutes is incredible. The ears of corn were cut off by the ice as if they had succumbed to a sharp instrument, and the ground was literally covered with the shaken corn. Valuers shortly before the storm broke had estimated a field of oats at 7 qr. per acre. Not more than 1 qr. per acre they calculated was left when the storm ceased. Turnip flats in the storm area look as if the tops had been cut off and a roller had then been passed over the crop. Much of the corn affected will not be worth harvesting, estimating the operation "in and out" at £1 an acre. One of these Wold farmers declares the storm has deprived him of what will be tantamount to a year's rent.

INCREASING interest is shown in the experimental farm carried on under the joint auspices of the East and West Ridings of Yorkshire County Councils. Sixty tenant farmers paid a recent visit of inspection to Garforth, and there saw the plots containing the different varieties of wheat, oats, and barley, of which more will be heard when the professors have tabulated the results of their labours and the wonder-working efforts of the soil and atmosphere. Since the County Councils began to take an interest in dairying, I am told by good judges of butter that the quality has been vastly improved, and that no dairy of any size is now carried on without the latest appliances. Free exhibitions are given to farmers' daughters to enable them to acquire skill in butter-making; and the same advantages are offered to the sons desiring to become "wisdom-seekers."

THE most cheerful reports are prevalent of the luxuriant crop of hay that has been got into stack. The contrast between the yield of meadow grass this year and last is the most striking on the hill farms. In the higher reaches of Tyneside valleys the crop last year was about half an average. In the outlying portions of North and South Tyne and in Weardale crops were very light, and only a mild winter spared the farmers from the inconveniences of a shortage of fodder. There is no district, perhaps, in the north of England where the root crops are even in character. In York-shire they vary very much, are best on land which is retentive of moisture, and the promising outlook has removed all cause for anxiety on the part of farmers, who last year found their supplies of roots exhausted half way through the season.

RURAL councils, urban councils, county councils are all discussing the motor car question as it affects the roads. They all come to one and the same conclusion—that highways, which are the national arteries of traffic, should

be maintained out of the Imperial Exchequer. At the present time there are portions of main roads kept in repair by county councils, other portions are under the control of and are repaired by urban or rural councils; and one can very often discern quite easily where the jurisdiction of one ends and where the others begin. The system is antiquated, but is a very big matter to tackle, and most people having a limited acquaintance with the cost would express their astonishment with the gigantic proportions of the sum total that would be required to meet the expense of keeping up our national arteries. We dare not presume to hazard a guess. A rural district in Yorkshire, for instance, has 300 miles of road to keep up (not all "main" roads, be it noted), and spends about £10,000 a year in doing it. If we are to have roads dustless and less liable to wear than an ordinary road constructed of macadam without substantial grants of revenue from taxes upon the owners of motor cars, the rates may easily be doubled. But rural ratepayers could never stand the strain of the excessive charges which would be necessary. Alleviation must come from some source or other.

DARLINGTON farmers for thirteen years have been selling their own stock at a mart of their own, and as a company they have been fairly

successful. The principle carried out is to be commended. It is a case of farmers helping themselves and acting on their own initiative. The net profit of the mart for the last financial year was £500, and a balance of £290 was transferred to a reserve fund, after providing for a 10 per cent. dividend. The turnover reached a total of £202,000, being a reduction of £15,500 compared with the preceding year. The falling off in the receipts was entirely due to the decreased entries of live stock, and this, again, was accounted for by the almost entire failure of the root crop in the locality. We wish the Darlington farmers better luck this year of grace.

STORRE sheep and lamb purchases will very soon be engaging the attention of our graziers. Up to the present time but few have been on offer at York, Hull, Wakefield, or Newcastle. There is every indication of dearthness. A grassy autumn and a good root season tell their tale in enhanced prices for the stock which the "mixed" farmer has to buy in, and it is far from probable that any cheap lambs will be picked up east, west, or north. A thousand cross-bred and white-faced lambs were sold at a Yorkshire market this week at an average of about 36s. per head. This is an advance on last year's rates.

not full, crops, and there are several instances in other parts of Kent, proving the special value in a critical season like this of skill and careful watchfulness, when allied to common sense and perseverance. The prevailing opinions of growers point to the improbability of the average crop exceeding that of 1904.

Reports from Sussex are much to the same effect. Some little improvement is seen here and there, but in the Northern district not more than 3 to 4 cwt. are expected, and around Rye the yield will certainly not come up to 1904.

Throughout Surrey the outlook is not encouraging. There are but few exceptions, where a slight improvement is visible. Many gardens have gone back, some will fail utterly, and the average will only be low. The usually fertile gardens in Hampshire are generally very disappointing, and although a few of them will come out fairly well, the average is not expected to go beyond 3 to 4 cwt. per acre.

In the Temes Valley, in Worcestershire, some very promising gardens are to be seen. Persistence in washing, and skilful cultivation, added to the advantages of soil and situation, are showing good results. The bine is healthy and clean in many of the gardens, and the crop prospects are very good for the year.

The comrade county of Hereford does not promise much on the whole, and observers say that 3 to 3½ cwt. will be the utmost average. An expert of my acquaintance, after a careful survey of the Midland districts, arrives at the conclusion that 30 per cent. of the yards may produce about 7½ cwt., another 30 per cent. about 4½ cwt., and the remaining 40 per cent. will not exceed an average of 2 cwt. This brings the general average to a little over 4 cwt., corresponding practically with the figure I have arrived at by another method of calculation.

All our evidence thus compels us to the conclusion that our crop must be small, and cannot possibly be improved during the short period that remains before picking. It is generally expected that this work will commence before the end of the month, and will in most places be speedily completed.

Foreign Prospects.

BELGIUM.—The farmers in Alost and Poppeinghe have had much the same experience as their brethren in England. Two or three weeks ago there were hopes of improvement, but these have been replaced by the acceptance of the fact that the crop must be seriously deficient. The effects of the blight and the long drought are everywhere evident, and growers have now raised their quotations for new crop hops.

BOHEMIA.—The news from Saaz is to the effect that the yield will be much lighter than expected a month ago. While a few plantations show signs of advancement, most of them are standing still, which is equivalent to retrogression. The crop throughout Austria-Hungary is estimated at about one-third that of last year.

BAVARIA.—The reports are very varied, and it is somewhat difficult to arrive at any satisfactory conclusion. From some districts I hear that the prospects are good, while others are evidently in a very poor position. On the whole, I am inclined to think that a little general improvement has been effected, but that it is not sufficiently

With its fine connection amongst Live Stock Owners, the "Mark Lane Express" is undoubtedly ONE of the BEST MEDIA for the Disposal of Pedigree Live Stock, either by Public Auction or Private Treaty.

The Journal goes directly into the hands of likely purchasers at home and abroad.

marked to change the moderate figures of earlier estimates.

FRANCE.—Owing to the assistance given by more favourable weather, it is now estimated that the Burgundy plantations will nearly equal the yield of last year. In the north the position is about the same as Belgium, and only a moderate crop is expected.

AMERICA.—Recent information has considerably modified the estimates that were previously so confidently put forward as likely to surpass all former records. A cable message this week tells me that the intense heat and absence of rain have lowered the figure for the U.S.A. to 300,000 bales, this being about nearly 20 per cent. lower than former declarations. I am prepared for still further reductions. The New York State growers are said to promise fine quality, but are likely to be less in weight than a year ago. They are branching well and have no vermin. The news from Washington is not very favourable. Oregon promises a full crop, but not so large as has been stated, and although the Californian yards are looking well their yield will not be at all phenomenal.

College of Agriculture, Downton, Salisbury.

The fifty-third session of this college terminated on Friday last, when the following certificates, scholarships, and prizes were awarded:—The college diploma was presented to Mr. F. M. G. Starbuck, St. Margaret's Vicarage, Collier Street, near Marden, Kent; Mr. G. V. Wellesley, Uphill Rectory, Weston-super-Mare; Mr. H. M. S. Fellowes, 101, Onslow Square, S.W.; and Mr. C. P. Vansittart, 73, Warwick Gardens, Kensington. Prizes in various subjects were given as follows:—Mr. G. V. Wellesley, for agriculture, chemistry, book-keeping, and surveying; Mr. F. M. G. Starbuck, for practical chemistry, veterinary, forestry, and building; Mr. B. A. Scarlett, 1, The Rocks, Uckfield, Sussex, for agriculture, theoretical chemistry, practical chemistry, veterinary, forestry, building, and farm machinery; Mr. J. L. Rogers, Penrose, Helston, Cornwall, for book-keeping; Mr. L. A. Haswood, Kirtlington Park, Oxford, for live stock, milking, and surveying; Mr. H. F. Foster-Pegg, St. Matthew's Rectory, St. Leonard's-on-Sea, for theoretical chemistry, practical chemistry, and book-keeping; Mr. H. M. S. Fellowes, for wagon-driving; Mr. C. P. Vansittart, for collection of forest foliage; Mr. R. N. K. Colville, Bellaport, Market Drayton, for attention to the farm. The Bles prize, awarded for the highest number of marks obtained by a student during his first academical year, was given to Mr. B. A. Scarlett.

Labourers and the Land.

Among the papers read on the closing day of the York meeting of the British Association was one by Mr. R. E. Turnbull on "Labourers and the Land," in the course of which he said that, in order to encourage the best class of cottlemen, shepherds, and field labourers to remain as farm workmen, an adequate supply of comfortable cottages should be provided, each having sufficient good land attached to provide an ample supply of vegetables, fruit, and milk for the labourer and his family. "The necessity of this kind has always been found to be an invaluable school for children, and not infrequently it has proved to be a stepping-stone to a larger holding."

In the course of an interesting discussion which followed, Major P. G. Craigie, C.B., said he did not himself share in the belief that female labour on the land did not coincide with our present ideas of civilisation. Country workmen might remain longer on the land if women took the part in the work that they had done in the past.

Mrs. Edwin Gray urged that labourers should have a recognised half-holiday.

The question of whether farm labourers migrating to the towns came to be preferred by employers to city-bred workmen having been raised, Mr. B. Seaborn Rowntree made an interesting contribution to the debate. He said his firm found that the most skilful confectioners, and those who became head officials, were men who began life following the plough. They had excellent power of observation, and made most intelligent men.

It would be difficult to find many horse breeders who are not acquainted with Pedicura, but for the benefit of the few it may be mentioned that it is a tried remedy for all hoof ailments, as well as itchy mane, harness, or other sores, and many skin in animals. It is manufactured by Messrs. Gregory and Co., Temple, Bristol, to whom many horse owners and also cattle breeders are indebted for their Vesico-Sudorific, for lameness and chronic swellings. It requires no cradle or tying of the head, and does not bluish or ruffle the hair. Both these excellent preparations can be obtained from chemists or direct from the manufacturer.

A General Survey.

While endeavouring to keep myself well posted up by always obtaining my information from reliable sources, I am also on the look out for contemporary opinions, hoping that I may pick up points that have not otherwise reached me, so that the reports I present may be as complete and impartial as possible.

It is for this reason that I read with interest the views of the expert who collects for the *Times* the estimates of the growing crops. His latest report, which describes the position of the hop plantations at the beginning of this month, states that the average condition of Kent was only 55 per cent., as against 102 per cent. at the same date last year, the average for the preceding ten years being 75 per cent.

Similar conditions are deduced from the reports received from Sussex and other southern counties, but the average for the Midland hop counties only works out from 32 to 40 per cent. Reasoning from these figures, I find full confirmation of my views previously expressed with regard to the crop probabilities this year. If 75 per cent., or three-quarters of a crop, is taken, as in comparison with the actual average yield of the past ten years, which is under 9 cwt., we may conclude that the present average proportion foretells a crop for the south of England of about 4½ cwt. per acre, while the Midlands will probably show by the same method of reckoning about 4½ cwt.

If I take these figures as approximately correct, it will result that the Southern counties may produce from their 38,225 acres about 248,000 cwt., and in the Midlands we may expect from 10,742 acres about 45,000 cwt. By this somewhat dimly lighted road we arrive at the end of our journey, and find waiting us the possible figure of 293,000 cwt. to represent the yield of our plantations this season. I may add that the figure I have thus deduced is in excess of the estimates of my friends in the Borough, but I am inclined to the opinion that when the final results are officially declared it will be seen that I am not very far away from the facts.

My figures to day come out lower than my previous estimates, but they follow the actual course of events, as far as we can ascertain them from the reports forwarded to me by growers. Without going into minute details, it appears that the hot sunshine and the absence of rain have somewhat retarded the development of the burr in most places, with the result that all neglected grounds that have not been persistently washed have gone back, and many are showing signs of complete failure. Rain is badly wanted everywhere, but can be of little benefit to such gardens.

On the other hand, it may be of great service to the plantations that in several districts, notably about Faversham, Selling, Sittingbourne, and Harbledown, the condition of which, due to the advanced methods and determination of the planters, are in a more promising condition. Some of these larger farms will produce good, if

CORRESPONDENCE.

Damage by Hailstones: Assistance Needed.

SIR,—Will you help this Chamber by drawing attention in your next agricultural article to the great damage to crops inflicted by the hailstorm of the 2nd inst. in the counties of Huntingdon, Bedford, and Cambridge?

The hailstones, which were jagged pieces of ice, were in many cases 5 in. in circumference. They fell with a force sufficient to kill a flock of starlings roosting on a tree. Rabbits were killed in the fields and many covies of partridges.

The damage to the crops is estimated by practical valuers who have carefully inspected the storm area at £20,000. The wheat, barley, and oats were so thrashed as to have the appearance of having passed through the machine.

The storm has brought ruin not only to small occupiers but also to large farmers.

Bearing in mind that this loss has swept across a district which has been suffering for many years past from agricultural depression, it is more of a national disaster than many of those which have been relieved by a Lord Mayor's Fund.

I will send you any further particulars you may require.—I have the honour to be, Sir, your obedient servant.

GERALD HUNNYBUN, Hon. Sec.

Hunts Chamber of Agriculture,
Huntingdon, August 14, 1906.

English Auctioneers and Aberdeen-Angus Sales.

SIR,—I see in your "Notes of the Week" the following paragraph:—"It has always seemed strange to us why English breeders of Aberdeen-Angus cattle should invariably employ Scottish auctioneers to dispose of their stock."

You have, however, in using the word "invariably," apparently overlooked the fact that the spring shows and sales under the auspices of this association were conducted by the well-known English firm of Messrs. Lythall and Walters, of Bingley Hall, Birmingham, this year, and also in the years 1901, 1902, and 1903, and they may now, I think, be considered a fixture at Bingley Hall.

I may mention that Messrs. Lythall and Walters are this year also holding an autumn sale under the auspices of this association.—I am, Sir, your obedient servant,

ALBERT POLLING, Hon. Sec.

English Aberdeen-Angus Cattle Association,
Beddington, near Croydon, Surrey,
August 15, 1906.

. We publish the above letter as being representative of a number we have received in the same strain. Our correspondents do not seem to deny that our Notes of the Week were true to all intents and purposes. There may be several exceptions, as pointed out above, but we had more especially in mind the Home Sales.—En.]

English or Foreign Meat for the Army?

SIR,—It is well and widely known your valuable paper is one of the principal organs devoted to the furtherance of British agricultural prosperity, and that your columns are open to all—I amongst them—who temperately and with consistent reasoning bear a space in your columns in placing their views for the purpose under public notice for this—from a national and beneficent point of view—our chiefest industry and all other subsidiary indivisibly associated with it.

It was from an episode in the House near the adjournment when our War Minister, Mr. Haldane, unpatriotically and unwisely refused the request made to him to confine the supply of meat to our Army from British raised sources only, that suggested to me the letter I now send to you. It is a truism that all things come to humanity through the land, and with due deference to some holding it matters not from what land and where situated, I venture to think, and that our agriculturists will be in accordance with me, that as the needs for the sustenance of the British Army at home, excepting tea, coffee, and cocoa, can be supplied to it of the prime quality from British land, supplemented by British industries, and the request that it should be supplied entirely from British sources, is only reasonable and right, and as we have the best of coal, iron, copper, tin, and other metals, armaments also should be, and I believe are, also supplied from British sources entirely.

Further, considering the sustaining power of our food and the durability of our home-produced clothing, it is questionable if cost would be greater than for the foreign stuff now supplied.

Have we not the best of bees, and of sheep with the golden fleece, which Jason of old went a long and perilous journey to seek? We have the British farmer, too, and the British men,

and all the British-made appliances, live and dead, prepared to raise all that is needed from British land.

To set this industry agoing would, indeed, be a stimulus to our agriculture, and by drawing more labourers to the land met, in the proper way, the "back to the land cry," and by increased circulation of cash at home, through numberless channels, would vivify industry and so recoup bit by bit imperceptibly the taxpayer.

Would it not be well for every Chamber of Agriculture throughout the land to be prepared—by many signatories—on the October meeting of Parliament to request through the members generally that the Government take measures to have our Army supplied in all its needs of food, clothing, and armament from British sources? Alas! it is to be feared, the Government is so firmly in the grip of the fetid Free Trader, the little Englander, the peace-at-any-price party, the friends of every country but their own, and the Irish Nationalists, that they dare not move to carry out this patriotic policy.

Besides, by so much as we raise from our land to supply our wants and thus displace that hitherto supplied by the foreigner, by so much would our imports account be lossdebited against us in the national imports and exports account.—Yours truly,

ALFRED WELCH.

Southall, Aug. 15, 1906.

Country Education.

SIR,—Farmers are sadly neglecting the interest as affecting the industry nationally. A great opportunity now to start a system of country teaching, after the "Appeal Court Decision." Also the motor nuisance. How history is repeating itself: the rich stopped the dog-drawn carts of fifty years ago, now the supposed rich are driving us poor ratepayers off our roads after being oppressed to make them like bowling-greens.—Yours truly,

S. DUTTON.

Wash Hall, Little Soughall,
near Chester, August 13.

Making Corn Stacks—The New Zealand Method.

SIR,—I beg leave to call your attention to a little matter that deeply concerns the English farmer just now.

I would, however, first state that I spent the greater part of my life as a farmer in the dear Old Country, but the depression which began in 1879 and continued for some years was ruinous to the majority of agriculturists in our district, and consequently I resolved to try my fortune in New Zealand.

With regard to what I made reference to above is the way corn stacks are built with you.

We here in New Zealand put stacks up so that no thatching is needed. You build them level up to the usen, and even if the middle is well backed up at the top, when the stack settles the whole is concave, and consequently liable to be injured by heavy rains which occur before it is possible to cover them in, and is a source of anxiety to the owner. Not only so, when the stack settles it often bulges. Now if the stack is convex, all the way up from the very bottom, it would bulge because the pressure would be even all round, and it is impervious to wet.

Please don't infer from this that stacks left until the spring would not require thatching if built that way; probably they would not if correctly built. But what I wish to point out is, if built wet, it would save a lot of anxiety just at the busy season, when it is not always possible to get them covered in at once. One year I kept an oat stack for some six months, and it was exposed to several downpours—and it does pour here—that would have completely spoiled it if built the ordinary way; as it was, there was not a dozen sheaves spoiled. It would have saved me a great deal of anxiety in the Old Land had I been acquainted with the better method.—Yours truly,

H. MASOX.

Wellington, New Zealand,
July 9, 1906.

The Past and Future of Agricultural Labourers.

SIR,—Our good friend and correspondent "Red Rose" is very hard to convince, but with your permission, if you are not yet weary of this controversy, I must say a point out that it is no mere fanciful idea, but a stern reality with regard to my statement as to the cause of the young labourer to a great extent not following the occupation of his father.

To treat him as a man his feelings should be taken into consideration, and he must be acknowledged to be endowed with as much aversion to sneers and jibes as labourers in other vocations, and I think the opinion expressed by "Red Rose"

Opposite the Comedy Theatre.

that he does not care tuppence for them is hardly consistent with that treatment. I adhere to my statement that the inexperienced and sensitive young farm labourer is thus prejudiced, also that it has succeeded only too well, and has been a great factor in causing the influx into the towns of the rural population, and is responsible for the necessity of the cry, "Back to the land," which is so perplexing our rulers. I claim there is some reason and common sense in this idea, having seen and experienced so much of it and heard the contemptuous remarks of those who should know better.

With regard to prospect and scope for the farm labourer who is energetic and desirous of advancement, I think your correspondent "Red Rose" cannot do better than read the clear and practical letter by "Another Rose" on the subject. I would only add that he now has all the advantages of free education.

I must now detend what "Red Rose" describes as the weakest point in my letter. Our worthy friend has an unfortunate and persistent way of looking at the worst side of the case, which is quite despondent; and the way he describes the occupation and prospects has to me a doleful sound, and is not calculated to inspire hope or energy.

It is no new thing that some emigrate or look out for other means of livelihood offering better prospects; this is but natural, and has always been so. This is very different to flocking into the towns after the big wages—all things must find their level.

Then again he says, unfortunately agriculture has never shown a marked desire to help the labourer. I maintain that it always has, and is still doing all it can to help the labourer, which assertion requires no better proof than that illustration on page 159 of our last issue of Reuben Pratt, who has worked on a farm for seventy-four years; and we are frequently hearing and have known instances of fifty, forty, thirty, and twenty years of service. These men know who are their best friends, and have not been deluded by false promises by the agitator, or un-acted by the discontented. Agriculture is now paying all it can afford to the labourer, and in some cases more. In the same doleful strain "Red Rose" goes on to describe the palmy days of farming, when he represents the poor labourer's condition as little better than that of a galley slave.

I maintain that this is looking at the darkest side of things, and that all things have not been considered, for at that time there was no more stronger or healthier class of people in existence than our rural population, which strongly testifies to the good feeling which existed between him and his employer.

At that time he took his pasture and recreation in feats of physical strength, in which he delighted, and not content with carrying one sack of wheat or beans, would tie two together and vie with each other which should carry them the farthest, or lie on his back under the heaviest of his master's wagons, put his feet under the axle-tree, lift it off ground, and turn the two hind wheels with his hands. Your correspondent must admit that his condition was better than a galley slave.—Yours respectfully,

WHITE ROSE.

August 9.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Super-phosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equivalised.	Phosphatic.	Dissolved (soluble).										
Ammonia, organic as in Guano and Bones	s. d. 15 0	s. d. 12 6	s. d. 15 0	—	—	s. d. 12 6	—	—	s. d. 15 0	s. d. 15 0	—	—	—
„ in Sulphate of Ammonia	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
„ calculated from Nitrogen in Nitrate of Soda	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	2 0	—	2 0	—	—	—	1/10-2/	—	2 0	2 0	—	—	—
„ assimilable	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
„ insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

Albuminoids s. d. 2 8
Oil or fat s. d. 2 8
Carbohydrates s. d. 1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 24 times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 24 and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids	22.1	55.2
Oil	5.2	13.0
Carbohydrates	33.2	33.2
Total feeding units		101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

To the Editor of the MARK LANE EXPRESS.

SIR,—In last week's issue you remind your regular subscribers that you are prepared to analyse free of cost, they being farmers not dealers or vendors of feeding stuffs and fertilisers.

Why exclude dealers? If you help dealers (not being manufacturers) to buy a genuine article you will also help farmers to get genuine feeding stuffs and fertilisers, and thus further protect the farmer. May I suggest that dealers are fully as good supporters of your paper (everything considered) as the farmers are.—Yours, CUMBERLAND.

Referring to the above letter, the same idea has no doubt occurred to others, so we are glad to avail ourselves of the opportunity to explain our view.

In the first place, we would like to say that, having a large number of subscribers among dealer-agents, we fully appreciate their support, and are always glad to advance their interests so far as lies within the province of the paper.

But with regard to the point raised, we have not included dealers in the arrangement, because we think it forms an integral part of their business to ascertain for themselves that the goods sold by them are of a genuine quality, and the cost involved in getting the information is one of their regular business disbursements, to be taken into account when they fix their selling prices.

If the opinion expressed by "Cumberland" were followed to its logical conclusion, a manufacturer, being a regular subscriber, might as well

expect us to analyse free of cost for him, and so dispense with the expense of a regular chemist.

On reconsideration we feel sure that "Cumberland" will agree with us.

Cockle Park Experiments.

Professor Gilchrist, Director of Armstrong College, Newcastle-on-Tyne, has issued Bulletin No. 7, a guide to the experiments for the current year, as a preliminary of the full report, which will be published in due course.

A glance at the contents of the guide serves to show the manifold nature of the investigations carried on at the station, and we look forward to the pleasure of drawing the attention of our readers to the leading features of the results when they are published.

In the meantime the following notes on effects of dung and new sources of nitrogen are of interest:—

Effects of Dung with Straw and with Moss Litter.

Dung made from moss litter and from straw, produced by cattle under the same conditions, was applied to two plots on light soil in Back House Field for swedes in 1905. Twelve tons moss litter dung gave 25½ tons swedes an acre. Twelve tons straw dung gave 23½ tons swedes an acre. All through the season the moss litter dunged swedes looked best.

Seedling trees were sown last spring on land manured with these kinds of dung. That made from moss litter gave the best results with quick-growing acacia seedlings, but by far the worst results with slow-growing pine seedlings.

The results indicate that moss-litter dung is quicker in its action than ordinary dung, and is likely to give its best results on a quick-growing crop. It is evidently important also that moss-litter dung should be in a moist state when applied to the soil, as if dry and friable when applied it will tend to bring about a dry condition of the soil, especially in a dry spring. This test is being repeated on one-sixth acre plots.

New Sources of Nitrogen.

Nitrate of Ammonia and Calcium Cyanamide. Nitrate of ammonia, although now too expensive

as a manure, may soon be produced at a much cheaper rate. A pure sample contains about 34 per cent. nitrogen. Calcium cyanamide (lime nitrogen) is now being produced by the Berlin Cyanide Company, as a result of a process for combining the free nitrogen of the air. This contains nearly 20 per cent. of nitrogen, and about 62 per cent. of lime. These were tried as top-dressings for seeds hay on Tower Hill (N), alongside of nitrate of soda and sulphate of ammonia, the plots being one-hundredth of an acre in area. The dressings were applied on May 3. The results were per acre:—

Plot 1.—No dressing	51½ cwt. hay
„ 2.—153 lb. nitrate of soda	59½ „ „
„ 3.—119 lb. sulphate of ammonia	57½ „ „
„ 4.—71 lb. nitrate of ammonia	56½ „ „
„ 5.—125 lb. lime nitrogen	43 „ „

All the dressings contained 25 lb. of nitrogen. Owing to the very dry summer the lime nitrogen did considerable injury when applied to the hay. It should be stated that the manufacturers of it do not recommend it as a top-dressing.

Most of the above dressings were also tried on mangels with double the amounts applied to the seeds hay plots. All the plots also received (per acre) 210 lb. slag, 300 lb. muriate of potash, and 2 cwt. common salt. The results were:—

Plot 1.—No nitrogen	12½ tons mangels.
2.—238 lb. sulphate of ammonia	14½ „ „
3.—142 lb. nitrate of ammonia	14½ „ „
4.—250 lb. lime nitrogen	11 „ „

The lime nitrogen was mixed with the surface soil as recommended by the manufacturers. Notwithstanding this, however, it had an injurious effect on the crop, but this was probably owing to the dry season.

Bombay Cotton Cake.

Attention is being directed to the good value for feeding purposes of Bombay cotton cake. According to a series of tests made in Scotland, it would appear that Bombay cake is practically as good an article of food for cattle or sheep as cakes made from Egyptian seed, while it costs 10s. to 12s. 6d. per ton less money.

Constituents of Fertilisers.

The Department of Agriculture, United States, issue from time to time Farmers' Bulletins, containing much useful information. Here are some notes taken from a recent Bulletin under above heading. The particulars are put in a lucid form:

Many materials containing the essential elements—nitrogen, phosphoric acid, and potash—are practically worthless as sources of plant food because the form is not right; the plants are unable to extract them from their combinations; they are "unavailable." In many of these materials the forms may be changed by proper treatment, in which case they become valuable, not because the element itself is changed, but because it then exists in such form as readily to feed the plant.

Nitrogen is the most expensive of the three essential fertilising elements. It exists in three different forms—organic nitrogen, ammonia and nitrate. Organic nitrogen exists in combination with other elements either as vegetable or animal matter. All materials containing organic nitrogen are valuable in proportion to their rapidity of decay, i.e., change of form must take place before the nitrogen can serve as food. Organic nitrogen differs in availability not only according to the kind of material which supplies it, but according to the treatment it receives.

Nitrogen as ammonia usually exists in commercial manures in the form of sulphate of ammonia, and is more readily available than organic nitrogen. While nitrogen in the form of ammonia is extremely soluble in water, it is not readily removed from the soil by leaching, as it is held by the organic compounds of the soil.

Nitrogen as nitrate exists in commercial products chiefly as nitrate of soda. Nitrogen in this form is directly and immediately available, no further changes being necessary. It is completely soluble in water, and diffuses readily throughout the soil. It differs from the ammonia compounds in forming no insoluble compounds.

Phosphoric acid is derived from materials called phosphates, in which it may exist in combination with lime, iron, or alumina as phosphates of lime, iron, or alumina. Phosphate of lime is the form most largely used as a source of phosphoric acid. Phosphoric acid occurs in fertilisers in three forms: That soluble in water and readily taken up by plants; that insoluble in water, but still readily used by plants, also known as "reverted"; and that soluble only in strong acids, and consequently very slowly used by the plant. The "soluble" and "reverted" together constitute the "available" phosphoric acid. The phosphoric acid in natural or untreated phosphates is insoluble in water, and not readily available to plants. If it is combined with organic substance, as in animal bone, the rate of decay is more rapid than if with purely mineral substances. The insoluble phosphates may be converted into soluble forms by treatment with strong acids. Such products are known as acid phosphates or superphosphates. The "insoluble phosphoric acid" of a high cost commercial fertilizer has little or no value to the purchaser, because at the usual rate of application the quantity is too small to make any perceptible effect upon the crop, and because its presence in the fertilizer excludes an equal amount of more useful and valuable constituents.

Potash in commercial fertilisers exists chiefly as nitrates and sulphates. With potash the form does not exert so great an influence upon availability as is the case with nitrogen and phosphoric acid. All forms are freely soluble in water, and are believed to be nearly, if not quite, equally available as food. The form of the potash has an important influence upon the quality of certain crops. For example, the results of experiments seem to indicate that the quality of tobacco, potatoes, and certain other crops is unfavourably influenced by the use of muriate of potash, while the same crops show a superior quality if materials free from chlorides have been used as the source of potash.

Plants differ widely with respect to their capacities for gathering their food from soil and air, hence the proper fertilizer in a given case depends upon the crop as well as upon the soil. The fertility of the soil would remain practically unchanged if all the ingredients removed in the various farm products were restored to the land. This may be accomplished by feeding the crops grown on the farm to animals, carefully saving the manure and returning it to the soil. If it is practicable to pursue a system of stock feeding in which those products of the farm which are comparatively poor in fertilising constituents are exchanged in the market for feeding stuffs of high fertilising value, the loss of soil fertility may be reduced to a minimum, or there may be an actual gain in fertility.

The Disaster in Chili and Nitrate of Soda.

The terrible disaster on the Chilean coast excites our feelings sympathetically, and will bring home to us how close is the link existing between different nations. We shall feel the effect of it in this country by the disturbance of the nitrate of soda market and the inevitable advance in price of this valuable fertilizer.

In calculating the value of fertilisers, the form of the materials used must be taken into account. Slowly-acting materials cannot be expected to produce profitable returns in quick-growing crops, nor expensive materials profitable returns when used on crops of relatively low value. The more concentrated and expensive fertilisers should be employed on the most valuable crops.

Nitrate of Soda.

The production of the last four months compared with the same period of 1905 has been as follows:

	1906.	1905.
	Tons.	Tons.
April.....	126,000	132,000
May.....	153,000	146,000
June.....	152,000	141,000
July.....	155,000	148,000

And the late deliveries for the seven months, January to July:

	Tons.
1906.....	986,000
1905.....	933,000
1901.....	873,000
1903.....	891,000

Within the last few days a cable from Chili announced that, in consequence of labour difficulties at the port of Iquique, a "lock out" has been put in force, which it is inferred may delay shipments from the port.

Grass Experiments at Kington, Warwickshire.

The experiments conducted on the farm of Mr. Ernest Pake, under the guidance of Dr. Dyer, have now been continued for a period of five years. As in most parts of the country, the hay crop was late, and very deficient in the unmanured field, although in the liberally-manured plots very good results were obtained. Thus the yield on the field left untreated was only 16 cwt. of hay per acre, while phosphatic fertilisers raised it to nearly 2 cwt. of hay per acre, and phosphatic fertilisers combined with nitrate of soda raised the crop to 2 tons 3 cwt. of hay in one field and 2 tons 7 cwt. in another. In confirmation of general experience, the best herbage was produced by the combined fertilizer. The addition of potash salts increased the crop still further to a slight extent. It may be mentioned that the grass in both the experimental fields has been down for nearly fourteen years. The trial plots are cut for hay every year, the aftermath being afterwards grazed.

Soils vary greatly in their capabilities of supplying food to crops. Different ingredients are deficient in different soils. The way to learn what materials are proper in a given case is by observation and experiment. The rational method for determining what ingredients of plant-food a soil fails to furnish in abundance, and how these lacking materials can be most economically supplied, is to put the questions to the soil with different fertilising materials and get the reply in the crops produced. How to make these experiments is explained in Circular No. 8 of the Office of Experiment Stations of the U.S. Department of Agriculture.

6 FEEDS FOR ONE PENNY INTERNATIONAL STOCK FOOD.

The Cottage, "Rainsforth," Ecclesfield, near Sheffield, March 5, 1906.

"I think 'International Stock Food' very good stimulant for horses out of condition."

STORM IN HARVEST.

We publish in our correspondence columns to-day a letter which none can read without sympathy and few without a personal wish, as we should hope, to do something in the way of aid. On the 2nd inst. a storm broke over London which was chiefly remarkable for the brilliant display of lightning. The rain flushed the gutters, and made streets in low-lying districts impassable for perhaps a couple of hours. But by next morning summer had reasserted itself, and few could have imagined from the state of the ground that there had been any particular weather disturbance.

Whilst this was the case over the greater portion of England there fell on the Eastern Midlands especially on the country between Wisbech to the north and Hertford to the south a veritable plague of icy hail. In half-an-hour smiling landscapes ripening and mellowing to harvest had become veritable scenes of desolation. Where the hail struck at an angle, as on hillsides, ears of corn were cut off as though with a knife, while the more usual level fields of this particular region presented the aspect of having been trampled by a herd of stampeding animals. Huntingdon felt the full fury of the devastating hail. This little county is one of the most purely agricultural in England, out of 209,295 acres it has 77,726 under corn crops. Some 30,000 acres of wheat, about 20,000 acres of barley, and over 11,000 acres of oats have been gravely depreciated in value, besides which the cost of harvesting has been greatly augmented.

We all know from experience what a troublesome and tedious matter is harvesting when constant use of sickle or bagging hook or scythe is entailed. In the county of Bedford the

damage done was not much less than in Huntingdon, and with a large area under cereals it is likely that the total amount of money loss will come to about the same. On the fringe of the great storm the district between Peterborough and Wisbech to the north suffered, while the Newport Pagnell and Olney district of Bucks to the west and the Caxton to Royston district of Cambridge to the east were included in the region where crops were badly laid.

The damage done exceeds many cases in which sympathy has been of a national character. May we express a hope that prompt and generous subscriptions will be forthcoming, nor from the agricultural classes only. The harvest is a national affair. For months in advance of its fruition hundreds of farmers in these parts have been paying rates and taxes, labourers' wages, and tradesmen's bills. The means out of which these expenses were in the end to be met have in all cases been reduced and in some almost swept away. Few things in Nature have a more pathetic side or should inspire a more widespread sympathy than storm in harvest.

Midland Notes.

HOW often does it happen that the magnificent summer weather of July deserts us in August when the ingathering of the corn is in full swing! It was so last year, and it is so again this season. Heavy rainstorms on each of the last four days have already delayed work in the fields considerably, and at the time of writing the indications are all in favour of more wet. So far there seems to be no particular scarcity of labour, but here and there one hears complaints of difficulty created by labourers who persist in leaving their own districts to do harvesting elsewhere, where such work is more abundant and the season of high pay lasts longer. How to prevent that tendency where it exists is hard to say. The farm hand of to-day is apt to be an independent fellow, and persists in going his own way. Perhaps a little land of his own to look after might help to keep him at home, but it is difficult or impossible to restrain the man with an inbred tendency to wandering when the desire to roam comes upon him.

THE probable prolongation of the harvest reminds one, by the way, of the terms on which the extra hands required in the cornfields are taken on. Where pay is by the day or week a spell of rain is an expensive matter, and he who has been wise enough to adopt the piece-work system comes off best. Nowadays a certain number of farmers offer a lump sum for the harvesting of the entire crop, and the plan seems to work well. There is no room at any time for an idler in the harvest field, but beyond any doubt the work is pursued even more vigorously when every man has a direct interest in getting it over as soon as possible so as to be free for another job.

CROP reports are many and elaborate nowadays, but still most of us prefer the evidence of our own eyes. Those who have travelled much about the country will be the first to admit that one must reckon this in many ways a somewhat patchy season. It is not merely the big weather differences in distant parts of the country which have affected

the season's results; the smaller travelling squalls and showers have also left their marks. The FRESHAM district seems to have been unusually fortunate in these timely rains. Even here fruit is poor but of the ordinary farm crops there is little ground for complaint, the principal grumble being that so many haystacks have suffered this season from overheating. "Finger-and-toe" seems to have been causing more trouble than usual this year. One hears of very heavy grass crops round Worcester, where the violent thunderstorms that have visited other districts close at hand have failed to put in an appearance. But the sad state of the hops in the West Midlands is common knowledge, and threatens distress among the Black Country pickers, who will shortly be leaving home in their thousands to find the work awaiting them quite insufficient to go round. We are pleasantly free from the fungoid pest producing what is generally spoken of as potato disease; but the yellow wart disease in tuber crops grows increasingly troublesome in parts of Warwick and Worcester.

AMONG the many local shows of one kind and another which have been taking place since the holidays, it is the Welbeck fixture which has attracted most attention. As the pioneer of estate shows Welbeck has a unique interest of its own, but to-day it has fellows—one cannot say rivals in this case—of almost equal reputation and importance. The Clumber and Madresfield Court, Wynyard Park, Crewe Hall, and other tenants' fixtures that might be instanced run all of them on much the same lines, and no one who has visited these shows from time to time can fail to notice the great influence they have had in improving the local tenant farmers' stock. Partly that may be due to the steps which some great landowners are taking nowadays for putting high-class sires within the reach of their own tenants, but even more important is the effect of competition and healthy rivalry at meetings from which the professional exhibitor is practically excluded.

THE many local horse and flower shows attract but little, if any, attention outside their own immediate district, and in the majority of cases they are of no particular importance to the farmer, though even to the agricultural community they make a certain appeal. For one thing, it is at these village meetings that the farm hand who takes a pride in his small patch of garden ground finds the one opportunity of the year to demonstrate his skill and industry; for another, not a few of these fixtures serve to remind us of the close connection that exists nowadays in many districts between gardening and farming proper. The flowers grown to-day in many of our farm gardens do not serve only to beautify the homestead; their destination in the market, and a share of the fruit and vegetable produce of the garden goes in the same direction. These small sales from week to week mount up considerably in the course of the year, and are useful in helping to find the little ready cash which is so often needed when it is hard to put a hand upon.

August 17, 1906.

Chester Cattle Fair.—At this fair on Thursday supplies were large and buyers numerous. With an improved demand sellers endeavoured to obtain higher prices all round, with the result that a very disappointing business was done. Trade was confined to best lots, and for these buyers declined to pay any advance. There was a good supply of sheep, but for these prices were also high, and very few were sold. Prices generally were about the same as last week. Milch cows, £17 to £22; calves, £15 to £19; barrens, £10 to £12; heifers, £9 to £14; storks, £6 to £10.

Notes of the Week.

The agricultural summer show season is now drawing to a close, and as a whole it has been a remarkably successful one.

With a few exceptions the weather has been favourable and the attendances satisfactory.

No doubt their influence is a stimulating one, and the only deprecatory remark one might venture to make is that there are too many of them.

Of all the shows the Royal at Derby is the one that takes the palm. Its great success has given the Royal Agricultural Society a new lease of popular favour.

And the society's financial position has been strengthened by the amount of about £2,000.

The reports from different parts of the country indicate that the harvest prospects are satisfactory.

The cereals now being gathered are quite up to the mark, and the roots and potatoes look well.

Fruit growers, unfortunately, have good cause to grumble.

The recent storms played sad havoc in the orchards.

The uncertainties attending fruit cultivation has been once more demonstrated.

Enthusiasts who recommend the industry right and left are apt to forget its speculative character.

A sharp late frost, a hail shower, or a gale of wind, and prospects bright with hope are shattered in a few hours.

It is not encouraging news for our fruit growers that the imports of fruits from France are just now abnormally heavy. One day's exports from Boulogne reached the enormous quantity of two million pounds.

The reports from the hop districts continue to be of a very gloomy character.

What vicissitudes this industry has passed through since its introduction to this country in the reign of bluff King Hal—

Carp, Hops, Pickeral, and Deer
Came into England all in one year.
(1524)

In the reign of James I. an Act of Parliament was passed prohibiting the use of hops.

But there were passive resistors even in those days, and the Act remained to a great extent a dead letter.

In the reign of Queen Anne another Act was passed prohibiting the use of any other bitter than hops in beer.

Hops were especially esteemed as being good for the blood and digestion.

At the present time it is a case of "go as you please" in the manufacture of beer.

At Gibraltar cow milk is a luxury. There are said to be only two cows on the rock, and their milk is reserved for the use of the family of his Excellency the Governor.

Goats, however, are very plentiful, and the garrison are supplied with goats' milk.

We can't help thinking that Earl Carrington might champion the interests with more vigour.

He might give Mr. Haldane a warm quarter of an hour over the question of home-bred versus home-killed meat for the Army.

With a little judicious pressure Mr. Haldane might be encouraged to give more consideration to the interests of agriculture in the country.

Ho is setting a bad example in the matter of the Army meat contracts.

Everyone will wish success to the experiment of the Board of Agriculture to promote small holdings.

Some thousands of acres of the Crown lands are to be devoted to the purpose, and the result will be watched with great interest.

At present the tendency of practical opinion is that in general it will end in failure, although cultivation of small market garden plots near towns may prosper.

It is considered that if big farmers working with modern appliances and skilled experience can scarcely pay their way, there is not much chance for the man with a few acres.

Under a more progressive fiscal system it might be different; then "la petite culture" might have a measure of success here as it has in France.

The proposed scheme of importing cattle from the Argentine and other countries into Alderney has probably been abandoned in consequence of the opposition raised against it.

When referring to it, Mr. Ailwyn Fellows, speaking recently at Welbeck, pointed out the paramount importance of keeping our live stock free from contagious and infectious diseases.

For which expression of opinion he merits the thanks of the agricultural community.

The wool industry in Australia is in a thriving condition. For the year which ended on June 30 last the production reached the enormous quantity of 1,509,455 bales, value £25,251,911.

For the previous twelve months it was 1,595,734 bales, value £20,000,000.

According to the latest returns there are 93,836,543 sheep in Australasia.

This makes the number of sheep in the United Kingdom under 30,000,000 look rather small by comparison.

We all of us have pleasant memories connected with sweet lavender, and it is a pity it is going out of fashion.

The cultivation of the plant in parts of Surrey was formerly a prosperous minor industry, but it has fallen on evil days.

Lavender, sweet lavender, is no longer so fashionable, and the acreage under the crop has fallen to something like 70 acres.

This year the weather has been unusually bad for the growth of the crop. The frosts and dry winds injured it seriously.

VETERINARY.

Age to Milk a Heifer.

Will you tell me what age a heifer will give milk?

Answer: This is a curious question, or one curiously expressed, of which we do not quite see the drift. "At what age will a heifer give milk?" would seem at first sight a variation of "At what age will a heifer breed?" but the mammary secretion may be present in animals without their being in a pregnant or parturient state, or ever having been so. Cases of this are on record in cattle, ewes, bitches, rabbits, and mares and fillies, and we have known of maiden bitches not only yielding milk, but nursing and rearing the offspring of another. Milk has been found in the mammae of quite young animals. If you mean at what age may a heifer give milk after producing a calf, we have known of two cases of heifers calving down when wanting several days of being a year old; and there are many cases on record of bovine precocity approaching this. Needless to say that such cases are exceptional, and that such exhibitions of precocity are not desirable.

Trouble with Horse's Coat.

In thanking you in referring me to the above question, the condition powder is not satisfactory, as I am sure that it is his water. When I go on a journey, say 14 miles there and 14 miles back, he never stales for about two or three hours after, and if he was right should stale when he gets there.—G. W.

Answer: We can only suggest that you consult a qualified veterinary surgeon of experience, and see if he confirms your diagnosis. In your amended account of the case you render a reason why you think it is his water, because the animal does not stale at the end of a journey; but what this prolonged retention of urine under these conditions can have to do with the coat of the horse "sometimes going like a hedgehog for a few minutes" when you start out we quite fail to see. We may point out to you that many horses will

not stale in harness, no matter how long time may elapse since previous metritation, and that others will not do so in a strange stable. We have often seen this in cabbars, who have had to be taken home for the express purpose of metritating. We have, however, never seen a case in which prolonged retention of such circumstances caused to individual peculiarity, not to disease—caused staling of the coat when taken out of the stable.

Sale at the Sedgemere Hackney Stud.

An unreserved sale of Hackneys belonging to Mr. Sam Woodiwiss was held at Sedgemere, (great Waltham, Essex, on Thursday, and was well attended, but prices were disappointing, as the top figure was only 38 guineas, and this sum was given by Miss Langworthy, of Maidenhead, for the two-year-old filly Sedgemere Florodora, a daughter of that fine pony Sharplo. The latter was one of the ponies on which Mr. Woodiwiss had placed a reserve, but it was only 100 guineas, and as there was no bid for him he was withdrawn. Considering that 500 guineas was refused for his season's ago, Mr. Woodiwiss's reserve was an exceedingly moderate one. The York-shire breeder, Mr. Inman, secured two of the bargains of the sale in the three-year-old filly Sedgemere Viscountess, for which he went to 32 guineas, and the brood mare Sedgemere Futura, a four-year-old bay roan, at 48 guineas; while Mr. J. M. Washington bought others for Holland at prices ranging up to 32 guineas. Mr. Mullens, Halesworth, paid 45 guineas for Sedgemere Pagoda, and Mr. Underwood 35 guineas for Sedgemere Vignette. The best prices for sires were 30 guineas and 30 guineas, the former being reached by Sedgemere Rufina, sold to Mr. Strong, Brentwood, and the other price was given by Mr. Washington, of the Hague, Holland, for Sedgemere Queen's Birthday. Altogether forty-one lots were sold for a total of 929 guineas, which gives an average per head of only a little over 22½ guineas.

FARM MACHINERY AND IMPLEMENTS. have for so long been closely identified with the "Mark Lane Express," that the Journal's position as a means of bringing Maker, Agent, and Customer together is unique.

SHEEP.

Notes and Jottings.

A CORRESPONDENT makes a series of inquiries in respect to raising fat lambs, and has a fancy for "peel-throated" lambs. One of the difficulties that breeders of certain breeds have to contend with is that of the wool peeling away from the throat; but as it is the type of lamb which has been known as peel-throated in Northamptonshire for many years, he doubtless means the lambs got by the West Country horned sheep. This breed, in all probability, is the lineal descendant of the old horned, whitefaced Wiltshire, which a century or more ago was brought to the Midland and Home Counties in great numbers, but was gradually improved out of existence so far as its general appearance was concerned, and developed into the modern Hampshire. In 1835 Low, in his "Domesticated Animals," gave an illustration of what was regarded as the last pure-bred Wiltshire sheep, as no one had trace of any which had not been subjected to crossing. However, a few years ago Professor Winter, of Bangor, met with a strain of sheep in Wales which possessed all the characteristics of the old Wilts breed; and there is good reason to believe that this little colony is an offshoot of the original Wilts, which, having got outside the area where they were generally kept, was overlooked as that time. Lamb raisers in Northamptonshire and a few other places long since found that the offspring of rams of this breed were well suited to fatten for the early lamb market; and so far as the existence of these sheep was concerned it was little known of in other parts. Rams of this breed are occasionally advertised as being for sale; but if our correspondent cannot find one to suit his convenience, no doubt Prof. Winter, of the University at Bangor, who takes much interest in this breed, will help him.

THE term West Country as applied to sheep was used in Beds, Herts, and other counties within the last thirty years to denote the origin of sheep, which originally was similar to those now only found in Wales. By this time they had become for the most part blackfaced, but they were not pure-bred Hampshires or Oxfordshires, but rather sheep in a transition state, which were losing most of the features of the original Wilts. Nowadays, people get their sheep from the West Country, but they are not West Country sheep in the sense that they used to be, for the term no longer conveys the same idea that it then did.

WOULD the West Country horned ram mate well with Radnor ewes? is another query. There is no reason why they should not. Both breeds were originally heath breeds—for a down is a heath—and the pasturage of the Radnor and Montgomery hills was typically heath land before the land was enclosed under the Enclosures Act; in fact, all rough open country making commonage appears to have developed a heath breed, some horned and some hornless, some whitefaced and some coloured, but practically all having a common origin, but varying in type through indigenous conditions. The common origin has the effect of

permitting all these breeds to intercross with success; the measure of success being, of course, dependent upon the skill exercised. The old Radnor sheep was developed on the higher hills, but so long ago as seventy years had been freely crossed with the Shropshire and other breeds of the low country, and has become a breed suitable to conditions varying greatly from those in which it was originally raised; and its usefulness has been greatly extended. The ewes take the ram much earlier than the cold climatic conditions under which they were mixed might suggest. The old Wiltshire or West Country and the Radnor would undoubtedly make a profitable cross.

A QUESTION arises whether the Suffolk should not be a more profitable sheep for the querist, who lives in a dry climate. It would cross all right with the West Country, and the cross would show plenty of throat-peeling; beyond that, however, he would get excellent lambs, and great freedom from foot-rot.

AT this time there is special interest in the Welsh sheep, because the Welsh breeders have just brought out a Welsh Mountain Flock Book, dealing with another type of sheep than the Radnor or Kerry Hill breed. Probably no society ever had so difficult a task in establishing a flock book, because in doing this they have to determine what features constitute a Welsh sheep. Moreover, the white or pink nosed, soft woolled Welsh sheep differs very widely from most British breeds, and is supposed to be of Celtic origin. In the unimproved state they have lengthened hair beneath the throat, like a beard; a thin neck thrown back like an antelope or deer, long tail, a wool peculiarly adapted by its softness and tenacity to the manufacture of flannel; the horns slender and slightly curved and bent backwards in the rams, and in the females generally missing, as they are generally in the rams; generally, but not always, whitefaced; light forequarters, and long, sloping hindquarters. The Anglesey sheep was much of this type, but generally a better animal, because of the more favourable conditions it experienced. The improved sheep are the result of selection and crossing, some of the crossing dating back to the earlier days of sheep improvement. The evolution of the breed has reached a critical stage because, at a time when the Flock Book comes into existence, the type is not unanimously fixed upon, and in the showyard several types may be seen, each one in the opinion of the breeder that which is best suited for his soil, climate, and requirements; and it is quite possible in his conditions each one is best. The question to be solved is, which of these, or which amalgamation of these, will be best suited over the greatest area; what features must be eliminated and which developed; whether it is best to try to make this breed, which, in its native form, differed from every other British breed, such as will conform in outline and type with our other short-woolled breeds, or whether it shall

retain its indigenous characteristics with the mere development of its good features and gradual eradication or submerging of its less desirable features? Beyond this there is the altered conditions of food supply and adaptability to utilise this to the best to be considered; as also the fact that in some places the supply of food, rainfall, soil, &c., differ from others; and how far the sheep suited to the most favourable conditions of food and climate should be allowed to dominate those where conditions are less favourable. Evidently, from the variation in type under different skilled breeders, many of these features are not being unnoticed. Of course, it is not difficult by continued crossing

Mr. C. N. SKINNER,
Shortlands, Kent.
BREEDER OF EXMOOR SHEEP.

to get a type which will make a more taking appearance, and conform more to what in other breeds has become to be regarded as a model to be aimed at; but in dealing with a totally different type of animal it may not be the best in the circumstances in which the greater number of the sheep will have to be kept. Possibly each breeder will fight for his own hand according to his own views, and in the multitude of counsellors wisdom should be found. But no breed society has ever been faced with greater difficulties, because the area over which the breed is spread offers such a variety of differences in soil, climate, &c. Therefore nothing should be done over-hastily; and it may be remembered that in improving the form of an animal injudiciously the utility of the animal may be lessened.

The Liskeard Sheep Sale Dispute.

At a meeting of the Liskeard Town Council held on Tuesday, the following resolution was adopted:—"That proceedings be taken under the Markets and Fairs Clauses Act, 1847, against the gentlemen named for selling, or offering for sale, rams on Monday, August 13, at a field near the railway station, Liskeard; that the General Purposes Committee be empowered to take such other legal proceedings against such person or persons, or company, as may be decided, for selling, or exposing for sale, rams in the field at the railway station on that day; and also that the said committee be authorised to take such other legal proceedings against any person, or persons, or company, taking part in the sale, as the committee may decide upon."

The Mayor remarked that they had decided to take legal proceedings, not with the idea of making any vindictive distinctions, but simply with the idea of taking three typical cases. Proceedings would be instituted against Mr. E. W. Boly, the local hon. secretary of the Flock Book Society; Mr. F. M. Sobey, an auctioneer; and Mr. W. F. Sobey, a vendor.

Birmingham Shropshire Sheep Sale.—Messrs. Lythall and Walters will conduct this important sale in Bingley Hall on Thursday, the 23rd inst. Entries have been made by many of the leading breeders, and several prize winners will be offered. Catalogues may be obtained from the auctioneers, Bingley Hall, Birmingham.

EXMOOR SHEARLING EWES.

The property of Mr. C. N. SKINNER, Shortlands, Kent. Winners of First Prize at the Royal Show.

If SHEEP DIPS were more extensively advertised, there would be a far wider distribution of the trade. The "Mark Lane Express" is a good medium for such.

SHEEP SALES AND FAIRS.

Mr. Harris' Hampshire Downs.

The annual sale of Hampshire Down ram lambs from Mr. W. M. Harris' Long Sutton flock, held at Basingstoke by Messrs. J. Harris and Son, drew a large company of buyers, and a satisfactory sale resulted, sixty-four lambs out of the sixty-five catalogued being let or sold at an average of £8 9s. per head. No. 1 lamb for letting six weeks was secured by Mr. Carey Coles, of Winterbourne Stoke, at 32 guineas; No. 2, to let for similar period, by Mr. J. Falconer, Long Sutton House, at 38 guineas; and amongst the principal purchasers of others were Mr. C. Cox, for Capt. Dalgety, at 16 guineas, 11 guineas, and 8 guineas; Mr. R. H. Cholmondeley at 16 guineas; Lord Carnarvon at 14 guineas; Mr. Baigent at 11 guineas, 10½ guineas, and 7 guineas; Mr. George Judd at 12 guineas and 10 guineas; and Mr. Davis, for Sir George Cooper, Bart., at 9 guineas (twice). Other purchasers paid from 5½ to 10 guineas.

The Honington Suffolks.

Messrs. S. and F. Traylen's Honington flock of Suffolk sheep was, in consequence of the farm having been given up, dispersed by auction on the 10th inst. at Thurston. The flock was established in 1898, and has attained considerable notoriety by virtue of the marked success of its produce at shows in various parts of the country. Mr. A. Lucy Scott, who conducted the sale, referred to the excellent qualities of the sheep which he had to offer, and he gave some particulars as to the origin and achievements of the flock. A small lot of eight shearing ewes (sucklers) were first offered, and they realised 65s.; two lots of ten two shear ewes went at 70s. and 67s.; whilst three shear ewes made from 65s., and full-mouthed ewes 62s. There were but four ewe lambs, one lot going at 48s. The ram lambs realised from 7½ guineas and 6½ guineas; some choice wether lambs going at 42s. and 40s.

Lord Ashburton's Hampshire Downs.

An important sale of Hampshire Down sheep was held by Messrs. James Harris and Son, of Winchester, on the Alresford fair ground, on the 9th inst., for there they disposed of one of the famous Grange Estate flocks, viz., that from Swarraton Farm, as well as drafts from the registered Brown Candover and Chilton flocks. The whole belonged to the Right Hon. Lord Ashburton, and were famed for their quality and pure breed. The sale of the whole of the Swarraton flock was therefore a matter of considerable moment, and created wide interest among sheep breeders and agriculturists generally. The demand for the sheep was very brisk, and, considering that they were brought up in stock order only, the sale was generally regarded as a very satisfactory one.

The Swarraton flock was first disposed of, the sale opening with 150 two-tooth ewes, in alternate lots of ten and twenty, which realised from 54s. to 76s., and averaged 58s. 7d. Mr. Rand (for Sir George Cooper, Bart.) bought at the top figure. Four-tooth ewes, of which 130 were offered, made from 56s. to 76s., averaging 61s. 8d. Mr. W. V. Allen, of Popham, bought at 76s., and Mr. Rand at 74s. The two-tooth and four-tooth ewes were sired by rams from Mr. J. H. Dibben and Mr. A. F. T. Drake. Six-tooth ewes, to the number of 120, made from 55s. to 70s., averaging 62s. 2d. Mr. Hall (for Lord Carnarvon) and Mr. Rand purchased at the top price, and Mr. Waters at 67s. and 59s. Eighty full-mouth ewes made from 45s. to 57s., the average working out at 52s. 1d. Mr. Pickard, of Chapman's Ford, being the principal purchaser. The sale of the Swarraton flock ended with the offering of 190 ewe lambs, sired by rams from Mr. A. F. T. Drake and 11 rams of his own breeding. These brought from 37s. to 47s., and averaged 40s. 8d., Mr. Hall buying at 47s., 45s., and 43s.

From the Brown Candover flock sixty two-tooth, forty four-tooth, and thirty six-tooth ewes were sold with the following results: Two-tooth ewes made from 52s. to 53s., the four-tooth ewes made from 48s. and 50s., and the six-tooth ewes sold at 47s. and 48s. Of the ewes from the Chilton flock the top price was obtained by ten splendid two-tooth ewes, which were bought by Mr. A. E. Hambro at 82s.; who also secured another pen at 75s.; while Mr. Alan Arnold (for Mr. R. H. Cholmondeley) purchased a pen at 62s. Thirty four-tooth ewes from the same flock made 55s. to 62s., whilst thirty six-tooth ewes realised from 51s. to 58s.

Sale of South Devons at Liskeard.

Unusual interest was taken in the third annual sale of registered South Devon rams in a field near Liskeard Railway Station on Monday, by reason of the threat of the town council to take proceedings against anyone taking part in it. The council had previously refused to grant permission to hold the sale in any other place, but the market, constructed at great expense in the centre of the town, and instructed the town clerk to point out

that the Markets and Fair Clauses Act, 1847 (adopted by the Council), provides that every person who sells or exposes for sale in any place within the borough anything in respect of which a toll is payable to the market authority is liable to a penalty of £2.

Mr. F. M. Sobey, one of the auctioneers, said the statement had been made that by holding the ram sale in the field they seriously affected the trade of Liskeard, at which there was laughter, whilst the question as to whether he was right or wrong in his opinion that the action of the Liskeard Town Council would affect the sales of Liskeard more than any sales at the station, brought shouts of "Right."

The sale passed off without any untoward scenes, and proved a successful one, there being a good demand for the better class of rams. The highest price realised was 21½ guineas, given by Mr. T. Roskilly, Truro, for the pick of the consignment from Mr. H. Sobey, of Pensilpe, Liskeard. There were seven others from the same flock, and one fetched 14 guineas, another 11½ guineas, and a third 10½ guineas, the others ranging from 9½ to 6 guineas. Five out of the consignment of nine from Mr. W. F. Sobey, Trenant, Menheniot, were also sold at sums ranging from 15 guineas to 6½ guineas; Mr. P. G. Brown, Tremadur, Duloe, got 17½ guineas for one of his nine, 11 guineas for another, and an average of 9½ guineas; Mr. E. W. Body, Twelvewood, Liskeard, sold one at 15 guineas, another at 10, and others down to 7 guineas; a consignment of nine from Mr. P. G. Brown, Tremadur, Duloe, was sold at the average of 9½ guineas, the top prices being 17½ guineas and 11 guineas; whilst four belonging to Messrs. J. P. Matthews and Sons, Blerick, Antony, averaged 10½ guineas, top price 14 guineas. Other lots sold up to 7½ guineas.

Lewes.

A sale of Southdown ram and ram lambs was held at Lewes, on Monday, by Mr. J. R. Thornton, who brought under the hammer a choice selection from various herds, and with a good attendance of buyers, satisfactory prices were realised. Of the Duke of Devonshire's Eastbourne flock shearing rams were sold to Sir J. Blyth and Mr. G. S. Harris Hailsham, at 7½ guineas and 10 guineas respectively; two six-tooth rams, the property of Mr. J. Kenward, Hamey, were purchased by Messrs. J. and H. Robinson, Iford, at 10 guineas and 9 guineas. The Hon. T. S. Brand paid 10 guineas each for two shearing rams, the property of Mr. Allan Cooper, Bishopstone, shearing rams from the same flock going to Mr. H. Willett, J.P., at 11 guineas, 5 guineas, and 4½ guineas; whilst Mr. Watson, Framfield, bought a shearing ram, the property of Mr. A. Heasman, Littlehampton, for 12 guineas, and two others at 7½ guineas apiece. Others sold up to 7 guineas.

Britford.

Britford Sheep Fair, one of the most important held in the South, took place on Monday, when some 28,000 Hampshire Down sheep were penned, this being about an average number. There was a large attendance of buyers and flockmasters, and trade was up to the average of other fairs in the district, the prices for young store lambs being rather higher than at Salisbury fair. Messrs. Waters and Rawlence held their annual sale of Hampshire Down ewes and lambs at the fair, the entry comprising upwards of 13,100 head. The trade throughout was well maintained at fully late prices. Regular draft ewes made from 42s. 6d. to 55s.; draft ewes, one year over age, but fit for breeding, 37s. 6d. to 43s. 6d.; grazing ewes, 31s. to 41s.; two-tooth ewes, best, 48s. to 57s. 6d.; smaller, 42s. to 47s.; mixed young ewes, 41s. to 48s.; best wether lambs, 42s. to 46s. 6d.; working ditto, 31s. to 40s.; ewe lambs, 31s. to 45s.; mixed lambs, 27s. to 37s. Eight lots only out of upwards of 200 were unsold, and quite reaching the owners' estimate of value. The same auctioneers also disposed of some valuable consignments of ram and ram lambs, details of which are appended:

Mr. J. Flower, Chilmark, Salisbury sent 100 grand ram lambs and 100 full-mouthed ewes, which were of the usual high standard of the flock, and met good competition. Nine lambs were first lot at an average of £70 10s., Mr. C. Coles hiring No. 1 at 180 guineas; Mr. J. Judd No. 2 at 60 guineas; Mr. Hurford (for Mr. T. F. Buxton) No. 3 at 135 guineas; Mr. C. Stanford (for Mr. Hulse) No. 4 at 16 guineas; Mr. Asprey (for the Marquis of Winchester) No. 5 at 44 guineas; and No. 6 at 38 guineas, Lord Rothschild; No. 7 at 34 guineas; and No. 9 at 105 guineas; Mr. Richards No. 8 at 44 guineas. The chief buyers and prices for lambs were:—Mr. Matthews, 34 guineas; Mr. Irons, for the Hon. D. P. Bouvier, 32 guineas; Mr. Crosland (for Sir A. Henderson), 32 guineas; Mr. Joyce, 32 and 14 guineas; Mr. Goldsmith, 24 guineas; Mr. G. B. Allen, 30 and 13 guineas; Mr. Eveleigh, 24 guineas; Mr. Harding (for Sir W. G. Pearce, 21 guineas; Mr.

Brook (for Mr. S. Darling), 21 and 18 guineas; Mr. Canning (for Messrs. Bates, C. Morris, &c.), 16, 14, 13, and 11 guineas; Mr. A. Edwards, 18 guineas; Mr. H. Hitchings, 17 and 9 guineas; Mr. W. Green, 18 guineas; Mr. Treble (for Colonel Le Roy-Lewis), 17, 14, and 13 guineas; Mr. T. L. Mills, 18, 17, twice, and 12 guineas; Captain Glen Kidston, 19 guineas; Miss Parker, 19 and 13 guineas; Mr. C. Stanford, 23 guineas; Mr. Reynolds, 19 and 11 guineas; others realised up to 15 guineas, and the average of 9s 9lbs let and sold was the good one of £20 10s. The 100 full-mouth ewes made an average of 68s., the Hon. D. P. Bouvier's agent buying at 70s. (twice), 68s., and 60s.; Lord Rothschild's agent at 88s., 84s., 80s., and 76s.; Mr. Treble (for Mr. Christian) at 60s.; Mr. H. White at 60s.; and Mr. H. P. Taunton at 53s.

Mr. H. J. Hulse sent fifty nice quality ram lambs from his Breamore House flock, but unfortunately buyers appeared to have been already served by the large number of rams sold in the fair, consequently a considerable number of this lot remained unsold. Those disposed of made 15 guineas (twice), 14 guineas, 10 guineas (thrice), to 6 guineas.

Mr. A. F. T. Drake, a regular contributor to the fair, had forward a choice selection from his Dogdale flock, which he let with a good trade, the average for eighty-seven let and sold being £14 0s. 6d. Six lambs were first let as follows: No. 1 to Mr. Notley (for Mr. Holman), at 50 guineas; No. 2, Mr. Coles, at 32 guineas; No. 3, Mr. Blackwell, at 40 guineas; No. 4, Mr. Philippi, at 20 guineas; Mr. Bishop, No. 5, at 14 guineas; Mr. M. Walis, No. 6, at 10 guineas. Of the selling lambs Mr. Notley bought at 42 guineas; Mr. E. Hambro's agent at 44 guineas and 30 guineas; Mr. C. Bagg at 29 guineas, 26 guineas, 17 guineas, and 11 guineas; Mr. Newland (for Major Chichester) at 30 guineas and 20 guineas; Mr. Rossier (for Capt. Glen-Kidston) at 20 guineas; Mr. Philippi at 26 guineas, 23 guineas, 18 guineas, and 13 guineas; Mr. Blackwell at 23 guineas; Mr. Cox at 18 guineas; Mr. Greenfield at 19 guineas; Mr. Rose (for Mr. W. Nicholson) at 20 guineas, 18 guineas, 15 guineas, 13 guineas, &c.; and Mr. Stevens (for Mr. Thursby) at 25 guineas, others making up to 18 guineas.

Messrs. Waters and Rawlence also offered thirty lambs from Mr. W. C. Young's sale, and they made from 16 guineas, average 45s. 3s.; whilst twenty lambs from Mr. G. B. Desai's Homington flock sold at an average of 45 17s. 6d. each, the range of prices being from 15 guineas down to 5 guineas.

The Leonfield Lincoln Longwools.

On Wednesday about eighty Lincoln Longwool shearing rams from Mr. R. B. Fisher's Leonfield flock were sold by auction by Messrs. Sugdon and Pearce Brown. The flock being so well known for its high class quality, the sale naturally attracted a very large company of buyers, and with competition keen satisfactory prices were realised. The pick of the sale fell to Mr. Crook, who was buying for the Argentine, and when he wanted an animal he was not to be denied. For instance, he outbid Mr. Dudding for an excellent specimen of the breed, by Dowsby Return, but not until he had offered 150 guineas. Mr. Crook also gave 84 guineas for another beautiful specimen, and other prices paid by him were 40 guineas, 38 guineas, 36 guineas, and 30 guineas. Mr. W. Taylor Sharpe, Baumber Park, had to bid 85 guineas before he could get a fine upstanding roan by Dow-by Return; Mr. E. Dixon, Brandesburton, was a purchaser at 70 guineas; Mr. Savage, who was buying for the Argentine, gave 41 guineas, 38 guineas, 30 guineas, and 25 guineas, whilst other purchasers at high prices were:—Messrs. P. and G. Hughes, Buenos Ayres, 37 guineas and 30 guineas; Mr. Jackson, Bridlington, 37 guineas; Mr. T. Crompton, Nafferton, 25 guineas; Mr. H. Dudding, Riby Grove, 32 guineas; Mr. J. E. Casswell, Loughton, 55 guineas; Mr. Beck, Kirmington, 51 guineas, 44 guineas, and 31 guineas; and Mr. E. Money, Silk Willoughby, 50 guineas. The average per head for the eighty rams was the fine one of £24 12s.

Newingreen.

Messrs. W. and B. Hobbs' annual sale of lambs at Newingreen, Kent, took place on Wednesday, when the entries numbered about 9,000, and included some first-class animals. There was a good attendance of buyers, and the demand proved satisfactory. The top price of the day was made by a pen of Kent ewe lambs of Mr. W. Long's, these fetching 37s., while other pens of the same breed fetched 31s. and 26s. 6d., and his wethers made 27s. 6d. and 29s. 6d. Mr. J. King-mill entered a fine run of 404 half-breds, which made from 21s. 6d. to 33s., and averaged close upon 28s. 6d. per head right through. Other sales included the following:—145 half-breds of the exors. of the late Mr. Wm. Long, 26s. 6d. to 32s.; 270 crossbreds of Mr. F. Hobbs, 21s. to 25s. 6d.; 180 Kent wethers of Mr. F. Hobbs, 22s. to 26s. 6d.; 100 half-breds of Mr. F. B. Brett's, 25s. and 32s. 6d.; 150 Kent ewe lambs of Mr. Dee Swaffers, 29s. 6d. to 26s. 6d.; 150

Kent wethers of Mr. Dee Swaffers, 17s. to 26s. 6d.; 210 half-bred Southdowns of Mr. F. G. Smith's, 21s. 6d. to 28s.; 100 half-bred Southdowns of Mr. F. S. Uden's, 24s. to 26s. 6d.; 150 cross-breds of Mr. F. Hammon's, 27s. 6d. to 31s.; 220 cross-breds of Mr. H. Long's, 24s. 6d. to 27s. 6d.; 100 of Mr. W. Johnson's Kent ewe lambs, 22s. 6d. and 26s.; 100 of Mr. W. Johnson's Kent wether lambs, 22s. and 25s.; ninety of Mr. T. Rolfe's Kent ewe lambs, 26s. and 31s.; ninety of Mr. T. Rolfe's Kent wether lambs, 25s. and 28s.; sixty of Mr. T. Rolfe's half-bred lambs, 24s. and 30s.

Hereford.

A sale of sheep was held at Hereford Cattle Market on Wednesday by Mr. W. Pye, who brought under the hammer about 450 Shropshires and cross-breds, and they met a good demand. The top price for cross-breds was 42s. 6d., which was given for Mr. Nott's lot, the other prices ranged from 30s. 6d. to 31s. The sixty-six Shropshire yearlings belonging to Mr. P. Coats averaged 47s. apiece, while 45s. was paid for those put in by Andrews, of Lower Lyde. Other prices were 44s., 43s., 42s. 6d., and 38s. 6d. It was generally expressed that young sheep made 2s. to 3s. better prices than they did at the corresponding sale last year. Before the afternoon sale Mr. Pye sold 200 store lambs. One hundred of these belonging to Mr. Matthews (Hollington) averaged 33s. apiece, and were sold by Mr. T. B. Smith made 32s. 6d., while the others averaged from 28s. to 30s. The whole lot met with a ready sale.

Mr. T. A. Buttar's Shropshires.

Messrs. A. Mansell and Co. on Thursday conducted the annual sale of pedigree Shropshire rams belonging to Mr. T. A. Buttar, of Corston, Coupar Angus, whose flock has a widespread fame, as was evidenced by the attendance of South American and Colonial buyers.

The fifty rams offered were a grand lot, big, well-boned, of grand style, and with excellent fleeces and skins. The flock holds a deservedly high reputation among connoisseurs of the breed, to which fact Mr. A. Mansell, the auctioneer, directed attention at the luncheon, where Mr. Simmons, Tasmania, presided. Although no phenomenal individual prices were realised this year, the bidding was brisk and even throughout, and for fifty rams the sum of £611 2s. was drawn, giving an average of £12 4s. 6d. per head. Mr. Bell, South America, paid the top price, 32 guineas, for a shearing ram, Mr. G. Russell, Luddlin Links, giving 31 guineas for another; Mr. R. Taylor, Pletieve, purchased a two shear ram at 30 guineas, whilst Mr. Middleton, Arbroath, gave 21 guineas. These were the only prices over 20 guineas, the other figures ranging from 17 guineas to 63 guineas.

Mr. E. Henty's Southdowns.

The entire prize-winning flock of pure-bred Southdown sheep (No. 47 in the Southdown Flock Book), the property of Mr. Edwin Henty, Ferring Grange Farm, near Worthing, was dispersed by auction on Friday by Messrs. John Thornton and Co. The weather was unfavourable, but there was a large attendance of buyers, and, on the whole, the results of the sale were satisfactory. The auctioneer pointed out that the flock has a foundation which was the most Sussex all through, and regretted that it should have to be dispersed in its entirety.

Some good prices were realised for ewes, the average for four-tooth and six-tooth being about 80s. One lot of five yearlings was sold at the high figure of 115s., and another similar lot at 100s., Mr. Maitland, of Eastbourne, being the purchaser. Rams sold fairly well, but trade in ram lambs was slow. The highest price for rams was 20 guineas, given by Mr. Julius Verner for the four-tooth ram which had won at the Royal, Royal Counties, and other shows; for yearling rams 15 guineas was the top figure, others selling at 13 guineas, 12 guineas, 11 guineas, and down to 7 guineas; whilst ram lambs sold up to 73 guineas.

The Brize Norton Oxfordshire Downs.

A large and representative company assembled at the Manor Farm, Brize Norton, Oxfordshire, on the 8th inst., for the sale of the far-famed and very old-established flock of pure bred Oxfordshire Down sheep of the late Mr. John Worley, the sale being on account of the executors relinquishing the farming business at Michaelmas next. The catalogue comprised sixty ewes, fifty-five four-tooth ewes, forty six-tooth ewes, eighty-four full-mouth ditto, four shearing rams, 108 ram lambs, and 100 ewe lambs. The luncheon was partaken of from eleven till twelve in a spacious marquee near the sale-ring, and punctually at twelve o'clock Mr. Frank Jones (Franklin and Jones, Oxford) mounted his rostrum, and after a few usual introductory remarks, proceeded with the business of the day. From first to last the keenest competition took place, it being interesting to note that the whole of the 167 lots were disposed of in two hours and ten minutes. The following were the prices realised:—Thieves, from 3 guineas to 53 guineas per head—average, £1 15s. 4d.; four-tooth ewes, 4 guineas to 43 guineas per head—average, £4 10s. 8d.; six-tooth ewes, 4 guineas to 7 guineas

per head—average, £3 6s. 4d.; full-mouth ewes, 23 guineas to 43 guineas per head—average, £3 10s. 7d. The four old sheep made 9, 9s., 12s., and 18 guineas per head. Ram lambs made from 33 guineas to 39 guineas, several realising 153 guineas, 13 guineas, 12 guineas, 11 guineas, 10 guineas, 10 guineas, 9 guineas, 8 guineas, 6 guineas, and downwards, the average of same being £3 3s. 2d. The 100 ewe lambs, from 33 guineas per head down to 50s., or an average of £3.

The Ottringham Grange Hackneys.

On Thursday next, the 23rd inst., just over fifty of Mr. J. Clappison's well-known Yorkshire Hackneys will be sold by auction at Ottringham Grange, Hull, the auctioneers being Messrs. R. R. Leonard and Son, and Messrs. G. Tanton and Son. Mr. James Clappison is one of the best known breeders of Yorkshire Hackneys, and many notable animals have come from the Ottringham Grange Stud, notably Appaloosa, sold for 1,000 guineas; Lady Gordon, 360 guineas; Lady Newsham, 300 guineas; Daisy Bell, 210 guineas; and at the last sale, Grange Forest Maid, and Ardath, 165 and 135 guineas, &c.

The animals to be sold on Thursday are by the noted sires Garton Duke of Connaught, St. Thomas, Goldfinch VI, St. Anthony, St. John, Langton Connaught, Lord Kimberley, Gentleman Jack, &c., and will doubtless meet with keen competition. The mares and fillies are specially attractive, being of the best Yorkshire strains, invaluable for brood mares. The colts, too, have great character, action, and breeding, there being several of both sex, that give promise of a highly satisfactory career in the show ring. The geldings are an interesting feature, being well bred with plenty of size and quality. The sale will commence at 12.45.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

Kinsale Fair, co. Cork, held August 15.—Average supply of cattle; demand slow. Yearlings, 1st class, £7 15s. to £8; 2nd class, £7 to £7 2s. 6d.; 3rd class, £4 10s. to £6. Two years old, 1st class, £10 5s. to £12; 2nd class, £8 10s. to £9 10s.; 3rd class, £6 15s. to £7 10s. Springers, 2nd class, £11 10s. to £12 15s.; 3rd class, £9 5s. to £10. Small supply of sheep, demand good. Lambs, 1st class, £1 7s. 6d. to £1 11s.; 2nd class, £1 0s. 6d. to £1 5s. Over twelve and under twenty-four months old, 1st class, £2 to £2 2s.; 2nd class, £1 12s. to £1 10s. Young pigs averaged 21s. each.

Messrs. J. Thornton and Co. announce the sale of a number of Mr. G. J. B. Chetwynd's Dexter cattle and Berkshire pigs at Wyndthorpe, Doncaster, on Friday, the 31st inst., and on the following Friday the dispersal of the late Mr. J. P. Cross's famed herd of Shorthorn cattle, at Calthorpe Towers, Rugby. Catalogues can be had on application to Messrs. J. Thornton and Co., 7, Princes Street, Hanover Square, W.

Pig Markets Closed.—Owing to the prevalence of swine fever in the Holland Division of Lincolnshire, the Board of Agriculture has issued an order closing all the South Lincolnshire pig markets as from Saturday. The order will affect the whole of the administrative county, except the Hundred of Skirbeck, north of Boston. The markets closed will be Spalding, Holbeach, and Long Sutton in the south of the division, and Donington and Boston in the north.

Harvest Pests.—In consequence of the continued dry weather in the Chiltern Hills district, "harvesters," or "harvest bugs," as they are more commonly called, are just now exceedingly numerous and troublesome. They infest not only the cornfields, but the parched herbage of the fields, and are particularly fond of the great variety of wild grasses and flowers on the hill sides.

The Midland Railway Company have issued a new series of picture postcards of the Peak of Derbyshire, including views of the interior and exterior of Haddon Hall and Chatsworth House. The series illustrates a few of the important places of interest included in the route of the new circular tour tickets, which can now be obtained at many of the principal Midland stations. The cards are printed in delicate colours and form an admirable souvenir of the Peak District. They will shortly be on sale at the bookstalls and in the postcard machines at the company's stations.

SITUATIONS WANTED AND VACANT.

Those to whom this column appeals, if identified in some way with agriculture, will have no difficulty in obtaining employment or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a nom de plume, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

CORN & SEED CRUSHERS

SEPARATE OR COMBINED WITH

BEAN & MAIZE KIBBLERS.

Turner's Crushers were awarded **First Prize** by the R.A.S.E. in 1873, and still retain the high reputation which they then gained for durability and general efficiency.

CATTLE.

Notes and Jottings.

JUST at the present time the bountiful harvest is the all-important subject of conversation amongst farmers, who for the time being have to leave the milk churns and the butcher's requirements out of consideration, but the milk supply will require to be reckoned with very quickly if contracts are to be kept going. At the moment milk cows, weight for weight, are worth vastly more than fat ones, and this has been the case now for several years, and so far as can be seen bid fair to become more pronounced as time goes on. With fat cows at scarcely more than 4d. or 4½d. per lb., they bring it but a very small sum as compared with the Down calves, at £22, or if a really good one, considerably more. Now is the time to repeat the oft-written advice to breed or buy good heifers of the dual-purpose type, and have two strings to your bow.

SUCH advice cannot be given too frequently, or, as the world has it nowadays, be too deeply rubbed in. If there is any possible means of keeping them, barren cows and heifers can be purchased now at ridiculously low down prices, and will lie aside at rough keep, costing but little for some weeks. Turn the milk with them at the first of October, after having taken care to buy only such as are correct in their udders, and there is no fear but a fair profit will result. It is true everyone cannot do this, but let those who can do it, not miss the opportunity. There are many farms and fields much more fitted to carry incalculable than to carry fatted stock, and the outcome is vastly in favour of the former than the latter in any season, especially upon such lands.

IN one of these notes recently we mentioned the Sussex breed of cattle as being worthy much greater attention than they have been receiving for a long time past at the hands of the general public as breeders, at the hands of feeders, and also at the hands of foreign buyers. After the remarks made it is very pleasing to find that at Earl Winterton's sale the record price of 35 guineas was paid for a yearling bull. This is very gratifying, as it proves distinctly the confidence patrons of the breed must have in their favourites, and a man seldom or ever places this great confidence in any project unless it is based upon actual proof of the benefit to be derived from that project, which project in this instance means the breeding of Sussex cattle.

AT a meeting of the Herd Book Society of that breed, too, matters appear to be progressing very satisfactorily. The number of members increases, the funds are flourishing, and the last volume of the Herd Book contains the names of 100 bulls and 605 cows with their produce. The breed, it will thus be seen, is strong enough to hold its own by itself without the assistance of the foreigner, which has been such a great help to our other most prominent breeds. As mentioned some time since, there is probably no breed of cattle in the three kingdoms that has improved so much within the past decade as these beautiful red Sussex cattle. It would take but little trouble and care, too, to convert them into a dual-purpose breed.

WITH regard to transforming our single-purpose half-breeds into dual-purpose cattle, the awarding of the third prize for dairies of cattle, given by the Royal Counties Society, to a herd of Herefords, and the award being made by so good and unbiased a judge as Mr. Arthur Hiscock, is ample proof that it only needs a little attention to bring these breeds of cattle up to a standard of the dual-purpose class that would more than double their value. If memory serves me correctly this same herd was similarly placed in last year's competition. The remarks of the judge, too, are worthy of especial notice. That gentleman says in his report: "I had no hesitation in awarding third prize to this herd, and I must mention it is of uniform type and in high condition, though only moderately kept."

THE last three words in these remarks have intense meaning. For a herd to win a dairy prize in such keen competition as that under notice is a great achievement under any conditions, but when it can be added that the herd is in high condition, though only moderately kept, the circumstance gains weight enormously. For a dairy herd to be in high condition when only moderately kept is in itself proof ample that the condition lies in the breeding of the animals, as does also the milk in this particular case. Many other herds of dairy cattle are seen from time to time in very high condition, but as the owner of one of these herds once observed to the writer, "the cost of that condition is incredible."

I READ a letter in your last issue that gives me intense pleasure—it is that referring to the export of Devon cattle in which the writer states that he has recently sold several Devons for export to Japan. One swallow does not make summer, neither does the fact that one breeder or exporter has shipped a few of these cattle to Japan alter the necessity for the note that was given upon Devons in these columns the other week, complaining of the neglect that that breed, together with one or two others, has been experiencing at the hands of exporters. If many of our foreign feeders knew the value of the North Devon they would be importing them by hundreds and not in little more than units, as is the case at the present time as represented by your correspondent.

ANYTHING in these notes that causes attention to be paid to any and every breed of cattle mentioned is for the ultimate benefit and welfare of those breeds. You cannot mention a breed as having suffered neglect at the hands of buyers or breeders without benefiting. Such mention leads purchasers, whether foreign or home buyers, to ponder over the matter as to why they have neglected them, with the result that they make up their minds to give them a trial, which in many cases leads to the sale of numbers of them. Perhaps the writer of that letter may not be aware that Devons were tried in Germany a few years ago and gave such excellent results that farmers there were most anxious to follow up the use of Devon bulls, yet no one appeared to have enterprise sufficient to speculate in sending out other animals.

THE writer obtained this information direct from the quarters whence these Devons had been used, and was delighted to hear that the produce of the Devon bulls on the native breeds with which they were used were so much more valuable than the original stock that they were most anxious to obtain more. A note exactly to this effect was contributed to these columns at the time. I have no doubt that were a small consignment of the breeds mentioned, Devons, Sussex, and Red Polls exported occasionally, even if when on the other side they were sold in the first instance at a loss, would end in a vastly increased trade and accompanied with profits.

THE Black Cattle Herd Book Society are becoming aware of this fact, and ere long it is pretty certain that some specimens of their breed will find their way abroad more than they have done in the past, and let these Welsh cattle give but as good results in the countries to which they find their way as they do on the marshes of Sussex and Norfolk, on the rich, sound pastures of the Midland counties, or in the turnip yards of their land of the ancient mountains and lovely valleys, and they will very quickly be wanted in hundreds, depend upon it. The Welsh breed, too, is quite one of dual purpose. Excellent milkers and great yielders of butter are oftentimes found amongst the hardy blacks.

I WAS pleased to read an article in one stock paper the other day referring to the use of the locust bean as a food for cattle. Having been a user of this food for more than forty years, I can only express astonishment that it is not more generally used, or used much more extensively than it is. Not only is it a very nutritious and much relished food, but it is cleanly and not wasteful, especially for use out in the fields during summer time. Many times have we seen great waste attending the use of cake when rain has fallen before the cattle have cleaned out their troughs, or through there being a little water in the trough when the cake has been given. There is nothing of this with the locust bean.

ANOTHER matter in favour of the locust bean as a food is when used whole or as it comes from the ship there is no fear of adulteration. In buying the meal there would probably be a risk of this, and adulteration now means a great deal. It means that you are paying for what you do not get. It means that very often you are paying several times over what the article is worth, and, most of all, it means that you are paying for and being at the trouble of giving to your cattle stuff that is not of one atom of value, even as manure. It is most essential, then, to take every possible means of ascertaining the purity of all cakes and meals used. Home grown produce (ground at home) is a very safe preventive of fraud by adulteration.

A Record Price for a Sussex Bull.

Owing to the herd having outgrown its accommodation, Earl Winterton decided to dispose of a number of his well-known Sussex cattle, and the sale, which took place at Shillinglee Park, Petworth, Sussex, on the 10th inst., proved one of the most notable of recent years, for a new record price for a Sussex bull was set up, viz., 135 guineas, as compared with 110 guineas the previous best on record. The bull that realised 135 guineas was Shillinglee Gold 2nd, calved June 5, 1905, and all agreed that in purchasing him Mr. J. Buchanan, J.P., Lavington Park, got one of the best Sussex bulls seen for many a year. Mr. W. J. Hadgate, Horsham, paid 95 guineas for another very fine specimen, namely, Shillinglee Gold 5th, calved July 23, 1905; Lord Leonfield bought a bull calf for 50 guineas, at which figure Mr. C. J. Lucas, J.P., Warnham Court, secured Shillinglee Gold 3rd, whilst for one guinea less Sunlight 8th was knocked down to Mr. Wildman Cauley, J.P., West Grinstead. Other animals sold up to 35 guineas, and the total realised by the sale was £1,100 18s. 6d. for thirty-nine animals, or an average per head of over 42s.; the average for the seven bulls and one bull calf was the splendid one of 50 guineas. Speaking at the luncheon prior to the sale, Lord Winterton mentioned that he had other cattle beside the Sussex, namely, Shorthorns, but he found that Sussex cattle, if turned out in the same fashion as Shorthorns, would "beat them into fits"; whilst Mr. Barker remarked that Sussex cattle are the only cattle that will enable a poor man to live in this poor country. They were to him what a pig was to an Irishman, they paid his rent, and he couldn't have lived without them.

Welsh Black Cattle.

With the object of improving the breed of Welsh black cattle, the Welsh Black Cattle Society propose to offer four challenge cups of 25 guineas value each for North and South Wales, open to farmers above £120 and those below, whilst Professor Winter will offer a 30 guineas challenge cup to be competed for by the winners of the smaller cups. These prizes are to be awarded to the breeders of the best herds of Welsh black cattle, the *bona fide* property of the competitors, and freeholders of not more than 200 acres would be eligible. The smaller cups may be won outright in three consecutive years, but the bigger cups are to remain each year for competition. Mr. Wynford Phillips, M.P., Lord Harlech, and Mr. David Davies, M.P., have each promised a smaller cup, and there seems to be no difficulty about getting the money. A committee has been appointed to arrange details.

The Buscot Park Herds and Studs.

The following shipments have been made from Buscot Park recently:—The Shorthorn bull, Buscot Victor, champion bull at the recent Notts County Show, and the two young cows to Buenos Aires. All these animals are by Wanderer's Prince, and the cows have calves, one by Missie's Crown and the other by Royal Pennant, both "Marr" bulls.

The following sales have also taken place:—Ten Hampshire Down ram lambs, and a three-year-old Shire stallion by Buscot Harold, for shipment to South America.

Mr. J. Aungier's Sussex Cattle.

A sale of a portion of Mr. J. Aungier's well-known herd of Sussex cattle drew a good company of breeders to the Home Farm, Lynwick, Rudgwick, on Thursday, and though prices did not rule so high as at Earl Winterton's sale, they were considered satisfactory. Lady Napier of Lynwick sold for 31 guineas to Mr. C. J. G. Hulkes, and Mr. P. Saillard bought Music 8799 for 30 guineas,

whilst many of the cows made well over 20 guineas. The catalogue also included sixty-eight fat Southdown sheep, which averaged out at 44s. 6d. per head, and fifty stags, which realised 42s. per head. Messrs. King and Chasemore were the auctioneers.

THE MELTON Constable celebrated Herd of Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cups Smithfield. Several recently exported for Continental and Colonial herds.—Apply **R. OWEN GODDARD**, Estate Office, Melton Constable, Norfolk.

HORSES.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

A WEEK or two ago I was speaking of Coach horses and Hackneys being shown together, and the subject brought to my mind rather a curious showyard incident which happened in the long ago. A well-known exhibitor, who rarely shows nowadays, though he sometimes officiates as a judge, bought a big, useful Thoroughbred horse. He was rather long on his top, as Thoroughbreds sometimes are, especially big ones that have not had time to develop fully. The gentleman "did" the horse well after he bought him, and sometimes he thought him a hunter and sometimes he was inclined to think that the barney qualities predominated. At any rate, a big show was coming on, and he solved the difficulty by entering the horse in the class for three-year-old Hunter geldings, and the class for three-year-old Coaching geldings. The class for three-year-old Coaching geldings was first judged, and here the horse won. Now the owner thought as the horse was entered he might just as well have a run for his money in the Hunter class. So he made all the haste possible to get his tail tied up, and just got him ready in time to get him tied into the ring. And he won in the Hunter class as well, so the question as to whether he was a Hunter or a Coaching horse was as far off being satisfactorily answered as ever. But next spring the question was finally solved, for the horse won a steeplechase in good company, and he was, I should think, the only steeplechase horse that ever won a prize in a Coaching class within eight months of winning a good race between the flags. The incident will be well remembered by some of my readers, but for obvious reasons I do not mention names.

I WAS at the house of a well-known breeder of Hackneys the other day, and the conversation turned upon the small shows of Hackneys there had been in Yorkshire during the year. At Driffield, at Milton, at Bridlington, at the Yorkshire there has been a considerable shortage, and this is the more remarkable inasmuch as there was a great show at the Agricultural Hall in March, one which was quite up to the high standard of any previous year, both for numbers and quality. But at all the shows in Yorkshire which I have attended this year, and I have attended a good many, this want of numbers in the Hackney classes has been very marked. Even where there was an exception to the rule, which was very seldom, the classes did not come up to one's expectations. My host gave it as his opinion that the reason is that there are fewer Hackneys bred. He tells me that in his district there are nothing like the number bred that there were a few years ago, and that the small breeders who kept a mare or two have tired of breeding Hackneys, and have devoted their attention to Shire horse breeding, which they say is a surer game, and, in the long run, more remunerative.

A CURIOUS thing in connection with the Hackney is that in other counties, such as Lancashire and some of the Midland counties, the improvement in the Hackney classes has been most conspicuous. And at the Hackney Horse Society's Show in March it was pretty evident that there is no great falling off in breeding Hackneys in the aggregate. Personally I was of opinion that the way in which a few horses have slipped out of this year was the reason of so many badly-filled classes. It is sufficiently disheartening to show time after time and get beaten; showing expenses are heavy, and there is little encouragement to men to keep showing when they know that they cannot win. I still think, in spite of what my host had to say, that there is something in this, and I scarcely think it likely that Hackney breeding should increase by leaps and bounds in other counties whilst it is dropping out in the county which to a great extent is its native home.

STILL, the shortage at the recent Yorkshire Show takes a great deal of accounting for, for the drop is such a big one. True, Middlesbrough is a considerable distance from the East Riding, in which Hackney breeding has been chiefly carried on; but that of itself is not sufficient to account for a drop from ninety-seven entries at Hull to fifty-four at Middlesbrough. And the latter number is a serious decline from the average of the five preceding years, which was eighty-two. But when one looked through the catalogue carefully one could not help asking the question why so many well-known breeders failed to be represented. In vain did one turn over the pages in the hopes of finding horses that made a mark at Linsington or at some of the big shows which took place earlier in the season. They can-

not all be sold—but they did not come to the Yorkshire. For instance, look what a big class of brood mares there was at Lancaster a week previously. At Middlesbrough there were four, two of the six entries being absent! I think after all "the form" must have had something to do with the falling off, from which it is to be hoped that there will be a recovery next year.

A VERY satisfactory state of things at the Yorkshire was the excellent show of Cleveland Bays and especially of Cleveland Bay mares. There were only six in the class, but all of them have done something, and Mr. F. Bateman's Woodland Rose, who was the winner, is one of the most promising young mares that has been seen out during recent years. This of itself is satisfactory enough, but it is even more satisfactory in the interests of the breed that the winner should hail from a south country stud, and should be a south country bred one. She was bred by Mr. H. C. Stephens at Cholderton. And it is cheering to learn from Mr. Bateman that the Midland farmers are appreciating the Cleveland Bay and the Yorkshire Coach horse, and showing their appreciation in a practical manner. If a few farmers were to take to the breed in the Midlands it would certainly be a great advantage to them, for the mares would be kept in the country. There are plenty of mares of both breeds to keep things going and to bring things back to what they were thirteen or fourteen years ago.

IN the meantime I would give breeders of Cleveland Bays and Yorkshire Coach horses a hint, and that is that they should take the trouble to break their horses in to harness. A typical harness horse, a Cleveland Bay or Yorkshire Coach horse, never appears to such advantage as when shown in his leather, and I am quite sure that breeders would find themselves well repaid for the little trouble they would be put to. After the Yorkshire Show I went about amongst some breeders, and at one place I found four handsome mares that had been sold at a good price to go to the Argentine. These mares had all been broken to single and double harness, and were two as good match pairs as one could wish to find. They were such, too, as would not be difficult for a dealer to sell in England. But if dealers would make the most of their horses they must provide the finished article or something more nearly approaching it.

IN what people are in the habit of calling the palmy days of the Cleveland Bay and Yorkshire Coach horse, Yorkshire farmers were in the habit of buying from small breeders foals and yearlings to graze, and many others used to take to Northallerton Fair, which was the great market for Coach horses, strings of a dozen three-year-olds like each other as peas in a pod, and not infrequently the whole lot would be sold to one man. Messrs. Wimbush were great buyers, and other London dealers came down and scoured the markets. But three-year-old geldings are scarcely such a ready sale as they were in those days, and if breeders would make the most of their stock they must adopt their methods to the altered conditions of the times.

IF Hackneys are not bred in such numbers as they were, as the gentleman I have quoted would have us believe, at any rate Mr. Clappison has managed to get a nice lot of Hackneys together. It is only three years since he had his last sale at Ottringham Grange, and on Thursday next upwards of fifty high-class mares and geldings, with one or two exceptions, of the Hackney breed will be offered for sale. It is needless for me to point out to those who know Mr. Clappison that he gets a fine class of horses together, and that there is sure to be found at one of his sales typical Hackneys with good pedigrees. A great many of the mares which Mr. Clappison owns strain back to that good horse Lord Derby II., who made Horderness famous, and of whom Horderness men are justly proud. The combination of Denmark and Lord Derby II. blood, which is frequently found in the pedigrees in Mr. Clappison's catalogue, is especially valuable, and it is getting scarce now. Intending purchasers have an excellent choice of the best blood at Ottringham Grange. THE LOOKER-ON.

Messrs. Sanders Spencer and Son, of Hollywell Manor, St. Ives, Hunts, have recently sold for exportation twenty-two bays and getts of the Large and Middle White breeds from their large herd.

VETERINARY PREPARATIONS.
and Small Articles of a Portable Character, will readily when brought regularly before the readers of the "Mark Lane Express."

The Kinvor Seed Farms.

The Kinvor Seed-Farms of Messrs. Edward Webb and Sons, of Wodeley, Stourbridge, and which we recently had the pleasure of paying a visit, looked at their best on this occasion. The season in that portion of the country evidently has not been so trying as in the eastern and south-eastern counties. It was at once apparent, from the crops at Kinvor, that rain had been much more frequent; in some cases even the storms had been so heavy as to partially lay the corn crops. The farms in the occupation of Messrs. Webb and Sons aggregate total in extent nearly 1,500 acres.

Visitors who have the opportunity of inspecting the Kinvor seed farms—and we believe we are right in saying that Messrs. Webb and Sons are always pleased to extend this courtesy to any agriculturists—cannot but be struck with the great expanse of land which is exclusively used for the production of stock seed and for the purpose of raising and improving varieties by cross fertilisation and selection.

The farms, lying as they do on the Red Sandstone, afford exceptional facilities for these operations; the land, it should be borne in mind, is by no means rich, and it has to be well farmed to give anything like fair results. The advantage of testing seeds on soil that is only of an average or even below the average is that no fictitious results are obtained, and when the seed is sown under normal farming conditions it will give results equal to if not better than the expectations of the purchaser.

Another feature of the Kinvor Seed Farms is the large extent to which trials are carried on, the varieties already on the market for which Messrs. Webb and Sons are responsible are grown alongside other strains, and their merits and demerits noted.

In connection with these trials there are at Kinvor to-day almost innumerable plots of different cereals, vegetables, flowers, potatoes, and other crops growing side by side, the object being to determine the best of its class. For instance, the trials include:—

Trials.		Trials.	
Wheat	58	Cauliflower and	30
Barley	49	Broccoli	63
Onions	96	Carrot	30
Peas	169	Swedes & Turnips	133
Beans	92	Mangold	44
Cabbage	42	Lettuce	40
Onions	81		

The wheats this year at Kinvor looked remarkably well; not only were they full in the ear and gave promise of giving an excellent yield, but what is more important nowadays, there was a good length of straw. Although heavy thunderstorms had been prevalent, practically none of it had gone down, and this feature of the cereals at Kinvor is one upon which too much stress cannot be laid.

The barley fields looked as well as ever we remember seeing them, and it is now some years since we first had the pleasure of visiting Kinvor Edge. Webb's Kinvor Chevalier promised an excellent crop; this barley, which was obtained from repeated selections, bids fair to maintain its high reputation for malting purposes. Points in which it excels is the large yield from thin seeding and for excellence of the grain, which is thin-skinned, bright, plump, and heavy. This variety, it may be remembered, beat all comers at the Brewers' Exhibition last year in competition for the world's champion prize. Another barley which is a great favorite on account of its earliness is Webb's Burton Maltster. This variety looked exceedingly promising standing on good stiff straw.

Oats promise a heavy yield, conspicuous among the varieties at Kinvor being Webb's Newmarket White Oat, which was obviously an enormous cropper. Webb's Black Tartarian fully maintains its popularity for yield and length of straw, while Stable King stood up well against the heavy rainstorms.

The section devoted to potatoes was interesting, for here no fewer than eighty different varieties were on trial, many of them being seedlings of considerable promise. We fear, however, that the late potato boom has rather made the public shy in this respect, and it will take some years for them to come into the market as purchasers of new varieties of potatoes.

Turning to garden seeds, there were several novelties which are likely to become popular in the near future. For instance, there was a new scarlet runner bean, averaging 7 in. long by 1 in. wide, while a new broad bean, which will shortly be put on the market, was an abnormal yielder of good flavour. There were also two new peas—Senator and Stourbridge Marrow—which looked full of promise; while a new tomato, which will be on sale next year, appeared to justify its claim of being a prolific yielder. Then the garden section also included 152 varieties of annuals, many of which were in bloom in the flower seed trial

grounds. Particularly noticeable among this lot were a very fine lot of stocks.

We are indebted to Mr. Edward Webb and Mr. Harcourt Webb for the admirable manner in which a rapid survey of the farms was arranged, so that no time was lost in viewing the salient features. A run through the Kinvor Seed Farms served to impress upon the minds of thinking men the necessity of getting good seed to start with. It seems a pity that so little importance is attached to this, as by growing from improved sorts bigger and better results can be obtained.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Rabbits and Rooks.

SIR,—I beg to ask for advice from your Barrister-at-Law if it is legal for me to shoot any poultry that comes on my land after I give the owner a caution? And also if it is legal for me or my son to shoot rabbits and rooks on my farm without a licence?

[It is not lawful for you to shoot rabbits or rooks without having a licence for that purpose, and I should not advise you to attempt to do it. The exception is in favour of an occupier of any lands using or carrying a gun for the purpose of scaring birds or killing vermin on such lands, or any person using or carrying a gun for the purpose only of scaring birds or killing vermin on any lands by order of the occupier thereof who shall have in force a licence or certificate to kill game or a licence under the Act. Rabbits, however, are not vermin, hence the necessity of a licence.—BARRISTER-AT-LAW.]

To any who are in any way dissatisfied with the cartridge they at present use, we would advise a trial of "Exceltor," which for cheapness and quality is held by many to be unsurpassed. It is manufactured by Messrs. Cogswell and Harrison, Ltd., 141, New Bond Street, and 226, Strand, London, W.C.

MISCELLANEOUS.

KEEP YOUR PIGS SO THAT THEY WILL KEEP YOU.—And undoubtedly the best way to do this is to mix with the food for each pig one of WILLSON'S CANADIAN PIG POWDERS once or twice a week according to the age. The result will astonish you. Sold in packets—7 powders, 6d., post free, 7d.; 16, 1s., post free, 1s. 2d.; boxes—48 powders, 2s. 9d., post free, 3s.; 144, 8s., post free, 8s.—Sole Proprietors, STEPHEN WILLSON, Peterborough.

VESICO SUDORIFIC is the most famous remedy in the world for curing Spinitis, Scabies, Ringworm, Sidelone, Capped Neck and Elbow, Curb, Windgall, Tumours, Strained Sinews, and Strengthening Legs of Horses without blemish or needing rest. Price 2s. 6d. to 5s., of chemists, or post free.—GREGORY & Co., Temple, Bristol.

PALATINE CAKES AND MEALS are maintained to a high standard. Good results made certain.—THE PALATINE OIL MILL, Liverpool.

JOHN PRIEST & SON, Ltd., Castle Iron Works, Bristol.

Root Competitions.

NOW that agricultural shows for the season are mostly over, attention is again being turned in the direction of the exhibitions of roots, corn, &c., which take place later in the year. Root and grain societies have been in existence in various parts of the country for many years, and doubtless they have done good in encouraging better cultivation of root crops on farms; but it is an open question whether the roots one sees at autumn shows are of the best type for general use on the farm. There is, in fact, a weakness on the part of many judges to go for size, but from a feeding point of view the medium size mangold or swede is better than a gigantic monstrosity, the like of which one often sees at shows. It would be interesting also to know the cost of the cultivation of some of the gigantic roots one sees at shows. We grudge nothing that is spent in actual tillage, but the amount of nitrate of soda and other costly fertilisers which some show roots get is quite out of proportion to their value, and, if extended to the whole acreage, hopeless loss would be the inevitable result.

Chemical Fertilisers.

WE learn with some regret that there is a prospect of chemical fertilisers being dearer next season, and the pity of it is that there is no scarcity of the products used for manurial purposes; but the demand is so great that the means at hand in the way of labour are not sufficient to keep pace with the supply. What a tale the above facts unfold if one cares to ruminate over them! It does not seem so very many years since a few enterprising farmers, who were looked upon at the time as cranks, set out to use chemical manure, while the champions of the dung cart looked on in wonder, and made all kinds of sarcastic remarks about that "patent muck" which they would have none of. But the "patent muck" had come to stay, and where would farmers be now without it? Every year the outlay of money in the purchase of slag, super, nitrate, &c., is looked upon as a matter of course, and the result is that the resources of those employed in the chemical manure trade are severely taxed. Naturally farmers will not welcome the idea of having to pay more for their fertilisers, but have them now they must and will.

THE Foreign Onion Trade. It is no uncommon sight in southern and western counties at this time of the year to see men attired in blue jerseys and peaked caps marching about with wreaths of onions suspended from staffs across their shoulders. You have no need to look twice at the men to

know that they are not English, and, as a matter of fact, they are Breton peasants who cross the channel every season and hawk their onions from door to door. Having just considered this point, now turn to the Board of Trade returns and note the amount of money we pay away every month for onions. If it were a case of oranges or bananas there would be no need to say a word, but onions will grow in Britain just as well as they will in Brittany at any rate. Just now, when there is such an outcry for the establishment of small holdings, one might safely urge onions as a crop that could be taken up. We do not know what Breton peasants pay for land, but if they can afford to grow onions, ship them across channel, pay their own expenses, and hawk them about this country, surely there is a chance for the small holder at home.

Harvest Bugs.

ALMOST every man you meet just now does not stand in conversation long before he commences to rub some part of his body, and, by way of an excuse for the operation, he informs you that he is suffering from "harvest bugs," "heat bumps," or some other local name that is applied to the cause of the irritation. You can sympathise with the sufferer, because ten to one you are suffering from the same complaint, which has been a real epidemic of late. No, they are not microbes which cause the trouble, neither is it fair to call them "bugs," because an enterprising authority has published the information that they are really mites, so diminutive that six of them together only make a dot smaller than a pin's head. By all good rights these mites should coalesce themselves to plants, but, as most people can testify from experience, they show a misdirected willingness to transfer themselves from plants to the human body. Rubbing and scratching are not much good, but the best remedies are said to be a little benzine or carbonate of ammonia applied to the spot, as these applications destroy the mite and the trouble ceases.

Kentish Lamb Sales.

ON the high road from London to Folkestone, and part way between Ashford and the fashionable watering-place mentioned, there stands a wayside hostelry. In the old days it might have been a stopping place for stage coaches, and, perhaps, at one time Excise officers baited their horses there when in quest of the

notorious smugglers who defied the authorities and carried on their nefarious traffic in the district. The place is called Newingreen, and if it is noted for one thing, it is the lamb sales that are held there at the fall of the summer. The spot is certainly a suitable one, for it is right on the main road; on one side a railway station is not far distant, and over the brow of the hill on the other that famous sheep grazing district known as the Romney Marsh stretches itself away for miles. In the neighbourhood of Newingreen on a sale day one can hear little but the bleating of sheep, and the motor cars which rush past on their way to Folkestone have to slow down whether they like it or not. Nine thousand head were disposed of at a recent sale, and this will give some idea of the magnitude of the trade done in lambs at this one quiet country spot.

Selecting Seed Potatoes.

COMMENTS are general just now about the failure of many patches of early potatoes this season to grow satisfactorily and produce a crop. Even varieties which are recognised as being the very best have failed lamentably in places, and it would seem as if more care will have to be taken in the selection of seed tubers. So prevalent is the "leaf curl" disease (which is the cause of most of the trouble becoming), that it seems almost useless to save seed potatoes from hot, light, and dry soils, as these conditions are most favourable to the evil referred to. The old idea that anything will do for seed is exploded, and the common habit of leaving seed potatoes on the ground to get green and hardened in the sun has nothing to recommend it. The fact that Scotch seed potatoes do so well on English soil is probably due, not so much to any conditions of soil and climate, but to the fact that the tubers are lifted before they are fully ripe, and the opinion of experts is that if properly selected and stored immature seed gives better results than tubers which are left to ripen in the ground or hardened in the sunshine. The other day we saw a man digging early potatoes and the crop was practically a failure through the curl disease. While deploring the fact that he would have no tubers to sell the man expressed some gratification at getting a nice lot of tubers for seed, and the idea never seemed to strike him that the progeny of his miserable plants might also fail in a similar manner.

Then and Now.

THE other day we chanced to speak to a wrinkled, cotton-bonneted old dame who was leaning over a gate watching a smart, brand-new reaper and binder rattling its way down a wheat-field, cutting and binding the corn and laying the sheaves in a long, straight

All Advertisements ordered for the "Mark Lane Express" appear simultaneously in the THIN paper COLONIAL and FOREIGN EDITION, for circulation abroad, WITHOUT EXTRA COST to the Advertiser.

row. "Lors, a mercy, wot one does live to see," said the old lady; "I be seventy-nine, and I was just 'a thinkin' o' the times as my old man—he's dead now—has swung a sickle in that field, and I used to glean enough in th' scason to nearly keep me in bread for th' winter. Bless you, these 'uns don't know wot work is. Many and many's the time as I've got up at four in th' morning, straightened my house up, washed and dressed th' children, took th' baby to a woman as use I to mind it for me for a shillin' a week, gone and done a day's work in th' fields, and then come home and done my washin'. Bless you, we did work in those days, and most of the stuff we had to eat come from th' vegetables we grewed in th' garden and th' pig in th' sty. Fresh meat didn't come my way very often I can tell you; but there, I'm seventy-nine, and can work as hard as some o' 'em yet."

Just then a big motor car rushed by, and as she rubbed the dust from her eyes the old woman exclaimed: "Drat them things, if we worked hard

in th' old days we could go about wi'out fear o' bein' suffocated and run over at every turn."

Co-operative Egg Sales. AN account appeared in these pages recently of the Framlingham Agricultural Co-operative Society, which makes a speciality of the egg trade, and during a period of six months the members benefited to the tune of £300 to £400, this being the difference between the prices formerly paid by dealers and those given by the society. Probably most of our readers read the account referred to, and we merely call attention to it here by way of emphasising that the fact that co-operation is no mere empty phrase. It is true that some people are inclined to make co-operation a hobby horse and ride it to death, but there are many ways in which, if properly applied, co-operation can be made a means of putting money into farmers' pockets, and the above illustration provides an instance.

British Possessions beyond the Seas AND THEIR London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

autumn session? Earl Carrington and Sir E. Strachley are both men possessed by a fine zeal. They have, in their first legislative and administrative career, shown this so effectively, and I will add, valorously, that they must have a little modified the suspicion with which the farming interest have undeniably regarded the Liberal party. Here is a new opportunity for their practical intent. A public sentiment must be aroused by these new revelations and suggestions.

A little flame is quickly trodden out;

Which, being sunder'd, rivers cannot quench.

Should there be supineness now, that sentiment may die from inanition.

Why not a Round Table Conference?

One need not enter into the details of the dispute which has re-arisen in connection with the question of railway charges on the carriage of fruit. One, too, need not profess to be a partisan of either Mr. Pratt or Mr. Hooper. The mere fact, however, that the discussion has taken place is to me, *prima facie*, an evidence that the recent report on the subject was too favourable to the railways. Perhaps, in our resentment not so much of actual incidents of the present as of the memories of older charges, we had at times permitted ourselves too vehement a denunciatory enthusiasm, and, perhaps, had become too sweeping and arrogant in our assertions. All the same, however, it would be impossible to have these assertions voiced in the manner that they have been this week without some basis for the publicity.

Might I make a suggestion with a view to the amicable evolution of a scale of rates acceptable to both interests. The railway companies may assert that they are quite competent to manage their own affairs without the invocation of external interference. Agreed; but the railway companies must also remember that they are in a measure acting under the authority of the nation. They have to receive the national approval to their schemes. They, therefore, owe some consideration to the community. Why not meet a few representatives of the fruit-producing, vegetable-producing, and general farming class. Let Mr. Hooper himself represent the first class, let a man of the distinction of Mr. Dennis (whose position in Lincolnshire has almost in this respect a national significance) represent the second class, and let a man like Mr. Stratton or Professor James Long, or Colonel Long, M.P., or Mr. R. J. Everett, M.P., or Mr. John Spear, ex-M.P., represent the third class. A mutual conference should do infinitely more good than miles of epistolary reprimand or the enunciation and rebuking of tons of accusations. The revival of this discussion is another evidence of how infinitely important to the interest it is that the new Railway Commissioner should be a man in touch with rural necessities and rural methods.

Bakewell August Fair, held last week, was not so largely supplied as was expected. There was a fair supply of good milch and in-calf cows, which sold readily at prices up to £22; secondary and inferior qualities from £15 to £17; barren and lying-off cows from £10 to £14; superior in-calf heifers from £14 to £17 10s.; stirks and steers, £7 to £11; yearling calves and young rough grazing stock ranged from £5 to £7 10s. The horse fair was limited. A few useful animals of the hack description and a number of young Welsh ponies attracted most attention, and realised fairly good prices for the time of year.

OIL and GAS ENGINES

are growing more than ever in demand, and would be still further "boomed" if regularly advertised in the "Mark Lane Express."

Agricultural Politics.

BY A LOBBYIST.

Mr. John Burns and his Rural Mentor.

Perhaps, naught has been more remarkable in modern politics than the practical sympathy which Mr. John Burns, the President of the Local Government Board, has exhibited with the wiser necessities of rural areas, and his refusal to be led away by mere unenlightened emotionism. I mean that probably naught has been more remarkable to those of us who have not comprehended every facet of this many-sided statesman. And yet, in a conversation which I had with the right hon. gentleman, I caught methinks a glimpse of the genesis of this very same intention! "When," said he—Mr. Burns was in a reminiscent mood—"I was eighteen or nineteen, I was sent to Rochford, in Essex, in connection with the fixing of a set of Rankin's engines, in some mills there. I went to lodge at the house of a labourer, who revealed himself to be one of the most original and natively-informed men I had met in my life. In the clearness of his observation, in the wisdom of his outlook, in his shrewd comments on economic conditions he greatly impressed me. I often got up an hour earlier in the morning in order to walk with him to his work and stay by his side whilst he did it; at night I would sit along with him as he fished by the dam. He was a kind of corduroyed Richard Jeffreys; his conversation was both a tonic and a corrective. It, perhaps, induced me to inquire whether certain of the assumptions I had in my youthful exuberance adopted might not well undergo revision. The memory of that man and his natural astuteness and quiet comprehension of actualities are with me to-day. I shall never forget him and his teaching. Perhaps the man and his lesson have been a greater unconscious influence than even I conceive." There was a softer note in Mr. Burns's voice as he paid his tribute to this unintended Mentor of his; the eye, too, became humid ere the tide of generous memory ceased to flow.

A. Indictment and a Justification.

The report of the Butter Committee should have the effect of making renewed legislation imperative. It should give such an impetus to the demand for this stronger legislation that the barriers suggested by sordid selfishness or crude folly must inevitably be brushed aside. It is at once an indictment of dishonesty and an appeal for commercial and industrial sincerity. I must confess that I did not originally think the inquiry was necessary. The practical character which Earl Carrington and Sir E. Strachley associated with it, and the full-natured character of the recommendations are, however, not merely a justification for the investigation, but in themselves constitute a plea for action such as the isolated revelations and disconnected facts, of which we formerly were in possession, did not provide. The enlargement of the power of the inspectors to enter factories; the insistence upon the registration of all premises where butter is blended, or re-worked, or blended by any process; the prohibition in a registered factory of any adulterant of butter; the prohibition of the artificial increase of the percentage of moisture in butter; the insistence that "skim-milk shall not masquerade as cream" (in other words, that margarine shall be

advertised as "margarine" both on outside and inside wrappers, and the prohibition of fancy names to disguise its natural character); the minimisation of the quantity of moisture in margarine or any other substitute for butter or ought sold under the name of "butter" to sixteen per cent.; the declaration that all margarine factories shall be registered as such; the retention of the right to approve of any name of any substance containing butter fat, but having a limit of 24 per cent. of moisture; and the indication of a desire to secure an international agreement with a view to the general prevention of adulteration—well, these suggestions might well form the basis of a measure (true, there are many of them to be found in principle, in the Butter Bill, we know) which would, I dare aver, be at once operative and effective. The delay in securing the Bill has thus been an instrument in obtaining a more effective measure than has even yet been discussed.

Stimulating a Popular Sentiment.

What we must not forget is that the public conscience has not been aroused on this question. You see, you cannot wax flamboyant and turgid and rhetorically vivid over so general a matter as the adulteration of the people's food. That only belongs to unemotional problems affecting the public health. When, however, the public is fully introduced, to adapt the description of one of the democratic journals, to "the cotton-seed cow," when it comprehends that its faked butter is often a compound of cotton-seed oil and extraneous fats, when it permits its intelligence to grasp the fact that there is a process of sedulous instruction going on, whose purpose is to teach occupiers of factories how to adulterate their butter from fat not derived from milk (in other words, to almost produce milk-less butter), when it perceives that the ingenuity of many clever minds are deliberately devoted to producing compounds (some probably noxious and others noisome) which, in their likeness to pure butter, actually defy the analyst—well, when the public perceives all this, this public may for a moment withhold from knocking its sublime head against the stars in order to direct its attention to matters affecting itself upon the earth on which its feet are planted.

The Opportunity of Ministers.

Let this public—whose temper is the motive-power of legislation—comprehend that one adulterant-manufacturer promised a Wiltshire dairyman that he could make £5,000 by using their product, whilst in another instance a profit of £20,000 a year is being made. Let the public be educated up to the fact that all the resourcefulness of particularly ingenious minds is being utilised for the purpose of deceiving it and exploiting it; let that public perceive that it is itself which is being victimised, that it is its own health which may be menaced by these skilfully-devised and craftily-advertised compounds—well, this public will then find its articulate voice, and will probably associate with that articulate voice a pummelling fist. Is it too much to hope that a strengthened Butter Bill may be passed this

BOURNEMOUTH HORSE SHOW.
A GENERAL VIEW OF THE GROUND.

THE WEEK'S SHOWS.

Bournemouth Horse.

The horse show held under the auspices of the Bournemouth Corporation in Meyrick Park, on Tuesday and Wednesday, proved a most successful affair, both as a show of horses and an attraction for visitors to the town. Over 500 entries were received, and the competition in the open classes was very keen, for not only were horses entered from all parts of the British Isles, but there were also prize winners from Continental and New York shows. The Hunters entered included winners at London and the Royal Agricultural, Peterborough, Northampton, and other shows. The tandems and pairs, always an attractive feature, brought up winners from the principal shows of the country, and formed a capital collection. In the Shire and Agricultural classes there was a most creditable exhibition. In this department especially Hants and Dorset were well represented, but in the show as a whole the home and neighbouring counties figured well.

On the first day sixteen classes were judged, of which seven were open ones. The first was for Shire mares or geldings, any age or height, in which only two prizes were offered, but so good was the class that the judges recommended a third and a fourth, and expressed the opinion that the class was one of the best in the show. Mr. Max Michaelis's brown mare Pailton Sorais, first at the Royal Counties Show at Portsmouth, and second at the Royal Show at Derby, was placed at the head of the class, next coming Mr. Henry Oakley's brown mare Finstall Countess, which later was awarded the Shire Horse Society's medal for the best mare, filly, or filly foal. Mr. Isaac Wren's bay gelding Captain, and Mr. J. G. Wright's Horse's Surprise, a bay gelding. The next open class was for the best hack, mare, or gelding, any age, over 14 hands and not exceeding 15-2, and here Mr. G. Ford Tilley, Bridgewater, secured first prize, with Mr. Baker, Horsham, second, and Messrs. Yeo Brothers, Stonehouse, Devon, third. Then followed a single harness mare or gelding class, in which the entries were not numerous, but quality was first rate. The first prize went to Mr. Howard Frank's brown mare Tissington Kit Cat, who undoubtedly deserved the position, whilst the second winner was Jersey Lily, belonging to Mrs. Good, Mrs. Butcher's animal taking third. Tissington Kit Cat was also given the Hunters' Improvement Society's medal for the best Hunter mare or gelding. Riding and jumping competitions followed, and proved attractive, as did also the open class for Hunter mares or geldings up to 13 stone and under, any age, to be driven, for there was a keen fight for the prizes between the entries of such well-known breeders as Mr. John Drage, Mr. J. H. Stokes and Mr. H. M. Mackusick. Eventually the judges placed them in the order named. There were only four entries in the class for Open Pairs, but it proved to be one of the finest double harness competitions seen this year. Mrs. Hartley Butt once more won with Hopwood, Horace and Hopwood Spark, Messrs. Carr and Co.'s Heathfield Squire and Clyde Vale Squire making a very good

second. The local classes of the first day and also of the second were well supported with animals of the right stamp and a credit to their exhibitors.

The classes on the second day of the show were chiefly for Harness horses, and these, with the jumping competitions, to say nothing of the tenting, proved attractive to the company present. In the driving entries for the best tandem, any height, Mrs. Hartley Butt, London, obtained the principal prize, Messrs. Carr and Co., Carlisle, Scotland, being second, whilst for the best single harness mare or gelding, 14-2 hands or over, Mr. Gerard Jurgens, North Cray, secured first prize, Messrs. Carr and Co. again being second. In the riding competitions, for the best Hunter, mare or gelding, capable of carrying over 13 st., Mr. J. H. Stokes, Market Harborough, was awarded premier honours, and Mr. H. M. Mackusick, Nettlefield, Surrey, was second, whilst in the jumping competition for best mare or gelding, any age or height, there was a very close fight, and the two prizes were ultimately divided between Messrs. Gleucross and Messrs. Singer, Frome, Somerset.

The following were the winners of special awards not mentioned above:—A silver cup given by Miss Birch for the best mare or gelding: Mr. O. T. Price (Lyndhurst Paula); reserve, Mr. F. Blosset Maule (Nimble Ninience). The Hackney Horse Society's gold medal for the best mare or gelding exhibited in single harness: Mr. Jurgens (Glenburn Lass); reserve, Mr. Howard Frank (Tissington Kit Cat). The Hackney Horse Society's silver medal for the best Hackney or pony mare, filly, or filly foal: Mr. O. T. Price (Lyndhurst Paula). The silver challenge cup, offered by Mr. H. King for the best mare or gelding (14 hands or over) in the show: Messrs. Carr and Co. (Heathfield Squire); reserve, Mr. Jurgens (Glenburn Lass).

East Berks Horse.

The attendance at the tenth annual show of the East Berks Society, which was held on Thursday, as usual, on Hawthorn Hill Racecourse, was not up to the average, although the entry in all the sections, but more especially that which was apportioned to Hunters, was exceedingly good, whilst the weather was beautifully fine. The feature of the show was undoubtedly the splendid show of Hunters, both brood mares, colts, geldings, and fillies, and Shire horses. The judges expressed the opinion that the former were the finest lot they had ever seen at an East Berks Show; in fact many considered that better brood mares had never been seen outside of Dublin. The judges also spoke very highly of the Shires, those entered this year being far in advance of any previously shown at Hawthorn Hill. The produce classes were the first of the Hunters to be paraded, and Mr. Ernest W. Robinson won the first and second prizes offered in the classes for colt foals with stock by Collar and Riverstown, but the winners of the premiums which were offered for Hunter fillies went to the foals shown by Mr. F. G. Colman and Mr. J. A.

Mullens; the champion cup was awarded to the winning colt. The two classes were especially well filled. The gold medal of the Hunters' Improvement Society and the first prize for the best brood mare with a foal at foot went to Mr. Ernest W. Robinson's bloodlike Golden, the same owner's Golden Leaf being second; and the best of the yearling Hunters was Mr. J. L. Nickson's Ensign, a gelding by Yard Arm. The winning two-year-old, Footlight, a gelding by Pantomime, was from the same stud, and the best of a small class of three-year-olds was Mr. J. A. Mullens's Paleface. Then followed the light and heavy weight classes, and the winning exhibits were Mr. J. H. Stokes's Wrangler and Whiskey.

The Hackneys were not so large a group, but the classes were full of quality, the best of the stallions being Mr. R. A. de Manclay's Ve precocity, while Mr. Burnell Tubbs' Sunnery, a daughter of Polonius, was the pick of the mares, she being awarded the Hackney Horse Society's medal. The best of the hacks, which were not a numerous lot, were Mrs. W. C. N. Chapman's Miss Trix, a powerful chestnut, and Mr. F. V. Gough's Maritima. A new class for the best private pair-horse carriage, with servants in livery, for which a challenge cup, value 30 guineas, was presented by Miss Langworthy, only drew two entries, and it is hoped that another year the competition will be keener.

The silver challenge cup for single Harness horses was won by Mr. Gerard Jurgens, North Cray, Kent, with his brown gelding Radiant, which also secured first prize in the open driving competition. Mr. Walter Winans of Surrenden Park, Ashford, Kent, took premier award for the best pair of horses driven in double harness. In the open jumping classes the chief awards were taken by Mr. Benjamin Robins, Lynsters, Rickmansworth, with Tim and Stelling, two capital performers.

The Shire horses made an especially good group, the leaders in the produce classes being the exhibits of Mr. J. L. Harrison and Messrs. W. G. and A. J. Flower. The first named winning the champion cup, while among the winning exhibitors in the open classes were Mr. R. W. Hudson, Messrs. Headington Brothers, Mr. Louis Deane, the Hon. F. W. D. Smith, Sir W. J. Farrer, and Mr. Max Michaelis. Mr. Hudson secured the first and second prizes in the open class for Shire mare and foal, the first prize in Shire stallions, and the silver medal presented by the Shire Horse Society for the best Shire stallion in the show.

Bredon's Norton.

At Bredon's Norton, in Gloucestershire, a small colony of ladies, of whom Miss Elith Bradley (formerly of Lady Warwick's College at Studley) is the leading spirit, have embarked on a scheme of co-operative gardening, etc., and with a view of extending their work they decided to hold a show, which took place on Tuesday, and proved highly successful for an initial event. The show was held in Norton Park, the home of Mrs. Biddulph Martin and her daughter, Miss Woodhull, who has given great assistance to Miss Bradley's schemes. Broadly, the exhibits were of excellent quality. The vegetables were exceptionally strong, those in the cottagers' class being noteworthy; while of the market gardeners a few samples of Victoria plums attracted considerable attention, and in the amateur section cooking apples were prominent. An excellent collection of vegetables was displayed by Miss Crooke, F.R.H.S., Principal of the School of Gardening at the village. Demonstrations of bee driving, milk bottling, butter-making, and fruit trussing were given during the afternoon, and luting in the evening dancing, sports, and rifle shooting were indulged in.

A luncheon preceded the opening of the show, at which, in the course of a speech, Miss Bradley suggested the formation of an agricultural guild for Bredon's Norton and district, that not only should they have a show every summer, but that they should try to wake up the villages in the winter by lectures and other entertainments of a bright and varied nature, always keeping co-operation to the front.

Cleveland.

The entries received by the Cleveland Agricultural Society for their show at Redcar Racecourse on Friday were not so numerous as last year by about seventy, but nevertheless the show was a highly creditable one, and with fine weather and a large attendance was an all-round success. Horses, always the feature of the show, were forty-eight less than last year, but they were quite an average lot and up to the good standard of previous years—in fact, agricultural horses were

With its fine connection amongst Livestock Owners, the "Mark Lane Express" is undoubtedly ONE of the BEST MEDIA for the disposal of Pedigree Live Stock, either by Public Auction or Private Treaty.

The Journal goes directly into the hands of the purchasers at home and abroad.

amongst the best ever seen here. Hunters were of representative quality, but naturally the strongest classes in the horse section as regards quality were the Cleveland Bays, although only fifteen entries were received. The best brood mare proved to be Mr. G. Grandage's Woodland Briar, which was placed in front of Mr. Wilson Horsfall's Lady Salton. The quality of both these magnificent quadrupeds may be judged by one fact—viz., that Woodland Briar beat at the Royal show the mare which outshone Lady Salton at the Yorkshire. The winning animal also carried off the Cleveland Bay Society's medal. Mr. Grandage's colt foal, Woodland Comet, which comes of the same stock, was at the top of its class. Cattle were not numerous but of nice quality, especially in the non-pedigree classes, whilst sheep and pigs made creditable displays.

Scalby and Newby.

The Scalby and Newby Agricultural Society will have occasion to remember their twenty-first annual show, for instead of the brilliance and rejoicings usually associated with the "coming of age" they had most depressing conditions. This was due to the rain which was of the most disagreeable nature, a heavy thunderstorm being experienced just as the showyard opened, and rain fell practically the whole of the time the show was on. This was all the more unfortunate when it is remembered that last year rain spoilt the show, and caused a loss of £100. In consequence of this loss the committee were obliged to cut down this year's prize fund, and they accordingly struck out the Yeomanry class, five classes of young horses, and three classes of cattle, all of which had attracted little interest, but they wisely made no reduction in the prize-money allotted to those remaining in the schedule. There was, of course, a decrease in the total entry, but an increase in the average entry. The best classes were the horses; Hunters and Hackneys were of great merit, and included several well-known prize-takers. Agricultural horses were a capital lot, especially the turn-out of two-year-olds; whilst coach horses were fairly good, and sheep a splendid lot; but the cattle section was, as usual, a weak one.

Wensleydale.

The Wensleydale Agricultural Society's annual show, held on the 15th inst., was favoured with fine weather, an attendance above the average, and a good entry—516. There was a marked increase in the cattle classes, but there was a falling off in horses from 152 to 128, whilst the show of sheep was about the same as last year. Shorthorns made a good display, there being some particularly fine animals forward, and the same might be said of the agricultural horses. Hunters were a fair lot, whilst Wensleydale sheep were naturally out in great force. Some pigs and dogs were also shown.

Barnsley.

The Barnsley Agricultural Society were fortunate enough to be favoured with brilliant weather for their show on Tuesday, and the show must have proved a financial success, for the showyard was crowded all day. The show too was a satisfactory one, for although horses (138) were not quite so numerous as last year when the total was 159, cattle were nearly double the number of 1905, and sheep were about the same. Quality all round was quite up to the average. The committee arranged the schedule so as to encourage local exhibitors at the cost of rivals from a distance. Thus only two of the classes in the cattle section were what is known as open. They were the prize for the best Shorthorn bull and cow or heifer. In the first the contest rested between the bulls of Mr. T. Atkinson and Mr. J. Haslam, both well known in the showyard. They had met several times before at much larger exhibitions. Both hail from the neighbourhood of Bury, and sometimes one has been placed first, and at others its rival; but on this occasion the judges gave their award in favour of Mr. Haslam's animal, which looked certainly in the pink of condition. Besides taking the second prize, however, Mr. Atkinson carried off both honours with his Shorthorn cows, which did so well at the Royal and at the Yorkshire. There was some stiff competition in the dairy classes among the local tenant farmers. The sheep section was open to the county, and were a moderate lot. Horses were the features of the show, and both heavy and light animals showed to great advantage.

North Lonsdale.

The North Lonsdale Agricultural Society have of late years been in the unfortunate position of seeing the entries for their show at Ulverston decrease each year, and the tide has not yet turned, for with the exception of the dogs, which were double the number of 1905, the entries at Tuesday's show were fewer in each section than last year. The reason for this shrinkage is hard to find, but the society certainly need to give the

matter their closest attention, for such an established society should be in a better position than this. As regards quality, the best sections were those for cattle, sheep, and heavy horses. Light horses were very disappointing. This is the more remarkable when it is remembered that entries for the cattle, sheep, and heavy horse section are accepted only from exhibitors residing in the hundred of Lonsdale north of the sands, whilst the light horse sections were open to the United Kingdom. The farmers of the district devote themselves more particularly to cattle and Shire horses, and in both sections they have valuable help in breeding from one or two well-known studs in the district, such as that of Mr. Victor Cavendish, M.P., at Holker Hall.

Chester-le-Street.

The Chester-le-Street and District Farmers' Club are fortunate in having Lord Durham as one of their chief patrons, for he places a portion of Lambton Park at their disposal for their annual show, and the picturesque showyard and its associations naturally attract a large number of visitors. Wednesday's show proved no exception to the rule, and the weather being so beautifully fine, the attendance was a big one. The society's aims originally were confined to the breeding of horses. They still make this a feature of their work, but they have of late years taken in all branches of agriculture, and the exhibition, besides providing a pleasant outing, is now one of general merit and excellence. In addition to the well-filled entries of draught and field horses, there were creditable collections of cattle, sheep, poultry, dogs, and produce, while horse-shoeing competitions, sheep-dog trials, leaping, and band contests, provided ample interest for those who wished for attractions other than the displays of animals.

Arundel.

The annual horse, agricultural, horticultural, &c., show held in Arundel Park on Wednesday proved the most successful of the series, for beautiful weather, the largest attendance of visitors, so far, and a very large entry, were experienced. The total number of entries, which also included poultry and needlework shows, was 1,240, and taken all round the show was a highly creditable one to all concerned. The majority of the classes were local ones, but some were open to England, and they contained some splendid animals, notably in the Shire Horse classes, where one of the chief features of the show. Hunters, too, were a good lot, whilst, as was only to be expected, South Down Sheep showed to great advantage. Cattle, which were chiefly of the Channel Island type, made a nice display, whilst the horticultural section was generally voted the best ever seen here, flowers, fruit, and vegetables being shown in excellent variety and quality.

Poulton-le-Fylde.

The Poulton-le-Fylde Agricultural Society this year thought they would visit their neighbours in Blackpool for the purpose of holding their annual show, and chose the Athletic Grounds, Whitegate Park. The show took place on Wednesday, and its success must have made the society wish they had thought of Blackpool before 1906; but then the society is only of comparative recent origin—it was founded three or four years ago—so that they have not had much time for experiments. Their progress, however, has been remarkable, which is not altogether surprising seeing that Poulton is the centre of what is perhaps the most distinctively agricultural district in Lancashire. Last week the entries totalled no fewer than 1,301, an increase of nearly 200 on last year's total, and there could be noticed a distinct improvement in the quality. The Fylde has a famous breed of heavy cart horses, and in this, the chief section of the show, the local breeders held their own, almost invariably, against all comers. In the Hackney classes Mr. S. R. Tennant's Authority, a famous son of a famous Yorkshire Hackney, which has won prizes amounting to no less than £400 this year, naturally distinguished itself, and Mr. Sykes's Zaverda, another famous prize-winner, also added to its laurels. The Hunters, however, were conspicuous by their absence, and the two classes which had been allotted to them had to be cancelled for lack of entries. Among the cattle the competition was very keen, and the classes were of exceptional merit. Among the sheep, Lord Henry Bentinck's flock of Wensleydales were well represented, and Lord Henry took nearly all the prizes in the six classes in which he competed. The encouragement of the local dairy industries is one of the society's chief objects, and its efforts in this direction met with a gratifying response. Lancashire cheese was well represented.

PUMPING MACHINERY

is always required amongst the class of readers who regularly take the "Mark Lane Express"—the larger farmers and estate owners.

Bakewell.

After the disastrous weather of recent years, the gloriously fine day which favoured their show on Wednesday was heartily welcomed by the Bakewell Farmers' Club, and the good gate that was recorded should go far towards making good other years' deficiencies. The show is distinctly a local one, there being comparatively few open classes, and we think the society would meet with better success if they enlarged their area somewhat. The best section of the show was that for light horses, although Shires were by no means to be despised. Cattle made a moderate show, and were interesting from the fact that some pens of the "Dale of Goyts," a local breed, were on view. Concerning these, Mr. Henry Smith, the judge, suggested they might be given the name of Derbyshire Dales, and provided with their own flock-book.

Denbighshire and Flintshire.

The Denbighshire and Flintshire Agricultural Society received the record entry of 1,322 for their show at Ruthin last week, and it proved most successful, favourable weather being experienced. All the sections of the show were well patronised, and the quality, taken as a whole, was very good; in fact, many were of the opinion that the show was the best of the sixty-four which have now been held by the society.

The Shorthorn Society's prize for the best bull was won by Earl Powis, and Sir John Mark, of Mold, showed the best Shorthorn cow. Mr. Storey, Denbigh, annexed the society's valuable challenge bowl for the best bull, and Mr. Amos Jones, Denbigh, took Lord Kenyon's Gredington trophy, and the Bodrhydan challenge bowl. Messrs. Lloyd, Wrexham, secured the Shire Horse Society's silver medal, whilst Mr. Frank Lloyd, Wrexham, won the Duke of Westminster's massive challenge bowl. Mr. Alexander Maquire, Rossett, took the Hackney Society's silver medal for the finest Hackney; Mrs. Rowley Conwy, of Rhyl, with the best pen of Shropshire sheep, gained Sir Wyndham Hamner's Coronation Challenge Bowl and a special award; and Lady Naylor Leyland's trophy for the best pen of Welsh sheep was awarded to Mr. Thomas Williams, Denbigh.

Butter classes were numerous contested, whilst the judges described the cheese shown as the best ever seen in Wales.

Sale of Devon Cattle.—The herd of pedigree and prize-winning South Devon cattle belonging to Messrs. Butland Bros., Leigham Barton, near Plymouth, and some of the property of Mr. W. J. Crossing, Woodford Farm, Plympton, are to be sold by auction at Higher Leigham Farm, Egg Buckland (four miles from Plymouth), on Wednesday, September 12, at 1.30 p.m., the auctioneer being Mr. J. Pearce, of 15, Princess Square, Plymouth. Messrs. Butland and Crossing, having for many years kept a large number of cows for the supply of milk to Plymouth, have made a particular study of the milking properties of their cows, thus embracing this valuable attribute with that of flesh producing, for which the South Devon cattle are singularly noted.

Lincolnshire Farmer and Swine Fever.

—At the Holbeck Police Court on Thursday, William R. Caudwell, one of the largest farmers in the district, was charged with having sixty-eight pigs affected with swine fever on his premises, and failing to report the same. An inspector of the Board of Agriculture said that on four of the defendant's farms there were 131 affected pigs, and in order to stamp out the disease, the whole of the swine on the farms—350—were slaughtered. The defence was that in the cases in question the disease was not recognised as swine fever, and that in a case where it was recognised, the authorities were notified. The prosecution submitted that the matter was a serious one for the district, as in consequence of these outbreaks markets had been closed. The bench accepted the defendant's explanation, and believing that he had acted in ignorance imposed a reduced penalty of 23 sh. and costs.

Mr. John Gillies, of North Field, Prestonpans, popularly known as the "Cabbage King," died somewhat suddenly on Tuesday. Mr. Gillies had, in the course of twenty years or so, gradually extended his business till it had attained gigantic proportions, calling for a regular service of special trains to convey his produce from Prestonpans to points of distribution. Starting with some ten acres at Beggar's Bush, Levenhall, Mr. Gillies acquired land on the farms of Pirkie Mains, St. Clement's Wells, Barnclaw, Northfield, and Preston Grange, and at the time of his death had over 300 acres under vegetable culture, mainly of cabbage and carrots. He had 100 hands in regular employment, with fifty more in the dispatching season, and pushed with two million plants per day were pulled, hunched, and sent off all over the country.

SHOW GOSSIP.

This year's show of the British Dairy Farmers' Association, which will be held at the Royal Agricultural Hall, Islington, on October 9, 10, 11, and 12, will be on very much the same lines as last year, for a comparison of this year's prize schedule with that of 1905 shows only four or five alterations. As usual, there will be classes for Shorthorn, Jersey, Guernsey, and Red-Poll cows and heifers, and also for Ayrshire, Kerry, and Dexter cows, and the cow and heifer classes for those not eligible to compete in any of the foregoing classes; but there is a new class for South Devon cows, and it will be interesting to see what amount of support breeders will give it. The prizes in this new class are first £7, second £4, and third £2, with milking trial prizes of £15, £10, and £5 respectively. These are on similar lines to those for other sections, so that South Devon breeders who in other years have had to enter in the "any other breed" class, would do well to give the new feature their whole-hearted support and make it a permanent one. The milking trials and butter tests will be as last year, and the bull classes are again included. The valuable special awards for cattle are once more to be competed for, so that the cattle section should be well up to the average.

Coming to the other sections of the show we find one alteration in that for goats, namely, an increase in the prize money for goats of any variety, which, instead of a prize of a silver medal and £2, have a first of £2, a second of £1, and a third of 10s., the same as in the other goat classes. A new class has to be noted in the popular cheese section, and this is for Lancashire cheese, which of late has come to the front. Prizes of £5, £3, and £2, and a gold medal for the best exhibit of Lancashire cheese, given by the Royal Lancashire Agricultural Society, are offered. The other cheese classes are as in 1905, the prizes again ranging in value from £10 to 10s. Although only one entry was received last year for the "Collections of Dairy Produce," the society are not disheartened, and are still trying to make the section "go," for this year they provide two classes instead of one, thus keeping British and foreign produce separate.

The bacon and hams classes show no alteration, and there is only one to be mentioned in the butter section, and this is a new class for "butter, slightly salted, 2 lb. in 1 lb lumps, to be delivered at the Agricultural Hall four days before the show—i.e., Friday, October 5." No mention is made of what breed the milk is to come from, neither are

any prizes stated. Cream, skim-milk bread and scones, and roots are "as you were," but there is a slight alteration in the honey section, namely, in the class for display of comb and extracted honey of any year, the conditions being "approximately 100 lbs. in weight, shown on a space of 3ft. by 3ft.," whereas last year they were "not less than

SHOW SECRETARIES.

Mr. W. J. CLARK,
Bakewell Farmers' Club.

84 lbs. nor more than 112 lbs. in weight." Otherwise the honey classes are as last year.

Inventors are given only one class instead of three, but the terms of the class provide for a wide range of articles, as the judges will be empowered to give a silver or bronze medal to any new invention (showing sufficient merit) relating to the dairy industry or one showing distinct and practical im-

provement, not eligible for competition in any other class and not previously exhibited at this society's shows. Finally, the butter-making contests and also the milkers' contests should prove once more an interesting feature—in fact, the milkers' contests should be more popular than ever, particularly with women competitors, for this year, thanks to the generosity of Lord Northbourne, their prizes are £15, £10, £5, and £2, as against £2 10s., £2, £1, and 10s. last year. The men's will be as in 1905, but boys and girls under eighteen have instead of a class for both one for each, with prizes of £2, £1, and 10s. Entries for all the above-mentioned sections close on September 10 with the secretary, Mr. W. C. Young, 12, Hanover Square, London, W.

The A'trincham Agricultural Society's Show is one of the largest one-day shows held in this country, and it certainly grows in popularity, for each year since 1855 has witnessed an appreciable increase in the entries of live stock and produce. For instance in 1895 these entries were 2,767, in 1900 they had increased to 4,118, in 1904 they were over 1,000 more, and last year the total was the record one of 5,449, whilst in addition there were 564 other miscellaneous entries including implements. Such a number of entries speaks volumes for the estimation in which the show is held, and it is not odd that to the variety of classes provided. These include cattle, horses, both heavy and light and turnouts, sheep, pigs, goats, roots, grain, and other agricultural and horticultural produce, dogs, poultry, pigeons, rabbits, cats, caviar, implements, &c. With such a wide range the show is naturally a most attractive one, and especially as good prizes are offered. For this year's show, to be held on Wednesday, September 25, a sum of no less than £1,800 is offered in addition to silver cups and medals, and as the prize schedule is on similar lines to that of last year, the society may look forward to another big entry and visitors to a most interesting show. Entries close for all classes except implements and space on September 8, and with double fees on September 12. The secretary is Mr. J. H. Hall, 2, Dunham Road, Altrincham.

The West of England Fat Stock Society have decided to hold their show on Dec. 12 and 13 at Plymouth, when it is to be hoped another balance on the right side will be secured. The last year's working resulted in a profit of £33 9s. 11d., and this, despite the fact that subscriptions were £15 less than the previous year, and the prize fund £30 more. The society have now a net balance of £53 7s. 9d at the bank, a result due in a great extent to the excellent management of the secretary, Mr. S. Hoblyn, whose good work the society has acknowledged by a considerable increase in salary.

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

DAIRY SHOW, LONDON, OCTOBER 9, 10, 11, & 12.

Great Exhibition of DAIRY CATTLE,
PRODUCE, APPLIANCES, &c.

Entries close September 10th.

Particulars of—

WM. C. YOUNG, Secretary,
12, Hanover Square, London, W.

OKHAMPTON AND DISTRICT AGRICULTURAL ASSOCIATION.

THE 16th ANNUAL EXHIBITION
of Horses, Cattle, Sheep, Pigs,
Dairy and Garden Produce, Poultry
and Pigeons, will be held at Okhampton
on SEPTEMBER 13.

Prizes about £300.

Schedules and Entry Forms of
CHARLES J. FUTCHER, Hon. Sec., Fair-
field, Okhampton.

Entries close September 1.

CHILDREN HILLS & SOUTHERN
BUCKS AGRICULTURAL AS-
SOCIATION.—The 17th ANNUAL
SHOW will be held at HIGH WY-
COMBE on WEDNESDAY, SEP-
TEMBER 12, 1906. OPEN CLASSES
for Shire Horses, Hunters, Jumping
and Driving, Shorthorns, Jerseys,
Butter and Honey.—For Schedules
and Entry Forms apply to JOSEPH
BLISS, Secretary, 26, High Street,
High Wycombe.

MERIONETHSHIRE AGRICUL- TURAL SOCIETY.

GREAT SHOW at TOWYN,
FRIDAY, SEPTEMBER 14, 1906.

Over £300 in prizes. Dogs under Ken-
nel Club Rules. Open Leaping and
Trotting contests. Entries close Aug.
29.

R. ROBERTS, Secretary.

Rhydygarnedd, Towyn.

FROME SHOW, WEDNESDAY, SEPTEMBER 26, 1906.

All Entries close September 12.—T.
C. HARDING, Auctioneer, Frome, Sec-
retary.

FANCIERS' POULTRY SHOW
SAME DAY.—Messrs. YOUNG &
FRICKER, Palmer Street, Frome, Hon.
Secretaries.

BRECKENOCKSHIRE AGRICUL- TURAL SOCIETY

(Est. 1755).

Thursday, September 13, 1906.
Entries close September 4. Horses,
Cattle, Sheep, Wool, &c. Open Jump-
ing and Harness Competitions.—
W. T. ISAAC, Sec. etary, Brecon,
S. Wales.

COLESHILL HORSE SHOW, SEP-
TEMBER 19, 1906. £160 in prizes,
JUMPING, DRIVING, TURNOUTS,
&c. Entries close September 3, 1906.

W. H. M. BARTON, Sec., Church
Hill, Colehill, near Birmingham.

ALTRINCHAM SHOW.
A WEDNESDAY, SEPT. 26.
£1,800 IN PRIZES, besides Silver
Cups and Medals, for Horses, Cattle,
Sheep, Pigs, Goats, Turn-outs,
Hunters, Jumpers, Roots and Grain,
Butter, Cheese, Honey, Implements,
Dogs, Poultry, Pigeons, Rabbits, Cats,
and Caviar. Prize list may be had
from the Secretary,

J. HERBERT HALL,
2, Dunham Road, Altrincham.

Entries close September 8; double
fee, September 12.

WARWICKSHIRE HUNT
HORSE SHOW, at KINETON,
SEPTEMBER 14, 1906. Entries close
August 30.—LORD WILLOUGHBY DE
BROKE, Hon. Secretary, Kineton,
Warwickshire.

BIRMINGHAM AUTUMNAL SHORTHORN SHOW AND SALE

THE SIXTIETH GREAT SHOW
AND SALE will be held at BING-
LEY HALL, BIRMINGHAM, on
WEDNESDAY and THURSDAY,
SEPTEMBER 5 and 6. 404 Head
of Highly-descended COWS, HEI-
FERS and BULLS, including many
prize winners, are entered from the
most noted breeders, and will be
SOLD BY AUCTION, by Mr.

W. H. LYTHALL, without any
further reserve than entering
them at not more than £21 each.

Judging at 9 o'clock on Wednesday.
Sale at 11 o'clock each day. Admis-
sion, 1s. Catalogues, 7d., free* by
post.

W. H. LYTHALL, Secretary.

LEIGHTON BUZZARD and LINSLADE FOAL SHOW SOCIETY

Are holding their
FOAL SHOW

On TUESDAY, SEPTEMBER 18
1906,

At LEIGHTON BUZZARD.

SCHEDULES now ready, and can
be had on application to either of
the Secretaries.

Entries close September 4.

WALTER C. PRUDAMES, }
W. GRAVELLY W. WILLIS, } Hon. Secs.

HAY HORSE SHOW, September
20, 1906. Entries close
on September 6; double fees September
12.—REECE MORRIS, Secretary, Broad
Street, Hay, Hereford.

WARWICKSHIRE AGRICULTURAL SOCIETY.

THE ANNUAL EXHIBITION
WILL BE HELD AT
NUNEATON.

ON WEDNESDAY & THURSDAY,
AUGUST 29 & 30 next.

Admission: 1st day, 2s. 6d.; 2nd day, 1s.

JUDGING in all DEPARTMENTS
on WEDNESDAY.

SPECIAL JUMPING CONTESTS
each AFTERNOON, with DRIVING
CLASSES on THURSDAY.

BAND of 2nd VOL. BATT. ROYAL
WARWICKSHIRE REGIMENT.

WEDNESDAY—NUNEATON
TOWN BAND, THURSDAY.

THE FIELD COMPETITIONS will
take place on THURSDAY, on Mr. G.

H. WARD'S Farm, Attleborough Fields,
Nuneaton.

POULTRY & REE DRIVING DE-
MONSTRATIONS by Warwickshire
County Council's Experts.

First-Class Luncheon, 2s. 6d.; Second
Class, 1s.

CHEAP RAILWAY FARES, SEE
COMPANIES' BILLS.

FREDERICK H. MOORE,
Secretary, Warwick.

KINGTON HORSE SHOW, SEP- TEMBER 19, 1906.

£350 in prizes, including two Chal-
lenger Cups value £10 each, and seven
Silver Medals. Heavy-weight Hunter
Class—1st prize, £20; 2nd prize, £10;
3rd prize, £5. Light-weight—1st prize,
£10; 2nd, £5. Entries close Septem-
ber 4, or with double fee, September
8, except for Ring Competitions, which
close September 15. Prize Schedules
and Entry Forms from the Secretary,
T. H. VAGHAN MORRIS, Ryford
House, Hereford.

CORRESPONDENCE.

Hunts. Hailstorm Relief Fund.

SIR,—The Hunts. Hailstorm Relief Committee ask me to thank you for kindly noticing in your agricultural article the damage done, and they ask you to draw attention to the fact that subscription lists for a relief fund are about to be opened at all the banks in the county.

Lord Sandwich, the Lord Lieutenant, has subscribed £100, and Mr. George Fyfe Rowley, the first president of this chamber, £200.

It is hoped that the Lord Mayor will open a national fund, but this county, and also Cambs. and Beds., feel that they must make a good start in their own counties before any appeal for them to the general public.—Your obedient servant,
GEO. D. HUNYBUN, Hon. Sec.

Hunts. Chamber of Agriculture, Huntingdon,
August 23, 1906.

A meeting of the Cambs. Chamber of Agriculture was held on the 18th inst., at the Cambridge Corn Exchange, to consider the desirability of co-operating with the committee appointed for Huntingdonshire and Bedfordshire, for the purpose of raising a fund to relieve the more serious cases of damage done to the crops by the disastrous hailstorm on August 2, in portions of Hunts., Cambs., Beds., and the Isle of Ely. The meeting unanimously resolved to join hands with the committee of the other counties and to appeal to the country, since the estimated damage of between £50,000 and £60,000 is too much to be covered by local effort, and unless help is forthcoming more than one farmer, it is feared, will be ruined.

English or Foreign Meat for the Army?

SIR,—I have frequently heard it stated that young people should never hesitate to ask for information in order that they may, when wiser, utilise the knowledge which is bound to result from application in such old and valuable agricultural papers as MARK LANE EXPRESS.

I have read Mr. Welch's letter in your last, and I frankly confess that I am unable to convince myself that he has proved his case.

Suppose that the £50,000 which Mr. Haldane asserts that he will save the country by allowing home-killed in place of or in conjunction with home-fed meat, were to be placed into the pockets of home stock breeders and feeders, how much per farmer would this amount to? or would the change asked for, if sanctioned by Mr. Haldane, have the slightest effect on the price of home-bred stock in the markets? Even if the meat which has been supplied to our troops during late years had been home fed meat, and no one would be found to be bold enough to make such an assertion, why should not the War Office and all Government Departments buy in the cheapest markets, providing, of course, that the article bought is of equal consuming value? How many farmers are there who do not follow this system of buying in the cheapest and selling in the dearest market? Suppose the manufacturers of every kind of article or raw material were to squeak if the various Governmental Departments did not buy home-made stuff? What would farmers think of such a strange course of procedure?

Further, I would ask if farmers never buy any foreign meat at the thousands of butchers' shops in the country at which the owners profess to sell only imported meat, or do they never buy imported meat at a very large proportion of the butchers' shops in towns and at a lower price than could be charged for home-grown meat?

It seems to me that this is another of those wild goose chases, such as the repeal of the Malt Tax was, and the Pure Beer is now.—Yours, &c.
J. VENNIS.

Large v. Small Shows.

SIR,—Some interesting remarks concerning the show systems of the North and South of England were made by the Hon. Gertrude Beckett, M.P., at the Whithy Show on Thursday. He expressed the opinion that the more shows held in the agricultural parts of the country the better, and he added that the show system in Yorkshire differed somewhat from that in the south of England. In the north there were more small shows in various areas not very far apart, whereas in the south big shows, covering very large areas, were held. He thought the Yorkshire system the best, as it held out more inducements to the small exhibitor by multiplying his opportunities of exhibiting his stock and gaining prizes. It therefore encouraged the farmer and the breeder in a local area to exhibit more than in cases where he had to send his stock very long distances to compete practically with the whole of England.

There is undoubtedly a great deal of truth in what Mr. Beckett says, and I should like to have some other opinions on the matter. It seems to me that Mr. Beckett has opened up a big subject.—Yours, etc.
T. C. M.

August 17, 1906.

Harvest Home.

SIR,—Reading your paper this evening dated August 13, 1906, "Farm Horses in Harvest Time," I believe it has a circulation covering at least England. Farmers (as a rule) are always open to appreciate and acquire any instruction that can be given them in this generation of severe foreign competition, and your object is, I believe, to further their requirements, so that I hope you will pardon my troubling you by quoting this paragraph, viz:—

"By being able to cut and sheave the corn by machinery, even the largest farmers are now able to cry 'harvest home' within a fortnight after commencing."

If this quotation is written seriously by any one understanding English agriculture, I with thousands of other farmers would only be too pleased to have further advice and information as regarding the workings and condition of the corn at the "harvest home" within the fortnight.—I am, Sir, yours, &c.,
EDWARD W. HOWARD.
Ingleby, Lincoln, August 14, 1906.

The Cottage Question.

SIR,—It seems to me that one of the most important questions of the day in connection with agriculture is that of providing cottages. How about it is to talk of bringing labourers back to the land, when everybody knows perfectly well that there is nowhere for them to live if they come back! Indeed, when we hear of the reduced populations of villages, and on looking round find that there is not a single cottage empty, the wonder is where the people lived before they went away.

Here in towns and the suburbs of towns we see miles and miles of houses run up, but in a country district it is quite an event if a couple of new cottages are erected. Why doesn't some enterprising capitalist turn his attention to the erection of cheap cottages in the country where people want them? There may be many reasons, but one is, that in numerous instances the ground belongs to a local landed squire, who either cannot or will not sell. Why doesn't he build himself? He either has other means of spending his money, or else the return he would get from the cottages would not pay him sufficient interest on his outlay. It is obvious that the rural labourer on his rate of pay cannot afford to pay above a certain rent, but if a landlord cannot build cottages that will pay him interest on capital at the rate that the tenants can afford to pay, this does not do away with the absolute necessity of houses.

Cottages are as essential on a farm as cowsheds or stables, and how are we to get people in the country if there is nowhere for them to live? The town does everything it can to lure people to its midst; the country deplores the migration, but does its best to drive its workers away through not providing them with habitations in which to live. And what habitations some of the cottages are to be sure! They may look pretty with flower gardens in front and roses clambering over the porch, but you want to get inside and round the back premises. No alterations are made, and repairs are rarely done, because the rent derived from the habitation is not sufficient to allow for any outlay—the profits would be all gone.

To put the matter very plainly, is not too much money being spent by landowners on luxury, pleasure, and amusement? It is only fair that part of the money derived from land should go back to it, and whereas a landlord does not see his way to spend a few hundred pounds on cottages because the transaction would not return 3 per cent, it is essential for him to have a motor car or two costing perhaps a thousand pounds apiece. I wonder what interest the latter pay on the outlay.

One sees a good bit of building going on in the country, but it is chiefly of houses of the villa type, suitable for the man who has means and longs for a quiet rural life. What is wanted is cottages, houses of a plain yet comfortable and convenient character, which can be let at a rent that the ordinary labourer can pay, and which some one can be devised of providing for the want, the cry "Back to the land!" is a mere waste of breath.

August 23, 1906.

Some Minor Crops.

SIR,—Shortly, when your pages are not so much taken up with the agricultural shows, I should be glad if you would give us some articles on the cultivation, marketing, and general information on the less known crops which are capable of being grown in England, such as caraway seed, which I hear used to be grown in this neighbourhood, saffron, chicory, peppermint, and many others.

I have heard a crop spoken of as col, which was grown around here about forty years back. They do not appear to mean cole seed or rape. Some years back I remember reading of Sarradelle in

Bell's Weekly as being of great use in fertilising the soil, can you say if this has proved so?

I have noticed a grass very like rye grass which blows a flower very like a pea and grows a small pod with a few small seeds like small tares. Can you tell me anything about this?

I quite believe some papers on all this would be of general interest, also something on the cultivation of flax, hemp, millet, canary seed, sugar beet, and potatoes for converting into spirit, &c.—Yours truly,
SAD FARMER.

August 20, 1906.

Mummy Wheat.

SIR,—Undertaken by the unwarranted ridicule cast on the Dean of Bristol's mummy peas grown at Congresbury, I venture, with your kind permission, to place on record the result of my careful investigation into the history and disposition of the mummy wheat found in the folds of a mummy in the Bristol Museum in 1849, which is so surprising that it must interest your readers.

The mummy in which the wheat was found was always recognised as that of one of the early Pharaohs. Some of the grain germs were planted by me in a field of wheat at Russ in 1850, and when ripened consisted of a cluster, seven ears on each stalk, six growing out of a large centre one, all bearded. It grew taller by a foot than the rest of the wheat, and with thick, brittle stalks.

In 1853 I lost my sample, and those to whom I gave the rest ceased to grow it after two or three years. The mummy and all belonging to it have disappeared, except three heads of the wheat still in our local museum.

Last summer I received a specimen, exactly like that I grew, from the museum at Kew, which I believe was grown by the late Mr. Sutton, at Reading, about the middle of last century. No wheat of the kind is now growing anywhere, and there is no record of it ever having been grown in Egypt; and the only specimens left are at Kew, in our local museum, and that I hold. Many living persons recollect its being grown, but I find no other who grew it except myself.

The conclusions I come to are these. Seven-eared wheat, of which these samples are the progeny, was specially sent in fulfillment of Pharaoh's dream, and when its purpose had been served it disappeared as completely as did the manna subsequently; that the grains found in 1849 were placed where they were by the hands of Joseph, Pharaoh's Chief Minister and trusted friend, under prophetic inspiration. Their discovery and resuscitation at the present time is opportune to confirm the very interesting history of "Joseph and his brethren," and confound scientific experts who doubt the vitality of seeds, even when hermetically sealed, for more than about twenty years.

I wish to record my thanks to various newspaper editors and to many correspondents at home and abroad for confirmatory facts and information, especially to Messrs. T. Cook and Son for enquiries in Egypt; to the president of the College of Agriculture at Cairo; to Dr. Budge, of the British Museum; to Sir William Thistlethorn Dyer, the late superintendent of the Kew Museum, for the specimen he sent me; and, finally, with humble reverence, to Him Who led me to undertake an investigation which has culminated in such remarkable results.—Yours truly,
T. SHERWOOD SMITH.

Bristol, August 21.

Board of Agriculture Weaknesses.

SIR,—May I add a note to the remarks on Board of Agriculture weaknesses in a recent issue? There now lies before me the Board's official report on crop prospects—a well-compiled and accurate document, no doubt, but one from which we in the Midlands can learn almost nothing. It has been said (by a *Times* writer, if I remember rightly) that a line drawn on a map of England from the Wash to Southampton would have on the right the districts where hay is almost universally light, to the left the good yields, which increase in frequency as we go north. We know in regard to winter oats that the lower Thames Valley and south-east Midlands (which had some heavy rain in June) have come off better than any other parts of the country, and to west of Oxford and north of Leicester full yields are extremely rare. Our geological friends tell us that wheat has come off best on basins and Jurassic soil, and on the secondary formations which traverse England from south-west to north-east; and worst on other formations characteristic of well-defined districts. I quote these as examples of intelligent and informative criticisms on the season. In marked contrast the Board of Agriculture adheres to its old classification of counties, by which both geographical and geological considerations are obscured. What, for instance, have Leicester and Notts and Northampton in common with Hants and Surrey and Sussex? or Somerset and Wiltshire in common with Cornwall, Wilts., and Dorset? or Stafford in common with the Lake Country, where soils, farming practice, and customary weather types are all different? From the mass of material the Board must have at command, it should surely be possible to give a really good idea of the local variations and their causes.—Yours faithfully,
WARWICK.

August 24, 1906.

Weather, Crops and Stock.

Norfolk.

HARVESTING in this county was delayed by heavy rains which cut the corn down, but is now in full swing, and quite an average crop is expected. The heavy rains, whilst causing delay and loss in some directions, also did some good for the root crops benefited considerably.

Hunts.

NOT much now wheat has been shown at our market owing to the showers which fell last week, and which did an immense amount of good to everything, especially to the barley, which was very steady. The yield of wheat appears prove that an average crop has been grown. There are some very bulky pieces of barley and some very light. This appears to have been one of those seasons when good farming will have paid, adjoining fields in different occupations show crops of enormous difference and value, in some instances more than twice as good, or even more. The roots have benefited greatly from the showers, but herbage is getting dried up and very scarce.

Leicester.

THE general character of the season is rather better, because we shall be better prepared for winter; our stackyards will be more filled. Hay was above the average here, and clovers very good, and all got in splendid condition. Wheat suffered in spring from cold and late frosts, looked bad in May, has done very well since, and is now quite up to average—good ear with plenty of straw. Barley is strong in straw, and promising for a fair yield and good mauling sample if weather will keep fine another week. Oats will be the best cereal crop of the year in this district, very well grown, with a beautiful ear. Mangolds look well considering the dry season, plenty of plants, the germination was very good. Turnips: plenty of plant but scorched up, and prospects are poor. Cabbage are doing very badly, and do not look as forward as they did a month ago. Potatoes quite a failure on our strong soil. The prospects for graziers looks very gloomy indeed; price of beef bad, and pastures burnt up; beasts not growing. The prospect six weeks ago was much better than now, and a little better than same period last year, because stores were bought in for less money this year, and we had then much more grass (first week in July). The outlook for dairy farmers is bad, for the milk has gone off by 40 per cent. in six weeks, and cake is dear.

Lancashire.

A SATISFACTORY state of the cereal crops in South-West Lancashire is shown by the results of the growing crops competition established by the Southport and Ormskirk Agricultural Society. Wheat, of which a good acreage was grown, was reported good throughout. The entry in this class of cereal was a most representative one, including crops grown on light moss and brown soils, and no little difficulty was experienced in making the awards, owing to the uniform standard of excellence. Oats were also well grown all round, and gave every indication of a heavy yield at threshing time, though many crops were found to have been beaten down and twisted during the bad weather. All the corn was reported to be well fed, and the straw was of good length and clean.

Nottinghamshire (South).

DROUGHT is the chief grievance from a pastoral point of view—grass fields burnt brown, clover eddies very light, grass eddies have made no pretence of growing. Swedes were in some cases retarded with the fly, but, notwithstanding the lack of rain, they have grown wonderfully lately, though maggots at the root have damaged some crops. Mangel and kohlrabi indicate good crops. Hay this year very prime in quality, short in quantity. Winter oats stacked as early as August 1, good crop; spring oats now being carried. The earlier sown blue peas were secured last week in excellent condition, and selling well. Wheat crops deficient generally in straw, likely to be fine quality corn. Some of the barley has not had enough rain, and will be very flinty. Winter beans are being cut; spring beans ready next week, promise a good yield.

Nottinghamshire (North).

SOME progress is being made with the harvesting operations, and unless there is much rain—and for some purposes this is greatly needed—the in-gathering will extend over only a comparatively short time. Reaping machines are this year extensively used, as the crops are generally standing. Leading corn has

already begun, and very favourable reports have been received of the yield of wheat out of straw. The roots and pastures look rather greener and better after the showers, but more rain is required even for them. Harvesting has become quite general, but some of the crops are considered under the average, especially spring oats and barley. Winter oats and barley have done very well this season, and winter beans are much better than the spring variety. Potatoes do not promise over well, and swedes and turnips are "patchy," whilst mangolds afford a better prospect of a fair crop. The grass fields are sadly burnt up owing to the lack of rain, but the cattle look fairly well on the scanty pastures. The hay crops proved exceptionally light; however, the crops have been "well got" if wanting in quantity, will doubtless be made up in quality. Wheat will be an average; barley, oats, and beans under; peas average (herabouts). Cutting commenced here July 25 with winter oats. There is every prospect of a fine harvest, and the crops are setting up better than we anticipated.

Warwick.

THE season, on the whole, has been a favourable one, and where the land is well cultivated the crops are good all round. Some of the late planted oats and barley are nearly equal to those sown in proper time. Many of the wheat, winter oat and winter bean crops are excellent. Barley is generally a fair crop, but some is thin and short. Spring beans vary a good deal, but those planted early and with something under them are all right. The hay and clover crops are an average, and nearly all was secured in good condition. There have been a few heated ricks, as is often the case in a favourable haymaking. Roots generally are a good plant, but they have wanted more hoeing than usual, and this has not always been accomplished. Stock has not sold at all well lately, except the better class of dairy cows. This shows how short the supply of ready money is, and has been for some time.

East Lothian.

HARVESTING in East Lothian has begun in earnest, but is fully a fortnight later than last year, says the *Glasgow Herald*. The recent torrential rainfall has laid the heavier crops, and the winds have twisted a lot of the grain, so that the crop will be somewhat difficult to reap, but there is really comparatively little to complain of in that respect. Oats are as a rule light, especially in straw. Barley is variable, but the quality will likely turn out good. Wheat is a splendid crop. Potatoes have improved with the rain, but they are a small crop, and disease is prevalent in the earlier varieties. Turnips are suffering from finger and toe in some places. Otherwise they are a good crop.

Board of Agriculture's Estimates.

THE Board of Agriculture and Fisheries have just issued a report on the crop prospects for 1906. It is dated August 22, and gives a summary of the outlook for the various crops in England, Scotland, and Wales, based on reports from the Crop Estimates of the Board, who give optimistic accounts, for the general summary is that all the principal crops are likely to exceed the average. Wheat and barley, the report continues, appear in each division of Great Britain to be over average, while oats are slightly over average in all divisions, with the exception of the north and north-western division of England and the east of Scotland. Potatoes may be reckoned as slightly over average, and the prospect for the root crops is favourable; mangolds generally promise better than turnips. The hay crop is reported as deficient in the eastern, north-eastern, south-eastern, and east Midland counties, while the yield in the west Midland and south-western counties will barely reach an average. In the north and north-western counties, Wales, and Scotland the crop is distinctly over average. Fruit has varied a good deal; apples are plentiful, except in the North, but pears are very scarce. Bush fruits are mostly average or better; but stone fruit appears to be almost universally a failure. Hops are unmistakably the worst crop of the year, and the yield generally will be very deficient. Generally speaking, prospects for the western half of the country appear more promising than in the east. Summarising the reports, and representing an average crop by 100, the appearance of the crops in August indicates a yield for Great Britain as a whole which may be represented by the following percentages:—Wheat, 105; barley, 104; oats, 102; potatoes, 101; roots, 105; hay, 101.

POULTRY.

The Utility Poultry Club.

The Utility Poultry Club have found it necessary to abandon the project of holding a twenty months' competition, beginning in October next. The unfortunate illness of the principal of the Harper Adams Agricultural College, with whom arrangements had been made for carrying on the competition, compelled the college authorities to withdraw their offer for a time. Arrangements, however, have been made with the honorary secretary for holding the tenth annual competition at his farm, near Baintree, Essex. Mr. Richardson is retiring from the position of lecturer to the Cheshire County Council, and will therefore be able to personally undertake the entire management of the competition. Accommodation will be provided for forty pens, and it is probable that the competition will be divided into two classes, each having separate prize-lists.

National Poultry Organisation Society.

The seventh annual report of this society, of which the Marchioness of Salisbury is president, has now been issued in complete form. It contains, *inter alia*, a list of the affiliated branches and collecting depots, balance-sheets and accounts for 1905, and the names of subscribers and donors. A very satisfactory feature of the year's working is that the expenses of the society for the year under review are less by more than £50 than the receipts, and the report shows that the society, in spite of many difficulties and prejudices, is making very satisfactory progress. The egg-collecting depots, which are nearly all upon a co-operative basis, have, with the exception of one or two instances, been a distinct financial success. What failures there have been are due more or less to want of loyalty on the part of members or to inefficient management. Another important and gratifying result from the producer's point of view, is the enhanced returns which invariably accrue from the establishment of a depot in any district, which fact is so often forgotten by those benefiting thereby. The society is certainly performing a most valuable work and deserves the support of all those who have the welfare of our British agriculturists at heart. The report and any other particulars desired can be obtained on application to the offices of the society, at 12, Hanover Square, London, W., on payment of the postage—viz., 1d.

Owing to the attitude of the Portsmouth Corporation in initiating prosecutions of milk sellers and dealers for selling milk of a quality below the standard, the Fareham and Hants Farmers' Club have decided to call a conference of milk sellers and others interested with the object of creating a defence fund to fight such prosecutions. They argue that the milk is sold as it comes from the cow, and that it is impossible to set up any particular standard of quality. They are not able even to guarantee 3 per cent. of fat, which is the standard set up in several of the contracts; and for the future farmers are being advised not to sign any contract which contains such a clause.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Super-phosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equivalised.	Phosphatic.	Dissolved (soluble).	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Ammonia, organic as in Guano and Bones	15 0	12 6	15 0	—	—	12 6	—	—	15 0	15 0	—	—	—
„ in Sulphate of Ammonia	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
„ calculated from Nitrogen in Nitrate of Soda	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	2 0	—	2 0	—	—	1 10-2	—	—	2 0	2 0	—	—	—
„ assimilable	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
„ insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids	2 8	3 0
Oil or fat	2 8	3 0
Carbohydrates	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. of unit of albuminoids and of oil is at least 2½ times that of 1 per cent. of unit of carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and 1 added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids	22.1 × 2½ =	55.2
Oil	5.2 × 1 =	13.0
Carbohydrates	33.2 × 1 =	33.2
Total feeding units		101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

The Earthquake in Chili: Its Effect on Nitrate of Soda.

It was at first feared that the nitrate of soda market would be seriously disturbed, but from later telegrams it appears that the radius of the convulsion which has shattered Valparaiso and the surrounding villages, did not extend so far north as the nitrate of soda districts. We learn from the best authority that neither the nitrate works, nor the nitrate railways, nor the harbours from which it is shipped, have suffered damage. There may be some difficulty in getting up the mining supplies, which come partly from Valparaiso; this might tend to stiffen the market a little, but there is no occasion for any appreciable advance. We are glad to be able to give our readers this reassuring information.

Gas Lime.

Gas lime should be put on the land in the autumn, so that the injurious ingredients in it may be rendered harmless before seeding time. It gives the best results on stiff clay soils, which it breaks up and renders friable. It also acts as an insecticide, and will kill many autumn-growing weeds.

The "Mark Lane Express" has the finest connection amongst
MAKERS OF FERTILISERS AND FEEDING STUFFS
of any journal in the United Kingdom.
The best medium for this class of announcement.

Basic Slag.

We shall shortly be printing a special article on this subject. If any of our readers would like information on points connected with the quality or use of slag, and will write us on the subject, we shall be pleased to supply the desired information as far as is possible in the same issue.

Dung versus Artificial for Early Potatoes.

In the interesting remarks on this subject in last week's "Seasonable Topics," the writer of the note is certainly correct in expressing the opinion that "the great value of artificial manure is as a supplement rather than a substitute for dung." It should not be a question of dung versus artificial, but the two should be combined to assist one another. The value of the dung consists partly in its supply of plant food, and partly from its capacity to ameliorate the physical condition of the soil-bed, while the artificials furnish concentrated plant food in a quickly available form.

It is wasteful to apply very large dressings of dung, and although good crops can sometimes be grown with artificials alone, it is not good practice, and in dry seasons might lead to failure.

Sowing by Drill versus Sowing by Hand.

The following result of an experiment seems to demonstrate clearly the advantage of drilling the seed. Upon two pieces of land, adjoining one another and similar in character, wheat was broadcasted by hand on the one and on the other sown by drill. It took 180 lb. per acre of seed when broadcasted, and only about half as much when drilled. The crop on the broadcasted portion was 24 bushels grain and 30 cwt. straw, while the drilled portion yielded 31 bushels and 35 cwt. straw. Thus by the use of a machine there is the double advantage of saving in the seed and an increase in the crop.

A single sow thistle plant has about 20,000 seeds—hence the importance of destroying them before they seed.

Fungus Diseases.

In this month's *Journal of the Board of Agriculture* there is an interesting article on the spread of fungus diseases by means of hybernating mycelium.

It is pointed out that until recently it was assumed that fungi could not be reproduced by means of spores or seeds, but that recent investigations show this assumption to have been too general, as in the case of many destructive fungoid diseases spores play a subordinate part. The disease exists, or the disposition to the malady exists, in the seed or the tuber, and lies dormant until some agency occurs favourable to its development, when it breaks out, and in some cases spreads with great rapidity. For instance, the hereditary taint of the potato curl-leaf disease is present in the seed tuber, and if close, muggy weather acts as a stimulant to the disease, it will manifest itself in an outbreak; on the other hand, if there is a continuance of bright, sunny weather, the latent disease will remain in a quiescent stage, and the crop will be apparently sound.

The lesson to be gathered from these facts is that great care is necessary in the selection of the seed tubers, which should be accepted only from districts known to be free from disease.

Soil Deterioration.

There are many farms, writes a correspondent of a St. Louis paper, so reduced in fertility that general farming cannot be depended on for more than a mere existence. If the total supply of stable manure were spread over the fields, or a portion of them, it would be so much less than the needed amount as to be practically wasted. It is therefore used in the "intensive" culture of some specially valuable crop, such as potatoes, celery, or onions. The only way in such cases to supply fertility is the application of fertilisers which are scientifically and reliably prepared.

Fifty years ago the average live weight of beef cattle in America was only 800 pounds, but improvement of breeds has so greatly increased their size, that at the present time the average weight is up to 1,400 pounds.

Phosphate of Lime Powder for Feeding.

It is contended that phosphoric acid and lime can be supplied with beneficial results in a mineral form to animals by admixture with their ordinary forage, and the trade in phosphate of lime powder has grown to such an extent on the Continent, and particularly in Germany, that the German National Agricultural Society have felt themselves obliged to call attention to the trickery and fraud that have risen up in connection with it.

One might assume that just as human beings in a delicate state of health receive benefit from doses of syrup of hypophosphate and lime, so animals would be benefited by similar treatment.

It may be so in exceptional cases, but as a general rule it is certainly better to give the animals a sufficiency of these essential salts through the natural medium of plants, and attention should be directed to enriching the character of the fodder crops.

We know that the percentage of phosphate of lime in forage is in a measure dependent on the richness of the soil in these constituents. When grown on soils naturally poor, the grasses will be also deficient in nourishing constituents. Animals raised in districts of which the soil is deficient in these two elements do not prosper unless the herbage is improved by applications of phosphate of lime.

The improvement of poor pastures and grass lands is the point to be insisted on. Superphosphate or basic slag are the means available for every farmer, with potash, if this constituent is also deficient. If we take care that there is no lack of these elements in the soil, we may be sure that the plants will be rich, and that the stock fed on it will get sufficient for their normal development. At the International Dairy Congress at Paris the following resolution on this subject was passed:—

"The employment of fertilisers rich in phosphate and lime constitutes the best means of supplying animals with the mineral salts in question, and is adapted to produce the best results both from the point of view of improving the breed, and the general condition of the stock. It is very desirable that careful experiments should be made to demonstrate by analysis the enrichment of the herbage after application of phosphate of lime, and also in practical farming, to contrast the results obtained from fodder so grown, against fodder grown in soil to which phosphate had not been applied."

"It is recommended that active propaganda, by means of lectures, leaflets, and demonstrations, for the more general and greater use of phosphate in dairying and stock-rearing districts should be undertaken by the different societies which take an interest in the improvement of stock and of the industries connected with it."

Cotton Seed Meal.

How can a farmer distinguish between good and poor meal?

The increased demand for this meal and the enhanced price has led to adulteration and to an inferior article being placed on the market. A first-class cottonseed meal should contain over 40 per cent. albuminoids and about 9 per cent. fat. It should be a light yellow colour. If it is dark in colour with many fine black specks, it indicates that ground hulls have been added. If it is a rusty brown colour, it indicates that the meal is old or the material has at some time undergone fermentation. Such meals are not safe to use. The texture of the meal should be about the same as finely ground corn meal, and it should be practically free from cotton lint. The presence and amount of lint can be determined by sifting a portion in a flour or meal sieve. The cotton fibre will remain in the sieve. The lint and hulls are also quite easily detected by stirring the meal up with water. Put one teaspoonful in half a glass of water, mix thoroughly and allow the mixture to stand a few minutes to settle. The black hulls will be found on the bottom, and can be seen through the glass. The good meal will be in the next layer and the lint on top. A first-class meal should show only a few black hulls, and scarcely any lint.

An expert can judge very well of the quality of cottonseed meal by means of tasting. The best fresh meals have a very agreeable nutty flavour not found in inferior goods. The presence of much fibre is readily noted by the sense of touch in the mouth. The absence of the nutty flavour and the presence of a rancid taste indicates that the meal is old.

Experiments in Orchard Culture.

It is estimated that the fertilising elements taken from an acre of apple trees during a period of twenty years amounts approximately to 1,300 lb. of nitrogen, 310 lb. of phosphoric acid, and 1,500 lb. of potash. To make good this waste would require applications over the period of 13 tons of sulphate of potash, 2½ tons of sulphate of ammonia, and 1 ton of superphosphate. It is not strange, therefore, writes Mr. W. M. Morrison in a report to the Maine Agricultural Experiment Station, that many of the orchards of Maine, and we may add of this country, are deteriorating.

In studying the methods of fertilising orchards, the same general principles will apply as in the management of other farm crops.

The essential constituents must be the same; but unlike ordinary farm crops, orchard crops do not give an opportunity for rotation. A certain amount of nitrogen is essential to the vigorous foliage upon which depends the life of the tree.

Potash also is important, not only because it constitutes a large part of the ash of fruit trees and more than half of the ash of the fruit itself, but also, as suggested by Voorhees, because it forms salts with the well known acids. Lime, as also pointed out by Voorhees, "seems to strengthen the stems and woody portion of the tree, to shorten the period of growth and to hasten the time of ripening. Fruit trees growing on rich soils in lime show a stocky, sturdy, vigorous growth, and fruit ripens well; while those on soils which contain but little lime, particularly the clays, appear to have an extended period of growth, the result of which is that wood does not mature and the fruit does not ripen properly."

The fertiliser recommended by the experimental station contains—

3 per cent. of nitrogen
5½ " " phosphoric acid,
8 " " potash,

which was tried against a mixture known as the "Fisher" formula, favourably regarded by many growers.

The Fisher mixture is composed of—

8½ per cent. of nitrogen,
3.3 " " phosphoric acid,
11.9 " " potash,

and it is said to produce a most vigorous growth, resulting in large, though not always, well-coloured fruit.

The fertilisers to be sown on the surface under the tree a little further than the limbs extend at the rate of 10 lb. to a medium-sized tree as soon as the blossom buds begin to open.

Twenty Baldwin and five Tolman trees were used for the specific test of each of these formulas. The Baldwin are kept under cultivation; the Tolmans are in sod. Both lots of trees responded freely to the treatment and yielded a good crop of apples. The Baldwins were in an exhausted state when the work commenced, but are now making a remarkably strong growth and promise well, but at present no specific difference in the relative merits of the two formulas is apparent. Great attention is being paid to the cultivation and fertilising of orchards in Canada, and the experiments demonstrate what is sometimes doubted in this country, that the use of fertilisers is attended with good results, and that potash is an important ingredient.

By means of drainage, the various chemical actions which take place through the action of the atmosphere on the surface soil are carried down to a greater or less extent into the subsoil, for as the water level is lowered, the air enters from above to fill the cavities in the soil. By drainage, also the depth to which roots will penetrate is increased, for the roots will not grow in the absence of oxygen and rot as soon as they reach a permanent water level.—A. F.

6 FEEDS FOR ONE PENNY INTERNATIONAL STOCK FOOD.

"The Manor Farm, Reading, October 20, 1905.—Please forward me to Reading Station as soon as possible six times the quantity of International Stock Food that I had on July 28 last. I use the last two packets on a bull that was ill and became so emaciated that I thought he would have died. However, with the help of your Food he got better, and was sold a month ago weighing 15 cwt. 1 qr.—(Signed) THOMAS CHITTELE.

PRICES: 1/- packet, post paid, 1/4; 2/- packet, post paid, 2/6; 4/- packet, post paid, 4/7; in pails, 14/- carriage paid. Poultry Food prices same as for Stock Food.

'CAKENUTS'

RAPID FATTENING AND DAIRY CAKE,

Manufactured by a patent process in "PAULED" Form, thereby saving LABOUR and MONEY.

No WASTE or DUST.
The cheapest way to produce Beef or Milk is by Feeding Cakenuts on Grass.

What practical Farmers think of "CAKENUTS": —
Mr. JOHN RAMSEY, Nupend Farm, Horsley, Nallsforth.
"There is no waste whatever in taking the proper quantity out of the bags from time to time, compared with using the Cake Crusher. For Feeding the Cattle on pasture, the Nuts cannot be excelled, as every bit is picked up by them."

Mr. JOHN DANIELL, Bowcott, Dursley.
"It is the cheapest way of Feeding Cake on Grass. No boxes are required, as the cattle will clear up every bit off the grass."

Mr. EDGAREDDOLLS, Woodshaw Farm, Wootton Bassett.
"If you do not want to bring the Cows in, put the Cakenuts down on the Grass, and they will pick up every Nut without any waste whatever."

Give our **RAPID FATTENING or DAIRY CAKENUTS** a trial.

THE

"BIBBY" CAKE

IN THE FORM OF

"CAKETTES."

'Send me two tons o' they nobbs same as Mr. Brown is a using,' was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had o'ten thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrdden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism; and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good"; it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you will have done us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION

IN THE PUBLIC FAVOUR,

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest: there is this further to be said about it:—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE: THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

GREEN CROPS.

This summer has been characterised by fewer turnip failures in most districts than frequently is the case; consequently when corn harvest came there was very little vacant land remaining uncropped on the majority of farms. Under ordinary circumstances it is almost too late to hope for satisfactory bulbing from turnips sown after the first week of August, unless the soil be peculiarly favourable both in natural character and high fertility. Mustard, however, being naturally a quick-maturing crop, may be sown at almost any time in the month unless the condition of things be decidedly unfavourable, good feed for sheep will be ready for consumption in October.

Some farmers in their ordinary courses of procedure sow mustard in August for late-autumn sheep—feed, and consider it to be a great advantage to be able to plough a piece of wheat-stubble or oat-stubble in good time for a mustard crop. Supposing the additional produce to be wanted, there could not be the slightest doubt that a considerable gain would accrue. Moreover, the admission may be made that in any case, if converted to silage or even ploughed in after growth, such catch growing could scarcely fail in having beneficial results. But the condition of soil and the weather had needs be favourable for highly satisfactory yielding, and the culture ought not to stand in the way, so as to interfere with more important operations, in a busy time unless the flocks are likely to stand in need of the fodder.

There is another green crop which might profitably have August culture far more generally than at present, which is kale. Seemingly it would be wise for every light land arable

farmer to provide a nursery bed of young kale plants ready for August setting out. In seasons of turnip failure they would prove invaluable, because planting such seedlings into the lands where turnips had failed would be an almost certain way of ensuring a good crop, while the re-sowing to turnips so late would involve the probability of only small bulbs being produced. But even in a season like the present with slight actual turnip failure, it would seemingly be of high advantage to be able to plant kale seedlings into such of the stubble lands which could be early ploughed to receive them. Such crops would be at their best for hurdling off the following April, at the period when keep is often least abundant.

Trifolium seed is always sown into clean stubbles as soon after harvest as possible by the most experienced farmers, and they one and all will be found of opinion that the earlier it is done the better, provided the surface of the land be only moist enough to germinate the seed and bring the plants up. Laggard farmers often delay the matter until September, and even October, but it is most unwise to do so. The plants of late-sown crops are often killed by either slugs or frost.

Midland Notes.

FRUIT growing at the best is an uncertain business, as many growers in Worcestershire could tell, who look with sadness at their own bare trees and with envy at their neighbour's flocks and fields. Nevertheless, it is extending, and there are indications that we may expect to see more in Warwickshire before long. The late Lord Leigh desired it, and pressed the question upon the County Farmers' Association. It seems to be too hastily concluded in many cases that the soils of the county would be unsuitable for the purpose. Around Brailes, Long Compton, Shipston-on-Stour, Stratton-on-Fosse, and Ilmington there are many tracts of land entirely fit for fruit. The Tysoe district is as promising, and has the advantage of being an early one; and the country between Warwick and Stratford was once a noted grape-growing district.

ONE is reminded of this by the progress of the county council experimental fruit plot at Hatton. There the soil is by no means especially good, yet the results so far are more than promising. Even last year, it is said—the first of its existence—the county council's acre and a-quarter paid its way, thanks to the potatoes planted between the trees, while this year the new gooseberries and black currants are said to have given an excellent return. It is, perhaps, the apple which promises to repay cultivation best, for evidently apples are capable of doing well on Warwickshire soils, and there is always a strong demand for them through the winter and early months of the new year, when they escape the competition of soft fruit. At

FARMS

never remain unlet when advertised in the "Mark Lane Express."

The charge is Sixpence per Line per Insertion.

present more ground is needed, so that pears, plums, and other fruit may be given a trial. But even now the experiments which Mr. H. Bunkin conducts have demonstrated the possibility of successful fruit growing in Warwickshire, and it is good to learn that the trial grounds are being visited by a very fair number of local farmers and others on the Wednesday afternoons, when the superintendent is there to give information and advice.

ADMITTEDLY, this is not a good straw year. But it would be a mistake to think that the complaints of shortness of straw are universal. Here, as in other respects, the local variations referred to in these notes last week are very evident. In the Astwood Bank district, on the Worcestershire and Warwickshire borders, and round about Cookhill, Feckenham, and Inkberrow, I hear of straw which stood six and even seven feet in height. In the Tame and Severn valleys it is generally of excellent length and quality, and so it is in the Arrow valley, even though the hot sun of July ripened the corn there a fortnight earlier than usual. So, too, in the fertile and generously farmed Newport district of Shropshire I have seen oats standing five feet and wheat five and a-half feet high, while in Stafford it should be a very fair average. In this dairying district, by the way, not a little difficulty has been experienced lately in keeping up the milk flow. Up to the middle of July or thereabouts there was no trouble, but since then drought has been telling its tale, and bought feeding-stuffs have been much in request—an unpleasant expense in the middle of the summer, but a necessary one where there are milk contracts to be regularly fulfilled. To-day, however, the rains have relieved the situation, and the roots and field cabbage so much grown locally for dairy-cattle, are again moving forward rapidly.

ONE is glad to hear that a good start is being made with the county fund for the benefit of Huntingdonshire sufferers in the storm of August 2. It is but a short time ago since a little trip into Hunts, and Bedford left upon the writer's mind a pleasant impression of productive cornfields, smiling faces, and general contentment at the prospect of an abundant and profitable harvest. To-day all is sadness and depression. In this instance, at any rate, the sensation-mongers of the daily press have not exaggerated the calamity. Many a farm, indeed, is a scene of perfect desolation. Nothing, it would seem, could stand up against the pelt of those big and sharp-edged hailstones; and as to the corn, it has not merely been laid flat, but threshed out, and deplorably beaten and battered. The loss probably represents a year's rent in many cases; and even the income-tax people admit a year's agricultural rent as equal to three years' profits. It has been said, that one county fund at least has made a good start. So I am influenced by a local correspondent; but it is not to be supposed that these purely agricultural counties will ever be able to raise enough to make good a half of the damage.

August 23, 1906.

On Monday Sir Mark J. M. Taggart Stewart-Bart., of Southwick, presided over a large and representative meeting at Castle Douglas, held for the purpose of considering what form a memorial to the late Mr. James Bignard of Chagaston, should take. Sir Mark gave an interesting and eulogistic account of the life of the deceased agriculturist. A large committee was appointed, and the hope expressed that the meeting might result in a bursary being instituted in memory of the deceased.

Notes of the Week.

Our notes of this week cannot truthfully depict agriculture in a happy condition, if considered all round.

The present spell of harvest weather is a blessing, but the recent gales and hail have wrought sad havoc in certain districts.

For the sufferers in the Eastern Midlands we feel very sorry, and hope practical sympathy will be forthcoming on a liberal scale.

This feeling found expression in the sympathetic leader that appeared in our paper last week.

We hope it will have helped to awaken interest, resulting in a ready flow of subscriptions to the fund.

Remember the old Latin tag :—
Bis dat qui cito dat.

We have to record that the potato blight has broken out in a severe form in the West of Ireland.

The dull wet weather is helping to develop the disease with a rapidity that threatens to ruin the crop.

The small farming classes of that district are always on the verge of destitution, and a misfortune to the potato crop means ruin to many a poor family.

The Government is already being asked to find funds to stave off starvation.

What an untold blessing it would be if a really disease resisting tuber could be introduced.

Potato seedsmen are striving after this ideal, and much is hoped from the new variety with the long name of *Solanum Comersoni* Violet.

But will it act up to its high reputation when grown in old disease-tainted soils.

Evil communications may corrupt its good manures.

The blight of the present hop crop is depicted as the worst since 1882.

In our sympathy for the hop-growers, we ought not to forget the disappointment of the poor hop-pickers.

Hundreds of them will be deprived of their annual picnic in the hop-gardens.

There's a lot of woe, now let us turn to the brighter side of the picture.

It is satisfactory to find prominent members of the Liberal party sound on the question of keeping our flocks and herds free from disease.

The Under Secretary for India at Scalby Agricultural Show said he was in favour of absolute restriction of importation of any possible disease from abroad.

He rightly remarked that we sent to all parts of the world our very best breeds of horses, cattle, sheep, and pigs, and it was absolutely necessary to preserve them from risks of contamination.

A freak of Nature may be seen on an allotment at Tolleshunt D'Arcy, in Essex, gooseberries and apples growing on one tree.

A branch of an apple tree having broken off, a gooseberry seed has been deposited in the cavity, probably by a bird.

According to a note in the Journal of the Board of Agriculture, the wages of farm labourers after going up right from the year 1896 now show a sign of a slight diminution.

What influence will the increase of small holdings have on the farm labour question?

If its effect is to draw men back from towns well and good—but if the allotments are taken by men now working on the farms, it will create friction and dissatisfaction.

Ten years ago there appears to have been 117,968 holdings of above one acre and under five acres in extent.

Last year there were only 110,259 such holdings, being a reduction of over 7,700 holdings.

Why is this, if small holdings are so much in demand, and can be worked so successfully?

Much is spoken now of the advantages to be gained by co-operation. I am sometimes reminded of that blessed word "mesopotamia."

No doubt co-operation, properly organised, is a move in the right direction. We would not say a word to check its development.

But don't let the word be used as a red herring to divert attention from evils that should be remedied.

And the advantage to be hoped for from co-operation should not deter any of us from individual effort.

When all is said and done, the success of a farmer must be based upon his own hard work and sound judgment.

The remarks a fortnight ago concerning English breeders of Aberdeen-Angus cattle and their auction sales evidently touched on a sore point.

We are reminded of the subject by the receipt of the catalogue of Lord Redesdale's herd, which has been removed to Perth for sale.

Breeders of Aberdeen-Angus cattle are always grumbling that Englishmen do not appraise their herds at the proper value.

Is it cause or effect that makes them fly to Perth?

VETERINARY.

Advice of a Veterinary character, by an M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Itch in Young Pigs.

I have a pig, sixteen weeks old, which has a very troubled-like skin; there seems to be an awful itch about it. At first an eruption broke out behind the forelegs and inside the flanks and belly, and it scratches itself until it bleeds. I dressed it with carbolic acid, train oil, and sulphur, thinking it was eczema. But as soon as I got it all right like in appearance, the scratching that it goes on with soon makes it start afresh. I think there must be a something that is causing that itch in the skin that I fail to find out, but would like very much to know. The feeding consists of wheatmeal and sharps, but have changed the wheat to maize with plenty of green food. It may be as well to know I examined the pig and found its skin excessively hot.—Fitz.

Answer: Pigs frequently, from various causes, show signs of irritation of the skin by scratching and rubbing. Occasionally the trouble is lice, and sometimes mange or "itch"—technically scabies—but, happily, porcine scabies is rare in this country. Lice you ought to be able to see, if the pig has been carefully examined, because the pig louse is a big one, the largest of the tribe, and it is scarcely possible to overlook its presence. The determination of the existence of itch is not so easy, for it requires experience and skill in the use of the microscope to differentiate between itch and eczema. This is one difficulty; and when we tell you that the usual treatment for eczema is powerless to cure mange, and that suitable for mange is likely to aggravate eczema, you will easily understand our reluctance to advise treatment. We can only suggest washing with dog soap, and then applying simple sulphur ointment or sulphur and carbolic oil daily with a little friction.

Mare with a Thick Leg.

I have a grey mare; as near as I can say she is ten or eleven years old. I have had her about one month. She is very full on her off-side hind leg, round the fetlock and about 5 in. up her leg; her heel is quite dry. She is worse on Monday morning after Sunday's rest. It is quite dry and no discharge whatever, no offensive smell. Is it what you call a Monday morning leg? She goes quite sound. Could you advise a powder to be given in her food to reduce it? She is a very free driver. I use her for a small waggone. Her near leg is slightly swelled, but not so bad as the off-side;

VETERINARY PREPARATIONS, and Small Articles of a Portable Character, are readily when brought regularly before the readers of the "Mark Lane Express."

THE FARMERS' DIARY.

TUESDAY, AUGUST 28.—Spurling's Sale of Southdowns at Ipswich—Wyatt's Sale of Southdowns at Selsey—Airedale Agricultural Show—Cartmel Agricultural Show—Hawes Agricultural Show—Chester-le-Street Stock Fair—Preston Cheese Fair—Penrith Cattle Show, for Peddrough Fowl Show, and for Bourne (Lincolnshire) Show.

WEDNESDAY, AUGUST 29.—Guildford Agricultural Show—Cheshire Agricultural Show, at Chester—Warwickshire Agricultural Show at Nuneaton—Penrith Lamb Sale—Leek and Ilminster Cheese Fairs—Agricultural Fairs at Colne, Shrewsbury, Saintfield, and Watford—Cattle Fair at Newport Pagnell.

THURSDAY, AUGUST 30.—The Brewood District Show at Somerford Park, Staffordshire—East Somerset Agricultural Show at Bruton—North Stoneham Agricultural Show—Sales: Sheep at Ruddington, Southdowns at Godalming, and Shropshire Sheep at Craven Arms, Shropshire—Hope Valley Show at Hope—Leominster Show—Carmarthen Show—The Chiltern Hills District Show at Wendover—Sending-in day Sedburgh Show.

FRIDAY, AUGUST 31.—Thornton's Sale of Cattle and Pigs at Doncaster—Knighton Horse, Dog, Poultry, and Pigeon Show—Dispersion Sale of the Shropshire, Norton House, Flinton, and Basingstoke Last Day of Cereal Year: Farmers should save "statistics for 12 months ending August 31."

SATURDAY, SEPTEMBER 1.—Cowshill Show, Durham—Crawshawbooth Show, Lancashire—Middleton Agricultural Show, Teesdale—Amanford Horse Show—First Annual Show of the Saddleworth Agricultural Society—Blandford and Basingstoke Fairs—Sending-in day for the Blenheim, Ampleforth, Wear Valley, Thame, and Melton Shows.

MONDAY, SEPTEMBER 3.—Bedwellty Show at Blackwood—Dronfield Show—Gillingham Show—Worcester Show—Evesham Horse, Cattle, and Sheep Fair—Oxford Fair—Tredegar Cattle Fair—Welshpool Horse Fair—Sending-in day for the Aylesham Show and for the Bellingham Show.

TUESDAY, SEPTEMBER 4.—Bicester Show—Moorgreen Show—Hawkshead Show—Snepton Mallet Show—Kinsey Show, for Wharfedale—Cowbridge Show, for the Vale of Glamorgan—Thornton's Sale of Short-horns at Helmsley—Ashbourne Cheese Fair—Ashford Lamb Fair—Agricultural Fairs at Bury St. Edmunds, Crewkerne, Macclesfield, Kewstall, Westbury, Sudbury, and Barnet—Sending-in day for the Leighton Buzzard Show and for the Brecon County Show.

but there is no sign of grease on either leg. I fed on clover, chop, bran, and crushed oats, damp in stable, but dry in nosebag, with unlimited long hay in rack.—D. K.

Answer: Your question, "Is it what you call a Monday morning leg?" suggests that you have some idea as to the character of the enlargement of the limb, even if you do not properly appreciate its cause. The answer is, Yes. But it appears to be a phase of the disease in which the enlargement has become permanent, and for the reduction of which treatment, or at least ordinary measures, are of no avail. Repeated attacks of lymphangitis, which is the technical name for "Monday morning leg," invariably result in what is termed chronic call leg, a condition the veterinary surgeon calls elephantiasis. The name is very suggestive of the appearance of the limb. We are sorry we cannot assist you to reduce what you must now regard as a permanent enlargement, but as the establishment of elephantiasis does not put a stop to the recurrent attacks of lymphangitis we might perhaps help you in this direction.

A record in harvest operations has been established on Sir Cuthbert Quilter's Ramsholt Lodge Farm, where 400 acres has been harvested in nineteen days.

A Cow in a Cellar.—Much excitement was caused in Guildford on market day by the vagaries of a cow. Attracted apparently by the display in the window, it entered a fruiterer's shop. The ladies who were inside fled precipitately to the cellar, but the cow followed calmly enough, and when reaching the grating which admitted the light, appeared to be perfectly quiet, and the ladies were able to make their escape. The difficulty of getting the animal out of the cellar was a problem not easily overcome. Boards were placed on the steps in the hope of inducing the animal to climb up, but in vain. Ropes were then placed round its neck, and a pulley was rigged up, but it would not budge. The paving was then taken up, and an opening made in the roadway, at which juncture Mr. Boylett, a veterinary surgeon, arrived, and having expressed himself capable of driving the animal upstairs, descended to the cellar, soothed the animal, and in a short time it was seen mounting the steps, after having been imprisoned close upon five hours.

Notes and Jottings.

THE excessive heat and dry winds are marring the prospect of the winter root supply in many districts, but as a rule even in the driest districts there does not appear to be an unusual amount of mildew for the time of year; so the swede crop is by no means settled with, as if good rains come before this, there may be sufficient autumn growth to secure a good crop. But every day tends against this, so long as wet is withheld. In view of the trying time that the root crop is passing through in the districts largely supplied by sheep from the Western Counties, it is satisfactory to notice that lambs and stores are holding their price as well as they are doing. It must mean that the prospects of the root crop are not considered too black, or that the position of the trade in the future is regarded as being very strong—it is most probably the latter. This receives confirmation from the sound prices which rule for rams of practically all breeds.

THE cutting of the corn has revealed a thin plant of clover in many districts through the want of moisture at various periods during the

mainly on land that is more profitably employed in raising mutton and wool than it would be in gardening. Moreover, it would be difficult to raise so many sheep in the kingdom that a market for them could not be found; on the other hand, only quite a nominal increase in land under garden and vegetable cropping would preclude the prospect of profit to the producer, under the conditions which obtain in respect to the importation of fruit and garden produce.

GREAT Britain comprises a little short of 57,000,000 acres, of which about 33,000,000 are under cropping or grass; therefore in spite of other produce raised there is practically a sheep per acre maintained, if what is known as waste land is excepted; and it is certainly unfortunate that General Booth should make a public statement urging the limitation of the sheep industry in favour of an industry which at present does not cover 1,000,000 acres, and which if only 1,000,000 acres were added to it would bring destitution to practically all who embarked in it.

SHEEP find employment for a large number of labourers independently of shepherds, because it is only by the aid of sheep that a very big area is kept under arable cropping. Light arable land carrying from two to three head of sheep an acre must produce many other crops, because it would be impossible to keep the land wholesome for sheep without them. General Booth was speaking in Wilts which, with neighbouring counties, probably raises the largest quantity of mutton per acre over an extended area than over any similar area in the world, and it is quite certain but for sheep that land would not be in cultivation. In converting that land into arable, farmers went quite as far into the skin-skinned Down as was consistent with profit.

Mr. J. STOOKE'S SOUTH DEVON RAMS, WINNERS OF SEVERAL PRIZES.

summer, and there is need of filling up in many places, even where the plant has not entirely failed. The need for all the help that can be obtained for increasing the sheep food supply in early spring and summer impresses the necessity of getting in a liberal quantity of suitable catch crops at the earliest convenient time. The land in many districts has been very dry for the catch crops sown for autumn feeding, and the situation is worse in respect to the crops for spring feeding; still the crops must be got in, or there will be nothing to grow, and rain will in ordinary course come to their assistance. We have seen a great many very light crops of mangels in very widely lying districts, which does not give a hopeful prospect for spring feed, and makes a special reason for persisting in getting as much as possible of the crops which come into use between the finishing of the root crop and the starting of the grass.

WHILE General Booth has gained the appreciation of a very large portion of his countrymen for his labours in helping the more helpless in time of need, it is less as an agriculturist than as one capable of dealing with workers in town slums that his endeavours are likely to prosper. His statement that sheep farming should give way to universal gardening throughout the country, which he made to his listeners in Wiltshire, is regrettable, as showing that he has made a miscalculation as to the value of our sheep husbandry as well as to the importance of gardening. Sheep farming is one large industry in connection with the land which is profitable, and the land carries some 30,000,000 sheep,

Many of them would very gladly give up the higher portions of their land to others, but it would be rank absurdity to look for a profit on them from any form of gardening.

WITH sheep coming on to the stubbles ears are needed to observe that there are not injurious weeds among them in excessive quantity. Mayweed (stinking chamomile) very frequently causes trouble through poisoning the noses and lips of sheep—the stubbles pecking the nose and so allowing the poisonous matter to enter. At times so many sheep are troubled in this way that it is mistaken for aphtha. This, however, is only likely to occur when there is a large quantity of mayweed present, though fields with a large quantity are by no means rare. This weed has a bad effect on the animal if they eat it freely, as they sometimes do when other food is scarce, and if taken in large quantity may cause death. When there is a plentiful supply of better food they rarely eat it.

South Devon Rams.

The South Devon rams illustrated above are the property of Mr. J. Stooke, Sherford, Plymouth, who has won with them the Earl of Mount Edgecumbe's Challenge Cup; the special prize presented by Mr. F. B. Milnray, M.P., for the best group of six yearling rams at the Devon County Show. It may be added that Mr. Stooke has also won the cup at Lameston for best six yearling ewes and firsts at the Royal, Devon County, Royal Cornwall, and other shows with animals from his well-known flock.

THE WEEK'S SALES.

Newmarket.

Mr. J. Blencowe had about 6,000 sheep, chiefly pure-bred Suffolks from well-known flocks, for disposal at his thirtieth annual sale at Newmarket, and a good trade was experienced, there being a large attendance of buyers. The catalogue included the entire flock of Mr. J. T. Stockburn, Clare, and among his animals were five shearing ewes, first prize and society's silver medal as lambs, 1905, which fetched 80s. per head; another five shearing ewes, second prize, South Suffolk Show, 1906, made 78s. per head; twenty others realised from 75s. to 70s.; and eighteen more (including five sucklers) 67s. per head. Twenty three-year ewes fetched 75s. to 74s.; seventeen others 67s. per head. Ten full-mouthed ewes (four years old) fetched 78s. per head. Others from 61s. to 61s., and the rest of Mr. Stockburn's full-mouthed ewes ranged from 65s. to 58s., and from 58s. to 48s. per head. His ewe lambs made from 51s. to 50s., and down to 48s. per head. The other lots of Suffolks sold at very much the same prices as above. Hampshire Down and half-bred shearing ewes included Messrs. Colchester and Ball's consignment from Burwell of over 170 Hampshire Down shearing ewes, most of which fetched 50s. per head, and others from 49s. 6d. to 48s.

The Cholderton Hampshire Downs.

A fine draft of forty-four rams from the Stratford Castle section of the Cholderton Flock, and six specially selected ram lambs for letting from the Cholderton Lodge Flock, the property of Mr. H. C. Stephens, of Cholderton, were offered at Briford Fair by Mr. J. Lavington, and they realised satisfactory prices, the average for the fifty lot and sold being £12 16s. Of the rams for letting, the Marquis of Winchester hired at 35 guineas, Mr. Cary Coles at 25 guineas, the auctioneer at 18 guineas, Mr. H. Waters at 15 guineas, and Mr. Good and Mr. Matthews at 13 guineas. Mr. Good bought at 23 guineas and 13 guineas; Mr. E. D. Bryant at 22 guineas; Mr. Notley at 21 guineas; Mr. Pritchard at 18 guineas and 13 guineas; Mr. Pitter at 17 guineas, 10 guineas, 9 guineas, 8 guineas, and 7 guineas; Mr. H. Waters at 16 guineas; Mr. Matthews at 16 guineas and 8 guineas; Mr. Butt at 15 guineas and 9 guineas; Mr. W. J. Chalkier at 15 guineas; Mr. G. Judd at 13 guineas; Mr. Brook at 13 guineas; Mr. Wiltshire at 12 guineas, 11 guineas, and 7 guineas; Mr. Pullin at 12 guineas; and others up to 11½ guineas.

Colchester.

Messrs. Sexton and Grimwade's annual sale of rams at Colchester took place on the 18th inst., when Suffolks formed a large proportion of the entries. Mr. John Egle, of Walton Hall, entered twenty ram lambs; two of these, by Walton Burton III., sold at 7½ and 7 guineas, and others realised from 6½ guineas downwards. A shearing ram, by Walton Burton V., sold at 11½ guineas, and two others realised 7 guineas and 5½ guineas. Twelve ram lambs, entered by Mr. D. Abbott Green, of Fingringhoe Hall, brought from 7 guineas to 4 guineas. Other consignors of ram lambs included Mr. E. Giles, of Great Clacton, and Mr. Charles Cousins, of Great Toy (from 5 guineas). Black-faced ewe lambs, from Mr. Barton, of Alresford Lodge, realised 44s. 6d. per head, and half-bred ewe and wether lambs, from Mr. R. J. Sage, of Monkwick, brought 32s. 6d. and 31s. 9d. per head. Black-faced ewes from Mr. A. H. Eagle, of Pete Hall, sold at 45s. 6d. per head, and wethers from Mr. T. B. Portwee, 38s. 6d. per head.

Shropshire Sheep at the Sydney Show and Sales.

Messrs. Alfred Mansell and Co. have received advice of the prices made at the first day's sale of sheep at Sydney, New South Wales, which show a satisfactory demand. Mr. Harry Williams' ram, Hanroyd, changed hands at 18½ guineas, and his best ewe at 70 guineas. The following are some of the other best sales:—Mr. H. Williams, 104 ewes, average 21 guineas; Mr. A. E. Mansell, eleven ewes, average 31½ guineas; Mr. T. J. Burbury, eleven ewes, average 19½ guineas; Mr. Button, fourteen ewes, average 13 guineas; Mr. H. Williams, eleven rams, average 39 guineas; Mr. A. E. Mansell, three rams, average 27 guineas; Mr. T. J. Burbury, five rams, average 20 guineas.

Sir P. A. Muntz's Shropshires.

As usual, there was a large attendance of breeders and buyers at Sir P. A. Muntz's annual sale of Shropshire sheep at Dunsmore, held on Tuesday, and some good prices were realised. The highest price was taken for a ram by Dunsmore President, which was bought at 70 guineas for Mr.

If SHEEP DIPPS were more extensively advertised, there would be a far wider distribution of the trade. The "Mark Lane Express" is a good medium for such.

Kermode, of Tasmania. For other rams by the same sire Dr. Wall paid 15 guineas and 10 guineas, Mr. Minton 17 guineas, Mr. Rowley 15 guineas, Mr. W. J. Crofts 10½ guineas and 9 guineas, and Mr. Arthur Fabling 8½ guineas. For other rams Mr. Gamble gave 11 guineas, and Mr. Lovelock 10½ guineas. Ewes made up to 90s. per head. Messrs. A. Mansell and Co. were the auctioneers.

The Brandesburton Lincoln Longwools.

At the annual sale of Lincoln Longwool rams, bred at Brandesburton Barri, in the East Riding, prices, although not quite up to last year, were satisfactory, and some high figures were reached. Mr. Robt. Dixon, Dunnington, welcomed a large company. Eighty shearing rams of excellent quality, with heavy fleeces, were submitted for competition. Mr. S. E. Dean, Dowsby Hall, gave 115 guineas for a grand sheep. Mr. Nelson, purchasing for the Argentine, secured another for 105 guineas. The next highest prices were 95 guineas by Mr. J. E. Caswell, Laughton; 70 guineas by Mr. H. Cudding, Riby Grove; 30 guineas and 40 guineas by Mr. Nelson (for the Argentine). The total amount realised for the rams was £1,811 11s., an average of over £23 each. Seventy-nine breeding ewes were sold at sums varying from £9 to £13 each, the average being about £6 10s. They were bought chiefly by Captain Baring, Mr. Saveg, and Mr. Carsarres (London), principally for exportation.

Lockerbie.

At the sale of Cheviot and Blackfaced lambs held at Lockerbie last week trade was decidedly slower than at the first sale this season, and although prices were in advance of late years, they were distinctly lower than prices current a fortnight ago. Secondary lambs were in strong demand, and very dear. The best class of Cheviots may be quoted at 16s. 6d. to 20s. 9d., and smaller sorts from 12s. 9d. to 15s. 3d. Blackfaced lambs experienced a very good market, all the lots showing an advance on last year's prices. Top lots sold at 15s. to 19s., and secondary sorts from 10s. to 14s. each.

Birmingham.

The seventy-fifth sale of pure-bred Shropshire sheep held in Bingley Hall, Birmingham, under the auspices of the Shropshire Sheep Breeders' Association, took place on Thursday, when the feature was the strong demand for rams for shipment abroad. The home trade was also very buoyant, and the sale was one of the best of the long series. Over 200 rams from some of the best flocks in the Kingdom were entered, and there was also a good selection of ewes. Mr. S. F. M. Nevett made 66 guineas for a ram from the flock of Mr. Victor Cavendish, M.P., at Holker, whilst a companion, which had carried off honours at the Royal Lancashire Show, fetched 20 guineas. A South American buyer paid 48 guineas for a Royal winner from the flock of Mr. Matthew Williams, and Mr. W. H. Cooke, Shelsley Kings, secured another ram from the same pen for 30 guineas. Mr. W. F. Inge, of Thorpe Hall, had the distinction of realising the best average for her rams. One made 33 guineas, two 31 guineas, and another 21 guineas. There was also keen competition for the entries of Mr. A. S. Berry, Mr. Edward Nock, and Lady Ada Rothschild. The best price for ewes was 92s. 6d., which was obtained by Mr. Berry's entry.

Mr. Coxon's Shropshires.

On Wednesday Messrs. Mansell and Co. conducted the annual sale of pure-bred Shropshire sheep from the Elford flock, the property of Mr. Charles Coxon, Elford Park, Tamworth. The catalogue consisted of forty rams and seventy-one shearing ewes, all of the finest breeding, and they experienced a real sale. The highest price of the day was realised for a shearing ram, which was sold for 50 guineas to the Hon. Victor Cavendish. Dr. B. Wall, of Colshill, bought a three-shear ram for 20 guineas and a two-shear animal for 15 guineas, the latter for shipment to Philadelphia. Mr. P. G. Hughes purchased rams at 10, 9s. 8d., 7s., and 7 (two) guineas to go to South America. Several rams were sold to Sir Richard Cooper, Bart., Shenstone Court, at 10s. 8d., 6s., and 5s. guineas. Other prices realised for rams included 18s. 11d. and 9s. guineas. Fourteen pens of shearing ewes were disposed of at prices ranging from 12s. to 55s. per head.

The Bentley Hall Suffolks.

Owing to ill-health Mr. J. Keeble has had to give up his famous Bentley Hall flock of pedigree Suffolk sheep, and on Thursday Messrs. Robert Bond and Sons, in conjunction with Mr. E. Prentice, secretary of the Suffolk Sheep Society, brought the animals under the hammer at Bentley Hall, near Ipswich. The flock was established as far back as 1870, and it has for many years enjoyed a high reputation for the excellent grazing and breeding character of its produce. With the exception of twenty first-class shearing ewes, bred by Sir Thomas Barrett Lennard, Bart., which were added to the flock in 1879, the replenishment of the flock in each year was by the addition of the best of the home-bred shearing ewes. The rams used

were selected with great care, and were almost entirely home-bred. That the high standard of the flock was well maintained is shown by the fact that at the last inspection of flocks in the district the one at Bentley Hall was scheduled "All excellent," in addition to gaining prizes at county and local shows too numerous to mention, and its dispersal is to be regretted.

As was to be expected there was a very large company of breeders present at the sale, and some good prices were realised, the averages of the different sections being as follows:—Sixty-eight shearing ewes, £4 11s. 9d.; fifty-one two-shear ewes, £3 7s. 2d.; forty-three three-shear ewes, £4 13s. 6d.; forty-one full-mouthed ewes, £3 9s. 7d.; 100 ewe lambs, £3 4s. 6d.; twenty-four ram lambs, £8 11s. 6d. The rams and ram lambs met a keen demand. Mr. J. W. Eagle got the ram Bentley Bugler, by Grange Earl V., and bred by Mr. D. Abbott Green for 40 guineas, while Mr. Clement Keeble gave 24 guineas for Bentley Ensign, by Brantham Fancy, lambred 1904, bred by Mr. J. R. Keeble. The best of the ram lambs was bought by Mr. Thomas Rudland, who got a choice animal by Bentley Ensign at 25 guineas; Mr. J. R. Keeble took another by Bentley Perfect at 16 guineas; Mr. Edmund Giles one by Bentley Standard at 14 guineas, and Mr. S. R. Sherwood one at 18 guineas, whilst others sold up to 9 guineas. The ewes, which were sold in pens of five, realised as follows:—Shearlings up to £6 15s., two-shears up to £7 10s., three-shear, £7, and full-mouthed ewes to £5, whilst ewe lambs made up to £4 5s.

Ipswich.

The time-honoured Ipswich Lamb Fair took place, as usual, on the 22nd inst., but it was nothing like it used to be. Messrs. Robert Bond and Sons held their annual sale of rams, ewes, and lambs, and offered about 1,000, including Suffolks, Southdowns, Lincolns, Oxford Downs, and Wensleydales. There was a good attendance of buyers, and, notwithstanding the drought, a firm trade was experienced for all descriptions. Suffolk ram lambs made up to 7½ guineas, this also being the top price for Oxford Down and Lincoln shearing rams. Southdown ewes realised from 37s. to 40s., Suffolk shearing ewes up to 54s. 6d., mixed ages to 52s. 6d., crosses 30s. 6d., and lambs to 37s., whilst cross-breds and half-breds made from 30s. to 35s.

Messrs. Spurlings and Hempton also held an auction sale, their catalogue comprising about 1,200 animals. Southdown shearing rams made up to 8 guineas, Cotswolds to 4½ guineas, and Oxford Downs up to 5 guineas, whilst the ewes sold as follows:—Suffolk shearlings up to 66s., half-breds to 50s., and others up to 50s.

Hereford.

Messrs. A. and D. Edwards, of Hereford and Leominster, held their first special ewe and ram sale in the Hereford Cattle Market on Wednesday, when a number of ram lambs and 500 Shropshire and cross-bred ewes were offered. The highest price paid for ram lambs was 10 guineas for an Oxford Down ram lamb by Juror (4755). This sire won 4th at the Royal Show. Mr. Bonnor Barling was the purchaser, and he also gave 63 gs. for an Oxford Down ram lamb by Park Royal, which was won first at the Royal, Bath and West, and Oxfordshire shows. Other prices ranged from 6 guineas to 4 guineas. The ewes did not sell so well, the highest bid taken being 49s. apiece for Shropshire ewes. The prices for other Shropshire ewes averaged from 44s. 6d. down to 35s. 6d. Cross-bred and Radnor ewes made from 49s. 6d. to 23s. 6d.

Marlborough.

Marlborough Sheep Fair was held on Wednesday, when there was a good supply and a brisk trade for rams and lambs, ewes showing a distinct advance on recent fairs, whilst lambs sold fully as well. Mr. Thomas Lavington held a very large sale of sheep by auction, his entry including 11,000 Hampshire Down ewes and lambs, eighty Hampshire Down ram lambs, bred by Mr. H. C. Stephens at Cholderton, seventy ditto from Mr. George Judd's flock at Cocum, and twenty-five from Mr. S. Darling's flock at Beckhampton. Seventy-three of Mr. Stephens' were sold at an average of £7 15s. 6d. Of these, one realised 12 guineas, one 10½ guineas, four 10 guineas, three 9½ guineas, four 9 guineas. Fifty-seven of Mr. Judd's realised an average of £5 14s., the top prices being 9½ guineas and 8½ guineas, whilst Mr. Darling's were all sold at an average of £7 8s. 6d., and he secured the top price of the day, namely, 45 guineas for an excellent lamb.

SITUATIONS WANTED and VACANT.

Those to whom this column appeals, if identified in some way with agriculture, will have no difficulty in obtaining employment or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a nom de plume, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

CHEAP PORTABLE WOOD BUILDINGS

No. 152.

Any Size Made to Order.

Tenant's Own Fixture.

THE BEST AND CHEAPEST IN THE MARKET.

Suitable for Workshops, Store Rooms, Tool or Potting Sheds, Offices, Wash-houses, and many other purposes.

These superior Buildings are constructed in complete sections on strong framework, morticed, tenoned, and pinned; sides and ends covered with best match boards, tongued, grooved, and planed, made from ¾ in. boards. Roof covered with match boards and patent asphaltic felt (which requires no tarring). Door with strong lock. Two windows in any position, one to slide open and the other fixed. Fitted with strong floor, necessary bolts and nuts, barge boards and finials. All our houses are erected before leaving our works; every part is marked, so that any handy man can easily erect them in a few minutes.

Notes and Jottings.

"He doth nothing but talk of his horse."
— "Merchant of Venice."

A FEW years ago, save in a few districts where his many good qualities were well known, the pony was looked upon as at best a kind of toy. Some breeders, whose industry and intelligence succeeded in breeding miniature horses, were looked upon as wasting their time and money, which, said the critics, could have been employed to much greater advantage in breeding weight-carrying horses of the Hunter and Hackney type. That Time brings with it inevitable changes is a truism, and nowhere are changes so marked as they are in the horse world. And in the whirligig of Time ponies have been more and more thought of, till at present they are a very fashionable and a very marketable community indeed.

IT will probably be said that this popularity is due to polo, which, as a sport, has become quite naturalised in England. This, I think, is

It would, indeed, be strange—as seems not at all unlikely—that as the first attempts at systematic pony breeding were on the lines of developing him into a harness pony of the Hackney type, so it will be through the pony that we shall get the typical riding horse, which to a certain extent has been lost. The one thing to be careful about is that in improving the pony we do not lose the pony type. When the type of a breed is lost, many of its good qualities follow, and as we do not want miniature Hackneys, neither do we want miniature Thoroughbreds. Our pony breeds should be developed on pony lines, and the present trend of criticism, and concurrently of judging, is in this direction. There is, however, always a danger that enthusiastic breeders may carry their "improvements" too far, and so the original type may be lost sight of.

MANY years ago Lord Harrington called attention to the value of the pony strain in Hunter breeding. There can be no doubt that he was right in this direction, and if the pedigree of many of our good weight-carrying Hunters could be traced, there is little doubt but what some pony blood would be found. One of the best Hunters I ever knew was by a Thoroughbred horse—Cape Flyaway to wit—from a pony mare. The mare was a small one, standing under rather than over 14 hands 1 in., and her pedigree was unknown. The horse grew longer than is usual, that perhaps being accounted for by the fact that he was badly "done," and, perhaps, by the pony blood. At any rate, he grew to be 15 hands 3 in., and was well up to 15 stone. He did not show any pony character in his appearance, but he had all the tough wiry character of the Moorland or Dales pony.

It is so, for the sake of the breed itself, which it would be a pity to cross out of recognition. And a breed of this kind seems to flourish best where it supplies a local need. Then it is bred on practical lines, and not in accordance with preconceived theories, which may have a good practical end, but which again may not. There is no doubt that the Cleveland Bay does much better, and is bred more correctly to type, in his native country than in the south, because in his native country he is used as a farm horse on the moorland fairs and East Moor dales, and in breeding him at home, as it were, this fact is never lost sight of.

THE fact which breeders should bear in mind, whatever breed of horses they may select to try their hands on, is that no breed of horses is an "exotic," if I may be allowed to use the phrase. The moment a breed of horses ceases to be a practical value—so soon as there is no work for it to do—so soon will it begin to deteriorate and to lose its characteristics. If there was no hunting Hunters would cease to be, as we know Hunters nowadays. There might be horses bred which would be called Hunters, but they would be nothing like the Hunters of the present day. There would be no incentive to breed them with a view to the requirements of a hunting man. Stamina, pace, jumping powers, would not be needed, and they would disappear. And so of other breeds. The great strength of any breed, after all, lies in the men who build their horses for ordinary workaday life.

WEALTHY amateurs—who do so much for horse breeding in this country that it almost seems ungracious to call them amateurs—would do well to bear this in mind. Some of them do, notably Shire horse breeders and Polo pony breeders. The danger is to be apprehended from amateur breeders with strong prejudices, or perhaps it would be more polite to say, strong theories of breeding. These gentlemen, with the best of intentions, are sometimes tempted to lose sight of the original use of the breed they devote their attention to, in the quest of what, I fear, can be best described as "the unattainable."

ONE breed, and a very valuable breed it was, has been irreversibly lost to us. I refer to the Northumberland Vardy Horse, of which I have heard a good deal, but of which I have never seen a specimen. The late Sir Jacob Wilson told me that he had seen one when he was a boy, but that the breed was practically extinct then. The Vardy horse, as I have heard him described, was a black horse standing on a short leg, short coupled, and capable of taking half a draught even on the strongest of the Northumberland land. He was also a very active horse and a fine mover, and he could carry a man a long journey at a good round pace. His weight-carrying capacity was naturally great, and he was in his day in great request as a saddle horse in the north. The origin of the breed is somewhat obscure, but so far as can be judged from descriptions of it, it was produced by a mixture of Eastern blood, the Libyan horse, with the breeds of Northern Europe. According to Professor Ridgeway's theory, this would account for the colour. As for what has come of him, the probability is that from seventy to a hundred years ago he was absorbed by the Clydesdale on one side and the Hackney on the other. But however he went, it is deeply to be regretted that he has gone for ever, and his loss should make us all the more careful to see that we retain as much as possible the characteristics of our old breeds, and especially of our old breeds of ponies.

THE LOOKER-ON.

The Ottringham Grange Hackneys.

An important sale of Hackneys took place on Thursday, for on that date Messrs. E. E. Connaught and Messrs. G. T. Tanton and Sons disposed of a number of Mr. J. C. Cappin's animals from his well-known Ottringham Grange Stud, near Hull. As pointed out in a previous issue, many famous animals have hailed from this stud, whilst the animals offered last week were sired by such noted animals as Carlton Duke of Connaught, St. Thomas, Goldfinder V.L., St. Anthony, St. John, Langton Connaught, Lord Kimberley, Gentleman John, &c. The sale attracted a large company, but bidding was by no means brisk, and the prices, considering the quality of the animals, were very disappointing. The only three-figure price was 150 guineas, which Mr. Coverdale, Beverley, paid for Bright Dorothy by Carlton Duke of Connaught, a very true mover of a good type. The next best price was only 58 guineas, given by Mr. Reel, Sledmere, for the mare Grange Daisy, and the other lots went cheaply at prices up to 51 guineas. The total realised by the sale was £1,408, 25 mares and foals fetching £761, six two-year-old fillies £144, four yearling colts and fillies £84, and 11 geldings £354.

Mr. F. B. BLOSSETT MAULE'S NIMBLE NINEPENCE.

Winner of First Prize in the Single Harness Class at the Bournemouth Horse Show.

scarcely accurate, for the popularity of the pony is not confined to animals of the Polo Pony type. No doubt polo drew attention in the first place to pony breeding on a more systematic plan than had been hitherto adopted, and the Polo Pony misfits—by Polo Pony misfits I mean those which were outsize—had to be used for some purpose. Many of these were exceedingly good looking, and their many virtues were soon recognised, and breeding riding ponies without especial regard to polo became an objective of some breeders. Since then the pony has become more popular every day, and at our agricultural shows whatever classes may fail to fill they are rarely to be found in the pony section.

IT is curious that the earlier attempts to improve the pony by systematic breeding were all on harness lines. Or perhaps it would be more accurate to say that the systematic breeding of high-class ponies synchronised with the gradual development of the Hackney into a harness horse. The famous Sir Horace and his progenitors were of the Hackney type in shape and action, and not so very many years ago a pony of the Hackney type—that is, of the Harness Hackney type—was sure to win at any show. This, however, no longer prevails, and frequently at the ring-side one hears the remark, "That is not a pony—it is a miniature Hackney," and there is a strong objection to prizes being given to ponies of this type unless in harness classes.

THERE is little doubt that our Forest and Moorland ponies are to a considerable extent of Eastern descent. The Exmoor ponies certainly show this in many particulars, and tradition traces their descent from Arab forefathers. The same may be said of the New Forest pony, and also of the Dartmoor, though probably there is not so much Eastern blood as the Exmoor possesses. It is, however, questionable whether the sturdier ponies of the north—the Fell ponies and the dale ponies—which were once so numerous, possess any Eastern blood at all. They are built quite on different lines; some of them almost like miniature clean-legged cart horses, short-legged, wide, and capable of carrying a great weight or drawing a great weight. Ponies of this class were shown at the Durham County Show at Wolsingham, and it was interesting to see that the classes were well filled. They are pretty largely bred in the western dales leading up to the moors in the county of Durham, and there they answer a good purpose, both for draught and also as hacks, and very good hacks some of them are on the rough moor roads.

NOTWITHSTANDING their many good qualities, it does not seem likely that the Dales ponies, of which I am speaking, will become general favourites, for though they are sturdy and have a fair amount of pace, they are scarcely stylish enough to meet modern fashionable requirements. And perhaps it is all the better that

Notes and Jottings.

THE elaborate table of results at the recent Tring show in the butter tests reveals some terrible discrepancies in the way of richness of produce—discrepancies with regard to the characteristics of the breeds tested. In the class for cows not exceeding 900 lb. live-weight, one Jersey is stated to have given milk of such an utterly poverty-stricken quality as to require 46 lb. of milk to yield 1 lb. of butter; and a Shorthorn requiring 54 lb. of the former to produce 1 lb. of the latter; whilst another Jersey requires 32 lb. and others 31 lb. of milk to give 1 lb. of butter; whilst 21 lb. up to 25 lb. ratios are quite common. Surely this points to a very unsatisfactory state of things from some cause or other, the general average richness of milk of these breeds being far in excess of what is here given.

THE very dry weather and consequent lack of nutrition in a great proportion of the bulky food consumed may have been the cause of considerably poorer milk than usual being given, but for a Shorthorn to require 54 lb. of milk to produce 1 lb. of butter is altogether absurd, and a Jersey requiring 46 lb. is still worse. If this very ridiculously low ratio was caused by the animals being out of health or by variations in the temperatures of the milk at separating, or of the cream at churning, such causes should be mentioned, or there may have been other reasons; at any rate for such a large proportion of Jerseys to come over a 20 lb. ratio is very prejudicial to the breed, and owners of such cows ought to take care that these animals never make such an exhibition of themselves before the public again.

THE one great feature of the Jersey cow is her ability to produce the richest milk obtainable, and to make butter of the highest possible quality at the lowest possible cost, but the results here indicated show the very reverse. The milking trials may also account for the poverty of these milks in a measure, some exhibitors feeding with a view to winning the milking competition as well as the butter test prize, and so long as the milk is up to the required standard of butter-fat the interest of the breed, so far as richness is concerned, is set on one side. In all fairness to breeders and exhibitors of Jersey cattle, any cow requiring over 20 lb. of milk to produce her pound of butter should by all means be disqualified from either receiving a prize or a certificate of merit.

PERHAPS the most phenomenal feature of these tests and trials was the remarkable performance of Captain Smith Neil's cross-bred cow Doctor, now twenty-four years old, and capable, as was proved in the Tring showyard, of winning a first milking prize in such keen competition. The milk yield of this little cross-bred cow was 55 lb. 8 oz., the butter yield from same being 1 lb. 12½ oz., giving a ratio of 31.43 lb. of milk to the pound of butter. It is generally proved by experience with most of our breeds of cattle that milk diminishes in richness as the animals increase in years. From this point of view Doctor's milk must be looked upon as fairly satisfactory, much more so than many of the others. It is a pity that her breeding (the precise cross) cannot be ascertained. Appearances rather favour the theory that the Ayrshire and Jersey were the groundwork.

FOLLOWING upon the concession granted to the Black Polled Cattle Society with regard to dating the ages of that breed from the 1st of December in each year instead of the 1st of January, it will be seen that at a meeting of the Welsh Black Cattle Society a motion was carried for petitioning the L.A.S.E. to grant similar concessions to this breed. Surely it will be an unsatisfactory business to have the Royal Catalogue showing such mixed dates as these, and one would think the wisest step to pursue would be for the dates of every breed of cattle to commence from December 1 instead of January 1, and thus put an end to the confusion that must ensue upon these mixed dates. All breeds would then stand upon an equal footing in the eyes of strangers who are unacquainted with the reasons why different dates are allowed.

TRAVELLING through a great extent of country during the last two weeks has given an opportunity of comparing notes as to the appearance of the cattle in different counties and districts of the country. The district that strikes one most favourably at the present time is the south-west, through the neighbourhood traversed by the Great Western Railway from Bristol to Exeter. Along this route, covering some seventy or eighty miles, it is pretty safe to say that there are more and better cattle than could be found in any similar area or distance in the United Kingdom. The district is one largely composed of grass land, and includes the se rich marshes in the region of Bridgwater, where some of the finest Devon cattle are grown and converted into beef.

AT the present time this district, like practically all parts of the country, is suffering from shortness of keep, though the pastures have a fresher appearance than in many districts. The great numbers of cattle to be seen from the windows of the railway carriage are what strikes the traveller first, and secondly the general quality of the stock. There is more uniformity here than is seen perhaps anywhere else. For a long distance after leaving Exeter en route for Bristol, the herds are almost entirely purely bred Devons, and many of these are so conspicuously good as to be quite striking even when travelling at express speed. Most of them, too, are in very satisfactory condition, whilst not a few herds also give the impression of being at least fairly good milkers.

THE absence of cross-bred stock was also a noticeable feature of this journey, and certainly results, so far as could be seen, were very much in favour of pure-bred stock breeding. North of Bristol another very useful class of cattle preponderate, not purely bred these, for the whitish faces and other white markings upon a red ground indicated unmistakably the cross of the white face (Hereford) and the Shorthorn, and this cross seemed to be extending very considerably, far more such cattle being seen at the present time than is generally the case. The cross, generally speaking, had given a short-legged, well-ribbed, and hardy class of cattle that were keeping themselves in very good condition upon land and pastures that could not by any stretch of imagination be called good.

THE previous week a journey over some hundreds of miles up the Eastern, Midlands, and Northern counties contrasted, as regards its bovine population, very badly with the cheerful outlook in the South West. Pastures were browner to begin with, which was probably one great cause of the less thriving and generally poorer condition of the animals, which were for the most part of Shorthorn blood—in many instances of inferior blood, too, it is to be feared; and a great number of these, especially of yearlings, were very thin and thriftless-looking, with numerous individuals throughout the journey that must have had a very hard struggle during the spring months. The occasional (very rare) appearance of a herd of cross-breds was the most gratifying feature of this journey—these being for fattening, whilst the Shorthorns were evidently more intended for dairy purposes, might have something to do with this.

IT was, however, in spite of all favourable things that could be said, quite evident that first-rate bulls had not been a strong point in the make-up of the cattle seen here. Improvement of a really satisfactory kind can only be achieved in the first instance by the use of a higher class of bulls, and in the second place, by giving improved feeding. It is not necessary to give feeding of such a kind as will be ruinous to the owner in expense, and ruinous to the animals by raising them to a level of condition that is incompatible with healthy breeding conditions on the one hand, excessive fat for the butcher and consumer on the other hand, but such moderately good feeding as will insure steady progress being made from birth to maturity at such moderate cost as will leave a margin for the pocket.

MOST English breeders and feeders who are interested in Aberdeen-Angus cattle, will find themselves in accord with the Aberdeen-Angus Cattle Society in committing their annual or bi-annual sales of breeding stock to the hands of the well-known auctioneers, Messrs. Lythall and Walters, of Birmingham, and to hold their sales at that very convenient centre. No one could complain of the very able Scotch auctioneer who officiated upon several occasions at English sales of cattle (Angus), but manifestly for the sale of animals of that class, many of which (the males) are purchased for crossing purposes, local talent is usually more approved. The society may count upon success pretty surely if they will see that a sufficiently good class of animals are forward, and black-ball such as are not up to a fair standard of merit.

HILL & SMITH

MANUFACTURERS OF

Catalogues free on application to
Brierley Hill Ironworks, STAFFS

OUR beef markets stand at a very discouraging level. When one stands at auctions and sees really good crosses and Shorthorns of 90 stone Smithfield, failing to reach anything over £18, there is not much left to the feeder except trouble and sorrow. How to produce beef at a profit during a season like the present with these figures is a problem we will not pretend to solve.

IN the Chicago market supplies have latterly been considerably in excess of those of a similar date last year. Probably the supply marketed has been influenced by ordinary cause, such as weather and feed, and we doubt not prices, as at home, have been influenced badly by the excessive heat which has been experienced. Both at home and abroad, however, advices point to a future scarcity of well-finished cattle.

The Cockfield Hall Sheep and Pigs.

In consequence of the Cockfield property being advertised for sale, Mr. F. H. Jennings, of Cockfield Hall, Bury St. Edmunds, resolved to disperse his entire flock of pedigree Southdown sheep, as well as all the Berkshire pigs, with the exception of two old sows, Sillic and Orchard Beauty. The sale took place on Friday, Messrs. J. Thornton and Co. being the auctioneers, and its importance attracted a large number of visitors, not only from various parts of East Anglia, but from more distant parts of the country, the Southdown and the Berkshire, bred at Cockfield Hall having won for themselves a name and a place amongst pedigree stock by the care and attention devoted to the breeding and rearing of the best examples during a period extending over a score years. Mr. Fred Jennings is well known to have good taste for different varieties of stock, his services as judge having often been accordingly in request at the principal shows.

The first animals to come into the ring were the yearling ewes, which numbered fifty, and a particularly nice lot they were. Mr. More Stevens, Torrington, secured the first five at 64s. each, Mr. Walter Winch taking two other lots at 64s. and 62s. respectively. Mr. A. C. Hall, Carlton Grange, had the pick of the lot perhaps at 78s. Others made 73s. and 68s. The four-tooth ewes sold well, Mr. M. Stevens again taking the first lot of five at 67s., but another choice five ran up to 25 15s. each to Mr. Garrol, for the Exors of Colonel H. Malcolm; Mr. Neame, Midhurst, secured five at 73s.; Mr. Walter Winch took two fives at 67s. and 64s. respectively; and the same gentleman was the purchaser of two lots of ten. There were seventy six-tooth ewes, Mr. Neame giving 107s. each for five. Others went at 61s., 59s., 52s. The full-mouthed ewes also sold freely, Mr. Garrol taking two lots of five, one lot making 26 guineas. Mr. A. Neame gave 105s. each for five, and five more were bought for Lord Colclough at 70s. Ninety ewe lambs were next disposed of in lots of five, ten, and twenty, and they made from 28s. to Mr. W. Manning (Weeley), Mr. Rush, and other buyers.

About a score rams of different ages were then offered, the five-year-old Cusford Selsey going at 20 guineas to Mr. C. Adeane. Mr. Stride, Chichester, gave 14 guineas for a four-tooth Cusford Penman 3rd; Mr. Robert Edgar, 15s. guineas for a four-tooth Compton Ram 562d; and Mr. Walter Winch, 20 guineas for another four-tooth Compton ram. Other prices were 12s. guineas, 11 guineas, 10 guineas, amongst the buyers being Mr. Edgar, His Majesty the King, Mr. C. Adeane, and Mr. Bendish (for Sir Walter Gilbey, Bart.).

The Berkshire pigs were then offered, and the feature of the female lots was the big litters of little pigs sold with the sows. Mr. Phil. Browne gave 10 guineas for one sow, Mr. Phil. Browne, jun., taking the next at 11s. guineas, Mr. Jessup and Mr. Neame giving a like figure for two others, and Mr. Duck 9s. guineas. Mr. Alfred Brown, Southampton, took two others at 9s. guineas and 10 guineas. Mr. Cross, St. Osyth, also paying the latter sum, as did Mr. Dyer. Others went at 8s. guineas, 7 guineas, 6s. guineas, &c.

LARGE BLACKS.

CORNWOOD HERD of High-Class Pedigree Large Black Pigs.—Breeder and winner of numerous Prizes and Cup; Royal, Bath and West, and County Shows. Boars and Sows always on sale.—JOHN H. GLOVER, Cornwood, Devon.

PEDIGREE LARGE BLACKS of Choicest Strains, young Boars and Sows For Sale; prices moderate.—H. J. CLARKE, Norbury House, Newport, Shropshire.

STROUD HERD Pedigree Large Black Pigs.—Noted for length and depth; 1st and 2nd Prizes at Bath and West of England Show, 1906; young Boars and Sows (sired by Borstal Masterpiece, 1st and Champion Royal Show) at very reasonable prices.—WM TOWNSEND, The Manse, Stroud, Glos.

SUSSEX.

SUSSEX PIGS, LARGE BLACK. Pure bred and of finest quality, with very small bone and fine hair. Not to be equalled for prime meat.—FRANCIS N. HOBGEN, Manor House, Appledram, Chichester.

BERKSHIRES.

CORY, CLIFFORD J., M.P., Llantarnam Abbey, Monmouthshire.—Pedigree Boars and Gels.

CRIBB, ARTHUR LEWIS, Well End Lodge, Shenley, Barnet, Breeder of PEDIGREE BERKSHIRE PIGS. Young stock noted from strains, and eligible for Herd Book, for sale at moderate prices.

TAMWORTHS.

THE Melton Constable celebrated Herd of Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cups Smithfield. Several recently exported for Continental and Colonial herds.—Apply R. OWEN GODDARD, Estate Office, Melton Constable, Norfolk.

Mr. William Frith, of Vale Farm, Sandiway, Northwich, one of the oldest farmers in Cheshire, died on Monday afternoon. Mr. Frith, who was eighty-one years old, had occupied his farm on the Vale Royal Estate for upwards of half a century, and was well known and highly respected throughout the country.

The Uncertain Future.

The almost universal craving of human nature to fathom the unknown, and to speculate upon its possibilities, was perhaps never more forcibly illustrated than at the present moment, when, as regards the hop industry, the minds of all engaged therein are so actively exercised in trying to find out what the coming crop has in store for them. This is the estimating season, and "Opinion, which on crutches walks, and sounds the words another talks," raises its voice freely and loudly. It is amusing to the outside observer to trace the manifest connection between self-interest and the various views that are expressed, and one is almost inclined to agree with Shakespeare when he says: "A plague of opinion! a man may wear it on both sides like a leathern jerkin."

The planter, naturally desirous to belittle the crop, in the hope that thereby he may alarm buyers and secure good prices, is pessimistic; the merchant, with the opposite object in view, argues from this side, and doubts all the statements presented to him. Even factors, who are supposed to be impartial arbiters, differ materially, and when amongst their country clients appear to support estimates that they are not prepared to stand by in the Borough. Indeed on such a subject, and at such a time as the present, "truth and fiction are so aptly mixed that all seems uniform and of a piece."

One of the oldest planters who spoke at the Canterbury Farmers' Club on Saturday last said that after forty years' experience he found that this was the most difficult year to estimate concerning the hop crop, tracing his difficulty to the irregularity of the growth and the variation in the condition of the plantations.

These are facts on which we may rest, for when we hear, on the one hand, that extensive areas will not be worth picking, that other larger areas can only yield one to two cwt. per acre, and are also told that the best cultivated and well-washed gardens will give 10 to 18 cwt., we are left in such uncertainty that it becomes almost impossible to strike any reliable average.

Having no personal axe to grind, I am only desirous to ascertain the facts of the position, and therefore examine as carefully and impartially as possible the information that comes before me from various sources, and I am inclined to abide by my previous figures, which show a total from last year's acreage of near about 300,000 cwt. But I am now informed that when the official returns are published we shall find that our hop area has been reduced by some 1,500 acres; if this should prove to be correct, the crop according to this calculation would be lowered by about 10,000 cwt.

Any brings us into close proximity with the official returns of 1904, and judging by the average of the ideas expressed by many experts with whom I have discussed this matter, I think this estimate will be generally confirmed.

"The Brewers' Journal,"

which is the recognised exponent of the industry that consumes our produce, speaks plainly on the crop prospects, giving ample details in confirmation. The special reporter says there is no doubt that the hop crop of 1906 will be a very short one. The deficiency of bine in all districts prevented the possibility of a big crop, even if no adverse circumstances had occurred to check the growth. There was just a chance at one period that a favourable turn in the weather might give a fair average. But the weather did not improve, and the aphid attack continued, "resulting in more serious mischief than has happened in any year since the memorable blight of 1882." When the weather became more propitious, hundreds of acres were beyond hope of recovery, and a large proportion will produce so few hops as will not pay for picking.

"In all our experience extending over a period of a quarter of a century, we have never seen a blight so prolonged or so difficult to cope with." As a rule, washing has the desired effect of clear-

ing off the pest, with a few applications, but this season, "only by dint of great determination and by incurring of huge expenses, have a number of the leading planters saved their crops from irretrievable ruin." These strong words may be safely accepted when we consider their origin. There can be no bias in favour of the growers, as every sentence shows the consumers that they must be prepared to pay a fair price for their hops this season, if planters are to be compensated for their outlay. But the writer makes an error in his concluding paragraph when speaking of the cost of washing. Doubtless the error is unintentional, for he says that a certain planter in East Kent, who farms 300 acres of hops, has expended no less than £190 in washing them. The planter himself wishes me to say that his outlay has been at least 25 per acre, or over £1,800.

This correction is confirmed by the evidence of a large grower in another district of Kent, whose outlay for this process averages nearly £10 per acre this year. The efforts made by English growers to provide a crop should appeal to brewers, who would otherwise have been completely at the mercy of the foreigner, by whom the situation would certainly have been taken full advantage of.

Having now arrived at the last week in August, we may conclude that the position is fixed as regards the harvest. The climatic disturbances we have lately experienced must be rather detrimental than otherwise, as I cannot suppose that the extreme variations of temperature from a blazing sunshine at 125 deg. to 53° nights with an easterly wind blowing can benefit the tender crop. The recent fall of the barometer, bringing a little rain and promising more, may increase the weight of the crop slightly, but there is now hardly any time for further development, except of the later sorts, which I trust may come down better and to the greater comfort of my country friends.

The American Crop

will not be so large as previously estimated. I have received further letters on the subject, one of which says that "crop prospects in the United States are not so brilliant as when we last wrote, but they still promise a good yield." Continued hot weather on the coast has damaged the crops slightly, and there is a probability of a top crop only in some yards. Estimates have been reduced to 330,000 bales. From another letter from same correspondent, but a week later, I learn that "the weather is very dry and there is no indication of rain. Our crop will be much smaller than previously reported. To-day we would not estimate United States above the following:—Washington 45,000, Oregon 115,000, California 90,000, New York 50,000; total, 300,000 bales." It is probable that we shall get lower figures as the season progresses.

Continental Prospects

The following are extracts from reports recently sent me by the German Hop Growers' Association:—

Bavaria.

ABSBURG.—The hop plantations have not suffered at all since the beginning of this month. A decided estimate as to the likely output cannot yet be given; in any case we expect to be even with that of last year.

GROSSWENDELN.—From the present condition of the hop gardens we have something to expect, but as compared with last year we shall have a shortage. If the good weather continues, the general picking is likely to begin on August 26.

NEUSTADT A.A.—A good crop may be expected here, provided the present prospects are not interfered with by unfavourable weather. Some gardens promise a full crop, the early hops are well developed. . . . we will have about one-fourth less than last year's crop, which was very good.

BAMBERG.—The warm weather has been very beneficial to the crop. There is progress in the development of the plant in Upper Franconia, and also in Upper Bavaria and the Palatinate; it is, however, still too early to give any idea as to the probable output.

MAINBERG.—The condition of the plant here is generally good. Picking of the early hops will in many places begin on the 20th of this month.

WOLZACH.—Development is progressing satisfactorily. We shall soon be able to give some idea as to the output. The picking should begin in about ten days.

KINDING.—In our gardens much has changed since my last report. In nearly all plantations, particularly those which lie in a deep position, there is a lot of rust, and a small crop may be anticipated. On healthy stalks the flowering development is normal. It is impossible to give an estimate as to the output. In some places it would seem as if the crop would be greater than last year, but on the whole a smaller one may be looked for.

HUSENBURG.—Some of our gardens look well—those which have been attacked by the earth flea, &c., having greatly improved, but some are still

ADVERTISEMENTS

received after Friday cannot appear under Classified Heading, so are inserted on the last pages of the late

MARKET SUPPLEMENT.

bad and promise little or no hops. Rust and vermin are to be seen in many districts. From what we can see, not half the quantity of last year's crop will be reaped.

Wurtemberg.

ROTTENBURG.—Since my last report things have not changed much—those hops which may be called really sound are developing well. Unfortunately the cold nights and early fogs are not conducive to the improvement of the hops, particularly those in deep places which are suffering from rust, and the crop will be small.

HORK.—The condition of the plant has improved; but the black-stalked hops do not promise much even in spite of the favourable weather. The crop is likely to be late as compared with last year.

THAILFINGEN.—Our plantations promise a good medium crop—one-third is fine, one-third medium, and one-third inferior.

HEARENBERG.—Since my last report the condition here has improved, and from the good gardens much may be expected. Even the plantations which were totally rusty have so far improved that a little is to be hoped in the way of crop. As the cone development is still backward, it is too early to say anything as to the total output.

WEILDERSTADT.—The condition of the gardens has improved on account of the favourable weather; the healthy hops have greatly developed, and the diseased hops are so far advanced that a certain production may be expected from them.

AIDLINGEN.—Since our last report the condition here has not improved—on the contrary, the middle and deep plantations, and partly the high ones, have been totally destroyed by rust. On the whole, one-third of the crop of last year may be expected.

RENNINGEN.—Great improvement here since last report, even the gardens which were suffering from the flea will be bearing some hops. The

quality promises to be good. We have at present favourable weather. As to quantity, this may be estimated as about two-thirds of last year.

Baden.

SCHWETZINGEN.—Until the end of July hops here were threatened greatly by rust, but they have recovered on account of favourable weather; one may count on a one-fourth crop, and if the cold nights cease, also the great heat by day, the sound hops will produce a full crop.

HEGNAT.—Since August 1 fine sunny weather has prevailed. The crop will be less than last year, but the quality much better, as rust and lice have not done any more damage.

Nassau.

GRENNHAUSEN.—The present weather is conducive to the development of the cones. Hops on the whole are sound. Those plants which have suffered from rust will bear no hops.

Bohemia.

SAAZ.—The hop plants, which have been diseased, will bear little or nothing; one-third of last year's crop is to be counted on. Picking of the early hops begins about 20th inst.

Russia.

WARSAW.—Our hops have improved during the last week or two. The rain has helped them considerably, and present prospects are much better than they were. It is now estimated that our crop will be about half that of last year. The prices offered by Galician merchants have therefore fallen somewhat, but Bavarian buyers have not yet commenced operations.

The Markets.

LONDON.—Buying and selling in the Borough have practically ceased for the moment, very little business having been done during the past fortnight. A few small sales have been made to con-

sumers at full prices, and the tone of the market remains very firm. Reports have appeared that choice hops are valued as high as 1s. per lb., but I cannot hear that any sales have gone through at this price, although it is possible that an odd pocket or two may have changed hands. The general currency may, I think, be safely estimated at 80s. to 100s., and we may fairly anticipate that when the new hops come forward, a further advance will soon be established. Most of the merchants are, however, away, taking advantage of the fine weather for extension of their holidays, and we must wait their return before we can expect any renewal of activity.

NUREMBERG.—The reports from the plantations being more favourable, business has become quieter, and although there is no perceptible change in values, the desire to sell is somewhat accentuated. Country holders are also clearing up their stocks. Recent quotations are from 60s. to 80s. for medium green samples, choice qualities being priced at 80s. to 105s. Low grades are completely neglected, but a few have been taken for export at 40s. to 50s. Some early new hops are on offer at 140s. to 170s., the arrivals being from Styria and Tettnang, but they hang on hand, demand for them not having developed.

BRUSSELS.—The trade is slow, but values are well maintained at recent figures. Alost of last year's growth are quoted at 70 francs, and new crop for October/November delivery, 115 francs. The general tone is firm.

NEW YORK.—The American markets are quiet but firm, with an upward tendency. Yearling Pacifics are selling at 13 to 17 cents, and a fair amount of business is being done in contracts for the new crop at 15 to 17 cents. The shortage of the English crop imparts tone to the market for futures, and it is reported on this side that 20 cents is now the quoted price, but I have not had this confirmed by my correspondents.

MISCELLANEOUS.

BASIC SLAG PHOSPHATE. Remarkably successful on Grass land. Obtain our prices and book requirements to ensure delivery. Binder Twine, all brands; Rick and Wagon covers; Implements, at very lowest prices. Write us to day, it will pay you.—CANNOCK AGRICULTURAL Co., LTD., Cannock, Staffs.

BASIC SLAG, 42-50, 38-45, 30-35, 25-30 per cent phosphates. State quantities required and station, when prices analyses, &c., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

POWDER for DESTROYING LICE in CATTLE and HORSES, and FLEAS and LICE in DOGS and POULTRY. Remedy; simply sprinkled on, or washing; quite harmless, 1s. per lb., over 3 lbs. post free. E. RUMSAY & CO., 38, Abchurch Lane, London.

TRACTION ENGINES and WAGONS, Portable, Ploughing, and Fixed Engines, Threshing Machines, &c., second-hand, for Sale, cheap or to Let on Hire-purchase. Full list free. Inquiries for all classes of Machinery solicited. Largest stock in England to be seen at our Works as below. We are also buyers of good modern Engines at all times, for cash. Large stock of Beltings, Oils, and Engineers' Requisites. Descriptions, &c., 18, 19, LEWIS & SONS, Thames Bank Iron Works, Reading.

WIRE NETTING.—Cash prices per 50 yards, carriage paid on 70s. lots. 3 in. mesh 30 in. wide 5s. 10d., 2 in. 7s. 4d.; 1 1/2 in. 10d., 1 1/4 in. 12s. 10d. State wants. Fox & Co., Rochford, Essex, Sheep netting.

POULTRY Houses on Wheels, 7 ft. long, 5 ft. wide, 6 ft. high, nest boxes outside 60s. carriage paid.—For other sizes write for Catalogue to WHITLOCK BROS., Great Yeldham, Essex.

RATS!! RATS!!—A Truro Farmer writes: "After using a 1/2 Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or cats won't touch it. Price 6d., 1s., 2s. 3d., 3s. 8d. Postage 2d.—M. L. HARRISON, Chemist, Broad Street, Reading.

SHEEP FARMERS.—Sow now Brinkworth's Early Wonder Cabbage Seed, 5s. per lb., post paid. This new cabbage produces large heads in April.—BRINKWORTH & SONS, Bugle Street, Southampton.

WILLSON'S CANADIAN PIG POWDERS. Packets, 7 Pounds, 7d.; 16, 1s. 2d.; boxes, 4s. 3s., 14s. 6s., all post free.—STEPHEN WILLSON, Peterborough.

Seasonable Topics.

Hopping. ALL through this brilliant summer Kentish hop-growers have been struggling against opposing forces, and now the fight is over, for the season of harvest has arrived. Reports come from every side telling of the shortage of the crop, but the growers who cultivate well and liberally have come out the best. Be the crop, however, big or little, hopping is a busy time in Kent, and a hop-garden when picking is on is by no means a bad place to study human nature. The newspapers make a point of describing the annual exodus from London, and a motley crew the metropolitan pickers are with their wan faces, cockney accent, and heterogeneous collections of goods and chattels. Some of the London pickers return home better off in pocket, but others spend as they go on, though one and all are improved in health by the few weeks' sojourn in the country. Hopping is not what it used to be, however, and of late years considerable improvement has been made in the lodging accommodation of the imported pickers, and in several districts excellent attempts are made to provide them with amusement and recreation during their hours of leisure.

The Hop-dryer. PERHAPS of all the people who are connected in one way or another with a hop garden at picking time, the man who realises most the sense of his own importance and responsibility is the individual who has charge of the oast and drying arrangements. When hop-picking begins there are certain men who rise quite suddenly above the level of their fellows. They are the hop-dryers, and no matter what occupation they follow at other seasons, while hopping is on they occupy an exalted circle. A good dryer is a jewel to a hop grower, and we know men who have dried on the same farms for half a lifetime, and they seem to know their oasts just as an old mariner knows his ship. A good hop-dryer is jealous of his reputation, and to have hops spoil in the process would be almost too much for him to bear. Consequently self is put aside when there are hops to be dried, and though the dryer gets extra pay during the time that his work is on, if he is a reliable man (and, generally speaking, hop-dryers answer to this description) he thinks as much of his own reputation and his employer's property as he does of the extra money he earns.

Hop-bookers. A CASUAL spectator entering a hop garden when picking is in full swing would observe an individual here and there who looks to be quite a cut above the rank-and-file of pickers, particularly if the latter belong to the London element. As a matter of fact this is so, and the

man referred to is the booker, whose duty it is to keep the records of the hops as they are measured from the pickers' baskets or bins. As a rule the hand of the booker is not hard and horny, for in a good many cases he is a schoolmaster, who prefers to spend part of his holiday in this occupation. We do not blame him, for the work brings in some remuneration, and there is no place like a hop garden to put a glow of health on to the cheeks of people who follow an indoor occupation. Clerks out of work find temporary employment in book-keeping during hop-picking, and though the work looks easy enough it is not always so, for though the native pickers generally do the thing fair and square, amusing stories could be told of the attempts that are sometimes made to get the better of the measurer and the booker.

Blackberries. THOUGH blackberries are mostly as common property, they play an important part in the commercial fruit industry of the country, and once more the harvest has begun. Since less attention has been paid to hedges blackberries have flourished and increased, and it would be hard to say how many tons of fruit are annually picked and sold. In the west of England blackberrying is quite a business with the cottage folk, and so sparse is the attendance at some of the country schools that the latter are closed during the season. The attitude taken by farmers over blackberrying is not always favourable, and one can understand this, when one realises the extent to which fences invariably suffer. Not very many farmers pick the blackberries themselves, and as a rule they do not mind the cottage folk having the benefit of the fruit, but in this, as in other cases where the public is concerned, the privilege is abused, and we can understand a man doing his best to keep down blackberry brambles when he has his fences broken and destroyed by thoughtless pickers.

The Brilliant Harvest Time. AUGUST has run its course, and few of us can remember a more brilliant harvest time. We should have welcomed more rain for the roots and the grass, but the corn came on splendidly under the influence of the glorious sunshine, and in many parts reaping was well started before all the hay was up. And what quality too! For the most part the reports to hand tell of good quality straw, fine ear,

and golden-coloured grain. The cost of the corn harvest should also be low this season, for after it was out the weather quickly did the rest, and a good deal of grain has been reaped and stacked this season in record time. This rapid harvest has had its effect on the labour market, for there is in most places a plentiful supply of workers, and even when carrying was in full swing there were plenty of men to be had. Satisfied to get the corn into stack, farmers do not seem in a great hurry to start threshing, and not much has apparently been done yet. This, however, will be the next item, and at a later date we shall know more of average yields.

Partridge Shooting. ALL the world makes a note of the first of September, for though we are not all privileged to shoot partridge, there is a certain national sporting spirit prevailing, which prompts the entire population to take an interest in the day when the law lifts her protecting arm from Dame Partridge. The man who farms his own land, and consequently has a right to the game thereon, has doubtless been noting the number and size of the coveys for some time past for his own personal satisfaction, but this does not mean that the individual who rents his land necessarily takes no interest in the game. Happily on a good many estates an amicable spirit prevails between landlord and tenants, and the latter are pleased if a number of good coveys are found on their farms when September shooting begins. We fear that in some cases there is a danger of the interests of agriculture being sacrificed to those of sports, but this does not apply to partridge shooting, and we hope the day will never come when the whistle of wings and the banging of guns are not heard in the fields in September.

Potato Scab. EVERY potato grower is naturally pleased when his crop of tubers turns out clean and free from bluish, and, on the other hand, it is disappointing when the surface of the potatoes is disfigured by the brown corky-looking blotches which we call scab. Not that scab in a mild form affects the edible qualities of the tuber, but the potato-buying public are attracted by appearances, and it is the clean, even samples which effect the readiest sales. It is peculiar that potatoes invariably come scabby on some soils, whereas they always grow clean in others, and the actual cause of the trouble is one of the problems which has not been finally solved. The opinion held in some quarters is that the prime cause of scab is friction. That is to say, the skin is abraded when in a very tender state by sharp, gritty particles in the soil, and this sets up an irritation which results in the familiar scab wounds. It may be observed that scab is invari-

ably common when potatoes are grown in sharp, gritty soil, and we have noticed that liberal applications of coal ashes to the ground are a sure means of bringing about the trouble.

Heated Stacks.

IT is a common saying in agricultural circles that we always have more stack fires after a good haymaking time than we do when the weather necessitates more than ordinary precautions being taken. There is something in the contention, and we suppose it is because people, knowing the uncertainty of the British climate, are so anxious to get up the crop while fine weather lasts, do not give the hay sufficient time to get thoroughly dried and made. We are reminded, however, that there is also another cause. When the weather is catchy there is no getting out of haymaking, and the crop has to be knocked and turned about before it is carried; but in ideal weather a good deal of the making is left to the sun and breeze. It is false economy to save money in haymaking and then have the stack spoil through over-heating, and we have not much sympathy with those people who mow one day and carry a day or two later, without doing anything in the meantime. It may

come off sometimes, but it is a risky experiment, and if a stack fire is the result there is only one person to blame.

Rain and Roots.

IT would be a very surprising thing indeed if we got just the kind of weather that suited everybody and everything, and while we rejoice in the glorious sunshine which is so desirable for the harvesting of the corn, we cannot help noticing the pastures which are burnt up and brown, and the aftermaths which offer little keep for the stock. In the root fields, too, the soil kicks up dry and dusty, and the mungold flag flutters under the burning influence of the midday sunshine. They are fed, it is true, by the refreshing dews which settle on them in the evening, but they are dry at the root, and a soaking rain would help them wonderfully. As for potatoes, the time has gone past for rain to help them much, and we are not anxious for excessive moisture now for fear of the disease. Rains which have fallen of late have been mostly in the shape of thunder showers, and whereas some districts have been fairly well favoured with moisture, farmers in others have experienced repeated threatenings, but the rain clouds have rolled away without any downfall.

Agricultural Politics.

BY A LOBBYIST.

The Protection of Our Flocks.

I am able to say that Sir E. Strachey absolutely reflects the views of the Government when he says that there is no intention of recalling and revoking the law for the protection of the flocks and herds against disease. As a fact, the assertion of this intention is, in view of the purpose of the Earl Carrington, simply absurd. Both in and out of Parliament Lord Carrington has revealed that he is entirely against any policy which would permit of the admission of tainted cattle into this country. The stupidity of the report is, in fact, emphasised by the memory of the twice-made declaration of Lord Carrington that he would do naught to imperil British flocks and herds. I am convinced that in this matter Lord Carrington does not speak for himself alone. He is, so far, the adviser of the Government on all matters concerning agriculture reflective of official opinion, and his word, therefore, is the word of the Government.

Lord Londonderry.

Lord Londonderry has assuredly mistaken the temper of the hour. In declaring unequivocally against any concession in the direction of the Land Tenure Bill, in averring that the landlord shall be the supreme authority as to the value of improvements, he has shown that his intellect belongs to the pre-Disraelian period. That landlords behave in a paternalistic manner—that is, the generality of landlords—towards their tenants is undeniably true; but there remains the fact that there is no compulsion or inducement upon them to behave in this manner. Lord Londonderry, in making his speech against the Land Tenure Bill—in making his speech, in a word, in favour of generous methods and a reciprocal manner between landlord and tenant, which shall simply depend upon individual prejudices—is forgetful of the fact that his own first chief, Mr. Disraeli, was in favour of the law stepping in and deliberately defining the relations which, so far as improvements are concerned, should exist between landlord and tenant.

Young Englandism Revived.

I am bound to say that Lord Londonderry's ideal would have been realisable in the Young England day. That was certainly a perfectly comprehensible scheme. It was the union of modern-dayism with the feudalistic instinct. Where it failed was that it was assumed that the feudalistic instinct would be a more dominant influence than the modern-day influence. As a fact, Stuart Millism is a potent influence in our midst to-day which even man of the significance of Lord Londonderry cannot disregard. "There is no such thing," quoths the scribe, "as private property in land"; and no Londonderry in the wide world can alter the absolute mural inscription that the law of the land has already declared that the State has a right to interfere between the landlord and the tenant, and that if the tenant be ill-treated it has

a right to demand his recompense at the hands of the landlord. It simply is no use whatever saying that tenure is a matter of kindly consideration on the part of the landlord. Such an assertion is at least two hundred years old as events march at the moment. Lord Londonderry's assertion belongs to the miocene and pliocene order, and after Lord Londonderry was born in another era.

What the Radicals Mean.

More than once I have declared that the first sequel to the defeat of the Land Tenure Bill in the Lords—and Lord Londonderry, Lord Ridley, and their friends are invoking the rejection of the measure—would be the exasperated encouragement to a Bill of a much more strenuous character. I am justified out of the events of the moment. Undeniably the Land Tenure Bill was the inception of the Land Law Reform Association; and of that association Mr. James Rowlands, the member for the Dartford Division, is the honorary secretary. List to this from his speech in the division last Saturday: "What," quothed the orator, "was foreshadowed for Scotland was what was wanted for England. Legislation must bring the people back to the land." And so on, etcetera, etcetera. But what does this mean? That almost immediately we shall have legislation initiated on the land of the Scottish Crofters' Bill if the Land Tenure Bill passes not. The Land Tenure Bill is a mild anodyne. The Radicals in the House of Commons want a palliative, and their idea of a palliative is land nationalisation. I put this to Lord Londonderry. It is no use disregarding the fact that the Radicals have a majority in the Commons. And it is the Commons which control. Think on't—the Commons can stop the maintenance fund of the Lords.

Lord Carrington's Assumed Purpose.

Lord Carrington is so versatilely energetic an administrator that I am inclined to accept the story that his lordship is intent on the reorganisation of his department and the rendering it a more effective and direct instrument in the weal of the farmer. It is undeniable that the Board is sorely cribb'd and cabin'd by the want of financial resources and the consequent dependence upon mere voluntary effort Lord Carrington, with his practical intuitions, must have been driven into revolt against the system of voluntary correspondents by reason of its very ineffectiveness. Of course, Lord Onslow was compelled to resort to the voluntary method in seeking to establish a direct means of communi-

SITUATIONS WANTED AND VACANT.

Those to whom this column appeals, if identified in some way with agriculture, will have no difficulty in obtaining employment, or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a nom de plume, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

British Possessions beyond the Seas AND THEIR London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

cation between the counties and the Board of Agriculture. He had not the means at his disposal to extend his paid staff or to appoint men who would be directly responsible to him for the vigilant performance of their duties. Hence Lord Carrington's first purpose must be to secure a larger grant for the maintenance of his department from the Treasury. Well, I ween, from his suave persistence, that he will secure it. After all, claimants are the demands now being made on the Treasury, a mere £50,000 a year—and such a sum would suffice for the nonce—would not make a serious difference to the Chancellor of the Exchequer or be an embarrassment to him. A £50,000 a year would enable Lord Carrington to appoint a number of officials in direct touch, on the one hand, with the county agricultural associations, and on the other, with the Board of Agriculture. Fifty thousand a year would mean the creation of a human official link with the farmer.

A Welsh Land Bill.

Of course, though I have dwelt upon the fact that the land reformers—by this description I mean in particular the Land Law Reform Association—now look upon the Scottish Land Bill as providing a more desirable model of their future policy than their own Land Tenure Bill, I quite appreciate the fact that the English agrarian sentiment has not, to put it mildly, been educated up to its draconic height. However, it is different in Wales. The farmers of the Principality have long clamoured for differentiated treatment from Wales; and now of its Parliamentarians are insisting upon the same generous policy which is designed for the Scottish small farmer. Since the death of poor Tom Ellis the land-reform policy in Wales has lacked a vigilant and vivacious exponent. Mr. Lloyd-George, for instance, has attached an infinitely greater significance to the question of Disestablishment and the education problem. However, these Welsh Parliamentarians have a shrewd conception that he would willingly make himself the advocate within the Cabinet of a policy of bold land reform which should serve to deepen the ire of Welsh landlordism.

A meeting of directors of the Scottish Chamber of Agriculture will be held within No. 5, St. Andrew Square, Edinburgh, on Wednesday, September 5, at 10.30 a.m., to make arrangements for conference with Lord Carrington, including preparation of programme and resolutions and selection of speakers, &c.

Sugar Beet Growing in Suffolk.—At a meeting of the Sugar Beet Committee of the East Suffolk Chamber of Agriculture held at Ipswich on Tuesday, it was reported that although some of the experimental plots had suffered severely from drought, in many instances satisfactory results were likely to be obtained. Arrangements were made as to the inspection, weighing, and analysis of specimen roots from each of the plots in October.

The Earl of Feversham's Shorthorns.—On Tuesday, Sept. 4, Messrs. J. Thornton and Co. will bring under the hammer nearly the whole of the well-known herd of pure-bred Shorthorn cattle belonging to the Right Hon. the Earl of Feversham, at Duncombe Park, Helmsley, Yorks. The herd has been in existence upwards of a century, and as only the very highest class stock has been bred it has been brought up to a high standard of perfection, and its dispersal will give breeders an opportunity to secure some first-class additions for their herds. The sale will also include a few young Jersey cows in full profit or close at calving, bred for many years from the best English and Island strains; also a number of Leicester and Southdown ewes and pinneres, which are of the best blood, and, like the Shorthorns, have been long reared on the estate; whilst Messrs. Walker and Sons, of York, will offer about a dozen highly-bred hunting stock, a Cleveland mare and an entire two-year-old Cleveland colt.

DUBLIN HORSE SHOW.

This great annual event commenced on Tuesday last under most brilliant climatic conditions; indeed, if complaint could be made in this respect, it was that the heat was too intense. The turf in the judging and jumping rings was in very good condition, however, and the grounds all round looked their very best. The entry of horses was a record one, and the attendance when concluded it is pretty certain would also be beyond any previous year. Perhaps the most gratifying feature in this respect, however, was the very great interest all visitors appeared to take in the animals themselves. Never do we recollect upon judging day seeing at the ring side so much keen criticism taken in the horses by apparently all classes of people as was the case this year. A great number of foreigners were present from many other countries anxious to be the buyers of some of Ireland's best horses, and there were plenty of good ones there for them to select from, though it must also be admitted there were a number, as is always the case, that had been sent up with a view to selling only that were not as good as might have been wished. The majority, however, of the younger classes showed very conspicuously that greater care had been taken in their breeding than was at one time the case. Many of them went up to great weights, and with good quality about them too; and the lighter weights,

numerous and acquitting themselves satisfactorily in many parts of the world, the award was the more to be approved. Red Prince II. was bred by Mr. Linde in the co. Kildare, a grandson of Ben d'Or on the sire's side and Blood Royal on the dam's side. Mr. W. T. Trench provided the second winner in Benedictus, a twelve-year-old by Hagioscope, his dam by King Lad; he was bred by Mr. J. Bell. Perhaps he may be considered a little on the small side, but his build and movement stand him in good stead, and it is not always the biggest sire that is the best. The Duke of Devonshire's Minstrel was awarded third prize; he is a deep, closely built horse of twelve years, by Miting by Lord Lyon, his dam Poem by Petrarch, gd by Blair Athol. It will thus be seen what an amount of notable English racing blood of the past is infused in these sires, and when grafted on the half-bred mares which these stallions have to serve, what possible breeding could be expected to produce a more useful class of light horse. The racing blood gives the necessary speed and wind, whilst the small infusion of heavy blood in the half-breds makes up the substance. It is little wonder that horses bred this way should be able to carry off the honours in the great military races on the Continent, where heavy weights have to be carried against time for long distances. Mr. Hugh F. Malcolmson, was reserved with Cerasus,

HUNTER GELDING, RED SHANK.
Winner of Pembroke Challenge Cup at the Royal Dublin Horse Show.

though not so big in their bone, were so good in the quality of it that the lack of substance would be pretty well atoned for, as may be seen by the highly bred polo ponies, whose light bone carries the heaviest of weights under the most trying conditions.

The Breeding Classes.

The catalogue commences with the breeding classes, which are by far the most important section of the show from a practical point of view, as these are to be the foundation of future hunters that will be seen in these countries for years to come; for, depend upon it, the Hunter, particularly as bred in the British Islands, will be the military horse of the world, as well as the horse for the chase and general-purpose light work. Thoroughbred stallions were the first class to put in an appearance in the ring, and though the entry of these was not as heavy as it has once or twice been, the two classes contained twenty-one entries. The conditions pertaining to the exhibition of these stallions forms somewhat of a barrier against the highest class of Thoroughbreds coming forward, the stallions having to be obtained for the service of half-bred mares during the season of 1906 at a fee not exceeding 10 guineas. The first class was that for thirteen years old and over calculated to get weight-carrying hunters. There were eleven entries of these, which, considering that the service season has so recently closed, and that no doubt most of them will have had a very heavy one, came into the ring in very fresh and fit condition. It was very satisfactory to see that the first stallion to be selected was last year's winner, Mr. William Pallin's Red Prince II., now seven years old and looking very fit, his beautifully turned body, first-class back, loins and quarters, as well as his fine outlook and quiet temper, are all most satisfactory, and when backed by the knowledge that his progeny are very

an Irish-bred stallion by Cherry Ripe, of great beauty, and evidently a good sire.

The second class of Thoroughbred stallions was for horses under eight years old. There were ten entries of these, in which a son of the first prize stallion in the older class was selected for the retribition. This was Mr. James O'Connell's Red Sahib by Red Prince II., out of Hindoo Girl by Tacitus, a big horse, just the stamp to use upon some of the smaller and lighter class of mares, as his breeding is certain to give pretty well all that is wanted. Mr. R. G. O'Callaghan obtained second with Denis Richard, Ben d'Or blood on the sire's side, and with the quality that that blood invariably gives, he should prove an excellent sire as his stock grow up and finish. Mr. McMahon's Blairmore, which was third, was in the selected honours list last year, and is now in better form, and will probably as time goes on find his way to greater honours. Mr. D. Owen's reserve, Knightly, looked very hardly used with his position, a capital stamp of Hunter sire, bred by Lord Bradford, and

Hunter Gelding Redshank.

Our illustration on this page is of the Hunter gelding Redshank, which at the Royal Dublin Horse Show last week won first prize for three-year-old Hunter geldings, and the Pembroke Challenge Cup, value 100 guineas. The cup was presented by Lord Pembroke with the view of encouraging improvement in the breed of Irish horses, and is for the best animal in seven of the Hunter classes bred in Ireland by the exhibitor and continuously owned by the exhibitor up to the time of entry, and has to be won three years in succession by the same owner before becoming his property. Redshank, whose sire was Red Prince by Kendal, and dam by Runnymede, was bred by his way and is the property of Major R. G. Alexander, Newtown, Strallan.

lacked by excellent racing blood. The Croker Challenge Cup, for best weight-carrying Thoroughbred stallion, was awarded to Red Prince II., now for the second time, and the reserve for that honour to his son, Red Sahib.

Yearling Thoroughbred colts were entered to the number of thirty-three, and these were mostly a well-grown lot of animals, though a good number looked perhaps a little short of substance. This, however, is pretty certain to come as they develop. It is rather singular that the fillies in the Thoroughbred classes as yearlings should always display more weight than the colts. Probably, however, this may be accounted for in the more frequent furnishing that is invariably found in the female sex as compared with the males. The judge selected one or two very strong colts for the leading places, Mr. S. Kiat Kerr taking first prize with a bay colt of Gallinule blood with great substance, both muscle and bone, good shoulders, and a generally roomy coat. If he goes on developing in the same manner he has commenced he ought to make one of the best weight-carrying sires in the future. The second colt had also plenty of bone and weight with powerful formation. He was bred and shown by Mr. Edward Rooney in the County Dublin, and sired by General Peace by Gallinule, a capital stallion list in last year's list. Other winning colts were Mr. J. O'Connell's, a very good quality one by Vitez by Milton out of a Philomnon mare, and Mr. O'Reilly's Lesterland, a most beautifully-moulded colt with style, and a beautifully bred one. The first prize colt in this class also takes the Perpetual Challenge Cup for best Thoroughbred yearling colt bred in Ireland and owned by a resident in Ireland.

There were no less than fifty-two entries of Thoroughbred yearling fillies, and these indeed made up a remarkably good class, any amount of size and substance with pure breeding, which was in many of them very conspicuous. Mr. The McMahon carried off the first prize and also the Perpetual Challenge Cup with a beautiful bay filly by General Peace, that showing rangy galloping shape and with plenty of muscle and depth, and so well balanced; her quality, too, leaves nothing to be desired. Mr. R. C. Dawson's second filly, got by Lesterlin, a Gallinule sire, is quite a quality filly with good shoulders and outline, as well as a great lot of beautifully flat bone. Mr. McClure's third filly was got by Bushy Park by Hampton, and she too is capital, well grown and with a good deal of muscle and substance about her. Another very good filly of Mr. McMahon's by St. Margalen was placed fourth. Altogether this was a most satisfactory class of yearling fillies, and it is much to be desired that such a good lot, or any of them, should not be allowed to get into the hands of the foreigner, but remain at home to strengthen our rather, it must be confessed, weak ranks of brood mares in the Hunter section. Thoroughbred brood mares with their foals at foot were the next class in this breeding section, and the 17 entries composing the class made up a very beautiful collection. One does not often see Thoroughbred mares with so much growth and substance, as well as well-balanced forms, as were conspicuous in this class and their foals in many instances gave great promise, though as a rule we did not consider the foals quite an average lot. The Perpetual Challenge Cup for the best brood mare owned by an Irish exhibitor was given to Miss O'Callaghan's Carnage now for the second time, and honour this fine old mare richly deserves, for this summer she has produced a foal of the shape, and find with a beautiful filly foal at foot by Bushy Park. In the class judging Carnage was this time only commended; she is a direct daughter of Gallinule, and her dam by Speculation. The gold medal of the Hunters' Improvement Society fell to Mr. Tinley's Nora by Nasr Edlin out of a mare by Asctie, many years ago winner of the first prize as a Thoroughbred Stallion at Ball's Bridge. Nora is a deep, wide, good type of mare to breed Hunters from, and her blood is good as her personal merit. She was first prize winner in the class for mare and six years old, calculated to breed weight-carrying Hunters. Other winners in this class were Mr. R. G. Caden's Lady Tacitus, Mr. Hissett's Belle of New York, and Mr. O'Sullivan's Fairy Queen by Fieldhand.

Returning to the Thoroughbred mares, which, as previously intimated, were a capital class, Mrs. O'Callaghan's Curlew was placed first, a very beautiful type of mare by Gallinule. Mr. McMahon's Aensila by Playactor came second, a mare that displays her beautiful breeding in the best possible shape. Third came Mr. O'Reilly's Grosvenor, a seventeen-year-old mare by Atherling, bred by her owner, and a beautiful class. The fourth prize in these went to Mr. J. A. Mallon's English-bred mare Secret Sign, sent over from Scotland, and a great prize-winner at many English shows this summer, she has plenty of quality and is a roomy good mare all round, and well fitted with bone and shoulders.

A very good class for brood mares were also sent for mares over six years old, calculated to produce weight-carrying Hunters. There were 17

teen entries of these, and a bigger, better lot of marcs are not often seen together, great muscle and bone, yet with enough quality and legs and feet fit for anything. The winners in the class were Mr. C. E. Walker's Actress, eighteen years old, sired by Playdour, Mr. T. Clarke's Partridge by Young Marston, Mr. James Cole's May Morning by Marmiton her dam by Asctico, and Mr. Thos. Fitzgerald's Alexander, an extraordinary good mare by Beware. There were also some very good foals with these mares.

Hunters.

The made Hunter classes, as already mentioned, were very variable, as must be the case even where a thousand animals are concerned, and where the needs of sixteen stone riders have to be catered for, as well as those of lighter weights, and where general purpose work also plays a part. Some of the heavy-weight horses possessed great bone. The first prize horse in the 15-stone and upward class was bred in the co. Limerick, and sired by Tranesse, out of a dam by Wild Otis, so that he is pretty well up in Thoroughbred blood. There were some capital horses also in the 14 to 15-stone class, where Lady Muriel Grenfell's Sir John, a good mover and powerful horse by Sydenham, was given the first prize. The class for 13 to 14 stone horses contained no less than 118 entries, amongst them a number of beautiful horses. Capt. Holme's stud had the honour of being placed first in this class with a splendid type of Hunter by Walmgate, dam by Mayboy, blood that one is pleased to see coming to the top in such competitions. Space will not permit referring to so many classes at all closely, and as the breeding classes have been fully dealt with, the Hunter section must be dismissed with the comments that have already been made upon them. The riding classes of Hacks and ponies, too, need little comment beyond the general remark that most of them were pretty distinctly of riding type, fitted with easy-going shoulders, plenty of pace, and giving, for the most part, a comfortable mount to their riders. The pace class in harness, too, though a very exciting one, does not give much of importance to the practical side of things, the fastest pacer was Mr. Horan's Rustic Beauty by Phillis, which got over her mile in 2 minutes 37½ seconds. Several others followed rather closely. The harness horse classes at Dublin came in more as an entertainment than as part and parcel of a Hunter show, and when these horses came into the ring it was at once seen that most of the drivers wore English hats over English head, and that the animals competing were mostly of English Hackney blood, and consisted of some of our best movers. The chief winners were (in double harness) Mr. John Smith, London, with Seltield Nelly and Scarlet Lady; the Carrand Co. Carluke, N.B., with Clyde Vale King and Heathfield Squire; and Mrs. Hartley Batt with Hopwood Spark and Hopwood Horace. In tandems and singles much the same competition existed, by which it will be seen that matters were rather warm for the competitors.

Sheep.

The sheep classes this year owing to the better prices obtaining for wool, and the steady demand at a paying price that mutton is experiencing, commanded a larger share of attention than is often seen at Dublin, and have evidently caused greater attention to be paid to our "golden hoofed" fleecy friends, as the classes generally were filled with much more improved and more uniformly good quality lot of animals than has often been the case. This was especially noticeable in the Oxford Downs, Shropshires, Border Leicester, and one or two other varieties. Border Leicester sheep take precedence in this section of the show. One of the most puzzling questions of the day in this respect being the "why were the old English Leicesters cut off"? At home there is an excellent demand, and a great number of the original Dasleys Leicesters bred, but in Ireland the breed appears to have lost itself entirely. Amongst the Border Leicesters were a number of very truly bred and capitally brought-out sheep, with good backs and coats as well as scale and constitution. The chief winners in these, each of whom was admirably represented, were Miss Staples first with a two-shear run of Irish breeding and first-rate character, Mr. M. Franks, Mr. R. W. Bell, winner of the Border Leicester cup with a rattling good team, in the shearing run class, Major W. J. Forde, Mr. T. W. Stokes, and Mr. J. W. Stokes.

The famous Roscommon breed of sheep, too, was very well represented, some of these being of great size and scale, and carrying heavy fleeces and plenty of flesh in symmetrical and good-looking form. Mr. G. R. Acheson, Major Balfe, Mr. John Keene, Mr. P. J. Fitzmaurice, and one or two others were most successful, Mr. G. R. Acheson carrying off the Roscommon Cup.

Lincolns were a fair average show; we have

PUMPING MACHINERY

is always required amongst the class of readers who regularly take the "Mark Lane Express"—the *larger farmers and estate owners*.

seen them fully as good upon one or two previous occasions, still there was not much to complain of. Mr. G. R. Lloyd secured the cup for the best group of this breed with some very good shearlings in a class of twenty-five entries. Mr. Patrick Hanlon, Messrs O'Brien, Mr. R. Reynell, and Mr. J. G. Garden were also in the money with very good sheep.

Black-faced mountain sheep were a moderate collection, Mr. John Robson was the chief, almost only exhibitor of these.

Shropshires were in very good force, and a very nice quality lot. The old Loughcrew flock was very conspicuous with beautiful ewes and rams. Mr. R. F. H. White also exhibited a number of close coated, extra quality sheep, whilst Lord Barrymore, Lady Margaret Charteris, Mr. Hamilton Stubber, and one or two others were equally well represented and shared the honours.

Oxford Downs were much better than we have many times seen them, Mr. E. T. Downes, Longworth, had a first-rate collection of these, and won a large share of the spoil, Mr. T. L. Hodgins, Mr. Downes, and one or two others were also very well represented.

Hampshires, Suffolks, Cheviots, and Southdowns were so few in number and not strong otherwise, that they may be dismissed without further comment.

Warwickshire.

The Warwickshire Agricultural Society, after an interval of one week, on Wednesday and Thursday again held their show at Nunton. The town and district provided a handsome contribution to the prize list, and the site, which was the Newgate Arms ground, with adjoining field, is very convenient of access for visitors from either railway station. The entries of live stock were 524 (not including jumping horses), against 564 at Coventry last year, and there were fifty-nine exhibitors of implements, with good entries in the dairy department, and fifty-one competitors in the field competitions. All these sections were worthy of the County Agricultural Society, and proved most attractive, as also did the minor events. A new feature of the show was the stock-judging competition for farmers' sons and pupils from eighteen to twenty-five years of age, for which there were eleven entries. There were special jumping contests each afternoon, with driving classes on Thursday, poultry and bee driving demonstrations by the Warwickshire County Council's expert, whilst bands provided popular music, so that visitors were well catered for, and with the brilliant weather that was experienced the show proved an undoubted success.

Horses.

Without doubt the horses were the feature of the show, all sections being well supported. Shires were never better represented, and a satisfactory feature was the success of local breeders, thus proving that the tenant farmer of Warwickshire is devoting more attention to the breeding of good-class stock. All the Shire classes were well filled, and so keen was competition that in some instances the services of an umpire were necessary before awards could be made. The descendants of Dunsmore Jameson and Lockinge Forest King were among the principal prize-winners at the show. Mr. F. Farnsworth, of Hineley, showed the best two-year-old stallion in Ratcliffe Forest King, a bay, true to character, which has had a long run of successes since his victory at London. Another very good-class animal in Childwall Chatter, the property of Mr. W. Cunningham, of Liverpool, came second. Yearling colts and fillies were of such uniform quality the judges had a difficulty in making their awards. Mr. F. E. Muntz, of Rockley Heath, however, deservedly won again with his Royal winner King Forest, a massive, well-proportioned brown, a worthy descendant of Lockinge Forest King. Ratcliffe Conqueror King, the property of Mr. E. Farnsworth, of Hineley, made a good second. The premier award in the filly class was given to a tenant farmer, Mr. G. G. Atterbury, of Rugby, for a beautiful grey yearling of great size named Fuchsia II., and by Dunsmore Jameson. There were a good lot of two-year-olds, and chief honour fell here to Desford Future Queen, the representative of Messrs. Thompson, of Leicester. Sir Albert Muntz, M.P., had a three-year-old of well high perfect type, which not incorrectly bears the name Quality, and she won in a strong class in which her closest rival was Mr. Blackburn's Coalfield Conquest. The four-year-old fillies were quite of unusual merit, and included Halstead Duchess III., a weighty brood mare the property of Mr. Bradley, and Bonny Blue, shown by Sir Albert Muntz, and in this order the awards were made. The Dunsmore representative is one of the weightiest mares in England of her age, but she is not looking quite so well as usual on her joints. Mr. Bradley's filly, which had at foot a beautiful foal, was also distinguished among a first-rate lot of mares, and she received a champion at London, Rolloston Fusa, from the stables of Mr. H. Towgood, of Cambridge, being placed second. The class for foals was strong alike in point of quality and numbers, and gave the judges a no

easy task. A big, stylish bay from Sir Albert Muntz's stud, which won at Derby, was placed first, and a weighty colt, sent by Mr. Farnsworth, a tenant farmer of Hineley, secured second honours.

The light horses made a good display but were not so great an attraction as the Shires were. All the hack and pony classes were well filled, and there was keen competition in the Hunter section; in fact, the show was worthy of a hunting county. Mrs. Chapman, of Canterbury, showed the best hack, exceeding 15 hands high, in Miss Trix, a bay mare, which achieved successes at the Richmond show. Another very good type of hack was exhibited by Mr. J. H. Stokes, of Market Harborough, who won repeatedly in the Hunter section, and Mr. W. Wakefield, Mr. T. Wadams, and Mr. Ro loanachi also entered some stylish moving hack. The yearling Hunters were better represented than usual, though curiously there was a marked falling off in regard to the foals. In the colt or gelding class Mrs. Kendrick, of Eddington, won with Royal King, and the best filly was exhibited by Mr. H. R. Roe, of Market Harborough. There was a large entry of mares, but apart from the winners, there was not much uniformity of quality. Captain Jeffcock, of St. Alban's, headed the open class with Sweet Heather, an animal thirteen years old, of perfect type. The four-year-old class was one of the best in the section; the entry was not large, but all the competitors were well known in the showyard. Mr. J. H. Stokes once again won, with a filly of honour with Splasher, a stylish-moving chestnut gelding. The best light-weight Hunter was shown by Mr. John Drage, of Northampton.

The gold medal of the Hunters Improvement Society for the best brood mare originally went to Fleur-de-Lys, owned by Mr. P. P. Rodocanachi, of Rugby, but it was eventually withheld because the mare was not a prize-winner in her class. As all the other winners were ineligible owing to previous medal successes, the medal will not now be awarded. The society's silver medal for Hunter fillies was taken by Bounce, which belongs to Mr. C. L. Kendall, of Stratford, and the medal for the best mare or gelding by Mr. J. H. Stokes's Lothario. The silver medal for yearling Hunter entire colts was withheld owing to none of the exhibits being eligible.

Cattle.

The cattle were quite up to the high standard of recent years, and made altogether a good display. Nine well-filled classes made up the Shorthorn section, and a number of the best-bred animals of the season were included. Mr. G. Harrison's Royal Ensign, a Scotch-bred bull, which has been winning a good deal this summer, took first in the under-three-year-old class, beating Messrs. Gowing and Sons' Lodge Crown Prince, a former champion of the county. There were several good-looking bulls in the local class, where Messrs. Dyke Brothers were credited with both the first and second prizes. In the open class for bulls under twenty months Mr. George Harrison came again to the front, this time with Admiral, who was voted perfect by the judges, whilst the second was Mr. T. O. Lloyd's Evening Star, a yearling of great promise, which in the next class, was judged the best Shorthorn bull in Warwickshire. The Shorthorn Society seek to encourage the breeding of good milkers, and offer attracted an entry of cows, which were full of quality and of the real rent-paying class. The first prize winner, Oxford Ada, is a typical dairy cow, and the same exhibitor, Mr. C. R. W. Adeane, of Cambridge, was also second with Beryl. The cows were milked in the ring, and there was an excellent yield. Ursula Raglan, which was adjudged to be the best cow in the above three-year-old class, is a Dublin winner, and has followed up her success at the Irish show by numerous first prizes in the same class. She had as second to her Sir Oswald Mosley's Yours Faithfully, a cow which has also been very successful. The judges were in no doubt in the under-three heifer class, where Mr. George Harrison's beautifully-built Towy Princess was shown, and she proved an easy winner. There was very little to choose, however, between Bearstone Sunshine and Bearstone Sybil, which were respectively second and reserve. A pair of heifers which have scarcely ever been beaten, Silver Flora and Silver Steak, were shown by Mr. Herbert S. Leon, of Bingley, in the open heifer class, and were placed in the order named, whilst Snowdrop and Strawberry, two useful farmers' heifers belonging to Mr. J. H. Parks, won in the local class.

The picturesque Longhorns showed to great advantage, and it is a pity that their good qualities are not better known, for if they were we think the breed would be much more popular than it is now. A substantial first prize offered by the Longhorn Cattle Society drew together a large number of fine bulls, and at the head of them was placed Mr. W. H. Hensley's Sleds and sleds, a splendid specimen, which was first at the Royal, and was now given the cup offered for the best Longhorn in the breeding classes. Mr. W. L. Riley's Fradley Conqueror came second in the class, but was very closely run by Mr. S. Chamberlayne's

Conspirator. Mrs. Cheape's Rebecca A, sired by Keulworth, was first in her class, and is a cow of great quality, with beautiful head and horns. Mr. Sale's Lady Panza, the second prize winner, had lost condition through her great milk yield. Lord General's Beatrice Rebecca was the best heifer between two and three years of age, and was also reserve for the championship won by Arden Conqueror, which was given the preference for reasons of sex, the judges taking into account the greater influences exerted by a good bull upon the improvement of stock. First in the class for heifers under two years was Mr. H. W. F. Garland's Arden Buttercup, a daughter of Westmeath Squire, a bull bred in Ireland by Lord Westmeath, whose herd has been in existence for some 200 years.

Channel Island cattle were not numerous, but of good quality. The Hon. Mrs. Murray-Smith's Netina's Dairy Boy, a bull well adapted for raising dairy stock, was successful in the bull class, the second prize winner being Captain Gisborne's Oxford Scholar, who has proved more successful at several shows. Captain Gisborne, however, came to the front in the cow or heifer class with Unaware, a winner at the Royal, and practically all the leading shows in the country, whilst Forget-me-not, belonging to Mr. Smith-Ryland, was second. There was also a highly creditable display of dairy cattle.

Sheep.—Sheep showed a considerable falling off in numbers when compared with last year, the respective totals being seventy and ninety-two, but the quality was if anything better than ever. The decline in the number of entries was chiefly observable in the crossbreds, the tenant farmers failing to respond to the committee's invitation to such an extent that in two of the classes there was only one entry each. Shropshire was a nice lot, and for shaggy rams Mr. J. Barnett's Market Drayton, won first prize with a finely proportioned animal, which, however, was run close by the exhibit of Captain Townshend. The same exhibitors were successful with their shaggy ewes, but the order was reversed, Captain Townshend taking premier honours. A still further success was secured by Mr. Barnett in the open class for lambs. The prize offered by Sir Albert Muntz to tenant farmers in Warwickshire and three neighbouring counties attracted a good entry, and the winning ewes, which were from a Nuneaton flock, that of Mr. S. A. Berry, were of great length and well calculated to raise a sound breed. Mr. Berry also carried off Mr. Smith-Ryland's prize in the next class with five well-angled ewe lambs. The Oxford Down Sheep Breeders' Association considerably strengthened the entry for this breed by offering a special prize, which was won by Mr. Phipps Smith with a capital young ram, the same exhibitor also taking the reserve ticket. Three other classes for Oxford Down were not very well filled.

Pigs.—There were thirty-one entries in the nine classes of pigs, and the section was notable for the excellent quality of the animals, several well-known herds being represented, namely, those of Messrs. Sanders, Spencer & Son, Mr. Robert Ibbotson, Sir Alexander Henderson, and Mr. T. Henson. Messrs. Spencer and Son won the medal of the Pig Breeders' Association with Holywell Emperor D, which also headed the class for Large or Middle White breed. The National Pig Breeders' Association offered a silver medal for sows of the Large White, Middle White, or Tamworth breeds, and this was won by Mr. Alfred Hughes's Royal Ibis, whilst the gold medal of the British Tamworth Pig Breeders' Association was allotted to Lycidas, a boar belonging to Mr. Robert Ibbotson.

Airedale.

The Airedale Agricultural Society's Show at Bingley on Wednesday should prove a most successful one from a financial point of view, for the weather was practically all that could be desired, and the attendance of visitors a big one; but it was not so successful from an agricultural standpoint, for the entries of horses and cattle, which numbered 118 and 34 respectively, were fewer than in 1905 or 1904, of sheep there were none, owing to lack of support, whilst the pig classes, which were renewed after several years' lapse, only drew 21 entries, the remainder of the 1,685 entries being made up of poultry, pigeons, dogs, rabbits, &c.; in fact, any of these sections had more entries than the whole of the horses, cattle, and pigs put together. Agricultural horses were not particularly strong, Hackneys being a much better lot. The cattle section made up in quality for what it lacked in numbers, Shorthorns being particularly strong. Mr. George Harrison overcame competition in four classes in which the Gairford Hall stock was represented.

Belper.

Belper Horse Show, held on Wednesday, fully maintained its right to be considered as one of the most important of the Derbyshire horse shows, and

in interest it certainly ranks next to Buxton. A beautifully fine day favoured the fixture, and there was a very large attendance of visitors, but the heavy had one drawback in that it did not allow the Shire horses, the feature of the show, to stir themselves and thus appear to the best advantage when paraded before the judges. Still, they made a capital display for a local show, and would have done credit to many a county fixture. True, there were none of what may be termed national prize-winners, but a few who had figured successfully at the Royal Show were present, and these, supplemented by some fine animals from the district, made a display well worth inspection. The light horses, too, were by no means to be despised, and in several classes long and fine deliberations were needed before the judges could make up their minds. Cattle and sheep also figured in the catalogue, and if these sections increase at the rate they have done of late the show will become an agricultural one instead of simply a horse show, but it is likely to gain rather than lose interest by the inclusion of all kinds of stock.

Guildford.

By permission of Mrs. J. S. Budgett, the show of the Guildford Agricultural Society, of which Mr. Leopold Salomons is the president, was held in Stoke Park on Wednesday, and proved most successful, the attendance being exceedingly large, while the entries were above the average, although some of the most interesting competitions were confined to the county. Among the winning exhibitors of cattle were Mr. Jeremiah Colman, Lord Camrose, Mr. Ernest Emery, Mr. W. A. Thornton, the Duke of Northumberland, Sir Edward Stern, and Mr. A. F. Perkin, the prizes for the best dairy cows being taken by Mr. Dunbar Kelly's Lady Mary and Maud, while Lord Calthorpe's Shorthorn heifer Ruby 4th was awarded the Duke of Northumberland's prize which was offered for the best cow in calf or with a calf at foot. The winning sheep were from the flocks of Mr. Colman, Mr. H. Gosling, and the Duke of Northumberland, and Mr. W. G. Langland's Hazon Beecher was the best boar which was named. The Shire horses made an especially fine group, the county prize, the gift of the High Sheriff, Mr. R. C. Forster, being won by Mr. Leopold Salomons's Childwick Young and her foal; while the pick of the Hunters were Mr. F. G. Colman's Homely Lass and her foal by Royal Mask, Mr. John A. Mullen's Odd Stockings, Mr. Ernest Robinson's Tributary, Mr. H. M. MacCusick's Tennis Ball, and Mr. F. Dartnall's Miss Kenny. The Hackneys were only a small lot, the silver medal of the society being awarded to Messrs. Toms and Mar's Peninsula, other winning exhibits including Mr. R. A. de Maudslayi's Yer Zindora, Mr. R. Evans's Evanthus, and Mr. T. Radmore's Princess Dagmar. The harness and saddle horses included many notable performers, and among the winning exhibitors were Mr. W. S. Cunard's Wild Lucy and Queen Go Bang, Mr. Howard Frank's Burlington, and Mrs. Colman's Crystalino.

Weardale.

The Weardale Agricultural Society were unfortunately enough to have unfavourable weather for their show at St. John's Chapel, this being the second time in succession, but the members of the society are striving against their ill-luck, and are by no means downhearted, for the dales folk loyally support the show through thick and thin. The entries this year were, with the exception of dogs, about an average number, and included a very fine display of dairy cows; but naturally the most popular sections were those for dales ponies and black-faced sheep.

Leominster.

The Leominster Agricultural Society were enabled to increase their prize schedule this year, thanks to increased support, and it is gratifying to be able to record that success again attended their efforts. Thursday's show being one of the best on record. The display in the cattle classes was fully up to the standard of what may be regarded as the home of the Herefords. The entries were an advance upon previous years, and included exhibits by well-known breeders. The sheep, too, were fully up to the average in merit, but the number of entries, as in the past, was somewhat disappointing. The entries of horses were slightly below those of last year, but the average merit was higher, and both in the classes for Hunters and hacks, and in the agricultural classes the competition was keen. The exhibits in the agricultural classes were generally of a most useful character, and the horses altogether gave abundant evidence of the increasing attention given in the district to the breeding of good animals. A new feature of the show was the introduction of a competition in cider, and this excited considerable interest. The ring competitions in the afternoon attracted a large number of visitors, and the sheep dog trials were watched by a crowd throughout the day.

Cheshire.

For some reason or other the Cheshire Agricultural Society does not receive the support one would expect of a county association. In fact, its entries do not come up to those received for a local Cheshire show, and only a comparatively small portion of the prize-winners in the county usually figure at the show. This year there was a little improvement to be noted, and it is to be hoped this will be continued, for the society is certainly deserving of more support from the farmers of the county than it gets at present. At Wednesday's show the entries were the best on record in number, and the same might also be said of the quality. Cheshire is given the premier position in the catalogue, and it certainly deserved it, for there were about one hundred exhibits, and the judges gave out the general verdict that the season had produced cheese of excellent quality. Mr. E. Cookson, of Poulton, won the Duke of Devonshire's silver cup. Against the crowd of cheeses there was only a small exhibit of butter, sent from a score of dairies.

The cattle numbered eighty head. Mr. Brown, of Tarporley, won the chief prize for bulls with his white Excelsior, which beat the older and bigger roan of Mr. Cooke, of Handley, because of more compactness in build. The chief winner in the young bulls was a roan belonging to Mr. Thomas Parrott, of Crewe, and to this went a Shorthorn Society's medal and two first prizes. Mr. S. S. Rivingill, of Ringway, was highly successful with his dairy cows. The Chester Traders' Association Cup for the best cow and the Cheshire Land Agents' Cup for the best bull went respectively to Mr. Richard Clarke, of Heatley, and Mr. Thomas Parton. These prizes are open for competition amongst tenant farmers only. Colonel Cotton-Jodrell had two firsts, a second, and a third for heifers, and Mr. J. R. Newton, of Warburton, also did well in this section. The Duke of Westminster (who is president of the society) won the chief prize for Churney's Handlers.

The notable feature in the heavy horse classes was the triumph of Mr. James Gould, of Lymm, with his grey mare Darling, a well-known prize winner. This mare won for her owner for the third year in succession the Day Challenge Cup (which consequently becomes Mr. Gould's absolute property) and three first prizes, and her five-months-old foal also got a prize card. Mr. Gould with other entries secured several other prizes. The Duke of Westminster was an exhibitor of three Shire stallions, and won two second prizes. The Shire Horse Society's medal for the best mare or filly foal was secured by Mr. J. W. Kenworthy, of Kelsall.

The prize-winners in the classes for light horses included Sir Lees Knowles and Mr. A. L. Goodson for Hackneys, and Mr. J. Tompkinson, M.P., Mr. R. Prescott (Northwich), Mr. E. C. Griffith (Northwich), and Mr. R. Needham (Knutsford) for Hunters. The Hunters Improvement Society's gold and silver medals were secured by Mr. R. Needham with his chesnut Duchess. There was a capital show both of sheep and pigs.

Buxton Horse.

That Buxton Horse Show is as popular as ever was proved by the large attendance at that held on the 25th ult., when the weather was not altogether favourable, for although dry, there was a boisterous and somewhat chilly wind, which made things uncomfortable to spectators. The entries, too, were about up to the average, for the slight decrease was accounted for by the omission of some Hackney classes. The Hackney is to some extent feeling the effects of the motor, but a large number of Hackneys are still bred in Derbyshire, and they made a fairly good show. Hunters, too, were a nice lot, including as they did exhibits from the studs of Mr. F. B. Wilkinson and Mr. J. H. Stokes, but one would have liked the competition to have been a little more pronounced than it was. Mr. Stokes led in the heavy weight Hunters, and in the class for 12st. 7lb. the four-year-olds, and about up to the average, for the slight decrease was accounted for by the omission of some Hackney classes. The Hackney is to some extent feeling the effects of the motor, but a large number of Hackneys are still bred in Derbyshire, and they made a fairly good show. Hunters, too, were a nice lot, including as they did exhibits from the studs of Mr. F. B. Wilkinson and Mr. J. H. Stokes, but one would have liked the competition to have been a little more pronounced than it was. SHOW GOSSIP.

A comparison of this year's prize schedule with that of 1905 shows that the Birmingham Agricultural Exhibition Society are satisfied that the annual fat stock show at Bingley Hall, Birmingham, meets with general approval as now arranged, for they have made practically only two alterations in the classification—first, the "extra stock" section has only one class for both oxen and steers, or cows and heifers, instead of separate classes as last year; and second, the cross-bred classes for sheep and lambs are now for cross-breds or any other pure breed than Southdown, Shropshire, Oxfordshire, and Hampshire. Thus some breeders of others than those mentioned, who have been deterred from competing, will now be able to send animals to the second greatest of our fat stock shows.

So much for the classes; and now there are a few alterations to note in the prizes. The Elkington, Thorley, Webb, Birmingham Post, and the Maisemore Park Challenge Cups are again offered under the same conditions as last year, and H.M. the King has a very good chance of securing the Webb Challenge Cup outright, for he won it both in 1904 and 1905, and it has only to be won three years before becoming the absolute property of the winner. The special for the best Devon is this year only £10, as against £20 in 1905; but what the Devons lose the Welsh gain, for they have a special of £20 for the best animal of the breed, as compared with one of £10 last year. Another alteration is also to be noticed in the Welsh section, and that is the increase of the first prize for steers not exceeding two years old to £15, whereas last year it was £10. The prizes in the other cattle classes are the same, viz.:—Herefords and Shorthorns: 1st prize £15, 2nd £10, 3rd £5; Devons (two prizes only), £10 and £5; Aberdeen-Angus, £15 and £5; Galloways: £10 and £5; pure-bred West Highland oxen or steers, £15, £10, and £5; West Highland cows or heifers, £10 and £5; Welsh, with the exception of the class previously mentioned, have £10 and £5 prizes; cross-bred steers, £15, £10, and £5; cross-bred heifers, £10 and £5; and Kerry or Dexters, £10 and £5; whilst the popular butchers' prizes are £10, £5, and £3.

Turning to the sheep-section, we find once again the Cooper Challenge Cup for the best pen of sheep; a new extra prize of £5 for Shropshires, given by the Shropshire Sheep Breeders' Association; whilst the five-guinea extra is this year for Hampshires instead of Oxfordshires. The class prizes are again £15, £10, and £5 for the wethers, and £10, £5, and £3 for lambs, the third prize in both classes depending on the number of entries. Pigs, corn, roots, and potatoes are as last year, and altogether the fifty-eighth annual fat stock show at Bingley Hall should in no wise be inferior to any of its predecessors. It will be held on December 1, 3, 4, 5, and 6, and entries close November 1. In applying for forms, intending exhibitors are requested to mention the section they wish to enter, as separate forms are issued. Mr. W. H. Lythall, Bingley Hall, Birmingham, is the secretary.

The Crook Agricultural Society find that the experiment of holding their show on a Saturday instead of a Wednesday does not pay, for they have dropped over £80 by the change this year,

and it has been resolved to revert to a Wednesday for the show day. The peculiar feature of the experiment is that although fine weather favoured this year's show, and despite the fact that Crook is a colliery district, the attendance was less than obtained at Wednesday shows.

Next year's show of the Leicestershire Agricultural Society will in all probability be held at Market Harborough, for at a town's meeting held recently, the mayor of Market Harborough stated that the society would be pleased to visit the town next year, provided they were given a site and guaranteed the sum of £200. The feeling of the meeting was in favour of the show being held, and finally the following resolution was carried:—"That a committee be appointed to make inquiry as to a suitable site for holding the show in 1907, and if such site be found, to take the steps required to raise a guarantee fund and make

SHOW SECRETARIES.

Mr. C. S. HALL,
Bournemouth Horse Show Society.

all other necessary arrangements. This to be subject to the society being invited."

The capital entry of just over 400 has been secured for the Birmingham Autumnal Shorthorn Show and Sale at Bingley Hall on Wednesday and Thursday next, and the catalogue reminds one more of the spring show and sale than the autumn one. The latter has, however, grown wonderfully during the past few years, and with the present popularity of Shorthorns there seems no reason why this week's sale should not be as successful as that held in the spring, for the animals are from well-known herds. The prizes are to be awarded on Wednesday, and the sales will commence at eleven o'clock each day.

Amongst the principal exhibitors at the above

show and sale are the Earl of Camperdown, the Earl of Powis (10), Lord Fitzharing, Lord Penryn, Lord Rothschild, Lord Sherborne, Sir A. Henderson, Bart., Sir Oswald Mosley, Bart., Sir J. Rankin, Bart., Miss Alice de Rothschild, Messrs. Allen, Ames (15), Bass, Dean, Denny, Freeman, Garne, Gerrard, Haley, Handley, Hobbs, Horlick (11), Kellock, Maee, Morris-Eyton, Mytton, Preece, Raphael, Reid, Steward (12), Stokes (10), Stratton, and Tremaine.

AGRICULTURE IN SWEDEN.

IV.

Seed Improvement.

Of the many establishments visited during my recent tour in Sweden, which included creameries, slaughter-houses, typical farms, &c., not the least interesting was the time spent at the "Sveriges Udsädesförening," or Seed Improvement Association of Sweden. This establishment was at Svalof, and the object of its founders was to promote the agriculture of Sweden, more especially by producing superior breeds of grain and other plants necessary to farm economy. This modest commencement has given rise to the present Swedish Seed Improvement Association. The seed improving enterprise at Svalof was originally a private undertaking, but its present efficiency is due to the powerful pecuniary support given by the official authorities of Sweden. After some associating appropriations from the Government, the association in 1901 was given an annual grant of 15,000 crowns, but since increased to 40,000 crowns. Support soon came also from the agricultural economical societies (Hushållningssällskap) of the provinces, which in Sweden command considerable funds, this support amounting to 16,000 crowns a year. To this should be added the members' fees, so that the total income amounts to about 65,000 crowns a year. The business soon advanced, important suggestions, new points of view, improved selecting methods, as well as some novel instruments and devices opened new ways to the solution of the urgent question of improving the culture plants.

The experiences from the trials are briefly as follows:—(1) The former so-called methodical selections have not come up to expectations. (2) Mass-improving—even with the best expedients—does not result in constant forms and never gives well-characterised sorts. (3) The improvement must exclusively be based on the laws of breeding and variation, so that one should start from a single individual (pedigree culture). (4) The experiments must be based entirely on scientific principles and on purely botanical characteristics, which, on the one hand, offer the safest guide for finding out the most important and hereditary qualities of the mother plant, and on the other hand, give value to the improved new sort as a systematically independent type resisting the influence of climate and soil. (5) Special and well-furnished scientific and practical establishments are wanted to enhance the improvement in agricultural plants, and the issue point is the material already existing in the country. (6) The important problem of keeping up the productive capacity and satisfactory purity of the obtained breed by a methodical selection (picking, scrupulous sorting) is left to be resolved by the practical agriculturist and seed dealer.

The selection of the single ears for propagation referred to above as pedigree breeding is carried out in a most thorough manner, and I was much interested in the way in which the best ears are culled. At Svalof this is done by weight, the ears

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

SHAP AGRICULTURAL SOCIETY.

44th ANNUAL SHOW at Shap, on WEDNESDAY, SEPTEMBER 19, 1906.

Increased prizes for open competition in Horse-Leaping. Schedules may be obtained from the Secretary.

THOS. GILDART,
Mill Flatt, Shap.

ABINGDON HORSE AND AGRICULTURAL SHOW,

THURSDAY, SEPTEMBER 20, 1906. £450 in Prizes—Subscribers, Berks and Oxon and 25 miles radius.

HUNTERS. Six Classes, One open to all England.

SHIRES AND CART HORSES. Twelve Classes, Two open to all England.

JUMPING AND DRIVING. Eight Classes, Three open to all England. Entries close MONDAY, SEPT. 10. Schedules and Entry Forms of FRANK R. JACKSON, Auctioneer, Abingdon, Berks.

FROME SHOW, WEDNESDAY, SEPTEMBER 26, 1906.

All Entries close September 12.—T. C. HARDING, Auctioneer, Frome, Secretary.

FANCIERS' POULTRY SHOW SAME DAY.—Messrs. YOUNG & FRICKER, Palmer Street, Frome, Hon. Secretaries.

HAY HORSE SHOW, September 20, 1906. Entries close on September 6; double fees September 12.—REECE MORRIS, Secretary, Broad Street, Hay, Hereford.

ALTRINCHAM SHOW, WEDNESDAY, SEPT. 26. £1,800 IN PRIZES, besides Silver Cups and Medals for Horses, Cattle, Sheep, Pigs, Goats, Turn-outs, Hunters, Jumpers, Roots and Grain, Butter, Cheese, Honey, Implements, Dogs, Poultry, Pigeons, Rabbits, Cats, and Caviar. Prize list may be had from the Secretary.

J. HERBERT HALL,

2, Dunham Road, Altrincham.

Entries close September 8; double fee, September 12.

DAIRY SHOW, LONDON, OCTOBER 9, 10, 11, & 12.

Great Exhibition of DAIRY CATTLE, PRODUCE, APPLIANCES, &c. Entries close September 10th.

Particulars of—WM. C. YOUNG, Secretary, 12, Hanover Square, London, W.

GRANDSDEN AND DISTRICT. AT GREAT GRANDSDEN. SEPTEMBER 25, 1906.

Entries close September 11. R. J. KISBY, Secretary, Great Grandson, Sandy, Bedfordshire.

KINGTON HORSE SHOW, SEPTEMBER 19, 1906.

£350 in prizes, including two Challenge Cups value £10 each, and seven Silver Medals. Heavy-weight Hunter Class—1st prize, £20; 2nd prize, £10; 3rd prize, £5. Light-weight—1st prize, £10; 2nd, £5. Entries close September 4, or will double fee, September 8, except for King Competitions, which close September 13. Prize Schedules and Entry Forms from the Secretary, T. H. VAGHAN MORRIS, Ryfold House, Hereford.

MERIONETHSHIRE AGRICULTURAL SOCIETY.

GREAT SHOW at TOWYN.

FRIDAY, SEPTEMBER 14, 1906.

Over £300 in prizes. Dogs under Kennel Club Rules. Open Leaping and Trotting contests. Entries closed Aug. 29. R. ROBERTS, Secretary.

Rhydygarnedd, Towyn. BIRMINGHAM AUTUMNAL SHORTHORN SHOW AND SALE.

THE SIXTIETH GREAT SHOW AND SALE will be held at BINGLEY HALL, BIRMINGHAM, on WEDNESDAY and THURSDAY, SEPTEMBER 5 and 6.

404 Head of Highly-descended COWS, HEIFERS and BULLS, including many prize winners, are entered from the most noted breeders, and will be SOLD BY AUCTION, by Mr. W. H. LYTHALL, without any further reserve than entering them at not more than £21 each.

Judging at 9 o'clock on Wednesday. Sale at 11 o'clock each day. Admission, 1s. Catalogues, 7d., free by post. W. H. LYTHALL, Secretary.

are placed on an inclined piece of metal, which allows them to slide down. The centre portion of this is on a balance, which can be adjusted by means of a screw to deal with any weight. By this means the heavy ears, which are, of course, the best, depress this balance and fall through to a receptacle provided, while the light ones pursue their way till they fall among the rejected. The instrument is most simple and ingenious, and as far as I am aware, is quite novel. The idea for this particular one at all events originated at Svalof.

Experimental Fields.

The experimental fields are for the most part situated on adjacent farms tenanted by the company, and where a crop rotation may be ensured. They are distributed amongst the ordinary grain fields in order to have the same conditions as the surrounding crops. There are four kinds of trials. (1) The pedigree cultures sown always by hand and with a sowing board. (2) Control litras of seeds, which are also sown with machine, are all of the same size, so that the different sorts which without exception have been fixed and considered promising may be compared and studied thoroughly. (3) Pure cultures and increases of the best types mentioned in 2. (4) Comparative experiments in which the test is performed and some of the older sorts being used as standards, results obtained determined which of the new improved products are to be delivered to agriculturists.

As an example may be cited that in 1904 the experimental fields were five, comprising an area of about six hectares. The sorts tried by the comparative experiments were 116, of which only five were older types; whereas 111 grown in the process of increasing. The number of novelties in these fields, some in special specimens, is no less than 505.

A CORNER OF THE EXPERIMENTAL FIELDS AT SVALOFF, SOUTH SWEDEN.

This considerable quantity of working material will perhaps show that the association is seriously pursuing its purpose as soon and as completely as possible to obtain practical results from its methods.

The seed-selling business soon became troublesome to the association, so the Swedish General Seed Company, Ltd., was founded to take over the new breeds, to increase them, and to distribute them among the agriculturists, and also to form first-class, reliable seed-selling business dealing in the best seeds. In order to maintain its standard as a first-class seed business, the statutes of the company provide that only such wares as have been approved by the control board of the association shall be bought; the store houses, the cleansing, packing, and forwarding of the seeds are also controlled by the Association.

The grain sold by the company is the proceeds only of sorts bred, or at least pure cultured, by the association, and produced exclusively from the company's own cultures, which are for this purpose inspected by the officials of the association. To this end the company have their principal breed cultures at Svalof, the crops giving seeds for experimental cultures in widely different parts of the country. Even here the fields are inspected, and if the crop is approved and found pure it is sent to the stores to be further prepared and finally sold.

OIL and GAS ENGINES

are growing more than ever in demand, and would be still further "boomed" if regularly advertised in the "Mark Lane Express."

CORRESPONDENCE.

Harvest Thanksgiving Collections.

Sir,—The Royal Agricultural Benevolent Institution, for which I have been accustomed to make at this time of year an annual appeal through your columns to the clergy and ministers of all denominations, requires this year even more generous support than ever.

While again asking your indulgence in pleading its cause, I feel that the warmest thanks of all interested in the charity are due to the Press, which has rendered important assistance in raising the harvest offertories from £1,735 in the year before my first letter was written in 1887, to £8,644 in 1905.

Since 1863, the Royal Agricultural Benevolent Institution has been nobly endeavouring, by a system of pensions, to lighten the burden of those aged farmers, their wives, widows, and unmarried orphan daughters who, through no fault of their own, have been left destitute.

The charity now maintains 1,247 pensioners, at an annual cost of £24,276. Of these 373 are from eighty to ninety-six years of age, and 598 from seventy to eighty.

At the last election, in June, 1906, there were left out in the cold no less than 213 distressing cases, which could not be dealt with for want of funds.

Owing to the altered state of agriculture as an industry it is becoming increasingly difficult for the farmer to gain a livelihood, and there are annually hundreds of brave men and women of the farming class who have to face ruin.

His Majesty the King, who has always been closely associated with and deeply interested in

especially those having interests in landed estates.

Although the present harvest promises well, the wants of the aged agriculturist, ruined by bad seasons and other misfortunes in the past, remain as urgent as ever.

Having regard to the pressing need for funds, I earnestly trust that a liberal response will be accorded, and that the result may be such that most, if not all, of the 213 distressing cases which could not be dealt with by the council at the last election may have speedily relief.

Any inquiries will be gladly replied to, and contributions received by the secretary, Mr. C. B. Shaw, 26, Charles Street, St. James's, London, S.W.—Yours truly, WALTER GILBEY, Elsenham Hall, Essex, August 28, 1906.

The Cottage Question.

Sir,—The only way in which the farm labourer's cottage question can be satisfactorily solved is for the landowners to build cottages on each farm to meet its individual requirements.

These cottages should be let with the farms, and be entirely under the tenant farmer's control. This is one way in which landowners can benefit agriculture, and themselves eventually. The way in which the occupiers of these cottages can do likewise is by using their votes in the agricultural interest.—Yours truly, CLAUDE DE DUROI, August 28, 1906.

Peel-Throated Lambs.

Sir,—In your issue of the 20th ult., under the sheep heading, there are remarks re West Country Horned. Allow me to inform your correspondent that there are in this district seven or eight farmers that keep a few pure-bred of this variety for ram lamb breeding. They are called Westerns here.

I have often wondered if that was the real name, but could never see any at the shows I have attended. I saw about thirty ram lambs peeled nearly all over going to the station this week for a buyer in Wales. I often see a lot of ram lambs off to Wales. They are used here for breeding fat lambs for the London market, and are much liked by the butchers; they mostly kill well.

Your correspondent could purchase rams at the local sheep fair held here on Wednesday, Sept. 5. If he wanted ewes, he would have to go to the breeder. I might say he would get very little wool from the pure-bred; they peel nearly all over before shearing day. JOSEPH CHARROVE, Winslow, Bucks, August 28, 1906.

Sir,—I am very much obliged to you for the remarks in your issue of the 20th ult. re Peel-throated lambs. I have no doubt it has put me on the right track. I always understood the lambs were got by a horned sheep, but it is thirty or forty years since I saw these lambs at market in any quantity. Should I not succeed in selecting a ram or two to my liking, I shall have much pleasure in communicating with Professor Winter.

—Yours faithfully, JOHN C. MERRICK, Stanwell Moor, Staines, August 27.

Forestry: A Visit to "The Holt."

Sir,—Having just visited the "Alice Holt" Forest, situated at the eastern extremity of Hants, bordering on the county of Surrey, I was struck with the large area (1,892 acres under wood) of Crown property still covered by "The Holt," which figures so prominently in the classic pages of Gilbert White, the famous clerical naturalist, who was some time curate of Selborne in the 18th century. Much has no doubt been done since his time; but it is evident that still greater results might be obtained under more scientific and practical management. The Departmental Committee (Board of Agriculture) on British Forestry of 1902 recommended that the Alice Holt Woods should be utilised as "soon as possible" to serve as a demonstration area in England, and the Commissioners of Woods and Forests seem to have followed this up by requesting Dr. Schlich to present a working plan for these Royal woodlands. This has been recently published by the Royal Scottish Arboricultural Society, of which the undersigned is a member. It is a comprehensive and able report, showing how the annual yield may be improved, with a prospect of better and sustained results being obtained at the end of sixty years.

Although in this particular case, as Dr. Schlich points out, the "Labour question is a somewhat difficult one," there can be no doubt that the more systematically these areas are worked in order to meet present and commercial needs, the more opportunities will be provided for permanent labourers: and the more this class of operative can be prevented from drifting into the towns the better will it be for the community generally.

agriculture, once said, when presiding at an anniversary of the institution:—

"The cleverest farmers, men who understand their business, may, in consequence of bad seasons, failing crops, loss of stock, and a variety of other causes, find themselves reduced from a state of comparative wealth and prosperity to one of abject poverty."

Much valuable assistance to the cause for which I plead has been rendered in the past by the clergy and ministers, and there is a peculiar appropriateness in harvest thanksgiving offertories, whether collected in the country districts or in the churches of the metropolis and our large manufacturing towns, being devoted to this, the farmers' charity.

The present Archbishop of Canterbury, writing in 1903 to the then chairman of the executive council of the institution, said:—

"I have long been a warm advocate of the claims which the Royal Agricultural Benevolent Institution has upon the sympathy and support of all who are interested in our rural life. The need for such an institution is, in present circumstances, indisputable. There is, to my mind, a marked appropriateness in the collections made at harvest festivals being given for the help of those who are suffering in consequence of the existing agricultural depression."

I venture to make a strong appeal to those who have not hitherto sent their way to assist this good cause, to endeavour this year to benefit the funds of the institution by their harvest offertories; and I would also like to take the opportunity of bringing the claims of the institution to the notice of those who are making charitable legacies,

WE MAKE GUNS

We sell to the user with only one small profit.
We sell for cash direct to the user.
We buy the finest materials to be obtained.
We pay cash for all materials.
We employ some of the finest workmen in the Gun Trade.
We use finest machinery for machine operations.

RESULT.

We sell for £25 Guns of a quality for which sportsmen have previously paid from £50 to £80.

We sell thoroughly reliable Guns.

We get the finest shooting it is possible for guns to make.

Our "Field" Hammerless Ejector Gun.—A perfect Ejector Gun of the finest quality, £25. It made with the best single trigger mechanism ever invented, £30. A perfect pair of these Guns, beautifully matched, £50. A perfect pair of Single Trigger Guns, £60.

"The Gun of the Future," as an Ejector, £15. "The Gun of the Future," without Ejector, £10. A sound and reliable gun, well made, and perfectly balanced, which will give entire satisfaction.

Pattern 8662, £6.—A sound and reliable hard shooting and hard wearing hammerless gun. Better than many sold at double the price.

Pattern 8358, £4.—A sound and reliable hard shooting and hard wearing hammer gun. Better than many sold at double the price.

ESTABLISHED 20 YEARS.

Bankers: London and Midland Bank, Temple Row, Birmingham.

MIDLAND GUN CO.

Demon Gun Works,

PRICE STREET, BIRMINGHAM.

It appears from an interesting letter I have received from Colonel Pearson, of Kingston, Herefordshire, that Dr. Schlich has already inaugurated a practical first step towards providing forestal instruction in the neighbourhood of Oxford. It will be remembered that Colonel Pearson is a great forestry authority who, in the service of the Indian Government, had for upwards of thirty years under his care the "plotting" of the Cooper's Hill students periodically sent to Nancy and other places on the Continent to fit them for their important duties in the great forests of our Indian and Colonial Empire. Colonel Pearson writes me:—"I have never seen 'The Holt,' but I believe that at one time Professor Dr. Schlich wished to secure these woods for instructional purposes. I think now that he will be found to content himself with the woods near Oxford, as several of the Colleges have very kindly co-operated with him in this respect, especially the authorities of St. John's, who have practically given over to him the management of their large woods. It will take time before the present nascent interest in forestry bears fruit, but it is a valuable move in the right direction. We will hope that it may follow the proverbial example of the grain of mustard-seed. It is, in my view, a very good thing that we have got into touch with one of the great centres of education in the country. I was staying at Oxford for a week with Dr. Schlich, and was much struck by the general interest shown by all the authorities there, from the Vice-Chancellor downwards, in the matter. This will do a great deal more to bring the science of forestry before people generally than all the Parliamentary inquiries that have ever taken place. Much is due to Dr. Schlich. But you must not expect to see tangible results too soon; and it is better if the move be gradual. The leopard cannot change his spots at once; he only became 'spotted,' probably, after a long evolution!"

I am glad to observe that in many directions increased attention is being given to the question of silviculture, both privately and by the State, as affording a hopeful means of providing additional employment for our rural population; and it is to be hoped that in this matter the administrators of our Crown lands will not lag behind those of other countries—men like Dr. Schwappach, of Eberswalde, and Mons. Boppe, of Nancy—in the painstaking attention which the latter *inter alios* have so long given to this important subject.

Thanking you for your kind insertion of previous communications of mine,

I am, yours faithfully,

CHARLES HANCOCK, B.A.

Reform Club, S.W., August 30.

Insurance against Damage by Hail.

SIR,—In your issue of August 24 a letter appeared from the secretary of the Huntingdon Chamber of Agriculture stating the damage caused by hailstorms and suggesting relief by a Lord Mayor's fund. I entirely disagree with this suggestion, as all risk of damage can be obviated by paying a small premium of 5d. per acre. I make this statement as an agriculturist who has continually insured against damage by hail for the last twenty years. The above premium being so reasonable, I think all agriculturists should be informed of this precaution.—I remain, yours,

J. G. BERTON.

Barton-by-Lincoln, August 26, 1906.

The Need of Rain.

SIR,—This to let you know in N. Lincolnshire we are dried out; our milk is reduced by hundreds of gallons; turnips, especially the earlies, have ceased their growth, when only like large oranges, later ones are at a standstill; so with the short hay crop, food for sheep and cattle will not be too plentiful through the winter.

To take the other side of the picture. Harvest runneth apace; except for a few drizzling days last week we have got along famously, and thank we are gathering fair crops. Corn on the new seeds first claims our attention, as the stocks soon kill them if not removed, leaving a blot all the next summer.

The dry time is affecting the potato crop, many pieces show quite ripe in patches, and I think, on the whole, cannot but be a small crop. Dates are holding out better than some varieties, and have looked well. Disease seems absent at present, but we must not rely until we are out of the wood, for hot, moist, thundery weather would work havoc on the leaves, and thus down to the tubers.

August 30, 1906.

NORTH LINDEY.

Half-holidays for Farm Labourers.

SIR,—I quite agree this correspondence should now cease; in fact, it never should have begun, as every one connected with farming (at least in the eastern counties) must know that for ten months out of the twelve the labourer takes a day's holiday practically when he wishes—not in all cases going through the formality of asking his employer if it will be convenient.

FARMER AND SUBSCRIBER.

August 16, 1906.

English or Foreign Meat for the Army?

SIR,—I found in your impression of the 27th ult. a letter signed "Junior," prompted, I presume by mine in your columns of the 20th. The writer, by odd phraseology much favoured by some, writes:—"I frankly confess, having read Mr. Welch's letter, I am unable to convince myself that he has proved his case." Perhaps in withholding his reasons for his inability to convince himself, he thought it well to follow the advice of the astute old judge, who advised his brethren of the bench thus: "Give your judgment but withhold your reasons." Thus "Junior" gives his conclusions, and dismisses as a wild-goose chase the wisdom of raising from our own land, by our own people through their various industries completely, everything needed for the sustenance, the clothing, and the armament of the British Army, and the circulation of our taxation cash entirely through home channels, instead of raising, as now, the main supply for these needs from foreign lands and by foreign people. Further, by asking the question, "Why should not the War Office and all Government Departments buy in the cheapest markets?"

This is the orthodox question of the fetish Free Trade believer and worshipper of the idol set up by Cobden, and in later times buttressed by the glittering personality of Mr. Gladstone, but which all the great, renowned statesmen of Europe and America refuse to fall down to; they all maintain discriminating duties favouring their own industries, particularly the cultivation of the land, which great statesmen in all the ages have regarded as the paramount industry. Not so the fetish Free Trader, the little Englander, the friend of every country but his own; he gives no preference to it. This Free Trade idol is tottering, it will fall.—Yours truly,

Southall, August 30, 1906.

ALFRED WELCH.

Large v. Small Shows.

SIR,—The Hon. Gervase Beckett, M.P., appears to have overlooked some of the chief causes for the difference between the South of England and, say, Yorkshire in the number of large shows. The population in the North is infinitely more dense, and the proportion of breeders or fanciers of poultry, dogs, rabbits, canines, birds, &c., is twenty times as great as in the South. These two causes only alone would make shows in one district successes, and in the other failures. I am a strong believer in district shows, and won my first successes at one of them nearly forty years since.—Yours, &c.,

August 29, 1906.

SHOWMAN.

SIR,—I quite agree both with the Hon. Gervase Beckett, M.P., and your correspondent T. C. M. that small local agricultural shows offer more inducements to the average farmer to exhibit his stock than big events can possibly do, because apart from the expense attached to the sending of stock a long distance to a big show, the small man does not stand much chance against the renowned breeders who compete with each other at the large shows. There can be no doubt that it is to the interests of the ordinary farmer, who is not necessarily a stock breeder, to keep as good a class of cattle as his means will allow, and maintain a man has been induced to improve his stock, and at the same time benefit himself, on the chance of winning honours at his local show.

I contend that it is a good thing to exhibit, because when one man pits his stock against that of another he realises his weaknesses when he is beaten, and if he is made of the right sort of stuff he takes his defeat in the light of an education, and sets out to improve himself. On the other hand, when a man wins it is a means of encouragement, and he is prompted to strive his best to maintain the standard which has brought him success.

It may be observed that it is the good farmers who invariably exhibit and support shows, the men who are not satisfied with the average and commonplace, but are ambitious to rise above their fellows; and if shows stimulate a spirit of this kind they more than merit their existence. Your correspondent speaks of Yorkshire, but there is a society in Gloucestershire, i.e., the Berkeley Hunt, which is, perhaps, doing as much as any other local institution in the country to improve the standard of agriculture over the area which it influences. Berkeley Show is a household word in the vale of the Severn, and every August Bank Holiday thousands of people flock to the ancient town, not so much because they expect to find anything very different to what they have seen before, but simply because it is Berkeley Show, and an event belonging purely to the locality.

With its fine connection amongst Live Stock Owners, the "Mark Lane Express" is undoubtedly ONE of the BEST MEDIA for the Disposal of Pedigree Live Stock, either by Public Auction or Private Treaty.

The Journal goes directly into the hands of likely purchasers at home and abroad.

Whilst arguing in favour of local shows, we must not overlook the possibility of getting too many of them. It is an open question whether big events are not getting rather too numerous, and a show, be it large or small, to be successful must pay its way. Even small events can hardly be independent of the support of that part of the community who bring in the nimble shillings but have no particular interest in agriculture. If local areas got too limited and local agricultural shows too numerous, would there not be a danger of the indispensable man in the street growing tired and withdrawing his support?

August 29, 1906.

WEST COUNTRYMAN.

The Butter Tests and Milking Trials at Tring Show.

Sir,—My attention has been called to some remarks in your last issue under the heading "Notes and Jottings" on the butter test and milking trials at the recent Tring Show.

Two sentences in those paragraphs appear to me to impute carelessness, want of fairness, and, might I add, ineptness on the part of the judge. I am, therefore, obliged to take notice of them. The sentences are as follows:—

(1) "If this very ridiculously low ratio was caused by the animals being out of health, or by variations in the temperatures of the milk at separating, or of the cream at churning, such causes should be mentioned, or there may have been other reasons."

(2) "In all fairness to breeders and exhibitors of Jersey cattle, any cow requiring over 20 lb. of milk to produce a half pound of butter should by all means be disqualified from either receiving a prize or a certificate of merit."

In reply to the first of these two paragraphs, I would remark that (a) at all the milking and butter test trials which I have superintended I have always allowed animals who are reported to be out of health to be withdrawn on the application of the man in charge of them. One was so withdrawn at the Tring show this year, and her record was not published.

(b) At all butter test trials under my charge the milks are alike separated at the same temperature, the separated milks and creams being kept until the following morning, when cream (if any) found in the separated milk is skimmed and added to its respective lot of cream. This practice is so well known that I did not think it necessary to overload my report by mentioning it specially.

(c) It is well known that when churning sweet creams variation of temperature may seriously affect the weights of butter obtained, and consequently in "the elaborate table of results" which were put up at Tring in the dairy tent, and are always exhibited conspicuously at every show where I act as judge, three columns are devoted to temperatures—one to the temperature of the cream in the churn at the commencement of the churning, the second to the temperature of the dairy at that time, and the third to the temperature of the butter-milk when the butter has come.

These figures, which, with the time figures, act as a check on the operation of churning, may apparently have escaped the notice of the writer of "Notes and Jottings." If he refers to them he will find that all the creams were churned at 52 deg. Fahr.

(d) There may be other reasons why a cow should yield milk of poor quality; but I think it will be admitted that the judge can hardly be expected to account for or give such reasons.

With regard to the second paragraph, I would reply that the judge at both butter test and milk yield trials is bound by a scale of points which has been thought out carefully and adopted by all the leading societies. To disqualify cows as suggested in that paragraph would, therefore, be unfair and wrong, the animals having been entered for the trials with the knowledge that such scale of points would be adopted.

Perhaps, for the information of the writer of "Notes and Jottings," I may be allowed to add that the average butter ratio of all the Jerseys tested in England from 1886 to 1905 inclusive (amounting in all to 2,095) works out at 19.45 lb. —Yours faithfully,

ERNEST MATTHEWS.

August 30, 1906.

PUBLICATIONS RECEIVED.

Messrs. Ben Reid and Co., Limited, of the Aberdeen Nurseries, have just issued a small but comprehensive catalogue of Dutch Flower Roots for 1906. It is freely illustrated.

Mr. Perry, of the Hardy Plant Farm, Winchmore Hill, N., has issued Part I. of his new catalogue of bulbs and tubers. It contains a good list and variety of bulbs, &c., which he is offering at prices 20 per cent. to 30 per cent. less than last year's owing to removal.

ALL MISCELLANEOUS ARTICLES OF FARMING NECESSITIES certainly find a Ready Sale when advertised in the "Mark Lane Express." The charge is very moderate, and consistent with the profit such small goods yield.

Northern Notes.

HARVEST labourers have been plentiful this year; indeed, a plethora has existed for years past, and on each hirings day the number of disappointed men increased. Amongst the men presenting themselves in the market places as prospective helpers in the field, are very many apparently unfitted for hard work, and who would not be able to stand the strain of loading for half a day. These are wooed out by the keen farmer, whose experienced eye tells him who is fit and who unfit. A few of the weakly ones occasionally get a job, and then the master has to pay for his experience, a full week passing away probably before these men, having made the acquaintance of good substantial fare supplied at regular intervals, can satisfactorily perform the duties for which they were engaged. They are like a rusted machine, which requires a good deal of oiling before it runs with anything like ease. On the farms of Yorkshire very few extra hands are engaged at the beginning of harvest, the casual labourers having first chance, and then the "stranger." The latter class are chiefly Irishmen, and they come with clockwork regularity year after year, seeking a job on the same farm. These Irishmen enjoy the beer served out to them by the generous farmer, and one typical old hand told me it was "mostly for the beer" that he came. "We have no beer in Ireland," he wofully said. The heavy thunderstorms have sadly interfered with the progress of the harvest, and on farms where the hands are engaged for a month, and not by day or week, the wages bill has been out of all proportion to the work accomplished.

THRESHINGS in the storm area of the east of Yorkshire, to the destructive force of which reference has been made in this column, show a striking deficiency of grain. One tenant of Lord Londesborough's, who has farmed half a century, took note of the result from a field of oats undisturbed by the storm, and one which had been "cut to pieces." The former yielded four and a half sacks to the acre, and the affected corn gave no more than a sack for each load of six. He was not insured. A neighbour, who had taken that precaution, recovered £70.

IN spite of the stoppages caused by thunderstorms and night rains, it is extraordinary what a great breadth of corn is already out. Scarcely a day has passed lately without local showers; but advantage is taken of the intervals to get on. It is observed that farmers on large holdings have this year, more than in the past, enlisted the services of skilled mechanics to manipulate their self-binder reapers. This practice ensures steadier progress; the men are conversant with every part of the complicated machine, and if a breakdown occurs, any repairs are soon effected, or any mishap rectified. The ordinary hands of the farm are thus set free to attend to other details, such as setting the sheaves overend and making them into "stooks." The mechanic will, in time, in a large measure, supplant the plough-boy. The plough-boy must see to it that his blossoms into a mechanic. He is already an authority on bicycles, and there is no possible reason against his becoming skilful in the management of all sorts of farm machinery. In the evolution of the rural education code, what could be more useful than the introduction of continuation schools in our villages, at which the youths might learn a good deal in the form of applied mechanics? A wide field for a variety of technical instruction is herein suggested.

NORTH Yorkshire sheep-breeders are having a little "tiff" with the Board of Agriculture over their sheep-dipping regulations; and they have held a meeting at Bedale to protest against their enforcement after September 1. The meeting was influentially attended, and a general opinion was elicited that when a breeder had dipped his sheep in a dip approved by the Board of Agriculture in the presence of a public officer, a certificate should be granted to the owner to take his sheep wherever he can make the best of them without let or hindrance, and a resolution to that effect was carried unanimously. The Bedale farmers having set the ball of agitation rolling, are hoping to enlist the sympathies of their brother-farmers in all the counties that are scheduled under the Sheep Dipping Order.

IT is quite obvious that hardship may follow the stringent enforcement of the regulations. The sole object is to stamp out sheep scab, and the Board must be supported in its primary object. The individuals must inevitably suffer inconvenience in the larger interests of the community. Owners of pedigree flocks have for years advocated stringent measures, and if other breeders had been as diligent as they in keeping their flocks clean, and adopted a uniform system of dipping, these irksome orders of the

Board would not now be necessary. Our individual interests loom large in our own eyes and estimation; these must be submerged in what is really a national concern.

A COUPLE of sales of Lincoln sheep in the East of Yorkshire emphasizes the fact that Lincoln can no longer boast of a monopoly of what may be called the better-class flocks. The dispersals of shearing rams showed averages of £23 and £24 per head respectively. At these prices sheep pay infinitely better than Hackneys, or even Thoroughbreds, and the owners of such flocks, providing they maintain their standard of excellence, possess in them a sort of gold mine. The astounding fact to any person interested in sheep is that so few breeders venture into the show-ring. We see old names—very limited in number—year after year carrying off all the prizes; though it is fairly certain that others have sheep as good in form and quality as those owners who fill so conspicuous a place in the public eye. Flock-owners are, as a rule, a modest class of men; it is, however, well to remember that publicity pays, and if some of the ultra-modest men possessing Lincoln and Leicester flocks would not so persistently hide their light under a bushel, they would, we are certain, carry better-filled purses.

August 31, 1906

The Governors of Gay's Hospital, in response to applications for land for small holdings, have now set apart ninety acres of a farm at Sutton Bridge, Lincolnshire, for the purpose. They have divided it into plots of from two to ten acres each. There were plenty of applications for the small holdings from responsible men, and the land has been let at an average price of 50s. an acre.

The Foreign Cat le Question.—Speaking at an agricultural show at Brimsington, near Bristol, last week, Sir Edward Strachey said it would appear from a recent statement of Lord Londonderry that the Government intended to alter during the late session the law passed in 1896 for the protection of flocks and herds against diseases abroad. As the representative of the Board of Agriculture in the House of Commons, he could say there had never been such intention. Agriculturists might rest assured that in Lord Carrington they had a Minister in fullest sympathy with them, and whose interests and theirs were identical.

At a meeting of the National Federation of Meat Traders' Association, held at Newcastle-on-Tyne on Wednesday, a resolution was adopted to the effect that, having regard to the fact that the Government emphatically declined, pending the issue of the report of the Royal Commission on Tuberculosis, to promote or facilitate legislation in relation to the seizure and confiscation of the carcasses of animals alleged to be tuberculous, the federation urged upon the Government the necessity for issuing forthwith the report of the Royal Commission in the interest of master butchers throughout the kingdom, who were suffering the most serious loss and inconvenience.

FARMS

never remain unlet when advertised in the "Mark Lane Express."

The charge is Sixpence per Line per Insertion.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids ...	2 8	3 0
Oil or fat ...	2 8	3 0
Carbohydrates ...	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least $2\frac{1}{2}$ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by $2\frac{1}{2}$ and 1 added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids ...	22.1 × $2\frac{1}{2}$	= 55.2
Oil ...	5.2 × 1	= 5.2
Carbohydrates ...	33.2 × 1	= 33.2

Total feeding units ... 93.6

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

The "Lancet" on Manures.

The *Lancet* has evidently a poor opinion of agricultural professors, analysts, and experimental stations, because most farmers cultivate their lands in accordance with the information and data supplied by these experts, yet the *Lancet* is of opinion that "manure is dumped where it can do nothing but outrage Nature, and of all dumping the dumping of artificial manure is the worst."

"One reason," continues the *Lancet*, "why manures sometimes fail in the hands of the ordinary farmer is that they are applied with most callous indifference to the state and the requirements of the soil," and more to the same effect.

Farmers are not such ignoranuses as the *Lancet* seems to imagine, and the writer of the article in question would do well to study the subject more deeply before expressing such opinions which are wide of the mark.

Poppy Cultivation.

This is one of the minor industries confined chiefly to the particular district of the Isle of Axholme in Lincolnshire. Between twenty and thirty acres are cultivated with the crop, which is utilised for distillation into the sleep-producing substances, laudanum and opium.

As the crop extracts from the soil a large proportion of plant food, especially phosphoric acid, it can only be grown on the same land once in

about half-a-dozen years without having recourse to liberal application of artificials. It used to be a profitable crop, but like most other agricultural produce the profit in it has departed.

Thistles.

Cultivated crops have to contend with many enemies, which, in the form of weeds, dispute possession of the soil and its plant nourishment. Among the most troublesome is the too well-known thistle. The Board of Agriculture has just devoted a leaflet, No. 166, to a description of its characteristic and the best method of destruction.

There are four common varieties, known as (1) the spear thistle, (2) the velvet thistle, (3) the marsh thistle, and (4) the creeping thistle.

The spear thistle is a biennial, producing during the first year a growth of compact leaves, and the second year a strong central stem with branches and flowerheads. The late yield an enormous mass of seeds, carried about by the breeze and easily germinating in suitable soil.

The velvet thistle is somewhat similar to the first named but not so common.

The marsh thistle, as the name implies, flourishes on marshes and on damp, undrained pastures. It does not give trouble on well-drained, cultivated soils.

The creeping or common thistle is the most general and the most difficult to eradicate. Its root system enables it to develop and extend rapidly in all directions. It should be noted that the creeping growth of this troublesome weed distinguishes it from the others, and makes it necessary to adopt a different treatment to destroy it.

How to Eradicate Them.

The chief thing with the first three is to prevent them seeding, and this can be effectually done by cutting with a spud below ground, or with a scythe or sickle above ground in late June or July before the flowers have opened. This must be done before the seeds are formed—plants in their second season of growth are thus got rid of. The first year's growth of leaves must also be got rid of by spudding in the late autumn and in spring. The spud must be driven well below the surface of the ground, and the severed bunch of leaves turned upside down.

The creeping thistle required different treatment. It should be stubbed early in the year, soon after it comes above ground, and the operation should be repeated as frequently as possible throughout the season.

Systematic spudding and cutting for a couple of seasons in succession, or the growth of a couple of root crops in succession where the weed is very prevalent in arable land, is a sure plan of getting rid of this agricultural pest.

Special attention should be given to ditches and waste places where these weeds often accumulate, and during seed time scatter the germs of future plants all over the place. The banks of railways running through agricultural districts sometimes harbour quantities of noxious weeds; the railway companies ought to see that they are cut down and not allowed to contaminate with their seeds the neighbouring fields.

Rust in Wheat.

In a work on the "Diseases of Cultivated Plants" Professor Kitchner, in referring to the extensive injury caused to the wheat crop by rust, writes that no direct means of fighting the disease are known, but that it may be warded off in a great measure by the observance of the following points:—

1. Everything that favours an even and quick growth of the seed, and its proper development helps to check the spread of the disease, and therefore a good preparation of the soil and uniform depth of seeding by the drill-machine are useful.

2. Early sowing of both winter and spring wheat can be recommended.

3. Applications of phosphoric acid by super-phosphate or basic slag are helpful in warding off attacks; nitrogenous manures, applied liberally, seem, on the other hand, to encourage the disease.

4. Some varieties of wheat seem able to resist the disease better than others. This point should be carefully studied in districts where the disease has been rampant in previous seasons.

5. Berberry bushes round the fields should be done away with; they harbour the spores of the disease, as also does couch grass, which should be rigorously destroyed.

Potatoes Rotting in A Cellar.

A three-acre field of potatoes, sprayed several times during growth, and practically free from the blight (*Phytophthora infestans*), was harvested before the tops were dead and stored in one bin in a cool cellar. The day of digging was warm and muggy, but the tubers were well dried off before being stored in the cellar. At the time there was very little evidence of rot, perhaps one bushel of discoloured potatoes in 100 bushels, but no really rotten potatoes. Early in November it was noticed that they were rotting badly; fully a third of the crop was found more or less affected with rot, due to late blight.

It was thought possible that the sound potatoes had been infested while lying in store. To test this two barrels of sound potatoes were selected in November from the heap, and to each peck of sound potatoes two potatoes showing unmistakable signs of incipient rot were added.

To ascertain further if special treatment would decrease the amount of infection, five lots of two barrels each of selected tubers were treated (1) with flowers of sulphur, (2) copper sulphate, (3) unslaked lime, (4) Bordeaux mixture, (5) a 3 per cent. solution of formaldehyde. The twelve barrels were kept in the cellar until April. There was very little further rot in either the untreated or specially treated barrels.

This seems to justify the conclusion, according to the report of the Maine Experimental Station, that the danger of the transmission of rot, due to the blight, from one tuber to another during storage is remote. The rot, undoubtedly, is the result of infection in the field.

As the tops during growth were kept green by the application of Bordeaux mixture, and there was so little sign of the presence of the blight, the infection could hardly have been through the vines.

The field was heavily dressed with stable manure only a short time before planting, and there is little doubt, according to the report, that the fungus was carried to the field in the manure and the tubers directly infected, while the tops escaped the disease. This is said to be in accord with common experience so often noted before the use of Bordeaux mixture that potatoes were more subject to blight and subsequent rot when grown on manure than on chemicals, or without the application of fertiliser of any kind.

The following conclusions appear to be warranted from the results of the experiments.

1. The infection of potatoes with the fungus occurs chiefly, if not entirely, in the field before digging.

2. The disease is transmitted in the majority of cases, not directly through the vine, but indirectly through the soil.

3. Potatoes may be infected directly in the field from spores introduced in the manure, or from rotten potatoes spread upon or left in the land the preceding year.

4. It is concluded that the mycelium which produces the rot normally passes into the dormant stage after infesting the potato, but that abnormal conditions of moisture or temperature may cause abnormal activity in the fungus and hence the rotting of the tubers.

5. Whatever may be the explanation, these experiments all agree in showing that, whether the vines have or have not been protected by Bordeaux mixture, there is far less liability of loss from rotting in the cellar in the case of late dug potatoes. This last point is important.

A New Potato Disease.

At the last meeting of the "Academic des Sciences" it was announced that a new malady, caused by a special micro-organism had been recently noticed in France. It seems to be very similar to the disease known as "Solanineola," which has caused considerable damage to the potato crops in Germany, England, Holland, and Russia, especially on soils irrigated with sewage.

These two diseases attack the haulm of the plant just where it rises above the soil, and thus prevent the moisture drawn up by the roots from ascending to the leaves, which turn yellow, and the plant soon dies.

It is most damaging in districts where the potato crop is grown on the same ground year after year, and especially when the crops are irrigated with water containing nitrogenous matter such as sewage.

The remedy seems to lie in growing other crops on such fields for some years and changing the seed of tubers when their growth is again undertaken.

Granite Dust as a Fertiliser!

The Americans are a people gifted with original ideas and apt at making wonderful discoveries. The Bureau of Plant Industry of the United States Department of Agriculture in a recent report indicates what may turn out to be a great discovery in the way of cheap fertilising, and one of special interest to the Western States. It is well known that a good deal of fertility is carried down to valleys simply by the wearing away of rocks in the hills and mountains above them, and this led to an investigation of the subject. Ordinary granite rock was ground to a fine powder, and extensive experiments were made with the powder to test its value as a manure. The results were excellent, and the report on the subject states that a ton of granite, which cost 12s. 6d. for quarrying and grinding, contained fertilising matter which could not be purchased abroad and imported at less than £20.

Report of Wye College, Kent.

The agricultural reader is always sure of finding something to interest him in the Journals of the Agricultural College, Wye, Kent. The new issue, No. 15, is no exception. There is much in it of an instructive character, expressed in a readable manner.

On the special subject, "manures," it is stated that a manure may serve four functions; it may (1) Increase the amount of plant food in the soil, either directly or through its solvent action on the soil constituents;

(2) Improve the mechanical condition—i.e., the texture of the soil and so facilitate the production of a good tilth;

(3) Increase the water-holding capacity of the soil, enabling water to be retained till such time as the plant requires it;

(4) Render the conditions more favourable for bacterial activity.

Organic manures—i.e., those of animal or vegetable origin—serve all of these purposes, but mineral manures, with the exception of lime and basic slag, usually serve only one—the increase of plant food. Mineral manures, as a rule, are more soluble than organic manures, and therefore more quickly available to the plant; they also contain a larger percentage of "fertilising" material—i.e., of nitrogen, phosphoric acid, and potash.

Irish Bacon.

The Department of Agriculture for Ireland is rightly keen in keeping up the high reputation acquired by Irish bacon, and in order to be in a position to contravene certain adverse rumours, it has recently carried out an inspection of all the important bacon factories in Ireland, and has also made inquiries as to the trade in Irish bacon amongst wholesale bacon factors in London and the north of Ireland.

The Department points out that for the production of bacon of the highest quality it is necessary (1) to breed suitable pigs, (2) to feed the pigs properly, (3) to ensure that only healthy animals are used, (4) to cure the pork under the best sanitary and other conditions.

Great attention has of late years been given to these four points, and as a result of its careful inquiries, the Department is in the happy position to refute the statements recently made to the detriment of Irish bacon. The British public are content to pay more for the well-known brands of Irish produce than for the bacon imported from any other country, and this fact is abundant evidence of the high estimation in which the bacon is held. There is no foundation for the statement that a greater proportion of second-class bacon is now being exported, nor for the report that the best Irish pigs are bought for export to bacon-curing factories in England.

6 FEEDS FOR ONE PENNY INTERNATIONAL STOCK FOOD.

"The Manor Farm, Reading, October 20, 1905.—Please forward me to Reading Station as soon as possible six times the quantity of International Stock Food that I had on July 28 last. I used the last two packets on a bull that was ill and became so emaciated that I thought he would have died. However, with the help of your Food he got better, and was sold a month ago weighing 15 cwt. 1 lb.—(Signed) THOMAS CHETTEL."

PRICES: 1/- packet, post paid, 1 1/4; 2/- packet, post paid, 2 1/4; 4/- packet, post paid, 4 1/4; in pails, 14/-, carriage paid. Poultry Food prices same as for Stock Food.

LIVERPOOL VESTA CAKE CO.

BLACKSTOCK STREET, LIVERPOOL.

THE

"BIBBY" CAKE

IN THE FORM OF

"CAKETTES."

'Send me two tons o' they nobbs same as Mr. Brown is a using,' was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism: and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good": it is much better to say to the Cake merchant: "I want 'Bibby,' please, and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION

IN THE PUBLIC FAVOUR,

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest: there is this further to be said about it:—the more carefully it is tested against other competing Cakes the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

SELECTING THE BREEDING FLOCK.

Two highly important transactions engage the attention of owners of breeding flocks at the present period of the year; the selection of ewes to breed from in the ensuing season and procuring suitable rams to mate with them should there be none already possessed.

If doing the former the flock-owner is fortunate if his shepherd is experienced and takes a deep interest in the flock. If so, the latter will recollect and be able to point out all the bad mothers, and especially those with malformed, imperfect udders. These should be discarded without hesitation, whether young or old. On the other hand, if there are any of the older ewes which have arrived at the age at which the bulk are drafted out that have pre-eminently distinguished themselves as breeders, it might be advisable to retain them. This course is often pursued in the leading ram-breeding flocks.

For instance, the twin ram lambs of Mr. Cary Coles, which at his auction the other day were let for the season for no less than 325 guineas, were stated to be this year's produce of a very favourite ewe. To dispense with the services of such a one so long as she can breed would be akin to killing the goose that laid the golden eggs. The system of selection, while mainly founded on the principle of drafting out the oldest animals, should certainly not be rigidly applied to the exclusion of animals of sterling merit.

If the owner is scrupulously particular in the selection of stud rams, and does not regard extra outlay to secure those well calculated to impart improving character to his flock, every fresh re-

lay of shearing ewes imported for breeding ought to be superior to its predecessor. If such be fully apparent, only the worst should be culled. But this is not always the case, and neither in sheep or cattle do the best results always accrue from the most symmetrical sires. Good blood, however, invariably tells, so that seldom has the owner of an ordinary medium-class flock cause to regret going to one of the best-reputed fountains for it. The pure strain gathers strength by running through a great many generations, and rams from such strains are almost always characterised by great prepotency.

Uniformity of type is much more difficult to be obtained in some flocks than others, usually more or less according to the length of time they have been under skilled management and the degree of prepotency exerted by the rams which have been employed. Some know by intuition the ideal they have to seek after, and are able to discern at a mere glance the imperfections or shortcomings of each individual ewe to breed progeny up to the required standard. This is an invaluable gift to the flockowner desiring to raise his flock to a uniform high standard, for not only does he discern the kind of ewes likely best to accomplish his object, but the ram or rams most fitting to correct in progeny the faults of their dams.

This is why men of this calibre at ram auctions bid so persistently and determinedly for the sheep they have set their hearts on obtaining and seldom leave off until they have bid several guineas more than they intended to give. But those devoid of this gift work at a manifest disadvantage. Even if they succeed in matching their ewes tolerably well, they are seldom so fortunate as those who possess the faculty of discerning the kinds of stud rams calculated to remove most effectually the imperfections of their flocks.

THE AGRICULTURAL RETURNS.

The Board of Agriculture issued last week a preliminary statement showing the area of the various crops under cultivation, and the number of live stock in the country. The figures are compiled from the returns collected on June 4, and show the position of our industry on that day. Naturally the total area of land and water has not changed from last year, but the total acreage under all crops and grass shows a further contraction of 0.1 per cent., a small decimal truly, but a large area when applied to such figures as 32,265,790, which is the area for the present year.

Turning to the various crops, wheat shows a further shrinkage of 41,279 acres, the area

under the premier food stuff this year being 1,755,716. This reduction is not altogether unexpected, as the unfavourable weather at sowing time was expected to have some such result. Of barley there is a substantial increase, and now this crop is almost as much grown as wheat, 1,751,238 acres being devoted to it this year. Oats are now by far the most popular corn crop, and the figure shows only a slight variation on last year, the area on June 4 last being returned at 3,042,926 acres. The minor crops in this section—rye, beans, and peas—are noticeable for the remarkable increase in the cultivation of beans, and the almost corresponding decline in the popularity of peas. Of beans there are 288,891 acres, an increase of 34,126 acres compared with 1905, and of peas 153,979 acres, or 21,256 acres fewer than a year ago. Rye is grown on 64,808 acres, which shows an increase of 2,611 acres.

The abundant yield and low price of potatoes last season has left its mark on the crop, for there is recorded a decline of 42,552 acres as compared with a year ago. The area grown this year is 565,921, and the amount of contraction is 7 per cent. The great root crops—turnips and swedes—which form the bulk of the winter food supplies are practically unchanged, and it is to be hoped that the 1,590,920 acres devoted to their culture will give a satisfactory and profitable yield. Mangel shows expansion to the extent of 6.8, the area now devoted to them being 431,458 acres. The various green crops, such as cabbage, kohlrabi, rape, vetches, and lucerne, show a striking general tendency to expand. The most important of these is vetches, and here we find that there has been an increase of 4.1 per cent., the area now cultivated in this way being 142,047 acres. Rape is grown on 93,824 acres, while cabbage monopolises 70,268 acres, which shows an expansion of 3.9 per cent.; lucerne has grown to the extent of 4.4 per cent., and is now cultivated on 55,734 acres. The generic term other crops accounts for 114,063 acres, and it is obvious, from the growth of 7.4 per cent. in this item, that greater attention is being paid to the minor crops of the farm: we hope with profitable results.

The season for grass and hay has been variable, and the yields are likely to be poor in the southern half of the country: the respective areas devoted to this crop, however, show only slight alterations from the standard, beyond the tendency of permanent grass to expand. Of clover and rotation grasses for hay, there are 2,191,587 acres, a slight growth of 0.1 per cent., the same crop grown not for hay runs to 2,249,159 acres, or a decrease of 1.7 per cent. The greatest areas of the country are of course devoted to permanent grass, considerably over half of the total acreage under all crops being found under this heading. Of grass for hay, there is 4,785,613 acres, an increase as compared with last year of 2.1, while of permanent grass used for grazing, and not kept for hay, there are 12,459,121 acres, a figure which only varies by 0.4 per cent. as compared with a year ago.

Flax seems to have a tendency to pass out of cultivation altogether, as this year there are only 263 acres as compared with 411 acres in 1905. Possibly, however, the exigencies of rotation have something to do with the contraction in its area. Hops are growing on a smaller scale than

The "Mark Lane Express" is a **SPLENDID MEDIUM** for the Disposal of all kinds of Farm Seeds and Plants.

last year, there being 2,245 acres less, the total area under cultivation being 46,722 acres. So much depends, however, on the price obtained for the produce that a small crop often brings in a better profit than a large one. Small fruit shows a tendency to grow; there are 80,236 acres, a figure which has expanded from 78,825 a year ago. Orchards, too, have a similar disposition to increase this year, monopolising 247,687 acres, or an increase of 3,364 acres. Bare fallow has greatly decreased, something like ten per cent., this year's figure being 314,552.

The returns relating to the number of horses, cattle, sheep, and pigs show, perhaps, less variation than usual. The total number of horses used for agricultural purposes of all ages is 1,568,681, a figure which shows a slight decrease on last year to the extent of 0.2 per cent.; it is satisfactory to be able to record that unbroken horses exceeding one year old has grown by almost 5,000.

The total number of cattle in the country is

7,010,856, or 23,836 more than a year ago. This number is further divided into sections. For instance, of cows and heifers in milk or in calf there are 2,738,411, a percentage increase of 1.1; other cattle two years and above total 1,426,751, an increase of 0.8 per cent.; those between one and two years old number 1,494,755. The only decline to be recorded is among yearlings, which number 1,350,896, or a decrease of 3.0 per cent.

The total number of sheep shows a slight but satisfactory increase; they now number 25,420,360, or a gain of 163,164 over last year. The growth, it is pleasing to record, is principally among ewes kept for breeding purposes, while young sheep under one year in age are also substantially more numerous.

Pigs again show a decline in numbers; there are now 2,323,461, or 101,458 less than last year. Sows kept for breeding, however, show a tendency to expand, so with the present price of pork it is quite likely that a year hence pigs of all descriptions will be considerably more numerous.

Notes of the Week.

The heat on some days of this passing summer has been exceptionally great, and apparently has possessed a phenomenal character.

So much so that, according to the newspaper reports, there have been *seven* hottest days of the year.

Perhaps this accounts for the eccentric behaviour of some animals. A cow went to sleep while being milked, and fell down on the milker.

Some sheep walked into a drawing-room, presumably to get shelter from the sun's rays.

Flies, wasps, mosquitoes, and winged insects in general have multiplied enormously.

The Jersey early potato crop resembles the hop crop in its speculative character.

With this season's results the growers are far from satisfied; although the crop was good the prices realised have been disappointing.

When the season opened in April, the first deliveries fetched £27 1s. 8d. per ton; but the price soon fell off, and dropped to £23s. 4d. early in August.

Competition from the early-potato growing districts in the North of France is mainly responsible for the unsatisfactory prices.

The rent of suitable potato land in the Channel Islands is very high, and unless growers can realise £40 per acre for their produce there is small profit to be made.

The President of the Board of Agriculture has been touring by motor-car through Lincolnshire and inspecting the numerous small holdings.

He is also Commissioner of Woods and Forests, and in this capacity has been taking stock of the Crown property in the county.

No doubt he is maturing plans to bring the two, small holdings and Crown property, into closer contact.

People living in lonely parts of parishes in Essex are having a new and exciting experience.

Turbulent tramps are bad enough, but motor burglars are a novel danger.

It's easy for an accomplished motor burglar to rush down from London, hold up a few houses, and get back to town early in the morning.

The inhabitants take their guns to bed with them, and strange tales are told of the narrow escapes some peaceful travellers by night have had.

Dublin was unusually gay last week for the celebrated horse show. It passed off, as some of the reporters say, with great *relat*.

The horses were splendid, and the ladies' dresses were ditto. Pardon one mentioning first the horses—this is not from want of respect for ladies, but because horses form the real object of the exhibition.

Connected with the show there was a most interesting display of Irish industries—lace, embroi-

dery, tapestry, wood carving—the excellence of which served to illustrate the native artistic feeling and genius of the Irish.

Our medical contemporary, the *Lancet*, is exercising its mind about the ignorance of farmers in the use of manure, especially chemical fertilisers.

It deplores the fact that few farmers can tell the reaction of their soil—it's simple analysis.

And thinks manufacturers should be made to state the reaction of their manures to, say, methyl orange, clearly in their invoices.

The *Lancet* need not be so uneasy. Let it consider that the sulphuric acid used in the manufacture of fertilisers combines with part of the lime in the raw phosphate and reaches the land as sulphate of lime (gypsum).

And consider, further, that a liberal application of 5 cwt. superphosphate means only about 2 oz. to the square yard, and of this small quantity a still smaller is sulphate of lime; it will see that it has found a mar's nest.

A farmer, I think, in Lincolnshire scut a consignment of green stuff by rail to a market town, and in consequence of delay in delivery missed his market.

He brought an action against the railway company for compensation, and, I am pleased to say, won his case.

The fruit growers in Kent have a legitimate cause of complaint against the slow deliveries of their consignments.

Unreasonable delay in delivery often means a serious loss to the fruit-grower, for which the railway companies should be responsible.

The growers should co-operate to test this matter. They might also co-operate to utilise motor wagons for the rapid despatch of their produce.

The railways serving that part of England have a bad reputation; as a country girl sings in the opera—

"Of motor cars we'd never heard
That dreadful pace we thought absurd,
We'd hardly complain of a South-Eastern train,
We thought *that* last when I was a girl."

"Whisky is advancing by leaps and bounds, and beer by hops," says the *Referee*.

In the heads of many of us will the words of the old gee be now sounding—

"Come out, 'tis now September,
The hunters' moon's begun,
And through the wheaten stubble
Is heard the frequent gun."

All the bays and the principal positions are already let at the forthcoming Brewers' Exhibition (October 20 to 26), and there is promise of many novelties on show.

FARM MACHINERY AND IMPLEMENTS
have for so long been closely identified with the "Mark Lane Express," that the Journal's position as a means of bringing Maker, Agent, and Customer together is unique.

THE FARMERS' DIARY.

TUESDAY, SEPTEMBER 4.—Bicester Show—Moorgreen Show—Hawkeshead Show—Shepton Mallet Show—Kilnsey Show—Wharfedale—Cowbridge Show, for the Vale of Glamorgan—Thornton's Sale of Short-horns at Huddersfield—Sussex Cheese Fair—Ashford Lamb Fair—Agricultural Fairs at Bury St. Edmunds, Crewkerne, Macclesfield, Rawtenstall, Westbury, Sudbury, and Barnet—Selling in day for the Leighton Buzzard Show and for the Brecon County Show.

WEDNESDAY, SEPTEMBER 5.—Ashby-de-la-Zouch Agricultural Show—Retford Agricultural Show—Doddington Agricultural Show—Sale of Oxford Down Sheep at Hempton Green—Peterborough Foal Show—Bath Horse Show, first day—Cattle Fairs at Marlsvest, Northallerton, Oswestry, and Landrake—Brooklesby Ram Sale—Sheep Sales at Hereford, Bromsgrove and Peterborough—Horse Fairs at Oswestry and Hereford—Special Sale of Sussex Cattle and Southdown Sheep at Alfriston—Birmingham Shorthorn Show and Sale, first day—Barnet Fair, second day.

THURSDAY, SEPTEMBER 6.—Birmingham Show and Sale second day—Bourne Agricultural Show at Stratton Field—Buckingham County Show at Oakham—Grayrigg Agricultural Show—Cattle Fairs at Bristol, Devizes, and Northallerton—Abergavenny Horse Show—Horse Fair at Chester—Craven Arms Great Ewe Sale, Shropshire—Bath Horse Show, second day—Entries close for the Hay Horse Show.

FRIDAY, SEPTEMBER 7.—Newbury Horse Show—Shaftesbury Farmers Club and Horse Show—Tarporey and Stockport Agricultural Fair—Moy Horse Fair—Great Sale of Lincoln Longwool Rams—Lincoln Kidderminster Great Annual Sheep Sale—Lamb Sale at Lazonby—Coventry Sheep Sale—Sale of Oxford Down Sheep at Wellington, Shropshire—Short-horn Sale at Bathorpe Towers, Rugby—Special Sale of Suffolk Sheep at Ipswich.

SATURDAY, SEPTEMBER 8.—Appleby Agricultural Show—Bewes Agricultural Show—South Tyne Show at Bellister Park, near Whitby—Quarrie Ram Sale—Stanhope Agricultural Show—Otley Foal Show—Entries close for the Blandford, Altrincham, and Stokesley Shows—Horton Sheep Fair—Waltham Horse Fair—Bakers Exhibition opens at Islington and remains open for six days.

MONDAY, SEPTEMBER 10.—Agricultural Fairs at Oakham, Glastonbury, and Ormskirk—Cattle Fairs at Sutton, Sale, Buxton, and Warwick—Sheep Fair at Blandford—Pony Sale at Barnsley—Entries close for Abingdon Show and for the British Dairy Farmers' Association Show at Islington.

TUESDAY, SEPTEMBER 11.—Buckingham Agricultural Show—Woodstock Agricultural Show, Blenheim Park—Ampleforth Agricultural Show—Hitchin Foal Show—Horse Fairs at Ormskirk, Denbigh, and Hay—Cattle Fairs at Denbigh and Wirksworth—Sheep Fairs at Denbigh and Hay—Sale of Shropshire Sheep at Shrewsbury—Shrewsbury Horse Sales at Derby and at Lynn—Entries close for the Grandsden Show.

DAIRY.

Nantwich Cheese Fair.

Pitch about 65 tons. Good attendance of buyers. Prices:—Fine Cheshire, 64s. to 68s.; medium, 58s. to 63s.; lower grades down to 52s. 6d. A good clearance was effected.

Western Counties Cheddar Cheese School.

The second draft of cheese, weighing about 40 cwt., made during the month of May last at the above-named school, was carried on at Glendale Farm, near Wedmore, has just been sold to Messrs. Hill Bros., of Everecreech, at 66s. per cwt. of 112 lb.; 4,954 gallons of milk made 4,690 lb. of green cheese, which, when sold at eleven weeks old, weighed 4,447 lb., showing a shrinkage of 6 per cent.

The following particulars relating to the manufacture of the cheese will be of interest to cheese-makers:—Temperature of milk when rennetted, 81 deg.; acidity of milk when rennetted, 19; temperature of first and second scalds, 88 and 93 deg.; acidity of whey at close of second scald, 16; acidity of whey when vatting, 25; average time when cheese was put in press, 3.30 p.m. 105 pigs have been, or are being, fattened since the school was opened on April 13 last.

In consequence of two farms being let, Mr. J. E. A. Gwynne, of Folkington Manor, has decided to sell his herd of pedigree Sussex cattle and also a number of Southdown sheep. The sale, which will be conducted by Messrs. A. Burtenshaw and Son, will take place on Wednesday next, the 5th inst., at Milton Court Farm, near Alfriston, and should draw a large company of buyers, for the herd of Sussex cattle is well known for its high-class breeding.

Death of the Shire Mare Blythwood Guelder Rose.

A Reuter's telegram from Toronto states that Lord Rothschild's well-known Shire mare Blythwood Guelder Rose, which was being shown at the Canadian International Exhibition, at Toronto, broke from her stable on Tuesday and fatally overreached herself. All Shire horse breeders will sympathise with Lord Rothschild in the loss of so valuable a mare, and particularly under such circumstances, for it will be remembered that H.M. the King and he were the only English breeders who responded to the invitation to send exhibits, and in sending such first-class animals they undoubtedly did a great deal for Shire horse breeders

bone, that if only a horse came up to his requirements in this respect he could overlook almost any fault. Another man calls every horse whose quality is not superlative a common brute. Of course, both men take an exaggerated view of the importance of their special fancy.

PERHAPS of the two the advocate of bone is generally the more unreasonable. He looks to the quantity of the bone, and if a horse measures well he is satisfied. Now it would be absurd to argue that bone is not an important factor in any horse. A horse with legs like pipe stoppers is out of proportion, lacks balance, and is not at all unlikely to come to speedy grief. But there are many things to take into consideration when examining the bone of a horse, which in my opinion are of quite as much importance as the mere measurement. For example, there is the situation of the bone—by which I mean the angle the legs have to the body. This is of the greatest importance. A horse with a correctly-placed shoulder and with correctly-placed hocks, does not put such a strain on his bone and sinew as a horse whose withers are upright and whose hocks are right away from him, and his legs will wear better, no matter what the quality of his bone or its quantity.

IT is not the horse's bone that breaks down, it is his sinew. No one ever knew a horse break down in his bone. But weak and defective bone

linestone is proverbial for growing bone of the best. But in these days it is easy to apply lime to the pastures, and though lime applied to strong clays is perhaps not so much to be desired as land on a limestone foundation for the breeding of horses, yet that the application of lime answers a good purpose I am certain.

SOME years ago I visited a Thoroughbred stud which was just in the course of formation. There were three or four—perhaps more—valuable mares there, but I was very much disappointed with their foals, which certainly appeared weedy. The manager and I talked the place over, and he expressed the opinion that he could introduce plenty of lime in one form or another to make the land grow bone of the best quality. I believe he began with half-inch bones and bone-dust mixed—at any rate, I know he applied lime to his paddocks in many ways, and the result was that high prices soon began to be given for the yearlings which he turned out, and they justified the prices given for them by their performances.

SOME weeks ago I spoke of what a little gold mine a brood mare could be to a man, and instanced Mr. W. B. Swallow's Beatrice. During the last week or two I have come across a mare or two that has done quite as well for their owners. One of these is a black or brown mare, owned by Mr. R. J. Robson, of Branton Court. She is about twenty-seven years old now, and was by a

SHIRE MARE, BLYTHWOOD GUELDER ROSE,

WHOSE DEATH TOOK PLACE AT TORONTO LAST WEEK.

in general, which, maybe, will result in an increased demand for Shire horses in Canada.

Blythwood Guelder Rose, we need hardly mention, had been shown with success in this country, her latest prizes including a first and reserve champion at this year's show of the Royal Agricultural Society at Derby. She was foaled in 1895, sire Prince Harold 14228 dam Tudor Rose 15842 by Hitchin Conqueror 4458, and was bred by Sir James Blyth, Bart, Stansted, Essex. Her death is a loss not only to Lord Rothschild, but the Shire breeding industry in general, and 'will be regretted by all who have any interest in the breeding of our heavy horses. An illustration of Blythwood Guelder Rose appears above.

Notes and Jottings.

"He doth nothing but talk of his horse,"
—Merchant of Venice."

THE late Major Whyte Melville, in his interesting book, "Riding Recollections," calls attention to the bitter controversy which was raging between those who believed in "taking hold" of a horse's mouth, and those who believed in almost leaving it alone, the disciples of "finger" and "fist" as he so happily called them. Quite as fiercely rages the controversy between those who are believers in quality in a horse and those who are the advocates of bone. A friend of mine who has done a great deal of judging in his day, was so strong in his advocacy of

implies weak and defective sinews as a rule. Then in estimating the value of the bone the density of it must be taken into consideration. The specific gravity of an Arab or a Thoroughbred is much greater than that of a Shire horse or a Suffolk Punch, and consequently less bone answers the same practical purpose than is necessary for the heavier breeds. At the same time, an immense improvement has been made in the density of the bone of our heavier breeds of horses during late years. Clydesdale breeders began it, and since then the hard, flinty bone which distinguishes the northern breed has been gradually but surely extending amongst Shires.

IT has been asked how shall the density of the bone be discovered—how, whilst a horse is living is it possible to make even a guess at the specific gravity of his bone? It should not, I think, be difficult for an expert to make a pretty accurate estimate. The trained eye can tell from the shape of the bone what its density is likely to be, and the feel of good hard Arab or Thoroughbred bone can never be mistaken by an observant man.

THERE is not any doubt that the quality of the bone is very much affected by the land on which young horses are bred and grazed. The rich pasturage of the Fens produces, comparatively speaking, a soft, spongy-textured bone, whilst the

Thoroughbred horse from a Cleveland Bay mare. She looks wonderfully fresh for her years, and her owner told me the other day that he had sold upwards of £2,000 worth of horses from her. She has certainly filled her place in the economy of the farm to some purpose.

SO has a Hunter brood mare owned by Mr. Thomas Curry, of Morton Carr. Her career has indeed been unique. Now she was bred, or where she was bred no one seems to know. She is a lengthy, old-fashioned sort of mare, with good shoulders, and her hocks well under her, and she stands over a lot of ground. I did not stand up to her when I saw her, but I should think she is somewhere between 15 hands 2 in. and 15 hands 3 in. She was at a neighbour's place, running in a box, it being stated that she would not work. Mr. Curry saw her, offered £5 for her, and got her. She was put to run in the milk cart, which she did well enough for some time, and then she refused to work altogether. She has bred several foals, and every one of them

The "Mark Lane Express" has the finest connection amongst

MAKERS of FERTILISERS and FEEDING STUFFS

of any journal in the United Kingdom.

The best medium for this class of announcement.

has been a winner of prizes. At the recent Cleveland show one of her foals took first prize in two strong classes, and a yearling gelding from her also won in his class. Her stock, however, has established a record which will take a great deal of equalling, and which it is pretty safe to say will not be equalled for many a day to come. At the Durham County Show there was a challenge cup for Hunters, which has to be won three years' in succession before it becomes the absolute property of the winner. This year the cup was won right out by Mr. F. Walton Smith, all of whose winners were from Mr. Curry's old mare.

STILL another good brood mare came to my notice the other day. This was Mr. George Eldes's Cleveland Bay mare Aislaby Queen. She has been a good winner herself, and she is only a young mare, six years old or seven, I forget which; and at the Cleveland show the other day her foal won in the class for Coaching foals, her yearling filly won in the yearling class, and her two-year-old filly won in the two-year-old class. The two latter were show in the Cleveland Bay section. All three fillies are still the property of Mr. Elders.

THE sale of Mr. C. Howard Taylor's Polo ponies, which will take place a week to-day (Monday) will be an interesting event in the polo world, and some very high-class mares will be offered amongst them. The famous Grey Wings, who, if she had only been from half to three-quarters of an inch taller, would have changed many a second prize into a first. She has always been a great favourite of mine, and she never looked better than she does now. In getting his stud of ponies together, Mr. Howard Taylor has acted on a rather novel plan, but it is a thoroughly sound one. He bought as his brood mares not only ponies that played well; he wanted something more than that. It was necessary that they should have bred good ponies. The consequence is that there are not any very young mares at the sale, except such as Mr. Howard Taylor may have bred. But they are as fine a lot of brood mares as one could wish to see, and it was quite a treat to go through the young stock. The stallion, Marechal Neil, is too well known to need description. He never looked better than when I saw him a week ago, and he is certainly one of the best young ponies of his day.

THE LOOKER-ON.

Cottage Models and Designs at Bredon's Norton Show.

The result of the Prize Competition for Cottage Models and Designs, which were on view at the recent Agricultural Show at Bredon's Norton, have now been announced as follows:—For Designs Illustrated by Models.—First prize (£15) to "Cryptonian," Mr. Henry T. Weaver, Gloucester; second prize (£10) to "Pro Buono Publico," Messrs. Hugo Bird and Robert Browne, Brentwood. For Designs Illustrated by Drawings only.—First prize (£10) to "Red Lion," Mr. A. Dennis-Thacker, Birmingham; second prize (£7) to "Holt," Messrs. Sam Cooke and Norman Twist, M.S.A., Birmingham.

Mr. Bateman, the judge, considered that the competition was very interesting, and had produced some good designs; the work of "Red Lion," he commended especially, because "it indicated a character of work more in harmony with the country and the old buildings of the district than any of the others." He further considered that these designs would carry on the old traditions of Cotswold buildings. The two models submitted by Mr. Henry T. Weaver, of Gloucester, received great praise from Mr. Bateman, as they showed that a considerable amount of time and thought had been expended upon them. The design for single houses of Messrs. Crouch, Butler, and Richard Savage, of Birmingham, was very artistic and good in many ways, but Mr. Bateman considered that the cost of building would be exceeded owing to the amount of accommodation being in excess of what was asked for.

At a general meeting of the Cheshire, Shropshire, and North Wales Farmers' Supply Association, held at Whitechurch on Tuesday, Colonel Cotton-Jodrell presiding, the thirty-fifth annual statement showed that the turnover for the year was £104,489, an increase of £17,055 on that of last year, and several thousands better than the best previous record. It was decided to allow interest on capital at the rate of 5 per cent. and a bonus of 7d. in the pound on the purchases of members. It was pointed out that with the increasing turnover there was involved a large and more frequent overdraft, and the shareholders, by resolution, approved of the decision of the directors to increase the Association's capital by £7,000. It was reported that the several mills owned by the Association were in a very flourishing condition, and that the mill at Lea Forge, destroyed by fire last winter, was now rebuilt and practically ready to resume work.

PIGS.

Exportation of Large White Pigs.

Messrs. Lythall and Walters shipped last week, from Hull to Baron Frh. von Pohl, one of the leading breeders in Germany, two very fine Large White boars. They consist of the winner of first prize in the old boar class at the Royal Show and first and medal Royal Lancashire, 1906, Walton Tartar, purchased from Sir Gilbert Greenall, and one of the first prize pen of young boars at the Royal Show from the herd of Mr. D. R. Daybell. A very high price had to be paid to secure these pigs, which are two of the best that have been exported for a long time.

Four Pigs on Tour.

The swine fever regulations of various Continental countries have occasioned much travelling on the part of four fine pedigree pigs, recently purchased near Colchester for the famous pianist Paderewski for his farm in Switzerland. The agent who purchased the pigs entrusted them to a Continental forwarding office for despatch to Switzerland. The latter, being apparently unaware of the niceties of the laws in force in certain European countries relative to swine and herd fever, forwarded the pianist's pigs *via* Harwich to Antwerp and thence to Switzerland.

But when the pigs arrived at the frontier, neither the French nor the German authorities would permit them to pass, and they had, perforce, to be returned to Antwerp, whence, after lengthy delay and voluminous correspondence with the British Board of Agriculture, they were brought back by steamer to London, and transhipped by lighter to the Bennett Line steamer *Syria*, which sailed from Chamberlain's Wharf, London Bridge, on August 25, for Boulogne.

From that port they were forwarded by direct rail to Switzerland, and news has just been received of the safe arrival of the precious pigs at their destination. The pigs are valuable animals, intended for breeding purposes. Paderewski is an ardent farmer on his Swiss estate, and on his lands in Poland he grows fruit on a very large scale, and is reputed to make money out of the business—of course, nothing like what he makes at piano playing.

CORN & SEED CRUSHERS

SEPARATE OR COMBINED WITH

BEAN & MAIZE KIBBLERS.

Turner's Crushers were awarded **First Prize** by the R.A.S.E. in 1853, and still retain the high reputation which they then gained for durability and general efficiency.

Notes and Jottings.

THE Board of Agriculture's Returns to the effect that the root crop is well above average rather surprises us, and we do not think it holds good throughout the areas where the winter feeding of sheep on roots is most practised. However, sheep sales continue to go well, and the second drafts of rams which are largely used on ordinary flocks meet with a good demand. Some of the later breeding breeds are now freely coming to the hammer, and breeders have reason to be satisfied with their sales.

THE Bakewell Farmers' Club made a notable addition to their prize list by offering for the first time prizes for a Derbyshire breed of sheep. At the time of the Royal Show at Derby we expressed regret that the indigenous breeds of Derbyshire had not been taken in hand with the view of their systematic improvement, as doubtless there were among them those which might have been developed with much advantage. Whether the hint or the resonance of the Royal

plied by the starchy maize, though this may be to an extent lessened if at any time the lambs are put upon food which has a tendency to scour them, for in a coarsely gritted condition it may pass through them without being digested, and so not be available to counteract the excessive amount of nitrogen in the blood.

THE rich concentrated extra food given to sheep should be regulated in quality and constituents by the nature of the coarser foods supplied. Sheep receiving clover, which is rich in nitrogen, than when on swede turnips, which contain but little, require cake and corn in different proportions for the best results to be obtained. A sheep can only satisfactorily utilise a certain amount of nitrogen, and when given in excess it is not only wasted but imperils the life of the sheep. From the experience gained by living in a district of high sheep feeding in winter, and a personal experience over many years, we should say that something like 80 per cent. of the losses from feeding are due to over-feeding with nitrogenous foods, 10 per cent. from immature roots, and 10 per cent. from other feeding errors. Those who do not exceed $\frac{3}{4}$ lb. of good linseed cake alone generally avoid serious losses, but a danger zone is reached at this point, and more carbonaceous food is required if the ration is to be increased; and better results are obtained if the cake allowance is slightly decreased and the starchy food increased. It is difficult for many feeders to realise that because they see an improvement when the cake is raised from $\frac{1}{2}$ lb. to $\frac{3}{4}$ lb. that further increase will not give an equally satisfactory result. It may do so for a short time, but scour, apoplexy, and death become so frequent as to take away the profit if it is long persisted in.

HILL & SMITH

Brierley Hill Ironworks, STAFFS.

In respect to the dietary mentioned in the query, if the $\frac{1}{2}$ lb. cake is given the lambs would be better with fewer peas, and their place taken by crushed oats or barley, giving peas only during the last week or two to top up with to improve the handling. A great many farmers get "right there" when they say they like plenty of mixture in the cake and corn allowance; for they thus get a better balancing of food than when they feed on cake or peas only. Of course, there are those who know this, but who do not take the trouble to provide it.

THOSE who prefer profit to losses and do not mind the very slight extra trouble, would find that if they took $\frac{1}{4}$ lb. of linseed cake, $\frac{1}{2}$ lb. each of cotton-cake, peas, barley, oats, maize, and locust meal, the lambs would thrive well and safely. Of course, when it comes to feeding swedes, their quality and ripeness require to be considered. Many swedes are eaten before they are really fit to be, although they may have attained considerable size, in which case, for a time, the maize might be withdrawn and the cotton-cake, which is somewhat astringent, increased, until the roots get wholesome and digestible. All the corn is better broken, and when chaff is given it is better to have it ground to meal. A small allowance of clover or sunflower meal when the sheep are on roots tend to keep them thriving.

SHEEP FAIRS AND SALES.

Messrs. J. A. and G. F. Hempsen's Southdowns.

The Southdown flocks of the late Mr. J. A. Hempsen, of Erwtown Hall, and Mr. G. F. Hempsen, Arleigh, were brought under the hammer at Ipswich on Tuesday, by Messrs. Spurlings and Hempsen, in the presence of a large company, and a satisfactory sale resulted.

The original Erwtown Hall flock, established in 1844, was dispersed by auction in 1900, and for a commencement of the new flock, 146 ewes were purchased from Mr. E. J. Gorrings, of Chyngton, Seaford, and ninety-five ewes from Mr. A. H. E. Wood, of Sudbourne Hall. Other first-class ewes were purchased from time to time, whilst the rams used have comprised sheep of Henry Webb's strain, a ram bred by Earl Cadogan, a ram from Mr. Adeane's flock by Persimmon; rams of Goodwood and Penfold strains, and a Woolverstone ram bred by Mr. C. H. Berners. The sixty shearing ewes were purchased by Mr. W. Wrinch—20 at 70s. per head, 20 at 61s., and 20 at 75s. For the 50 two-shear ewes, Mr. Wrinch gave 63s. and 58s. 6d. per head; he also took 50 three-shears at 57s. per head, the other 20 being knocked down to Mr. Carter at 50s. each. Full-mouthed ewes realised from 46s. to 43s. 6d. and ewes from 36s. 6d. to 33s. Mr. R. Edgar, of Cockfield Hall, gave 64 guineas for a two-shear ram by Bahram Blue Jacket, and 10 guineas for a three-shear by Son of Stately C. J., a three-shear by Bahram Blue Jacket selling at 5 guineas to Mr. H. Webb, of Audley End.

The Arleigh flock, established in 1900, was also of a high class, only the best blood being used. Mr. W. Wrinch purchased thirty shearing ewes at 70s. and 68s. per head, Mr. Carter giving 64s. for the other twenty. Twenty-two shears were purchased by Mr. Kenneth Clarke, of Sudbourne Hall, at 72s. 6d., Mr. Wrinch taking sixteen at 61s., and twenty-one three-shears at 60s. Full-mouthed ewes sold at 66s. to 45s. to Mr. Kenneth Clarke. Seven two-shear ewes sold as follows:—One by a Hogben ram, 8 guineas, Mr. E. G. Pretyman; three by Arleigh Blue Jacket, 10 guineas, 10½ guineas, and 11½ guineas, Mr. W. Wrinch (two) and Mr. R. Edgar (two); two by a Hogben ram, 11½ guineas and 9½ guineas, Rev. H.

If SHEEP DIPS were more extensively advertised, there would be a far wider distribution of the trade. The "Mark Lane Express" is a good medium for such.

CHAMPION SOUTHDOWN SHEARLING RAM

Show had anything to do with the new movement, or whether it was merely the determination to be in the forward movement in sheep breeding which prevails so strongly, matters not. A breed which ought not to be lost, and which may have a useful influence in the sheep world, is likely to be saved from being crossed out of recognition, and made more valuable to those who are interested in it. One can only hope that when the Royal goes to Derby again the breed will have attained such excellence that it will figure in the prize list. Under the name of the Dale of Goyt, which may scarcely seem impressive enough at a time when so many breeds take their names from counties or large well-known tracts, another breed is added to the list of recognised British breeds; and as it possesses many valuable features, now that it has faced the public satisfactorily once, there can be little doubt that it will enter the further stage of a flock book. During the last dozen years several breeds have been saved, and now possess flock books which they have every reason to be proud. Although the British Isles are small, the breeds of sheep are numerous, but there is not one too many; there are still other breeds possessing features that ought not to be lost. It is many years since we first thought the Derbyshire sheep should take a more prominent position, and, therefore, congratulate those who have taken its better future in hand.

A QUERY reaches us respecting the feeding of 300 good lambs receiving $\frac{1}{2}$ lb. best linseed and cotton-cake (mixed), and $\frac{1}{2}$ lb. cracked maize and peas (mixed), the lambs to go out as tegs or hoggets in December. A pound weight per day of extra food containing so much nitrogenous matter is dangerous; what safeguard there is being sup-

The system gradually becomes over-charged with nitrogenous matter, the blood is over-ozotised, and one of the three plagues just mentioned results. The system tries to relieve itself by scour in many cases; failing to do this, over-pressure is brought to bear on the brain, and the shepherd, leaving his sheep apparently well over-night, finds in the morning a dead sheep, or one that is listless and fails to come to the trough, and if not promptly attended to and blood withdrawn to weaken the blood, or a dose of salts given to lower it, the sheep will soon die. "Knock off the cake," is the usual order, and by doing so others are saved; but it is a crude form of management that causes its necessity. The great point to be realised is that the sheep are not over-thriving when this occurs, but that, although they did well up to a certain point, they are slowly, and sometimes quickly, being poisoned by an excess of the very thing which had done them good until the system was over-charged with it. It is often the over-greedy sheep that suffer, for they get beyond their share of cake, which indicates the necessity for keeping all sheep away from the troughs until the cake is in them so that they get a level chance, and not to have the most eager butting the shepherd almost off his legs in their eagerness to get more than their share—a far too common sight.

Champion Southdown Shearling Ram

The Southdown Shearling ram forming the subject of our illustration above, is the animal with which H.M. the King won a first prize and the Southdown Sheep Society's Champion Gold Medal for the best Southdown ram at the Royal Agricultural Society's Show at Derby. It was born in February and was bred by the King at Sandringham.

Taylor and Mr. J. F. Benson (Toppesfield Hall). Older rams made from 9 guineas downward.

New Romney.

At this well-known Kentish fair, 11,000 sheep and lambs were entered for the annual fair, against 8,400 last year. Trade was steady throughout the day at the same prices which have been ruling in the district during the past week or so, and in comparison with last year, lambs were about the same, and ewes from one to two shillings a head lower. The prices made for lambs averaged from 25s. to 26s., these being paid for good useful lots of both ewes and wethers. Thirty shillings was the top price in the private sales, this figure being made for a pen of Kent ewe lambs, while 27s. 6d. was the top figure for wether lambs. Ewes made up to 43s., which price was reached by Mr. Chittenden for his sheep; while a pen from Mr. Arthur Finn's flock made 42s. 6d. Other lots of good toothed ewes sold at from 34s. to 42s., but rough-toothed sheep did not command much money, and were sold at about 26s.

Haverhill.

At Mr. C. Boardman's annual sale of sheep and rams at Haverhill about 1,150 animals from various well-known flocks in the district were offered. The entries included the entire registered Suffolk flock the property of the Hon. W. F. D. Smith, M.P., of Great Thurlow, and here, as all through the different departments, very good prices were realised. The shearlings sold up to 70s., the other lots making 71s. and 70s.; two-shears made up to 80s., and three-shears up to 75s., whilst a good trade was done in full-mouthed ewes, which went up to 62s. Mr. Althorpe's Smith's nineteen lots made an average price of 53s. 6d. Other consignments from various breeders made good prices, shearlings meeting the best demand and making up to 65s. Lamb rams also experienced a good trade, several lots selling up to 55, whilst a Mr. J. T. Stockburn, Clare, got £7 5s. for one, and Mrs. Lowe, Gosfield, £5 12s. 6d.

The Pagham Harbour Co.'s Southdowns.

The well-known Pagham Harbour Company's Southdown flock, which was established in 1870, and has since been very successful at many of the leading shows, was disposed of by auction at Selsey on Tuesday by Messrs. Wyatt and Son, auctioneers, of Chichester and Havant. The sale took place in a meadow at Manor Farm, and prior to the commencement of the business a luncheon was provided, at which Messrs. Herbert Padwick, of Thorney, (president of the Southdown Flock Association), presided over a large company. It included representatives of the Duke of Devonshire (Mr. Burgess), the Duke of Richmond and Gordon (Mr. MacWilliam), the Earl of Egmout (Mr. Howe), Lord Howard de Walden, and Mr. W. D. James, J.P., West Dean.

There was a large attendance of buyers, and a satisfactory sale resulted. The best price for rams was 9 guineas, Mr. W. J. Pettitt paying this figure, whilst others made 8 guineas, 6 guineas, 5 guineas, &c. The ram lambs fetched better prices, the Duke of Devonshire securing one at 12½ guineas, and others realising up to 8 guineas. The other chief sales were as follows:—Shearling ewes: The Duke of Richmond and Gordon bought three at 100s.; the Duke of Devonshire six at 68s.; and Captain Fisher Rowe, Bramley, five at 57s. Four-tooth ewes: The Duke of Richmond five at 58s.; Mr. Wigginton, Selsey, five at 55s., five at 54s., fifteen at 51s., and five at 45s. Six-tooth ewes: Mr. W. D. James, West Dean, ten at 45s.; Mr. Penfold five at 50s., five at 48s., ten at 46s., and ten at 44s.; Captain Fisher Rowe five at 48s.; others made up to 47s. Full-mouthed ewes: Mr. H. Padwick, Thorney, five at 56s.; Mr. Penfold, five at 42s., and five at 39s.; Captain Fisher Rowe, five at 41s.; and others up to 40s. Aged ewes: Eighty were bought by Mr. Napper, Mr. Penfold, and Mr. Wigginton at prices ranging from 39s. to 34s. Ewe lambs: The Duke of Devonshire bought four at 57s. and five at 48s.; Mr. Monckton, Stansted, six at 43s.; the others selling up to 37s.

Salisbury.

Messrs. Waters and Rawlence, of Salisbury, submitted to auction, at their Market House Yard, Salisbury, on Tuesday, seventy ram lambs, being second drafts from the registered Hampshire Down flocks of Messrs. J. H. Dibben and Carey Coles. The forty lambs from the Bishopstone flock made 12½ guineas, 10½ guineas, 9 guineas (twice), 8 guineas (five lots), 7 guineas, to 5 guineas, average 6s. 16s. 6d., whilst the thirty lambs from the Winterborne Stoke flock made 16 guineas, 15½ guineas, 15 guineas, 11 guineas, 10½ guineas, 10 guineas, 8 guineas (thrice), to 5 guineas, average £8 1s.

The Ruddington Hall Shropshires.

The late Mr. Philo L. Mills's famous flock of Shropshire sheep was dispersed by auction at Ruddington Hall, Nottingham, on Thursday, in the presence of a very large company of breeders. As Mr. Alfred Mansell, the auctioneer, pointed out, buyers had an opportunity of buying an old-established flock. The flock was the result of thirty years' careful breeding by Mr. Mills and Mr.

Gibson, and as showing the demand for representatives of the breed he stated that this year certificates had been issued for 1,700 sheep to go abroad, compared with 700 two years ago. That was almost entirely brought about by the fact that Shropshire sheep were being used on merino and cross-bred ewes in the colonies, which sent back fat lambs to this country.

Bidding for the various lots was fairly brisk, but prices were not anything like so good as had been anticipated. The top figure was 75 guineas, which sum was paid by Mr. Bibby for a shearing ram by Coronation. Another shearing ram by Duke of Lancaster, the dam's sire being the celebrated Ruddington Sirdal, was knocked down for 66 guineas to Mr. Napper, whilst one by Panama went to Mr. Thoroly, of South America, for 20 guineas, who took another by Park Royalist for 30 guineas, and two were sold to Mr. Hughes, of South America, for 16 guineas each. Another shearing ram by Duke of Lancaster was sold to Mr. Smith, of Australia, for 36 guineas. Mr. Taylor, of South America, was a considerable buyer, taking rams at 14 guineas, 16 guineas, 13 guineas (two), and 15 guineas, and Mr. Forbes, of South Africa, secured one at 12 guineas. Mr. Stein, of Ireland, obtained a ram by Park Royalist for 51 guineas. Panama, which once looked like being disposed of for 15 guineas, was bid up to 35 guineas before Captain Townsend his breeder, got him back.

There were seven aged rams, and the first to enter the ring was Royal Eclipse, a two-year-old, which made the highest price at Sir Richard Cooper's fourteen months' ago, when he fetched 90 guineas. He was also in the first prize pen at the last Park Royal Show. He started at only 5 guineas, and was knocked down to Mr. Shelton, of Newport. Park Royalist, a home-bred sire, which was second at the Royal, was sold to Sir Richard Cooper for 51 guineas. Panama, which once looked like being disposed of for 15 guineas, was bid up to 35 guineas before Captain Townsend his breeder, got him back.

The shearing ewes sold well, there being thirty-one pens. Mr. Kernode bought one pen for exportation to Tasmania at 16 guineas each. Mr. Henderson, of Lutterworth, gave 14½ guineas for three ewes; Mr. Bell 11 guineas for another pen. The general run of prices for shearing ewes seems to be from 5 guineas to 9 guineas, and at such prices Sir Peter Walker, Messrs. Davenport (New Zealand), and Messrs. (South America), Stein (Ireland), Randall, Pearce, and many small breeders were purchasers. The two-shear ewes were sold in pens each containing five. The highest price made was 9½ guineas, which was given by Mr. Bibby, and the general run of prices was from 4 guineas to 7 guineas. Foreign buyers made no purchases in this section. Ewe lambs were chiefly purchased by butchers at prices ranging from 2 guineas to 3 guineas each. Several ram lambs made from 4 guineas to 9 guineas. Mr. Woodcock paying the latter sum for one by Ruddington Signet.

The total realised by the sale was £2,998, or an average per head of £5 2s. 6d. The average of the shearing rams was £13 16s. 7d., of the aged rams £23, of the shearing ewes £5 7s., of the stock ewes £3 10s., of the ewe lambs £2 5s. 7d., and of the ram lambs £2 12s.

Kidderminster.

The entry of sheep for Messrs. Nock and Joseland's annual sale at Kidderminster on Friday next, September 7, will, it is considered, surpass all previous records. The 250 rams and ram lambs will include all the best breeds for crossing purposes, and flocks represented at this sale have taken the highest honours in their classes at the Royal and other great shows. A new feature introduced this season will be the Ryeland rams from two of the best flocks in Herefordshire—the home of the Ryeland sheep—which are especially suited for getting lambs of the finest quality and early maturity. The entry of ewes will be about 3,500, including Shropshires, (Oxfords, Hampshires, Cluns, Kerries, and cross-breds). The feeding sheep will include about 1,700 well-bred Shropshire and cross-bred lambs, whilst there are 500 good Radnor and cross-bred wethers.

Mr. John Harding's Shropshires.

Owing to advancing age Mr. John Harding disposed of his pedigree Shropshire sheep on Friday at Norton House, near Shifnal, the sale being conducted by Mr. Alfred Mansell. Many of the sheep have a world-wide reputation, and they included

BATTLE'S LIQUID, POWDER, AND PASTE SHEEP DIPS

OFFICIAL GOVERNMENT REMEDIES FOR SCAB.

THE CHAMPION RAM for 1905 (BRED BY MR. TOM CASSWELL) and the CHAMPION RAM for 1906 (BRED BY MR. HENRY DUBBIN), SOLD FOR 1,450 GUINEAS, were DIPPED IN BATTLE'S DIPS. WHY? BECAUSE THEY ARE THE BEST.

BATTLE, MALTBY & BOWER, LINCOLN.

many Royal winners. Some of the choicest sheep were bought for transit across the Atlantic. Crested Wave, with a reputation which few sheep could claim, reached the top of the list at 90 guineas, paid by Mr. Blatherwick, 86 guineas being paid by Mr. T. Jones, of Cotwall, for another fine ram. Other prices were—32 guineas, Mr. R. Bache; 25 guineas, Mr. Phillips; 41 guineas, Mr. Parker and Mr. E. Nock; 21 guineas, Mr. J. E. Bourne and Mr. A. Everall; 25 guineas, Mr. T. Button, Cooper Angus; 21 guineas; Mr. W. H. Foster; and 20 guineas, Lord Davis. The top price for ewes was 10 guineas, paid by Mr. McLaughlin, for Buenos Ayres, and Sir R. P. Cooper. Ram lambs sold exceptionally well, the top price being 15 guineas.

Messrs. R. and W. Wright's Flock Purchased for the Argentine.

The purchase is reported by that Levantian exporter, Mr. F. Miller, of the whole of Messrs. R. and W. Wright's prize-winning flock of Lincoln sheep, including all the breeding ewes, lambs, and stud rams—in fact, the entire flock.

This unique purchase, at a very high price, of the celebrated Wright flock of Lincolns, is on behalf of Señor Manuel José Cobo, of Buenos Ayres and Lezerna, Argentina, whose name has figured largely of late as the buyer of several high-priced animals, including Mr. Dean Willis's Royal Champion Shorthorn Bull at the magnificent price of £3,000.

All these sheep will be shipped by Mr. Miller in suitable consignments between now and the end of next January. It will be remembered that Mr. Miller had previously bought on his own account all Messrs. Wright's shearing rams of this season, several of which have already been exported.

Australasian Wool.

The sales of wool in the Australasian markets for the past twelve months total, according to statistics by Messrs. Dalgety and Co., 1,354,865 bales, which realised £18,305,012, as compared with 1,092,651 bales which grossed £13,825,269 in the previous season, so that the increase for Australasia from local sales of wools has amounted to £4,479,743.

Sheep numbers made up from figures taken from the most recent returns indicate that the total in 1905 for Australasia was 93,836,548. A large increase in the flocks is expected to take place during the present year.

As regards the future, the view is taken that while the production during the ensuing season will not result in any plethora of stocks, the use of substitutes and firmness of money are likely to act as barriers to any increase in values, and may, in fact, cause a moderate lowering of the present level. A ready demand is expected to welcome the coming clip, and it is considered that the output should be cleared at comparatively high prices owing to the excellent trade conditions prevailing at the present time.

Foreign Demand for Shropshire Sheep.

—Messrs. Alfred Mansell and Co., of Shrewsbury, report an unprecedented foreign demand for Shropshire sheep, the number of export certificates issued already numbering 1,400, as against a total for the whole year in 1904 of 703. **British Grasses.**—There is no more happy and wholesome "sign of the times" than the rapid increase in this country of the taste for Nature study; and the new fancy takes the desirable form of home study. The rage is all for things British. This, at any rate, is the experience of the Country Press, of Kensington, who have been inundated with applications for their Nature study (British) picture post cards, of which thirty, in five sixpenny packets, have so far been issued—British fern fronds, British tree leaves, British tree boles, and British trees in winter. People are now asking for grasses, and the Country Press meet the demand by issuing twelve cards for one shilling, depicting twenty-three interesting species, popularly and botanically named, showing magnified fructification, and giving the time of flowering.

Hollesley Bay Labour Colony.—Consent has been given by the Local Government Board to the Central (Unemployed) Body for London to purchase the land known as the Hollesley Bay Labour Colony. It will be remembered that this land—1,300 acres—was leased in February, 1905, by Mr. Joseph Fels to the Central Committee for the London Unemployed Fund for three years at a peppercorn rent. The option to purchase at any time during the period was given at the same time. When the Central (Unemployed) Body was formed, the land was transferred, and since then about 250 men on a daily average have been employed in the training necessary to fit them for life in the Colonies. Several batches of men and their families have gone to Canada, and the Labour Colony has been considered, on the whole, a fair success.

THE "MARK LANE EXPRESS" REGISTER OF FORTHCOMING LIVE STOCK AUCTION SALES.

DATE.	NAME AND ADDRESS OF AUCTIONEER.	CLASS OF STOCK FOR SALE.	PLACE OF SALE.	NAME OF OWNER.
September				
3	Mr. J. W. Taylor, Cheltenham	Oxford Down Sheep, &c.	Gloucester	Various.

25	Messrs. Tattersall	Polo and Riding Ponies	Marwell Manor, Eastleigh, Hants	The late Miss L. C. Standish.

Further Particulars of many of the above Sales will be found in our Advertisement Columns.

Notes and Jottings.

THE continued drought which exists over so great a portion of the country is making matters very serious for the store cattle trade; indeed, these cannot be cashed, it may be said, at any price over a large area of the Midland and Eastern counties, as well as North and South. In all the districts mentioned a green field is a very rare thing, and is only seen where some river or small stream has helped to keep the subsoil cool, or occasionally where a good field of the deeply-rooted lucerne or red clover is grown. It is, indeed, a very serious time now for stock-keepers in these districts, and, worst of all is, the prices for both milk and beef are such as not to justify an extravagant outlay in extraneous food.

VERY different from the above picture is that seen in North Wales, where the cool-lying valleys are rich green with beautiful herbage, both on pastures and aftermaths, and the cattle full and sleek with plenty of flesh upon them. The root crops, too, are of a good healthy colour here, and the corn crops are full of straw, the harvest apparently having been hindered somewhat by the rain that has given the green colouring to the grass and the roots. Welsh cattle, too, stand a grass diet as well as most late into the autumn without extra feed, so that it is quite probable and will be wisest, one would think, to winter their stores as much as possible on the roots and oat straw, and bring them out in the late spring for early summer feeding, when they are pretty certain to be wanted at long prices.

THE Emerald Isle has been very much favoured, too, with showers and good pastures, the happy state of things prevailing in Anglesea and other parts of Wales being continued on the other side. Cattle from the latter are coming to market in excellent condition, and feeders—at least some of them—give a very satisfactory account of the summer's profits upon their feeders, even though beef is realising so very badly. There will always be great difference of profits amongst feeders of cattle under the same conditions. Judgment in selection alone will account for all the difference between one lot that has paid well and another that has been losing money, or if not losing at least not giving anything.

IN travelling recently one could not but notice an increase in the number of the Welsh sheeted cattle that are to be seen, odd animals and small herds being seen in several instances where a solitary individual could not be found a year or two since. When an increasing demand for any product is experienced it is astonishing how soon those animals that can oblige begin to be sought after. We had noticed upon several occasions in mixed dairy classes at some of our shows a solitary or perhaps a couple of animals of these sheeted Welsh beasts with beautiful udders under them capable of a very profitable milk yield, and the breed is truly a dual-purpose one, the animals being easily converted into beef, whether steers or heifers.

THERE are many old breeds of cattle that have, so far as appearance before the public is concerned, become extinct, being perhaps kept lingering on in some secluded district of the country where the railway and the stranger are seldom seen. Amongst such breeds the old Gloucestershire would have to be counted. Very seldom are these seen now. The smoky-faced Montgomery, too, is seldom met with, a circumstance that calls for regret, for these were grand cattle. Then several years ago I recollect seeing in the extra class at the Dublin Spring Show a little red Irish cow with a white face and a splendid udder. A milky breed all over in appearance, and a hardy one, too, evidently requiring but little feed.

DIVING more deeply into the whereabouts this little cow had hailed from, I was informed that there was a breed of that kind in the wilds of Donegal that were excellent dairy cattle, very much in the hands of the cottagers—roadside cows as we call them here. The breed, however, appeared to be eminently worth looking after. The white face was not of the Hereford cast either in its pronounced whiteness or in the conformation

of the head and the face that wore the white colour. It is rather strange whence such a breed could have emanated. (Quite curious, too, is an occasional white face in some of the cattle of Devonshire; here, again, it is not the cast of the Hereford, but probably some outside blood of a very remote period that occasionally crops up and appears as strange in its way as do the occasional black sheep that one finds in a flock of pure Leicester or Cheviot sheep.)

RETURNING to the question of feed keep at such times as the present, I noticed yesterday by the railway side a crop of thousand-headed kale, that struck one as being quite as adaptable to and useful for cattle as for sheep, for which is now looked upon as indispensable upon many farms, and yields an immense bulk of feed per acre. Doubtless, like the cattle we are speaking for, this article would require good feeding at its roots and early sowing if a big bulk is to be obtained thus early in the season, but it is none the less worth a trial and might prove of immense benefit.

A GREATER demand for Guernsey cattle appears to have sprung up recently than has been experienced for a long time. Reports of considerable shipments of this breed to America and Australia being very common, whilst inquiries are also being pretty frequently received for them. The Guernsey has proved itself a very practically useful breed where rich milk and a heavy yield of butter are concerned, which is doubtless one cause of the increased demand that is being experienced. Singularly to say, the Guernsey seldom acquires herself as creditably as a showyard animal either for milk or butter as the sister Channel Island breed, but the showyard is not always the safest place to test the capabilities of a dairy cow, especially where the testing is confined to a one-day trial.

IN the sales of cattle advertised to come off during September amongst others is a large herd of the South Devon breed. It is not often that opportunity occurs for purchasing from a breeder by auction specimens of this very useful and rapidly-increasingly popular breed of cattle. It will be worth reminding any intending purchasers as well as any undecided ones, how well this breed accounted for itself in the Agricultural Hall last year. It may pretty safely be said that not only one other breed did anything like as well at the two end of the year shows, namely, the Dairy show in October for milk and the Smithfield show for beef, and this sort of thing certainly constitutes a valuable dual-purpose animal.

THE Red Poll, too, is another distinctly useful dual-purpose breed of cattle, though, like the Guernsey, they have seldom done as well in the showyards, either in the making of beef or milk records as some others, still the home balance-sheet, which is the true and much safer to be consulted test, gives in several instances results superior practically to most other breeds. The Red Poll is found to the greatest advantage in the Eastern counties; whether it is soil or climatic influence that causes this we cannot say, but we have sometimes thought that rich grazing land has greater effect upon the Red Poll than most other breeds in converting it more into a beef-maker than a milk-producer. Anyway where fold-yards are concerned it is very valuable for the two purposes.

THE Government orders with respect to the contracts for Army and Navy beef have made a very sore place with feeders both at home and in Ireland. The subject is one worth a good deal of attention, which it will doubtless receive and which it is to be hoped will end in a revocation of the conditions. There is really no need to feed our soldiers and sailors on States beef at present, and from another point of view there is considerably more nutrition in the beef of cattle killed direct from our own feeding pastures and fold-yards than from the poor beasts that have been on hard curs and boots for a month or six weeks, and must be frequently in very unfit condition for slaughtering.

REVERTING once more to the demand for our different breeds of cattle for export and their suitability to different climates, the photographs of animals that have been winning prizes in the different countries are very interesting (we refer to animals bred in those countries). New Zealand appears to be the one country more than any other that maintains the British type in its best form. Australia appears to lose form rather, probably owing to a less rich soil for the most part, or to a drier climate. The States and Canada come up to a very fair standard, yet English judges who have visited herds there declare that it is considerable degeneration after a few genera-

VETERINARY PREPARATIONS,
and Small Articles of a Portable Character, well readily when brought regularly before the readers of the "Mark Lane Express."

tions left without a new infusion of home blood. That great country the Argentine, also appears to maintain type in the Shorthorn and Hereford at least fairly well.

Count Munster's Sussex Herd.

In consequence of alterations at the H. M. Farin, Count Munster decided to dispose of his entire herd of pure bred Sussex cat, which was established in 1887, and has been brought to a high state of perfection by judicious purchases and management. The sale accordingly took place on the 22nd ult. at Maresfield Park, and was conducted in the presence of a very large company by Mr. Ansell, of Drawbridge and Ansell, Hayward's Heath and Lewes. Prices did not rule out the ordinary for the top figure was only 30 guineas, and this sum was given by Miss Wolfe for the bull Drungwick Probber of Maresfield. The best prices for cows were 25 guineas and 23 guineas, the others selling at prices under 20 guineas. Calves made up to 21½ guineas, and heifers up to 19½ guineas.

SHOWS.

Worsley.

The show of the Worsley Agricultural Society, held in Drywood Park on the 25th ult., was a most successful one despite the gale. The attendance of visitors was on a large scale, and the entries were something like 300 more than last year, although the increase was chiefly in the classes for dogs and horticulture. There were some good classes of cattle, and as the local show season is drawing to a close, many of the animals came before the judges with showyard honours to their credit, whilst as to horses these were above the average seen at local shows, but this is not surprising, seeing that in the district great numbers of horses are used for draught and agricultural purposes. Heavy horses were, of course, the feature of the section, but there were also some good light animals on show. Pigs made but a small display, whilst there were no sheep.

Lord Londonderry's Tenants.

For the past eleven years the tenants of Lord Londonderry's estate at Wynyard, near Stockton, have held with his lordship's and also Lady Londonderry's active co-operation, an annual show, to which they have had the great number of exhibitors of stock of the field or the garden. It has proved a happy means of cementing the good relationship that should always exist between owner and occupier, and that Lord Londonderry is appreciated by his tenants was fully proved at the show held on the 25th ult., he receiving a great ovation. Although the number of cattle, sheep, and horses exhibited showed a decline, the show itself was most creditable to the tenant farmers and cottagers on the estate. Horses numbered 128, cat 39, and sheep 28, and there were well-filled sections devoted to dairy produce, poultry, flowers, and vegetables, and the like. The exhibits were of a very good class, and amongst those in the horse section were animals belonging to Lord Londonderry's tenants which had won at the Royal and Durham County and Yorkshire shows. Mr. G. T. Peacock, Silksworth, Sunderland, carried off Viscount Castlereagh's cup for the best agricultural horse, and Mr. Yeoman (Stockton) the Countess of Hinchester's cup for the best exhibit amongst the cattle.

In the course of a speech at the luncheon held in the showyard, to which all the tenantry were invited, Lord Londonderry said he was sorry to see the bringing forward of the Land Tenure Bill, for, in his opinion, it would cause friction between the owners and occupiers of land. For many years past the tenants of well-managed properties had invariably looked to their landlord to effect what improvements they required in their farms, and the vast majority had never looked in vain. But legislation of the kind he had referred to would deprive the landowner of the benefits which would accrue by spending a part of his income in improving his property, and when he had to realise that the money he had made would be confiscated and given to another, he did not think that any landlord would spend any more than he could help on improvements. In the vast majority of cases the tenants would not be able to effect the improvements themselves, and would have to borrow the money, and, therefore, would be saddled with a double outlay in respect of interest upon the money and their rent. Legislation, therefore, on the lines of the Land Tenure Bill, which endeavoured to confiscate the property of landowners for the so-called benefit of the farmer, must, in the long run, result in the greatest injury to the occupier. It would be rash to say that we should never again have years of depression, and they would not be able to cope with them if the two great interests in agriculture did not work harmoniously. The interests of the owner and the interests of the occupier were identical, and they stood or fell together, and, therefore, he urged agriculturists to oppose the Bill by all the means in their power.

Live Stock Record.

DIRECTORY OF BRITISH PEDIGREE
STOCK OWNERS.

PIGS—continued.

LARGE WHITES—(continued).

KIRBY BEDON HERD of Pedigree Large White Pigs of prize-winning strain. Grand young Boars and Gilt for sale at moderate prices. Hardy constitution, size and bone a speciality. For particulars apply W. MITCHELL, The Vale, Kirby Bedon, near Norwich. Two miles from Trowse station, G.E.R.

LARGE WHITE PIGS.—Boars and Gilt, all eligible for Herd Book; also registered Oxford Down Sheep, descended from Prize winners. At moderate prices.—J. PHIPPS SMITH, Salford Priors, Evesham

NOTTINGHAM CORPORATION, Stoke Farm Herd Large White Pigs, estab. over 20 years. Boars and Gilt at moderate price. Inspection invited.—A. AVIS, Stoke Bardolph, Nottingham.

OWTRAM, HERBERT H., Newland Herd Pedigree Large White Yorkshires, winners many prizes, Champion Cup and Medal; Boars, Gilt, in pig Sows for sale.—FARM HALL, Newland Hall, Day Horse Station, Lancaster.

THE NEWNHAM HALL HERD of Large and Middle White Yorkshire Pigs is one of the largest and oldest herds of pure-bred pigs in the United Kingdom. Prices moderate. Inspection invited.—NEVILLE J. HINE, Newnham Hall, Newnham, Herts.

THE WATFORD HERD of Large White Yorkshire Pedigree Pigs of the choicest breeding. 150 to choose from. Send for Illustrated Catalogue. Grand young breeding stock always on sale.—Apply, R. AYER, Bushey Lodge Farm, Watford, Herts. (17 miles from London).

WALTON HERD of Pedigree PIGS, owned by Sir Gilbert Gremall, Bart., Walton Hall, Warrington. Large and Middle White Yorkshires, unsurpassed for purity of breed, size and general excellence, as proved by the numerous Championship and Class Pigs won at the leading shows. A choice selection of Boars and Sows for sale; stock carefully shipped.—For particulars apply to the Manager, J. HALLAS, Higher Walton, Warrington.

MIDDLE WHITES.

DEWHIRST, A., Ryecroft Farm, Dudley Hill, Bradford, Pedigree Large and Middle White Pigs also a few 1-lb. baireds of the choicest breeding. The following prizes have been won in 1902 by pigs bred by myself: 2 champion prizes for the best pig in the show, 30 firsts, 25 seconds, and 4 thirds, with numerous reserves and V.H.C. Send 2 stamps for Illustrated Book.

PEDIGREE MIDDLE WHITES.—Choice breeding, quality, early maturity. Station: Bingham, G.N.E.—HENRY SMITH, jun., Cropwell-Butler, Nottingham.

LARGE BLACKS.

CORNWOOD HERD of High-Class Pedigree Large Black Pigs.—Breeder and winner of numerous Prizes and Cup; Royal Bath and West, and County Shows. Boars and Sows always on sale.—JOHN H. GLOVER, Cornwood, Devon.

PEDIGREE LARGE BLACKS of Choicest Strains, young Boars and Sows For Sale; prices moderate.—H. J. CLARKE, Norbury House, Newport, Shropshire.

SUSSEX.

SUSSEX PIGS, LARGE BLACK. Pure bred and of finest quality, with very small bone and fine hair. Not to be equalled for prime meat.—FRANCIS N. HOBGEN, Manor House, Appledram, Chichester.

BERKSHIRES.

CORY, CLIFFORD J., M.P., Llantarnam and Gelts. ABBEY, MONMOUTHSHIRE.—Pedigree Boars and Gilt.

CRIBB, ARTHUR LEWIS, Well End Lodge, Shenley, Barnet, Breeder of PEDIGREE BERKSHIRE PIGS. Young stock from noted strains, and eligible for Herd Book, for sale at moderate prices.

TAMWORTHS.

THE Melton Constable celebrated Herd of Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cups Smithfield. Several recently exported for Continental and Colonial herds. Apply R. OWEN GODDARD, Estate Office, Melton Constable, Norfolk.

The entire herds of pure-bred Shorthorn cattle belonging to Mr. H. Verner, Churchill, Moy, co. Armagh, and Mr. J. Atkinson, of Crowhill and Summer Island, are to be sold by auction on the 14th inst. at Churchill, the auctioneers being Messrs. J. Thornton and Co. The catalogue also includes animals from three or four other herds, a d all are of the highest breeding, so that some first-class cattle will be offered.

General Observations.

By the time this issue reaches my readers, they will be too deeply engaged in the business of looking after their pickers to care for examining any lengthy reports. Therefore I intend to be as brief as possible, and will rapidly survey the position, noting only the points of immediate interest.

The first pocket arrived in the Borough on Monday last, the quality being favourably reported upon. We have since received other small supplies. The samples have been closely criticised, the average opinion being that they were picked rather too early, and were hardly ripe. The grower's idea of value has been expressed at £7, but merchants are not as yet willing to entertain so high a figure, and have named 1s. per lb. as a probably workable value. During the coming week it is likely that the boards will be fairly well covered, and I hope to be able to say something definite about market prospects in my next report.

In the meantime the discussion as to the probabilities of the crop continues. Merchants are apparently very unwilling to accept the statements which insist upon an extreme shortage, and it would appear from the information that comes in from the country that they have some reason for the doubts they express. I hear of improvement in all the best grounds, while it must be admitted that in many gardens recovery and advancement are not possible.

A friend from the Midlands, himself a grower, tells me that after all the difficulties they have experienced in Worcester and Hereford, they will come out of the struggle better than they expected. His opinion puts the average for the Midlands at 5 to 6 cwt. This is a great advance on the estimates of a fortnight ago. The outlook in the South is also rather more favourable, although I hear of some damage being done by the recent gale. Looking at the question with an impartial eye, I cannot avoid the conclusion that, even after deducting the lost acreage of which we are now informed, we shall harvest a crop at least equal to that of 1904, and I shall not be surprised if the official returns give us a somewhat higher total.

The estimates of the American crop are still further reduced. A letter just to hand tells me:—"We are having extremely dry weather in the United States, and have had this weather continuously for fifty days. Our hop crop will necessarily be only a top one, and estimates are coming down. Speculators are buying as the season advances, and to-day (August 17) the highest price was paid. A heavy speculator bought 500 bales at 20 cents to growers. This purchase will put the market to that figure, as growers are excited, and are slow sellers even at the high prices now being offered." This is good news for English planters, especially as I hear from another source that it appears probable that the crop will hardly exceed that of last year, and that the local consumption will certainly absorb the great bulk of this year's produce.

The Belgian yield will undoubtedly be small, not exceeding 40,000 to 45,000 cwt. Prices in these markets are rising, the present value of the 1906 crop being 100 to 105 francs (80s. to 84s.) on the spot. The weather is favourable for the harvest, which will soon be in full swing. The quality is expected to be above the average.

Throughout Bavaria planters are engaged in picking their early hops, and although there is much variation in the yield, the general results are more satisfactory than were formerly expected. The qualities of those that have been offered at Nuremberg are sufficiently attractive to have secured purchasers at 135s. to 145s. Very hot weather alternated with cold nights has been generally experienced, but the hops do not appear to have suffered, and the outlook is in favour of a fair crop rather below an average.

The Austria-Hungarian prospect is not so promising, and expectations do not go beyond two-thirds of last year's output.

In the south of France the plantations have suffered from drought, but appear to have come through it without much damage. The earliest are being gathered and find ready sale at 1s. to 1.50 francs. It is estimated that the general crop will not exceed half that of last year, but the quality promises to be very satisfactory.

Estimators profess to be able to state that the whole Continental crop will come out at about

two-thirds that of 1905, but I can hardly see what bases they have in hand that are yet to be relied upon. We may, however, calculate with comparative safety that although a large yield cannot be anticipated, it will be sufficient to meet local demands, and will leave some surplus for exportation.

The English Acreage.

The preliminary statement just issued by the Board of Agriculture shows that our area under hops has been reduced from 48,967 acres in 1905 to 46,722 acres this year. This gives a total loss of 2,245 acres, equal to 4.6 per cent. It was expected that the recent experience of planters would induce some reduction, but the area abandoned is certainly larger than was generally expected, and our acreage is now brought down to a lower point than is recorded since the year 1860.

Looking at the details of the returns, we find that Kent has been reduced by 1,350 acres, or about 4.4 per cent., and the three other Southern counties, Hants, Surrey, and Sussex, have gone down by 373 acres, or about 5 per cent. In the Midland Counties of Hereford, Worcester, Salop, and Gloucester, the reduction has been 513 acres, or about 4.8 per cent. It appears, therefore, that planters have felt the pinch of the times to much the same extent in all the districts. It is certainly to be regretted that so large an area is put out of hops, when we remember the benefits that should accrue to the hatching class from this industry. It is acknowledged that more labour and capital are employed per acre in this branch of agriculture than in any other that is practised in England. The diminution of the acreage means less labour required on the land, and the reduction of the numbers of the town dwellers, who annually enjoy a month in the country at picking time. I should occupy too much space if I were to attempt now to trace the causes of the changes that are evidently being accomplished. Foreigners will argue that this reduction is evidence of the decay of our industry, and will probably increase their efforts to complete our annihilation. But there is still hope in the fact that while our area is contracting, our knowledge is enlarging, our methods are improving, and our capacity of production is expanding. We are not beaten yet, and do not intend to be; we shall still fight the battle, even under the most disadvantageous conditions, and I have confidence in the pluck of our planters, which will keep them in front, and eventually bring them to victory.

Le May's Annual Report.

It is our opinion that the weight will approach as nearly as possible to that gathered in 1904, though many growers think that this estimate is too high; there can be no doubt, however, that England will produce this year considerably less than half her annual consumption.

While we have to conde with the growers on the smallness of their crop, we have great pleasure in congratulating the brewers on the grand quality that will be placed before them this season. We have never seen better hops than those that are hanging on the poles to-day. The splendid summer weather we have had has filled the cones with lupulin far above the ordinary; the hops hanging so sparsely, they have had the full benefit of the sun and have matured rapidly.

With regard to the consumption, you will notice we have now reduced our estimate of last year of 750,000 cwt. to 700,000 cwt., as we find in the returns made to the Government which were issued last February that in brewing last year's output of 35,047,824 barrels of beer only 556,793 cwt. of hops were used in the copper, which works out at an average of 13 lb. per barrel. Now if we add to this small quantity 4 oz. per barrel on the average for dry hopping it gives a total of 635,024 cwt., which will only leave 65,976 cwt. for exporters, manufacturers of non-alcoholic drinks, yeast makers, and private brewers not for sale, and inevitable waste.

This being the position of affairs, the brewer should take into consideration the enormous expense the successful English grower has been put to to secure the hops for him, and should bear in mind that if he is not properly remunerated a further grubbing of the hop plantations must ensue.

The low prices obtained last year have resulted in the grubbing of 2,245 acres of hops, for according to the agricultural returns just received there are now only 46,722 against 48,967 acres last year. This is the lowest acreage for sixty years, and a most serious state of affairs for the brewers of England! Thirty years ago there were over 72,000 acres in hop cultivation in England, and the consumption of beer was less than it is now by over 10,000,000 barrels.—W. H. and H. LE MAY, 67, Boro' High Street, London, S.E.

ADVERTISEMENTS

received after Friday cannot appear under Classified Heading, so are inserted on the last pages of the late

MARKET SUPPLEMENT.

Midland Notes.

THE weather break-up which seemed threatened—perhaps one should rather say promised—a week ago is again postponed, and once more the country is sweltering under a burning August sun, whose almost tropical rays are hardly tempered either by cloud or breeze. In spite of the showers which marked its early days, August will stand on the records as a dry month. Up to date it has yielded only 1.085 inches of rain at the Elghaston Observatory, and though that means nearly eleven hundred tons of water per acre, it is not half as much as the country could have done with. There were some very heavy downpours during the first half of the month, so that doubtless some districts have had more. But these were very local in their incidence, and probably other parts, especially on the Northampton and Nottingham side, have had even less; certainly the burned-up patches on the pastures and the appearance of some of the roots give that impression.

ONCE again it has been noted during the broken weather that pooked barley has come off better than barley which is sheafed in the ordinary way. Very few Midland growers follow the practice of pooking, so common in the southern shires, where the barley, after being cut, lies loose on the ground, whence it is carted and stacked like hay. Those who do so agree, however, that the corn so treated takes the dew better at night, and in an indifferent harvesting season generally yields better grain for malting purposes.

IN Worcestershire the rain of August has been sufficient to lengthen out the corn harvest, which had begun before Bank Holiday and was still going on as late as Tuesday last, when one might see the final loads on various belated farms being piled and carried under the light of the moon. But in rain, as in other things, Worcestershire has been luckier this year than some other counties. Even the fruit is not altogether the failure which it pleases the alarmists to speak of. One may find patches here and there where even plums escaped the late frost: one has been mentioned

at Putterly Court, where thirty-six acres should yield some 200 tons of, and undeniably this is a capital apple year. One of the season's troubles is the bird nuisance. In the prolonged dry weather fruit trees were unusually free from the blight, which provides some species of birds with food during the summer months; and in default of their ordinary insect diet, it is complained that they have had to fall back on the fruit. Certainly an unusual number of early plums, pears and apples have been taken this year just as they commenced to turn colour, and, looking at the damage wrought, not even the best friends of the birds can say that they have merely been digging insects out of the fruit, for in the case of plums one sees nothing but the stone and stalk remaining on the tree, and all the middle of the apples and pears is eaten. The same scarcity of insect food has made the birds' raids on the cornfields more severe than usual this year.

AN interesting illustration of the fine milling condition of the wheat crop in the heart of England comes from Erdington, near Birmingham, where Mr. Herbert Prosser succeeded, on Monday, in cutting a field on Whitehouse Common, threshing, and milling the corn, and baking six dozen loaves from it all in the space of less than three and a-half hours. Naturally the self-binder supplanted the hand reaper, but improvised flails took the place of the modern threshing machine, and the milling was done two miles away at an old-fashioned water mill. One is not surprised to hear that the grain was too damp to command the critical approval of the miller; still, the resulting bread proved appetising and attractive. Five years ago Mr. Prosser managed to perform a similar feat in a matter of eight hours, but since then no summer until this year's has been dry enough to admit of an attempt to break that record.

THE scarcity of milk already noted in this column grows more pronounced as the dry days succeed one another. Dairy farmers who supply Birmingham should note therefore that the City Dairy-men's Association has raised the retail

selling price to 3½d. per quart, and that the wholesale sale prices are also to be one-eighth on Saturday, September 1. There is an equally marked scarcity of butter; grocers and other wholesale dealers complain that neither the home-made nor the foreign sorts are anything like so plentiful as they should be, and here again rising prices are the order of the day. Are our local producers getting their fair share of the increase? At present it is doubtful, but their position is so strong that they should be able without difficulty to enforce a demand of better terms.

THERE are some points in the recent Poultry Organisation report which seem worthy the attention of Midlanders. One finds, for instance, that although quite a fair proportion of the subscribers come from this part of the world, Midland depots and branches are few and far between, Oxford, Hineley, Earlsfield, and Hereford being apparently the only places this particular co-operative movement has yet reached. One would like to see the number increased, for certainly there is room for more work in this direction. Near the large towns, indeed, like Birmingham, Wolverhampton, Stafford, and so on, there is so steadily a demand, and prices are so firm, that co-operation is hardly needed, though even here there are numerous large firms who would very much prefer to buy if possible from some association which took full responsibility for the quality of its goods. But in the smaller towns prices are very uncertain and fluctuating, so that the small poultry owner finds egg-selling a barely profitable business, and the larger farmer who has a few fowls running about finds it hardly worth consideration at all. An association which undertook the collection and retailing of the eggs, and guaranteed their quality, could do a good turn to both, and to the consumer as well, who is too often put off now with foreign and inferior goods. Eggs are but unconsidered trifles on the ordinary farm, but when a depot can take perhaps 120,000 a year, and pay the producer 11d. or 11½d. a dozen for them, they are worth consideration in this day of small profits.

August 30, 1906.

Seasonable Topics.

Record Heat. IT is not an uncommon thing, when talking about hot or wet seasons with old men, for the latter to look wise, shake their heads, and refer you to a season when something wonderful happened a few years before you were born. It

supply before he puts his name to any agreement. It is no small matter to be short of water, and even if liquid can be got by hauling, what a weary, slogging, back-aching, expensive task this is! In every case we know the weather is blamed, and in some instances there is no help for the water famine; but, on the other hand, we know farms on which the pits have never been cleaned out for years, and at the best of times only a few inches of water covers a thick bed of mud. Who is to blame in these cases when the water supply gives out?

Shortage of Milk. A FEW days ago we were staying with a friend in a west country town, and one morning our hostess was profuse in her apologies because there was no milk for breakfast. The supply from the previous

afternoon had gone sour, and the milkman was late. Such a thing had never happened before; but we got over it, and some time later the milkman appeared, sweating like a bull, and trembling about the reception he might get. Poor fellow, he was deserving of pity,

for the milk had run short at the farm where he dealt, and he had been running all over the district in search of more to supply his customers. This is by no means a solitary instance of mutual disappointment through milk being short, and it is an open question who is the most perturbed through it—the farmer, the milk dealer, or the consumer. It is all owing to the protracted drought, of course, but fortunate is the dairy farmer who has made provision for the emergency by having a piece or two of some good forage crop to help him out. Brewers' grains have also been called to the rescue, but more than one cow-keeper has been at his wits' end of late in attempting to keep the milk supply up to the average.

Threshing. SINCE last we wrote the hum of the thresher has grown to be a familiar sound once more, and from now onward through the autumn it will be heard daily in districts where corn growing is still an important item of agriculture. Warm work, too, is threshing when the thermometer is breaking records, what with the heat and the dust and the whirl; but threshing machine proprietors cannot wait, and those people who hire for this work must stick to the appointments they make, irrespective of weather. Straw may have come off heavier in previous years, but never, perhaps, were ears better filled with richly coloured grain, and it could not possibly have been harvested in better condition. It is early enough yet to make estimates as to the yield, but we have heard expressions of satisfaction over the prices already obtained for new wheat and oats. Barley waits a bit, and not very much is threshed out before the middle of September, that being the time when the malsters begin to make their purchases. Beer drinkers, however, need feel no anxiety about the barley supply this year. We are not so sanguine about hops; but then it is said that all beer is not brewed with hops nowadays.

Stackyards. NOT for a long time have stackyards presented such a full appearance as they do now, for they are mostly filled up with the result of the combined harvest of hay and cornfields. One always feels some anxiety, too, when the stack-

INSPECTING THE CATTLE AT BARNET FAIR.

is surprising what a respect the world has for past records in the way of weather, and it is quite possible that when 1906 is gathered to its fathers, and the young men of to-day are growing old and grey, they will linger with pride on the memories of this tropical summer. There is one thing certain, that if the season is spoken of in the future as being hot it will be no exaggeration, for old Sol has set himself to break records, and has done it. Harking back a little, what a day the first of September was to be sure! When we met a party out partridge shooting with the thermometer standing at something over 90 deg. in the shade, we hardly knew whether to admire them for their pluck or pity them for their folly; but later, when we saw a lot of fellows kicking a football, we promptly agreed as to their incapacity, and wondered what would have happened if football had been called work instead of play.

Water Supply.

REPORTS have come to hand of late from various districts telling of dried-up ponds, water supplies running out, and the various inconveniences occasioned by a shortage of the precious liquid. Men who have farms that are intersected by rivers and inland streams know nothing of the inconveniences suffered by their neighbours who are put to the trouble and expense of hauling water for the cattle in a season like the present one. When taking farms in low-lying districts an important question asked is whether the land is liable to flood; but any would-be tenant on an up-lying farm shows equal wisdom if he makes stringent inquiries about the water

BARNET FAIR: WAITING FOR A NEW MASTER.

yard is full of ricks, especially when the material is as dry as tinder, because there is always the risk of fire. Most weeks we see accounts in the papers of stack fires, sometimes caused by overheating, sometimes through the careless handling of matches on the part of tramps who never do any work, but can always get tobacco to smoke, and sometimes the cause of the conflagration remains a mystery. We know some farmers who make a practice of never filling their stackyards owing to the risk of fire, but build a good many of their cornricks in the fields. Where convenient the idea is good, and on large farms a good deal of time is saved in getting the corn together. Lastly, we confess to a weakness for a well-ordered stackyard which indicates the character of the farmer just as another yard will that is all strewn with litter and a picture of untidiness.

Competitions as a Means of Education.

IN most districts competitions are held and prizes are given for feats of skill in farm work, such as hedging and ditching, rick-building, thatching, and ploughing, and we should like to see more of it done as we look upon the competitions as a useful means of education. It is not uncomplimentary to the average farm labourer to say that he is a peculiar individual. He knows the rudiments of his business, though he may not be perfect at it, and if you asked him to join a hedge or strike a furrow he would probably scout the idea. But put him in competition, where there is a prize to be gained, or pit him against another man of the same calling, and he is another

being altogether. He may be beaten, but if so it does him no good, as it takes the conceit out of him; but if the man is worth his salt he does not pass through the competition without learning his own weak points and observing for his own future benefit where the other fellow has beaten him. Thus he becomes a better workman.

Potato Disease.

UP to the present we have not seen many signs of the presence of the dreaded potato blight, and the tubers now being lifted are coming out of the ground in a beautifully clean condition. Nevertheless, ominous reports are coming from Ireland about the ravages of the blight and the losses that Irish potato growers will suffer in consequence. Doubtless, the rainfall has been greater in the Emerald Isle than in Britain, and the climatic conditions are blamed; but is the accusation a fair one? It would seem strange if an autumn came round and no ill reports came to hand about the potato disease in Ireland, and no doubt we should hear more about it in England if our methods of cultivation were more Irish. We are sorry for the Irish potato growers in their trouble, but we do not know where English growers would look for help and sympathy if they persisted in sticking to the old Champion or any other variety irrespective of whether it was partly worn out or not, and generally adopted methods of propagation and culture which invite rather than repel the disease. But for the energy and enterprise of English and Scottish growers in the bad times of disease some years ago perhaps the potato would have gone under.

Agricultural Politics.

BY A LOBBYIST.

Poison in the Butter!

"London's Poisoned Food." This is the dramatic heading given in certain of our London newspapers to a story of the excessive use of preservatives in butter. The deduction from this story is simply that in the East End of London the quantity of boracic acid used in certain butter is such that it is a positive danger to health. As a fact, the danger assumes an alarming character when the number of other articles and beverages which often contain boracic acid is taken into consideration. Here, then, is a supplemental argument in favour of the early passing of the Butter Bill, which should be an active stimulant to the sympathy of urban M.P.'s. Hitherto the representatives of the great centres of our industrial life have held aloof from the movement in favour of this Bill, as though it had no direct interest for them or their constituents. Even when an occasional gleam of interest has been vouchsafed it has had but a tepid warmth. Perhaps the title of the Bill is a bit responsible for this. Butter is produced from milk, milk is the product of cows, cows belong to the rural side—*ergo*, the business could have no vital interest for men who represent only the teeming hives of our civilisation. This has been the instinctive argument. Had the measure been labelled "A Bill for the Salvation of the Poor of the Towns from Poison" it would have had a clamorous and clamorous urban advocacy associated with it. We should have had the Labour M.P.'s perceiving in impure butter the creator of the debilitated, wizened, shrunken specimens of humanity to be met with in our courts and alleys. However, this revelation should, I repeat, quicken in these men that sympathy which is ever sensitive to the romantic and the tragic. The butter of the poor of the towns is now shown to be oftentimes poisoned—no other description is acceptable—beyond the standard of human weal. If this does not give the necessary impetus to the Butter Bill, enough will.

Labour Agitators and Rural Workers.

I am not sure that the persistent disregard by the Labour leaders of the agricultural labourer as an economic entity has not a certain method and disciplined intention behind it. If the agricultural labourers were permitted representatives at the trades' union congress, there would inevitably be very articulate protests against the ecstatic and extravagant visions which move that body to turgid enthusiasm. What would the ex-rural representatives think of an inflexible eight hours' day, with, I assume, no exceptions in favour of season trades? What would they think of the proposal that, though the weal

of the countryside depended upon it—and though their hours may have been fewer in winter—their work must cease in harvest-time the moment 480 minutes had been exhausted, even though two or three hours' labour would save the season's yield from the oncoming menacing storm? What, above all, would they think of the new proposal that the State itself should step in and definitely and affirmatively enact by specific law that the wages of any class of workers should not be less than 30s. a week? I wince that it would not be long ere they perceived that the realisation of either phantasy would mean an added impetus to the farmer in his progress towards the abyss of ruin. Their mouth might water at the prospect dangled before them; but they would know it was illusory, a mere will-o'-the-wisp leading to the morass of cruel misfortune. The absence of representatives of rural labour from the Trades' Union Congress thus means the absence of a discordant element, whose discord would be the offspring of a very practical comprehension and sanity.

Where Agitation would not pay.

Ever and anon we are told that we are on the eve of the evolution of a new Joseph Arch—a Joseph Arch with improved and enhanced powers as a demagogue. I remember that certain gentlemen pretended to see the new rural evangelist in Mr. Nicholls, M.P., the erstwhile labourer who entered Parliament *vis-à-vis* the Nonconformist pulpit. An estimable man assuredly is Mr. Nicholls—quiet, restrained, and unaffected. He is of too mild and natively-refined a type to seek to provoke hurricanes. The oratorical dynamite of demagoguism must be forever repugnant to his soul. I could imagine him happy in a library whose shelves were lined with the tomes of the Nonconformist fathers; but I could no more fancy him astride the storm of a strenuous agitation than I could at the head of a prancing battalion of cuirassiers or in the vanguard of the British fleet. As a fact, there are men in the Labour movement who would readily seek to inflame the agricultural labourer if they thought he would be inflamed. You may call spirits from the vasty deep, but the question is would they come; and these Labour leaders doubt that the harangues which move the very trees in Hyde Park to a sympathetic rustle would do more than arouse a tremor in the breast of ruralism. It is the appreciation of this fact which is the salvation of the countryside. Your real Labour agitator lives in an atmosphere of adulation and pyrotechnics; he is persuaded that he would find neither in the

British Possessions beyond the Seas AND THEIR London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

countryside. In a word, agitation there would not pay.

Mr. Rider Haggard and Canadian Emigration.

Will Mr. Rider Haggard restrict his emigration advice to the unemployed? Will he suggest that, while means should be taken to retain the rural labourers to the rural side (I am bound to say that he has sought by a practical policy to induce this), a formal effort to export the unemployed should be initiated. Well, if he did this, I do not think he would have the overwhelming gratitude of the Canadian Government. Of course, that Government is anxious to welcome muscle and sinew from the motherland; but I do not conceive that Sir Wilfrid Laurier and his fellow ministers are so obtuse as not to comprehend the physical, mental, and moral character of the unemployed—that they do not know that of a great section it can be said that if they are not physical weeds, they are morally undesirable, in that they have a double dose of the spirit of waistrilom, and that if they are not one or the other they have so developed the brooding mood of discontent until it has become a disease. Of course, there are desirable men among the unemployed—victims of a pitilessly-dogging misfortune; but the difficulty would be in a policy of emigration to distinguish between one class and the other. Well, at least we must be thankful that Mr. Rider Haggard has not lent his great authority to the movement whose leaders aver that you have only to draft the unemployed—be he desirable or but a street-corner loafer—to our own countryside to make of him a rehabilitated man and a complete agriculturist. We might commend this Canadian emigration policy if it would rid the rural side of the menace of colonies of the unemployable.

Nonconformity and Small Holdings.

It is bad enough that the establishment of small holdings should have been in a measure made a partisan issue. Is the problem also to be made a religious issue? I see that at a meeting of the West Norfolk Federation of Evangelical Free Churches the creation of small holdings was advised, because "they would tend to the strengthening of rural Nonconformity." What shall we hear next? Will rich Nonconformists be advised to assist in the creation of small-holding colonies, because they could be utilised as forcing-houses for the growth and development of Dissenters? Will special boards be appointed with a view to seeing whether applicants for small holdings are sufficiently well-grounded in the tenets of Luther, Dodsworth, Whitfield, and Wesley? Will the acceptance of Dr. Clifford as a modern Melancthon be regarded as an imperative preface to the cultivation of the small holding soil? Of course, the unarrested depopulation of the villages must undeniably have had a painful effect on the vigour and vitality both of Conformity and Nonconformity; but this attempt to stay it by means of a denominational effort which shall regard the sectarian livery as of supreme importance is to be deprecated. Religion has really ought to do with the creation of small holdings; and if small-holding colonies were to be utilised for the provision of members of this or that sect they would introduce a narrow and unpleasant element into rural economy. Perhaps I have mistaken the purpose of this discussion. I can only hope it is so.

FARMS

BATH HORSE SHOW.

1. Weight-carrying Cobs in the Ring. 2 Judging the Champion Hunter Class, Mr. J. H. Stokes' Whiskey, the Winner, nearest. 3. Mr. W. S. Pinsent's Fernishurst Lady Olivette, Winner of the Hackney Horse Society's Medal. 4. Mr. J. H. Stokes Splasher. Winner in the Four Year Old Hunter Class.

BATH HORSE SHOW took place on Wednesday and Thursday in fine, cool weather, and was successful in every respect. As a social function, the exhibition maintains its position, and there was a brilliant company present. There was a strong revival of entries this year, there being 100 Hunters, as many Hackneys, and many of the finest leapers in the country competing for prizes of the aggregate value of £350.

In the Hunters' classes the judges were the Right Hon. W. H. Long, M.P., and Mr. Romer Williams. Eight geldings entered the ring in the open event for the heavy-weights, and little complaint could be found with the verdict which placed Mr. J. Drage's Matchbox first, with the handsome Ebony, of Mr. A. Cory-Wright, second. In the middle-weights there was virtually no opposition to the famed Whiskey. The celebrated Irish horse romped home an easy winner, thus adding another to the over fifty prizes which Mr. Stokes has obtained with the gelding. The blue ribbon was awarded to Mr. Drage's shapely brown gelding, Nugget. Quite a strong class of novices turned out, and the principal prize went to the Market Harborough stable with Goldleaf.

The four-year-olds were one of the strongest classes of the day, attracting no fewer than seventeen entries. Once more Mr. J. H. Stokes was to the fore, with Splasher.

In the limit class for middle weights the wisdom of the committee in excluding the well-known prize horses was apparent, for there was a capital entry and keen competition. Some diversity of opinion reigned as to whether Mr. J. L. Nickisson, of Swindon, was entitled to the first prize, as there was a suspicion of lameness about his mare.

The judging for the champion Hunter, which wins the £25 silver cup presented by Captain Forester, took place in the afternoon, and was followed with the keenest interest. The six first prize-winners eligible to compete all entered the ring, but there was never any doubt as to the result, and the judges were fully in accord with the popular sentiment in awarding the honour to the successful horse Whiskey, who thus again confirmed the general opinion that he is among the best Hunters at present in the prize ring. The reserve champion was forthcoming in the five-year-

old gelding Matchbox, which Mr. J. Drage has only recently purchased.

The hacks were well up to the average expected to be seen at a Bath show, and this is high indeed. Mr. W. J. Tatem, of Pen-y-lan, sent over the pick of his lot, and he was very successful with his well-known Pen-y-lan Perfection, which has won for him a lot of prizes in her career. The blue ribbon went to Swindon, Mr. T. H. Deacon scoring with his gelding, Brown Bread; while the third prize was taken away by a brown mare named Ladybird, owned by Mrs. Henegan, of Cheltenham. The weight-carrying cobs were rather a mixed lot, and it is doubtful if all of them came up to the necessary standard. Mr. W. J. Tatem produced the winner in Pen-y-lan Sportsman.

The ponies were a nice lot, Mr. W. Foster, of Moseley, putting out the best in his six-year-old Mel Valley's Treasure, Mr. J. L. Round (Wellingborough) second with Berkeley Cladiv, and Mr. G. Griffiths (Sneathwick) third with Berkeley May Day.

The harness events, as usual, attracted a good deal of attention. For pairs not less than 14 hands 2 inches the entries numbered five, and four competed. The stylish bay pair, Hopwood Horace and Hopwood Spark, owned by Mrs. Batt, deservedly won the first prize. The tandem class only attracted three entries, and the placing was Mr. H. Frank first, and Mr. A. G. Verrier's pair—County Squire and County Gentleman—second. Nothing could touch the beautiful and stylish mare, Kissington Kit Cat, in the single harness class, the nearest competitors being Mr. Jerman's Pindersfield Ruby II. and Mr. T. Smith's Shirley Dasher. Of the thirteen single harness horses not less than 14 hands 2 inches that were entered, Heathfield Squire, that grand mover belonging to Messrs. Carr and Co., was excellently driven by Mr. A. Butcher, and took first prize.

A Hackney's Society's medal was awarded last week to Mr. W. S. Pinsent, of Newton Abbot, for his chestnut mare, Fernishurst Lady Olivette.

Second Day.

On the second day the Hunter judges—the Right Hon. Walter Long, M.P., and Mr. Romer Williams—commenced their duties early. In

passing, it is worthy of mention that these two judges had the pleasure of acting in a similar capacity 23 years ago, at the inaugural Bath Horse Show, and their meeting on this occasion gave mutual pleasure. One of the first classes to enter the ring was that for yearlings, and a really promising lot of youngsters came up for selection. Mr. R. S. Salway won the premier honours with a remarkably nice gelding, named the Vicar, a son of Bass Rock, showing plenty of bone and quality. Two-year-olds created a record for quality, all the animals being of the right sort. Out of the seventeen entries, Mr. J. H. Watson, of Kidderminster, emerged first with his chestnut gelding Juggler, a horse of fine quality and points, and likely to be heard of again.

Quite a surprise was created in the three-year-old Hunter class, for, with her Dublin victory so close at hand, most people thought that Mr. J. A. Mullins' chestnut filly, Paleface, would retain her place. She, however, could get no nearer than reserve. The first prize winner was forthcoming in Mr. W. J. Tatem's Pen-y-lan Omerod, a magnificent chestnut gelding, possessing excellent bone, which has improved much since last year. The brood mares were a capital lot, and Mr. W. L. Cotton, of Clink, North Wales, won deservedly the premier honours with his black mare Creole, a mare of exceptional quality and bone. Mr. J. A. Mullins was represented with his well-known prize winner, Gaiety Girl, which got the blue ribbon for second place. Juggler, who won in the two-year-old class, secured the Hunters' Improvement Society's medal, the yearling Vicar, first in his class, being placed reserve.

In the harness section and jumping classes Messrs. Walter Lloyd and Alfred Rowell again officiated as judges. In the pony event, for animals not exceeding 14 hands 2 in., Mr. W. Foster, of Moseley, repeated his success of the previous day, beating eleven competitors. The single harness horses saw a number of animals exhibited the previous day again appearing in the ring. Mr. W. S. Pinsent (Newton Abbot), who had won a medal with Fernishurst Lady, topped the class for horses not less than 14 hands 2 in. On Wednesday the famous bays belonging to Mrs. H. Batt took the first prize in the pairs from Messrs. Carr and Co.'s chestnuts, and the same

order was observed when the horses met in the tandem class.

A medal awarded by the Hackney Horse Society, fell to Mr. H. Frank's mare, Tiesington Kit Cat, which had a successful time at the show.

Birmingham Shorthorn Show & Sale.

The Birmingham Exhibition Society this year had a particularly acceptable manner of celebrating its sixtieth exhibition by means of swelling out their hitherto one-day into a two-day event, the number of entries having rendered such a course necessary, and furthermore the classes were increased also, the net result being that the total of entries was 404, of which 229 were females, 39 of these having calves at foot. There were 175 bulls, many of these bearing cards that they had passed the tuberculin test. The judges were: For cows, Messrs. J. Graves, Heskett Hall, Wighton, Cumberland, and Arthur Hiscok, Notcombe, Shaftesbury; for bulls, Messrs. C. W. Brierley, The Furs, Brimfield, Hereford, and F. Miller, Le Belem, Birkenhead. In a preliminary view the majority of the classes did not show many animals of outstanding merit, many of them evidently being sent up for clearance. In the subsequent sale any animals showing merit, whether noticed by the judges or not, were properly and substantially recognised by the buyers, particularly so with the bulls. In the class for cows over three years old there were close on 100 entries. It was at once seen that the judges desired milk, and there was no getting away from the very superior merits of Cuthorpe Sweetheart, bred by the late Mr. J. P. Cross, and exhibited by Mr. G. Murray Smith; she was a big-framed cow, with a good coat and an udder that showed her milking proclivities. Mr. Albert Green was second with a rare useful five years old cow, Lavender Queen, but she was fairly eclipsed by the other. The reserve went to Mr. C. E. Odehouse's Coo 2nd, which was full of true Shorthorn character and just in her right condition to meet the eye of the judge. Highly commended cards were bestowed on Mr. F. G. Howarth's Susan Girl 2nd, Messrs. Denny's Fairleigh Princess and Rose Bud, Mr. J. W. Sander's Nelly Lee 15th, Mr. Benjamin Read's Duchess Annie 20th, Mr. J. E. Dennis's Charming Jennie 2nd, Mr. James T. Hobbs' Lady Ethelred. Numerous commendations were also given in this class.

There were just under fifty in the class for heifers exceeding two but not exceeding three years old. The first prize went to a very smart level heifer, Lady Primrose, sent by Mr. A. J. Marshall, though she had a very good second in Mr. George Freeman's Holywell Marigold. There was a very considerable falling back to the reserve animal, the Earl of Ancaster's Choice Ada; highly commended cards were bestowed on Mr. James Horlick's Diana Dennison, Mr. Murray Smith's Gurley Rose, Mr. Benjamin Read's Coral Rinz, Mr. A. S. Danton's Pen Favourite, Mr. James T. Hobbs' Hampton Daisy, and Mr. Alfred A. Haley's Treasure 2nd, Messrs. Denny's Chiddingstone Nonpareil, Mr. Frederick Ames' Dorcas, and Messrs. Smith's Harthill Princess. The commendations were numerous, and it was a thoroughly good class.

The class for heifers between one and two years old was not quite so good as a whole, there being in it some of the most indifferent specimens yet seen at Birmingham within recent recollection. Here the first prize went to a very even heifer with plenty of character about her, Rolleston Crocus, exhibited by Sir Oswald Moseley, second prize going to another very smart heifer, Mr. W. S. Thompson's Shady, the reserve going to Mr. F. J. Steward's Cherry 5th. Highly commended were awarded Mr. John Lucas's Scotch Girl and Sweetmeat, Mr. F. J. Steward's Shenley Rose 2nd, Mr. James T. Hobbs' Hampton Flower Girl, Mr. A. J. Marshall's Primrose Queen, Mr. R. H. Norman's Severn Red Wallflower 2nd, Mr. F. G. Howarth's Guild-fild Dolly, and Captain J. S. Reeve's Princess 11th.

The class for heifer calves filled fairly well, and really good useful calves were in the ascendant here. First went to Mr. F. Phillips' Pretty Pansy 3 h, very level, with nice coat and very deep. Second went to a white one, Mr. Benjamin Read's Coral Maid, very level, and which looked like topping the class when viewed broad side, but she was not quite so good behind; reserve went to Mr. F. J. Steward's Brigstock Lily Careless, which did not meet the eye so well forward; highly commended went to Mr. Frederick Ames' Princess Josephine 6th, Mr. D. H. Mytton's Barb, Mr. A. J. Marshall's Scottish Primrose, and Mr. John May's Knowl Queen 6th.

The male section of the show was a very mixed one, and it was very evident that the various herds had been well looked over before by various gentlemen interested in the export trade. There was a big entry of bulls exceeding eighteen months old. The first prize went to an excellent two-year-old bull, Mr. J. H. Straker's Giv Victor, a well built bull with good back and quarters, but rather short in the neck; second went to a rather unusual type of bull exhibited by Mr. John Charleston. Windmill Sovereign was

bred in Ireland, it is exceptionally deep on abnormally short legs, but very weighty and roomy; the reserve went to Mr. E. Phillips' Field Marshal, which by many was deemed to be one of the best, if not the best, animal in this class. Mr. Thomas Jones was highly commended with Marden Douglas 2nd. Sir Alexander Henderson also received a similar notice with Buseet Pioneer, the same honours also being bestowed on Mr. A. F. Webb's Alstone Pride and Miss Alice de Rothschild's Waddeson Eager. Much merit lay in the next class for bulls between twelve and eighteen months old. Here Mr. George Gerrard led the way with a very hardy, coloury bull, Hindlip Jester, though it was very closely indeed by Mr. John Handley's San Remo, very level on the back with good middle, but being a trifle gay at end spoilt its chance for premier honours. Third went to a very useful bull indeed sent over from Ireland by Mrs. Walsh. Baron Fortune did credit to its breeder. Fourth prize went to a very hardy roan bull shown by Earl Howe, and it was lucky indeed for him that the fifth prize-taker, Lord Fitzhardinge's Lord Woodford, was a bit timid, and therefore did not show itself to full advantage whilst under the judges' eye. It was a very smart bull. Miss Alice de Rothschild's Waddeson Noblesse was reserved. The highly commended were the Executors of the late Mr. John Naylor with Leighton Squire, Mr. Alfred Hayley's Whitewall Hector, and the Earl of Powis's Powysland Earl.

The younger class was not over filled. It was for bulls under twelve months. The first prize went to a growing bull, Mr. H. C. Lewis's Green Meadow, that did not stand quite so evenly as some of the others, and a very close competitor indeed was the second prize-taker, Mr. Frederick Ames' Hawford Star, a very straight, even bull, very hardy, with a nice coat; reserve went to Messrs. Charles Jeffries and Sons' Broadmoor Monitor, a very shapely bull, but rather full forward. Lord Rothschild was highly commended with Good Boy, and commended cards were bestowed on Mr. D. H. Mytton's Retriever and Captain W. B. Harrison's Aldershaw Bonny Jester.

The Sale: Good Prices.

There was a good demand for the best bulls for exportation, agents attending the sale on behalf of the owners of South American and German herds.

The winner of a strong class of bulls exceeding eighteen months old was Giv Victor, the property of Mr. J. H. Straker, of Cribbridge-on-Tyne. There was a high bidding for him, and ultimately a sale was realised at 200 guineas, the purchaser being Mr. Parkinson. The second prize animal, Windmill sovereign, was bought by Mr. Battle at the modest figure of 26 guineas. Mr. F. Phillips, of Andoverford, exhibited Field Marshal, a good quality bull, and he changed hands at 52 guineas, Mr. Stockburn becoming the buyer. Mr. E. Berry's Lynx, which formerly belonged to the Welshpool herd of Mr. D. H. Mytton, was sold to Mr. Edmondson at 53 guineas. Belfry, a massive two-year-old, sent by Mr. R. Ford, of Driffield, was bought on behalf of Mr. F. Webb, the price being 150 guineas. Another excellent animal in this class was Weston Recruit (which belonged to Mr. Joseph Pearman, of Kingsbury), bred by the Earl of Camperdown. He appealed to the eye of many, and after brisk bidding the hammer fell at 130 guineas. The purchaser was Mr. Bucka, and the animal will be despatched to Germany. Competition was none the less keen when Waldesdon Eager was highly commended. Miss Alice de Rothschild, from whose herd the bull came, disposed of him to Mr. E. Webb at 165 guineas.

Mr. Bucka paid 61 guineas for King of the Pansies, exhibited and bred by Mr. F. Phillips; and Hayle Victor, entered by Mr. F. Platt, Newark, was sold to Mr. J. B. Stevens at 41 guineas.

Nearly one hundred bulls, exceeding twelve and not exceeding eighteen months' old, were exhibited. The class was headed by Mr. G. Gerrard's Hindlip Jester, a finely developed red and white, calved in April of last year, which was bought by Mr. Parkinson at 95 guineas, who also paid a similar figure for Baron Fortune, a son of the well-known Good Fortune, which was tallied by Mrs. E. Walsh, of Cote Hill, Llandudno. For the winner of the fourth prize 46 guineas was paid by Captain Corfield for Gopsall Mast-erpiece, from the Leicestershire herd of Earl Howe. The highest price realised (205 guineas) was given for Lord Woodford (which was placed fifth in the class), from the herd of Lord Fitzhardinge. A son of Balloch Victor, he is an animal of promise and great Shorthorn character. He was bought by Mr. L. Turner, of Newark, paid 105 guineas for Adholton Clipper, a well developed red bull from the farm of Mr. A. W. Hicking, of Nottingham. For Leighton Squire, shown by the Executors of the late Mr. John Naylor, 110 guineas was paid by Mr. F. Webb; Lord Talbot, from the herd of Mr. C. E. Howard, Lincoln, was bought by Mr. Coxon, Ebor, for 61 guineas; and Mr. F. Ames's Hawford Boy 14th changed hands at 81 guineas,

the purchaser being Mr. Edmondson. Other prices realised were:—55 guineas for Mr. Joseph Stratton's Rupert, bought by Mr. Parkinson; 40 guineas for Mr. Heap's Wordsley Duke, sold to Mr. Green; 53 guineas for Mr. G. M. Smith's Gumley Planet, which went to Mr. Dudling; 52 guineas for the highly commended Powysland Earl, sent by the Earl of Powis, which was secured by Mr. Jonas Webb; 77 guineas for Mr. W. C. Barling's Boy, bought by Mr. Parkinson; and 85 guineas for Mr. Falconer's Secret Wanderer.

There was a fairly good lot of bulls under one year. The highest price was 120 guineas, paid by Sir Richard Cooper, Bart., for Retriever, stabled by Mr. D. H. Mytton. Broadmoor Monitor, bred by Messrs. C. Jeffries and Sons, Bourton-on-the-Water, fetched 57 guineas.

Peterborough Foal Show.

The annual foal show at Peterborough on Wednesday attracted a fair entry, Shires being the feature, while Hunters and Hackneys were also well represented. Earl Egerton of Tatton took both first and second prizes in the colt class, and also secured the championship and reserve for the Tatton Stud. Of the fillies the pick was a well-turned bay of Messrs. Houghtons, Leice ter, by the Sandringham bred horse, Benedick, the second being Mr. J. E. Thurman's winning Dunsmore Jameson bay, while Sir P. A. Muntz took both third and fourth prizes with bays by Buseet Harold and Dunsmore Jameson. Mr. Poles and Mr. J. E. Thurman's foals were the leaders in the tenant farmers' classes, and Mr. W. Horrell's Thorney won Sir Walter Gilbey's prize for the best foal by Blythwood Conqueror.

The Hunter class formed the best class seen at Peterborough for years, and prize of place was taken by a new comer in a colt bred by Mr. G. F. Stops, of Market Harborough, and sired by Lucifer II., whose appearance had been delayed owing to his having made a too early acquaintance with barbed wire. Mr. W. Carter's Merry Matchmaker colt, the winner at Peterborough summer show, was second, and Mr. H. D. Adley was third with a filly by Master Bob, a Lincolnshire winner.

Mr. Meacock's bay colt by Middleton King headed a meritious class of Hackney foals.

Mid-Somerset.

The fifty-fourth show of the Mid-Somerset Agricultural Society was held at Shepton Mallet on Tuesday in most favourable weather and with a good entry. Shepton Mallet occupies a prominent place in the cheese world, the neighbourhood containing some of the best known makers of Cheddar in the kingdom, and the substantial prizes in the open class, amounting to over £40, attract a good deal of competition, and it is looked upon by the makers as the beginning of the battle, which ends at Frome. This time there were 31 competitors in the big event, and the first prize and championship, which carries with it the silver bowl, value 10 guineas, went to Mr. T. C. Carley, of Cottesloe. Mr. Henry White, of Mappowder, Blanford, was placed second.

The cattle were hardly up to the average. Mr. A. M. Ciddle was successful with 50 ewe class in the dairy cow in calf in milk class, and he also scored in the heifer event. The old and young

bulls were not numerous. Fat stock was limited to three competitors. Mr. E. P. Alexander, of Holt, getting the champion silver medal for one of his black Polls. A fair entry was obtained of the popular Channel Island breed, Mr. A. Pocock, of Calne, securing the championship with his Jersey heifer, Grove Lady.

A record was created in the horse classes. The cart horses were a representative lot, and there was a keen competition for the medals. In the section for Hunters nearly twenty brood mares were exhibited, the Hon. Mrs. Melsau, of Longburton, furnishing the best. The medal offered for the best yearling filly or colt went to a shapely chestnut foal by Pantomime. Probably the best class was that for the three-year-olds, Mr. John A. Mullens, of Longcross, Surrey, following up his Dublin success with his chestnut filly, Paleface. In the weight carriers, Mr. J. H. Stokes continued his winning career with the noted bay gelding, Whisky; and Mr. A. Cory Wright got second place with his handsome black gelding, Ebony. Mr. Stokes was also successful in the light weight carriers, with Splasher. In the driving class, five competitors entered the ring, Mrs. A. J. Butcher again winning two firsts for her husband's brown gelding, The Gentleman.

Rutland.

The fifteenth annual show in connection with the above society was held at Oakham on Thursday, and was in all respects, both as regards number and quality, equal to any of its previous exhibitions. In the cattle classes there were some fine animals, and the sheep were of excellent size and quality. There were also an increase of thirteen entries upon last year, the numbers being for this year: Cattle, seventy-one entries; sheep, thirty; Shire horses, 100; Hunters, 125; total, 326 against 313 in 1905. As in previous years the cattle and sheep were arranged in the Poultry Hall, and the judging of horses took place in the Lime Kilns Field.

The cattle were of good quality, although not of outstanding merit. The cup for the best beast in the show was won by the Marquis of Exeter's roan heifer, Tea Rose, this being the first time the animal has been exhibited. It is one year and five months old, and promises well for the future.

In the horse section there was an exceedingly good show of Shires, and in the young classes were many animals of great merit. The Hunters were well up to the character of this show. Mr. Bradley's Holslead Duchess III., which was first in the four-year-old Shire class, is a well-known winner.

Abergavenny.

The annual show of the Abergavenny Agricultural Society took place on Thursday, the attendance, however, suffered from the wet on the previous day, otherwise the conditions were most enjoyable. Light horses were far & good classes, though not strong. Miss Pillmer's winning Hunter brood mare was of very nice character, and yearling Hunters were capital. The cart horse classes produced strong competition. Three-year-olds were headed by Mr. Peter Coats's Clifford Smiler. The two-year-olds caused a great deal of discussion outside the ring. First and silver medal went to Mr. E. Mosey's horse, Honan Belle, second to Mr. Peter Coats's Clifford Kelpy, but Mr. Frank Evans's remarkable gelding who was first at Leominster and other shows lately, was only highly commended.

The cattle were stronger classes than usual. Hereford breed has apparently captured the show entirely. In the open family class, Mr. Peter Coats came an easy winner with the well-known Endale, who was in the prime of condition, with a Girtin Girl three-year old cow by Rage Protector, and calf. Mr. David Jones's Crickehowell winners were second, his bull being of great substance and most promising. Mr. D. Jones also won in a big class of yearling bulls, with a very substantial and creditable animal. Bull calves must have been a rather difficult class to judge. Mr. D. A. Thomas, M.P., won handsomely. Pairs of cows were good enough for any show. Mr. D. A.

thors were the best for several years past; in fact, the show was an all round success and very gratifying to all concerned. Sheep form the most important feature of this show, and last week they fully upheld their reputation. Both the Wensleydales and Scotch and half-breeds were remarkable for size, typical points, and excellence of wool, the lambs in every section being very fine. Some first-rate milking cattle were on view, whilst horses, which were not great, consisted chiefly of heavy draught animals. Dogs and poultry were also shown, whilst the cheese section was, perhaps, the feature of the show, apart from the sheep.

SECRETARIES.

Mr. W. A. BROWN,
Driffield.

Leicester Sheep Breeders' Association.

Thomas, M.P., also easily won with pair of yearling heifers. Mr. Peter Coats's Pearl, a cow well known in the showyards, were very useful. The winning aged ram was a very sturdy Shropshire wanting scale, second a stylish Kerry wanting substance, third an Oxford whose weak neck must have spoiled his chance of a better award. In the pig classes the sows were all white; first prize went to one with pigs, while the winning boar was a Large Black.

Hawes.

Some time ago the Hawes Agricultural Society decided to increase its district area to sixteen miles, and that this alteration has proved a success was apparent at the show held on Wednesday, for both the entries and the attendance of visi-

SHOW GOSSIP.

The list of judges for the forthcoming Smithfield Club Show have just been published; space prevents their reproduction in this issue.

Entries for the Altrincham Show closed on Saturday, but they will still be received at double fees up to the 12th. It is the largest one-day show in the kingdom. £1,800 is offered in cash, with 203 specials, medals, and championships. The greatest care is taken of all exhibits, which are a 1 under cover, and fed by experienced assistants. There are three railway stations that serve the show-ground, and trains from Manchester run to Altrincham every few minutes.

The Ipswich Fat Cattle Show will be held earlier than usual this year. In the ordinary course it would have been held on December 10 and 11, but as this clashes with the Smithfield Club's show, the Suffolk fixture has been brought forward by a week, and will be held on Monday and Tuesday, December 3 and 4. The Marquis of Bristol succeeds Mr. Bence as president for the year, and has offered a prize of ten guineas for the best beast in the yard. The accounts showed a total receipt, including balance from previous year, of £521 12s. 6d., and the expenditure left a balance of £20 15s. in hand.

The account presented at a meeting of the Tiverton Agricultural Association, held last week, showed that there was a profit of £123 15s. on this year's exhibition, a highly gratifying result for a local society. Sir Edwin Dunning, who presided at the meeting, said the society had £500 in cash in the bank and £300 worth of assets on the show ground, which, he thought, was a highly satisfactory result of seven years' working. Subscriptions totalled £457 9s. 11d., but only the small amount of £60 13s. was collected from 244 men who followed agriculture as a business. There was a considerable falling-off in Shire horses and Hunters, and Sir Edwin suggested that the time had come to abolish novice classes (which had served their purpose), and pay more attention to attracting the very best in all classes. He also thought more attention should be paid to catering for the people who came to the show for mere amusement.

The Mayor of Bideford (Alderman J. Cock) presided over a preliminary meeting of the local committee to make arrangements for the visit of the Devon County Agricultural Association to Bideford next year, and the chairman and secretary were authorised to sign the guarantee required by the county society.

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

MARKET DRAYTON AND DISTRICT AGRICULTURAL SOCIETY.

The SEVENTH ANNUAL SHOW will be held at THE SYCH, adjoining the Railway Station, Market Drayton, on THURSDAY, SEPTEMBER 20, 1906. Horse Leaping, Single Turn-outs, and Pairs, open to the world. Dogs, Kennel Club Rules. Poultry and Pigeons, open. Sheep Dog Trials. Bees, Honey, etc. 14 valuable Cups and Medals for Horses, Cattle, Cheese, etc.

Entries close for Poultry and Pigeons Sept. 10, Dogs Sept. 13, Horse Leaping and Turn-outs Sept. 19. Schedules ready.

THOS. PODMORE,
Hon. Sec.

Mornington, Market Drayton,
Salop.

GRANDSDEN AND DISTRICT. At GREAT GRANDSDEN, SEPTEMBER 25, 1906. Entries close September 11.

R. J. KIRBY, Secretary.
Great Grandsden, Sandy, Bedfordshire.

LEWES SHEEP FAIR.

TO FLOCK MASTERS, FLOCK BREEDERS, AND OTHERS interested in the noted breed of SOUTH-DOWN SHEEP.

THE GREAT FAIR will be held on SEPTEMBER 21, 1906, at the County Town of Sussex, LEWES, about one mile from the Station, on the L.B. & S.C. Railway, and within 14 hours from London. Sheep penned, including Ewes, Lambs, and Rams, about 18,000.

CLYDESDALE HORSE SOCIETY. STUD BOOK. VOLUME XXIX.

Entries now being received at 50 per cent. additional on ordinary fees. No Schedules issued after 1st October.

ARCHD. MACNEILAGE,
Secretary.

93, Hope Street,
Glasgow.

SHAP AGRICULTURAL SOCIETY.

44th ANNUAL SHOW at Shap, on WEDNESDAY, SEPTEMBER 19, 1906.

Increased prizes for open competition in Horse Leaping.

Schedules may be obtained from the Secretary,

THOS. GELHART,
Mill Flatt, Shap.

MERIONETHSHIRE AGRICULTURAL SOCIETY.

GREAT SHOW at TOWYN, FRIDAY, SEPTEMBER 14, 1906.

Over £300 in prizes. Dogs under Kennel Club Rules. Open Leaping and Trotting contests. Entries closed Aug. 20.

R. ROBERTS, Secretary.
Rhydygarnedd, Towy.

FROME SHOW, WEDNESDAY, SEPTEMBER 26, 1906.

All Entries close Wednesday next, September 12—T. C. HARDING, Auctioneer, Frome, Secretary.

FANCIERS' GREAT POULTRY SHOW Same and Following Day.—Messrs. YOUNG & FRICKER, Palmer Street, Frome, Hon. Secretaries

SUSSEX.—LINDFIELD and LEWES SHEEP FAIRS.

To Flock Masters, Flock Breeders, and others interested in the noted breed of Southdown Sheep.

THESE GREAT FAIRS will be held on AUGUST 8, 1906, at LINDFIELD, one and a half miles from the first class Station of HAYWARDS HEATH, on the L.B. and S.C. Railway.

And at the County Town of Sussex, LEWES, on SEPTEMBER 21, 1906, about one mile from LEWES STATION, on the L.B. and S.C. Railway.

The Stations are within 1 hour and 14 hours from London.

Sheep penned, including Ewes, Lambs, and Rams, at LINDFIELD, 13,000;

At LEWES, 18,000.

DAIRY SHOW, LONDON, OCTOBER 9 to 12.

After Monday, September 10, until noon on the following Friday, entries only accepted at extra fees.

WM. C. YOUNG, Secretary,
12, Hanover Square, London, W.

Midland Notes.

A LITTLE sprinkle of rain last evening was followed by another light shower or two to-day, and a falling glass, together with the general aspect of the sky, gives hope of more to come. It will take more than showers, however, to make good the effects of the drought and heat. Wells and springs have probably never been lower, and everywhere, but more especially on the eastern side, water is being carted long distances for stock at great expense. We have noted already a case of Warwickshire wheat being harvested, milled, and baked within the course of a few hours. In Worcester and Gloucester, also, it is so dry that one hears of its going straight to the threshing machine and market without any preliminary stacking. A week's steady downpour is needed to encourage pastures, which are forcibly described as "bare as the roads," and give a fresh start to the roots, which are simply scorched up and prematurely ripening, as are the late potatoes. Hay will be wanted much earlier than usual, which is bad for those eastern districts, as for example in Nottingham, Leicester, and Northampton, where it was generally light; and to make matters worse, the acreage of catch-crops which provide a timely bite of green fodder during early spring will certainly be less this season than usual. The stubble fields, in point of fact, are hard to day in many cases, and as unploughable, as they are often after a long frost; and even on the lighter soils which can be broken up, it is hopeless to expect any seed sown in present conditions to germinate.

WE have been treated lately to some entertaining newspaper reading on the subject of the present milk scarcity. Farmers, says the writer, are giving up milk selling in order to make fortunes out of cheese; another blames the milk chocolate industry at Bourville; a third relates a circumstantial story of milk being slain wholesale for conversion into beef in consequence of the Chicago meat-packing disclosures. In point of fact, with pastures affording nothing but "baked meat," and none too much of that, the milk yield of ordinary herds has fallen off by 20 per cent. or more—some put the figure at 30 and even 40 per cent. Retailers in Birmingham have therefore had to advance prices from 3d. to 3½d. per quart, while at Burton the advance is from 3d. to 4d., and an increase of a penny is being enforced also at Coventry and other places.

MEANWHILE, there is a strong suspicion among farmers that the retailers get a great deal too much of the profits of the trade. Naturally the latter deny it. "Our profit," said the manager of a leading Birmingham company to the present writer a short time ago, "comes mainly from our tea rooms and sundries; a half-penny per gallon extra on the milk we buy would wipe out all our profit under that head." But, if the dealers speak truly, the expenses of distribution must be inordinately large, milk which is bought at 6d. per gallon being retailed at 1s. 2d. From the farmers' point of view the condition of the trade is rather lamentable. Where there is effective combination—as there is on the Worcester side—as much as 8d. in summer and 10d. in winter is realised; but even in this time of scarcity, when Worcestershire producers get 8d. without difficulty, there are farmers in Staffordshire and elsewhere who are ready to accept 5½d.—a ruinous price as things are at present.

THE one good thing about the present condition of affairs is that the dairyman, or some of them, seem to be realising that they have gone too far. Not that they think of taking any step that might reduce their own profits; that would be too much to expect. But some are thinking now that it would pay them better to ensure a regular supply by paying the producer a little more, and giving him a fair chance to resort to artificial feeding stuffs when a bad season comes. The doubt in their minds is, can the extra cost be extracted from the pockets of the general public? And the verdict among men of experience is that it might be. The secretary of the Birmingham Farmers and Dairy-men's Association (a retailers' society) recalls, for instance, the days when 4d. and 4½d. per quart were regularly paid locally for milk. "The public, even the poorest of them, would not object to pay the price again," he thinks, and "whatever may be said to the contrary, unless things alter materially soon, they will have to pay it."

A Birmingham Daily Post representative, I notice, has been interviewing Mr. W. D. Rowland, the secretary of the Warwickshire Farmers' Association, with reference to the statement in this column to the effect that the late Lord Leigh hoped for an extension of fruit growing in the county, and pressed the question on the association without any great result. As Mr. Rowland points out, members of the association have paid visits of inspection to the fruit plots

at the Harper Adams College and University College, Reading, while there has been an increase in the acreage of strawberries, especially at Allesley and Stoneleigh, while fruit trees have been planted at Bubbenthall, and some growers have put up more glass. So far, so good. But "any considerable strides," adds Mr. Rowland, "could not be made" under present conditions, which is much what was said in these notes. The cost of planting and the system of land tenure are the difficulties he finds in the way, and his plan for stimulating planting is to let farms on thirty-year leases. No doubt that would be an encouragement; but at present, whatever the terms of leases may be, there is a further obstacle in the prevalent belief that the soil and climate of the county are not fitted to fruit. It was presumably to test the truth or otherwise of that idea that the county council started its experimental fruit plot at Hatton, and now that the Hatton results are becoming known we may expect to find less reluctance to plant in suitable places.

Sept. 6, 1906.

OBITUARY.

Mr. A. C. Skinner.

The death took place on Monday evening at his residence, Pound Farm, Bishop's Lydeard, near Taunton, of Mr. Alfred C. Skinner, who was well known throughout the West of England as a noted breeder of Devon cattle, and successful exhibitor at the leading shows throughout the country.

Mr. Skinner was returning home last Thursday

The late Mr. A. C. Skinner.

week from a visit he had paid to Mr. Samuel Kidner, at Milverton, and when near his residence his horse shied at, it is supposed, some running water in the roadway. Mr. Skinner was discovered about midnight lying on the road by Mr. Morris Tavender, another farmer of East Lydeard, who was cycling home after seeing Taunton Carnival. The unfortunate gentleman was then in an unconscious condition, a wound in the head having bled profusely. Despite all that medical skill could do, Mr. Skinner passed away. Mr. Skinner was a man of heavy build, and was about sixty years of age. For many years he had been chairman of the Taunton Board of Guardians, and was also a member of the Somerset County Council. He leaves a widow and grown-up family, with whom much sympathy is felt in their bereavement.

Mr. John Knapman.

Mr. John Knapman, who for many years owned and farmed East Ash Estate, Southlawton, died at Okchampton on Wednesday of last week, aged 62 years. The deceased achieved great success as a prize breeder, and at shows won about 400 prizes.

Mr. W. P. J. Allsebrook.

Mr. W. P. J. Allsebrook, of Wollaton, near Nottingham, one of the best-known agriculturists in the county, and official valuer of stock to the Nottingham Corporation, died on Wednesday. He was a prominent member of the Royal Agricultural Society, and was generally regarded as an authority on agricultural subjects, particularly those connected with dairying.

WE MAKE GUNS

We sell to the user with only one small profit.
We sell for cash direct to the user.
We buy the finest materials to be obtained.
We pay cash for all materials.

We employ some of the finest workmen in the Gun Trade.

We use finest machinery for machine operations.

RESULT.

We sell for £25 Guns of a quality for which sportsmen have previously paid from £50 to £80.

We sell thoroughly reliable Guns.

We get the finest shooting it is possible for guns to make.

Our "Field" Hammerless Ejector Gun.—A perfect Ejector Gun of the finest quality, £25. It made with the best single trigger mechanism ever invented, £30. A perfect pair of these Guns, beautifully matched, £50. A perfect pair of Single Trigger Guns, £50.

"The Gun of the Future," as an Ejector, £15. "The Gun of the Future," without Ejector, £10. A sound and reliable gun, well made, and perfectly balanced, which will give entire satisfaction.

Pattern 8662, £6.—A sound and reliable hard shooting and hard wearing hammerless gun. Better than many sold at double the price.

Pattern 8358, £4.—A sound and reliable hard shooting and hard wearing hammer gun. Better than many sold at double the price.

ESTABLISHED 20 YEARS.

Banks: London and Midland Bank, Temple Row, Birmingham.

PRICE STREET, BIRMINGHAM.

SPORT ON THE FARM—A DAY WITH THE PARTRIDGES.

"What's bred in the bone comes out in the flesh" is an old and true saying where farmers are concerned, because from time immemorial they have been keen sportsmen, and they are just as keen to-day as ever they were, though perhaps means and facilities are not quite so good. Indeed in some cases it would have been better if this sporting spirit had been a little less marked, because sad stories could be told of men who have gone under through paying too much attention to sport and not enough to business. But all this by the way, and I will not dwell on it. It is a great pity when people who have to get their living fail to realise that the first consideration should be business, but fortunately there are plenty who understand this and are good sportsmen nevertheless.

The farmer sportsman moves in a circle of his own, and his strong point is his whole-hearted enthusiasm. Naturally his place is not amongst the aristocratic members of the sporting fraternity, but, bless you, he is happy and contented enough to take his stick and beat for his landlord on big days (if the latter is a good one), and he does not feel that he is losing one whit of his dignity by doing so. But when the farmer shoots himself he likes to have farmers with him or people who are connected with agriculture. Perhaps, my reader, you have formed one of such a party, and if so you will understand the feeling. No form, no ceremony, but mutual good fellowship; plenty of good fare, for the sporting farmer's forte is hospitality; with, perhaps, a bit of friendly chaff, and a help-yourself and enjoy-yourself feeling which tells you, without need of words, that if you don't you have yourself to blame.

Some people argue that the old type of sound, well-to-do, jovial, yet shrewd farmer has gone out. I mean the man who made money and yet found time to enjoy himself in a quiet way, and whose name was a household word over the country side. It is true we have not so many of this stamp as we should like, but they exist nevertheless, and we have farmers who occupy homesteads which have been in the family for generations, and cultivate their own land or hold the shooting rights on that for which they pay rent.

It was from a farmer of this type that I recently received a note saying that most of the corn was in, work was not particularly pressing, and it would be just as well to have a day at the partridges early in the month before someone else had them all. Fortunately for the acceptance of the invitation the worst of the heat wave had passed over, or I hardly know what would have happened, for you want all the sporting spirit that Nature could possibly endow you with to tramp after partridges with the thermometer standing at something over 90 deg in the shade.

Farmers differ from some other people over their sport, inasmuch as they do it thoroughly. They rise early and start early, and it was a delightful walk through the fields to the old homestead in the cool air of a delightful September morning. It made one regret that fine weather could ever do any harm, and except for the thirsty and parched crops, one felt that the Indian summer weather might continue for weeks to come. A cheery good morning, an invitation to breakfast, though we had already had one—this is the welcome one gets at the farm, then a smoke, a look round the stock and the sheep and then off. A few dogs turn up from somewhere, and they look as if they know just what is going to happen, and a couple of sturdy lads, sons of our host, who are home for the holidays, and whom we hope will be farmers themselves some day. Bill must come of course, and by the way, is the general factotum, who knows just where the partridges are located, and in fact knows everything about the places considering that he has been on it as boy and man for well-nigh half a century. It is Bill who trains the young horses for occasional days after hounds, buds the roses in the garden, prunes the fruit trees, suckles the weakly lambs, and nurses sickly animals back to a state of health. Bill is given charge of the cellar arrangements at harvest time with utmost confidence that the men will have enough without getting too much. In fact, Bill is like one of the family, and the good feeling prevailing between him and his master is delightful to see in these days of discontent and labour contentions.

The morning mists are rolling away as we pass through the paddock, and the sun's rays stealing through the trees in the adjoining orchard foretell another warm day. "I wish it would rain," is Bill's comment, as we kick up the dust in the turnip field and note the flagging of the leaves of the mangels; but rain is forgotten the next moment, for two dogs (Bill trained them) stand still, four guns come into position, and for a second we wait. Then a move in the roots, a whirl of wings, and bang! bang! bang! First blood, three birds drop, and the remainder are vanishing over the hedge. Do you remember, my reader, the first partridge you ever shot, because that exhilarating moment is lived over again each September when the first bird of the season is bagged. At the bottom of the field picking his way along the hedgerow, presumably in quest of berries, we see a cock pheasant, who hardly troubles to get out of his way. Our host does not rear pheasants, of course, but there are a few little spinneys on the farm, and Bill contrives to throw a bit of corn down occasionally for the benefit of the birds. He seems to know all about the cock, and points to a place in the hedge where there was a nest last June, and the mother brought off her brood in safety. We are not tied to any rules as to what we shall shoot, and an exciting bit of sport presents itself when the terrier sniffs round a heap

THE HEAD OF A TYPICAL RETRIEVER.

of old hedge brushings, which Bill says contain rabbits. It is true, and after the heap has been jumped on considerably they bolt, one this way, another that. We stop four, which are bagged, and Bill expresses approval. He doesn't like rabbits, because they get in the garden and eat off his young plants.

Fear of the editorial blue pencil and consideration for your feelings, my readers prevent me from dragging you, even in thought, over pasture and stubble, through roots and potatoes, which is the ground covered in our shooting tramp. Not much cover, but partridges are not gun-shy yet, and our bag is nicely filled when making a detour, and long after midday, six sweating, tired, and hungry beings enter the farmyard once more. Need I describe the next item? A farmhouse lunch! Is there anything equal to it? Good wholesome viands, home-grown and home-fied, with pressing invitations to keep on eating; and cider: such cider, the pure juice of the apple grown in the home orchard, not the wish-washy liquor which the man in the street buys for cider and rightly condemns it as poor stuff.

The mists are beginning to gather when our host observes that there may be a few rabbits sitting out near to the warren, and we might as well finish the day there. Compared with partridge shooting, potting rabbits may be considered slow work, but there is something very enjoyable in stealing quietly along a hedge-side in the cool of a September evening, hoping that at the next opening you will get the desired shot. But September evenings are short even at their longest, and darkness waits for no man. The rabbits scurry into cover as we return homeward, but they need have no fear, for they are safe in the gathering gloom. More refreshments follow, then a hearty handshake, and a cheery good-night. We feel satisfied, as we

have reason to, with the events of the first day of the season.

In passing, let me moralise a little. I am aware that it is not the privilege of every farmer to shoot partridges. Many tenants, of course, have to keep within limits given to them by the ground game laws, but though feathered game may be desired, there is good sport to be had with fur. Mind you, I am averse to farming rabbits to the detriment of land and crops, but it is an entirely different thing to encourage a few for the provision of quiet sport in summer evenings, and the more exciting pastime of ferreting in the winter. As for hares, well, everyone knows and regrets that in many places they are as extinct as the dodo; but in my case memory fondly lingers on the recollections of more than one good day's coursing in the Romney Marsh in Kent, where hares grow big and where the farmers are keen sportsmen and preserve them. Hard things have been said about puss, and she has been greatly persecuted, even to the extent of extermination in some parts, and in such cases the result is the sacrifice of pleasant items of sport.

H.

Price of Barley—Pure Beer and the Public.

Maltsters and brewers will, no doubt, make efforts to keep down the value of our barley, says the *East Anglian Daily Times*; but we have become more or less used to taking very little more from these buyers than one could get from a miller for grinding, and the mind of many a farmer revolts at the thought of how brewers have ruined—not only themselves, but the barley trade as well. "Serve them—well right," I heard a farmer say the other day, when some of us were discussing the present position of many a brewery, as disclosed by the value of their shares. By manufacturing a concoction in they have pleased to call beer from almost anything but malt and hops, they have brought about a positive dislike to what had for so long been the national drink. By their system of tied houses they forced the consumer to swallow the liquor provided, and now they have lost their customers their houses are a drug on the market. Serve them right; and we drink cider instead of beer, and note that the share list still puts a considerable sum opposite the name of breweries known to consume less substitutes for malt and hops than most of those in the column. They thought the British public could be made to swallow anything that had the name of beer; now they have found out their mistake; but they have spoilt our barley trade as well as their own, to say nothing of the maltsters.

At the Chester Horse Fair on Thursday there was a good show of horses, but trade, except for the best, was quiet and buyers indifferent. Prices ranged from £12 to £15 for light horses and from £30 to £50 for good cut and wagon horses.

If SHEEP DIPS were more extensively advertised there would be a far wider distribution of the trade. The "Mark Lane Express" is a good medium for such.

CORRESPONDENCE.

The Innocent Farmer or the Knavish Dealer?

SIR,—Sorry I had not time to write you last week re your kind reply to mine ament analysis. I may say at once it was just what I expected. I knew the question was too big. I was leading up to another which I hope is smaller, but am afraid it will be deemed larger, viz :—We hear continually how the poor innocent farmer is taken in by the knavish dealer. He must have guarantees, analysis, Government protection, co-operation, &c., but we never hear a word of the "dealer" getting protection from the very many (I am sorry to say) unprincipled farmers.

To-day I get sixty sacks wheat, every sack 3 lb. and some 4 lb. short weight. I have seen wool wrapped up with all the "dirty locks" carefully "concealed"; potatoes put on rail with up to 10 cwt. rotten ones in, and some with 4 to 5 per cent. pure soil; oats with two or three bag "sittings" amongst them.

Also, I have seen bargains made in above articles when the market went "up," he would not deliver, and when on a downward market he has not only delivered his own, but also his neighbours; and have seen wicked horses sold for quiet ones, and unsound horses and cattle for sound ones. I could go on, but have probably said enough. I only write this for the sake of justice. No doubt there are bad men in both classes, but I do think the farmer should bear his share instead of expecting everybody to help protect him from the "naughty" dealer, when probably, nay, certainly, he is the worst of the two. —Yours truly, Sept. 5, 1906. CUMBERLAND.

Insurance Against Damage by Hail.

SIR,—Mr. J. G. Burton, of the little village of Burton-by-Lincoln, has sent you a sensible letter. I cannot make out why farmers who have paid their own insurance premiums for years should be asked to subscribe to those who have neglected to make themselves right against hailstorms. I do not ask why they have not insured. It may be because they were careless, or they might have thought the charge too high, or some were, maybe, too close. Anyhow, they have got nobody but themselves to thank for being left.

A friend of mine told me that he was at Ramsey lately, and he heard of one applicant for charity who owned two or three farms, and occupied four or five farms which had not been insured for many years, and now that his crops are a bit damaged, he wants the Lord Mayor of London to collect for him and his wife, for he has no children.

I say help those who cannot help themselves, like the poor allotment hires, but not the rich who fly in the face of Providence and do not insure. —Yours truly, COMMON SENSE.

Lincoln, September 4.

English or Foreign Meat for the Army?

SIR,—As I anticipated, I have learned something from Mr. Alfred Welch's somewhat verbose reply to my letter in your issue of the 28th ult., albeit that something is, perhaps, of little practical value; it is to attempt to avoid answering certain straightforward questions by unfairly criticising the verbiage of the questions and then making other wild assertions.

I cannot quite discover the application of Mr. Welch's ancient story about the advice of the judge, unless it is to show why Mr. Welch has not answered my questions.

My age and my want of experience alone prevent me giving my opinion of Mr. Welch's idea of everything required by our army being produced at home; but this matter and Mr. Welch's tirade about the fetish Free Trader, &c., which appears to me to have not the slightest application to the present discussion, shall have my serious attention when I have received Mr. Welch's replies to my questions.—Yours, &c., JUVENS.

Sept. 5, 1906.

A Subscriber's Letter.

SIR,—The receipt of the MARK LANE EXPRESS this morning tells me that you received my subscription for the year ensuing, which I am glad of, as I assure you I look forward on each Tuesday to peruse its contents.

From knowing the district around Dorchester well, I notice with much interest the corn reports you that head, which you can understand when I tell you that for many years I was a large buyer of malting barley in that market; but I fail to grasp your meaning of the words "the samples of this grain were mostly of a legal description." The meaning intended to be conveyed is thus quite in the dark, and is doubtless a misprint, but not caused by my bad calligraphy, as has been the case once before; but even so, I must ask you to be lenient in your judgment, seeing I am now eighty-one and use no glasses!

The Toronto telegram, in speaking of the death of Lord Rothschild's mare, says she "fatally overreached herself." How can that be explained? I have had a great deal to do with horses all my life, but never heard of death from "overreaching."

A little corn of all kinds has been threshed, and from what I hear, the result is somewhat disappointing, both as to quantity and quality, and prices are still more unsatisfactory.—Yours truly, Devises, Sept. 5, 1906. W. FOKES.

English & American Farm Machinery: A Colonial Opinion.

SIR,—Seeing an article in the MARK LANE EXPRESS AGRICULTURAL JOURNAL of July 9, 1906, entitled "The American Machinery Question," I can state with utmost confidence that the American machinery is nothing like as substantially made as the English machines. For instance, take the mowing machine. The American and Canadian machines will do the cutting as well as anybody can wish, but they are very short lived. The reason such is the case is because the bearings do not run in brass bushes. The boxings are filled with a composition called

Brabbitt, for the bearings to work in, and when the bearings get too much play, in the greatest number of cases the life of the machine is at an end, and the farmer most generally gives his old one and the difference in money for a new one. The life of a machine on the prairie ranges from three to five years, and the cost of a new one is 60 to 62 dollars (cash when you get it) for a 5 ft. cut machine.

With the English machines it is different; the bearing all run in brass bushes, and when one of the bushes gets worn a new one is put in its place, and the machine is almost as good as new, and a machine will last ten or twelve years (cost £14).

Respecting the horse hoes in this country, they are made so very light and springy that when they happen to hit a stone or work in cloddy land they are just about useless. I well remember the one we had in England. Set it as deep as you wanted to cultivate, and it would stay there, and in my opinion, taking the American and English machinery all through, I should undoubtedly give the English the preference.

Fall wheat is a failure this year in this locality. Oats very good, barley good, good spring wheat good.—I remain, yours truly, THOS. JOHNSON.

Nanton, Alberta, N.W.T., Canada. August 21, 1906.

Northern Notes.

HARVESTING operations are being pushed on rapidly. Yorkshire is much more forward with the work of securing the crops than Durham, and Northumberland is behind its neighbour. The weather has been splendid in Yorkshire; and if it is possible to find any cause of complaint, it would be that the heat was too oppressive. Some of the casual harvest workers refused to proceed while the heat waned, and we know at least of one instance where, rather than miss a golden opportunity, a farmer and a septuagenarian friend replaced the absent men by donning their coats, rolling up their shirt-sleeves, and handling a fork a whole day under a tropical sun, and clearing a field of six acres of oats. The carters in an adjacent field looked on with amazement at these gentlemen workers.

THE rainfall in Yorkshire during August yielded about 2½ in.; further north the precipitation far exceeded that amount and jeopardised the cereal harvest, while at the same time much benefit was conferred upon grass land, and roots cannot possibly take a backward step now, except from mildew, and that contingency is extremely remote. Turnips and swedes are a bumper crop, and this factor is exercising the usual effect upon the prices of grazing lambs, which are at the very least 3s. ahead dearer than at the corresponding period of last year. The farmers are buying cautiously, but wherever good stock is offered expositors of lambs have no fear of securing a ready sale. The restrictions imposed upon the movement of sheep from one dipping area to another is causing in fact, and perhaps needless alarm and fault-finding with the Board of Agriculture. Some of the holders of lambs are, as a matter of fact, working themselves into a frenzy of excitement, and are clamouring for a modification of this order before the commencement of the autumn fairs. Will the Board be wheedled into compliance? We do not think so, in face of the statement made in York market on Tuesday, that a number of sheep were turned away because their owners could give no guarantee that they had been dipped.

THE agricultural societies in the Wear valley seem to be treading upon each other's toes, and several are already in a wobbling state. Is there no remedy for this congestion of agricultural shows? The only solution is amalgamation or alternation. The idea put forward is that the smaller societies should be merged in those possessing larger subscription lists, and which consequently enable them to meet reversals of fortune with a certain amount of equanimity. At one of these Wear valley shows a choral contest was arranged as an additional attraction: This is going very far afield, and relegating to a secondary position the main object of the show. An agricultural society is not promoted for the sole purpose of making money and hoarding it away at a bank. It should be a real, live organisation, with energies bent upon one object, "cutting its cloth" according to the means at its disposal. It is suggested that if the Wear dale societies would amalgamate in a neighbourly fashion they might promote a show in every way worthy of that important district, whose wealth-producing efforts are associated with agriculture and the production of steel.

A QUESTION which might come more boldly to the front is that of imparting more exhilaration to country life in the dull winter months. There is very much talk of reclaiming our whilom rural population back to the land, and

of repealing the empty cottages. Much of this talk is vain, because it is unaccompanied by any active propaganda. Sympathy is all very well, but it is merely passive. How then is country life to be made more attractive? The one agency on the spot which can and should take the work in hand is the Church. In the towns the Church realises her social duty. Through her exist guilds, clubs, entertainments, lectures, libraries—in fact, she tries by every legitimate means to brighten the existence of the working classes. The Church, as well as Nonconformity, is alive with activities. In the country she is practically dormant. Here and there is an institute, often not much more cheerful than a third-class waiting-room. Two or three times a year the vicarage organises a concert or a lecture, and this is really all. These items, which go to relieve the monotony of the daily round, the common task, are not arranged for the labourers and their families, but for the "upper crust" of village life; so that practically the social work of the Church in the villages, so far as concerns the toilers, is a negligible quantity. Many of our country clergy are in a state of somnolence. Their minds and ideas become cramped through continuous association with their dull surroundings, and they develop into gardeners and handicraftsmen, apiarists or poultry fanciers. They don their cloth once a Sunday, but do not trouble themselves on weekdays with the question "What shall we do for our people?"

AT Driffield, in the East Riding of Yorkshire, the custom of ringing the harvest bell in the tower of the parish church is still carried out every year. The morning bell goes at five and the evening at seven; but it is highly questionable whether the householder will fit in with the ideas of field workers in these days. The bell is rung by the parish clerk, who will be eighty-five on the 13th of this month, and he has performed the duty without a break for over fifty years. His predecessor in the office received remuneration in the form of sheaves of wheat, which he collected from the farmers. They no longer feel under any obligation, so the churchwardens pay the ringer. Herein is much sentiment involved.

Scottish Chamber and Lord Carrington.

A meeting of the directors of the Scottish Chamber of Agriculture was held on Wednesday, to make arrangements for the conference with Lord Carrington, the president of the Board of Agriculture on the 10th of next month.

The secretary intimated that he had a letter from Sir Thomas Elliott, stating that the chamber's suggestion to appoint a Scotch successor to Dr. Somerville on the Board of Agriculture would be carefully considered. It was within the knowledge of several, the secretary said, that when Sir Thomas was at the Highland Society Show at Peebles he was making inquiries with that view.

Resolutions were prepared to be laid before Lord Carrington on such subjects as the Land Tax, the Bill, Foreign Meat for the Army, Butter Manipulation, Law of Trespass, and Motors on Highways.

A serious outbreak, believed to have been caused by an incendiary, occurred on Thursday at Crossing, near Baintree, Essex, where a very old homestead and a dozen stables of this year's produce were destroyed. The farm adjoined the village street, and several rows of thatched cottages were in imminent danger for two hours. The owner, Mr. Mark Moss, who is unable to walk, hobbled to the conflagration on crutches. The damage is estimated at £2,000.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Com-pounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equa-lised.	Phos-phatic.	Dis-solved (sol-uble).										
Ammonia, organic as in Guano and Bones	s. d. 15 0	s. d. 12 6	s. d. 15 0	s. d. —	s. d. 10 6	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 15 0	s. d. —	s. d. —	s. d. —
in Sulphate of Ammonia ...	—	—	—	—	—	—	—	—	—	—	—	—	—
" calculated from Nitrogen in Nitrate of Soda	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water ...	2 0	—	2 0	—	—	—	1/10-2	—	2 0	2 0	—	—	—
assimilable ...	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
insoluble ...	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure) ...	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

June, 1906.

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit of carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	s. d.
Albuminoids ...	2 8 to 3 0
Oil or fat ...	2 8 to 3 0
Carbohydrates ...	1 1 to 1 2

	Per cent.	Feeding units.
Albuminoids ...	22.1 x 2½	= 55.2
Oil ...	5.2 x 2½	= 13.0
Carbohydrates ...	33.2 x 1	= 33.2

Total feeding units ... 101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Comparative Crop Yields.

The agricultural methods of this country are often disparaged, but, according to a table of average yields of some of the principal crops in different countries compiled by Mr. Bear, the British farmer still occupies the leading position. Here are some of the figures:—

	Wheat. Bush.	Barley. Bush.	Oats. Bush.	Potatoes. Tons.	Hay. Cwt.
G. Britain ...	30.95	33.17	39.06	5.75	23.63
France ...	19.57	21.99	26.19	3.26	28.15
Germany ...	28.25	32.83	39.69	5.17	31.99
Spain ...	12.70	18.91	16.24	—	—
Austria ...	17.49	21.83	23.97	3.59	22.52
Belgium ...	27.43	48.91	54.95	6.77	30.20
Holland ...	29.82	46.06	52.85	5.54	—
Russia ...	9.05	11.84	15.67	2.44	9.91
U. States ...	13.43	25.02	29.15	—	25.18
Manitoba ...	18.45	29.87	38.61	—	—
N.W. Canada ...	19.13	25.27	34.76	—	—
India ...	10.63	—	—	—	—
Victoria ...	7.18	14.27	20.54	3.26	—
N.S. Wales ...	9.9	14.61	19.49	2.08	—
New Zealand ...	28.43	31.59	35.81	6.26	—

Root crop yields are not given, but in the cultivation of roots England is easily first. Germany and Belgium pay special attention to the hay crop, and within the last decade have largely increased their average by liberal dressings of phosphate and potash.

Fertilisers for Potatoes.

Referring to this subject, a Continental authority writes, that the question whether sulphate of ammonia or nitrate of soda is most suitable for application to the potato crop, has not yet been settled. It is, however, certain that the plant requires liberal dressings of nitrogenous substances, and that both materials have a beneficial effect.

Sulphate of ammonia should be applied at the time of planting the tubers, nitrate of soda partly at the time of planting, and partly after the lapse of a few weeks.

Basic slag, if used, should be applied in autumn. It has been found of advantage to apply part of the phosphate of lime in the form of superphosphate or soluble guano, and part as slag.

Kainit should be applied to the previous crop, or if not, it should be broadcasted in August or September over the stubble and ploughed under, in order to prevent the potatoes being injured from the muriates in the salt.

The best results are not obtained by applications of artificials alone, but by a combination of artificials and dung.

Purity of Linseed Cakes and Meal.

During last year ninety-one samples of linseed cakes and meal were analysed at the Government Laboratory of Louvain, and of this number eighty were also submitted to a careful microscopical examination to test their degree of purity.

It was found that of these samples

6 contained less than 2 per cent. of impurities.
34 " from 2 to 5 " "
26 " " 5 to 12 " "
9 " " 12 to 25 " "
3 " " 25 to 50 " "
2 " more than 50 " "

The report adds that in view of the gross adulteration, it is desirable that farmers should exercise the greatest care when buying, and should not be led away by apparently cheap offers. Good merchandise, even if dear, is the most advantageous, and pure foods, whatever their price, are always costly. Fed to stock they never produce the satisfactory results obtained by pure food, and in some cases they do positive harm, resulting occasionally in the death of valuable animals.

The Effect of Carrots on the Colour and Quality of Butter.

An experiment was carried out at Wyre Agricultural College to ascertain—(1) how long a period it takes before a change of colour becomes marked; (2) what is the minimum quantity of carrots required to alter the tint; (3) will a mixture of carrots and mangels answer the same purpose; (4) what effects have carrots on the churning character of the cream, the quality of the butter, and the percentage of fat in the milk.

For the experiment four cows of the Lincoln Red breed were picked out, the animals having calved down a few months previously.

Two of the animals were fed on 28 lb. of carrots and their ordinary allowance of cake, meal, and hay. Two others were fed in a similar way, mangels being substituted for carrots. The records were taken in February and March, and the feeding reversed—i.e., carrots being substituted for mangels after the first month of the trial. The carrots used were Sutton's Red Intermediate.

A brief summary of the results is as follows:—Length of time before the effect on the colour is apparent. Butter made from carrot-fed cows.

1st week.—Very slight difference compared with that made from mangel-fed cows.

2nd week.—Difference more marked, less time occupied in churning, and better grain and flavour.

3rd week.—A very good high-coloured butter, considering the time of year.

On reversing the order of feeding, it was noticed that the colour was maintained in a diminishing degree over two or possibly three weeks, whereas the cows that had previously had mangels responded slightly to their change of food, and would, no doubt, have done much the same as the other cattle. The experiment did not last long enough to finally answer the question as to how few carrots will give the required tint, but it may be said that half mangels and half carrots gave a more salable quality of butter than those getting a full ration of mangels.

The change of food had the effect of slightly lowering the butter fat in the milk of one cow, and practically made no difference in the others. In no case did it fall below 3 per cent.

Fertilisers and Feeding Stuffs Act, 1906.

Apart from some administrative changes, intended to make the Act more effective and simpler in operation, it differs from the old Bill in certain important points, which should be especially noted, and may be briefly summarised as follows:—

1. Fertilisers.—Sellers must state the respective percentages of nitrogen, soluble phosphates, insoluble phosphates, and potash.

It will not be legal for a seller to guarantee merely nominal percentages, as has often been done in the past.

The percentage of phosphate of lime soluble in a solution of citric acid or other solvent of the prescribed strength may be given. This has special reference to basic slag.

The Act applies to quantities however small. Under the old Act quantities under 56 lb. were not included.

2. Feeding Stuffs.—Sellers must state the respective percentages of oil and albuminoids in all artificially prepared cakes and feeding stuffs, in addition to stating, as stipulated in the previous Act, whether prepared from one substance or seed, or from more than one substance or seed.

Poultry foods are now included in the Act. The Act comes into operation on the first day of next January.

* * *

The following is the full text of the Act:—

BE it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

Warranties as to fertilisers and feeding stuffs.

(1) Every person who sells for use as a fertiliser of the soil any article which has been subjected to any artificial process in the United Kingdom, or which has been imported from abroad, shall give to the purchaser an invoice stating the name of the article and what are the respective percentages (if any) of nitrogen, soluble phosphates, insoluble phosphates, and potash contained in the article, and the invoice shall have effect as a warranty by the seller that the actual percentages do not differ from those stated in the invoice beyond the prescribed limits of error.

(2) Every person who sells for use as food for cattle or poultry any article which has been artificially prepared shall give to the purchaser an invoice stating the name of the article, and whether it has been prepared from one substance or seed or from more than one substance or seed, and in the case of any article artificially prepared otherwise than by being mixed broken ground or chopped, what are the respective percentages (if any) of oil and albuminoids contained in the article, and the invoice shall have effect as a warranty by the seller as to the facts so stated, except that as respects percentages the invoice shall have effect as a warranty only that the actual percentages do not differ from those stated in the invoice beyond the prescribed limits of error.

(3) Where any article sold for use as food for cattle or poultry is sold under a name or description implying that it is prepared from any particular substance or from any two or more particular substances, or is the product of any particular seed or of any two or more particular seeds, and without indication that it is mixed or compounded with any other substance or seed, there shall be implied a warranty by the seller that it is pure, that is to say, is prepared from that substance or those substances only, or is a product of that seed or those seeds only.

(4) On the sale of any article for use as food for cattle or poultry, there shall be implied a warranty by the seller that the article is suitable to be used as such.

(5) Any statement by the seller of the percentages of the chemical and other ingredients contained in any article sold for use as a fertiliser of the soil, or of the nutritive and other ingredients contained in any article sold for use as food for cattle or poultry, made after the commencement of this Act in an invoice of such article, or in any circular or advertisement descriptive of such article, shall have effect as a warranty by the seller.

(6) Where an article sold for use as a fertiliser of the soil or as food for cattle or poultry consists of two or more ingredients which have been mixed at the request of the purchaser, it shall be a sufficient compliance with the provisions of this section with respect to percentages if the invoice contains a statement of percentages with respect to the several ingredients before mixture, and a statement that they have been mixed at the request of the purchaser.

Power to appoint analyst and samplers.

Treasury may assign. The chief analyst shall not while holding his office engage in private practice.

(2) Every county council shall, and the council of any county borough may, appoint an official agricultural analyst (hereinafter referred to as an agricultural analyst) and one or more official samplers for their county or borough.

(3) The council of any county or county borough may also appoint a deputy agricultural analyst, who shall, in case of illness, incapacity, or absence of the agricultural analyst, have all the powers and duties of the agricultural analyst, and where the deputy acts this Act shall apply as if he were the agricultural analyst.

(4) The appointment of an agricultural analyst, deputy agricultural analyst, or official sampler shall be subject to the approval of the Board of Agriculture and Fisheries.

(5) A person whilst holding the office of agricultural analyst shall not engage or be interested in any trade, manufacture, or business connected with the sale or importation of articles used for fertilising the soil or as food for cattle or poultry.

III.—(1) Every purchaser of any article used for fertilising the soil or as food for cattle or poultry who has taken a sample thereof within ten days after delivery of the article to him or receipt of the invoice by him, whichever is later, shall, on payment of the required fee, be entitled to have the sample analysed by the agricultural analyst.

(2) An official sampler shall at the request of the purchaser and on payment by him of the required fee, and may without any such request take a sample for analysis by the agricultural analyst of any such article as aforesaid which has been sold or is exposed or kept for sale, but, in the case of an article which has been sold, the sample shall be taken before the expiration of ten days after the delivery of the article to the purchaser, or the receipt of the invoice by the purchaser, whichever is later.

(3) Where a sample has been taken with a view to the institution of any civil or criminal proceeding, the person taking the sample shall divide the sample into three parts, and shall cause each part to be marked, sealed, and fastened up, and shall deliver or send by post two parts to the agricultural analyst and one part to the seller.

(4) An agricultural analyst to whom a sample is submitted for analysis under this section—

(a) if the sample has not been divided into parts and the parts marked, sealed, and fastened up as herein-before mentioned, shall send a copy of the certificate of his analysis to the person who submitted the sample for analysis; and

(b) if the sample has been so divided into parts, shall analyse one of the parts of the sample delivered or sent to him and retain the other, and shall send a certificate of his analysis in the prescribed form and containing the prescribed particulars to the person who submitted the sample for analysis, and where that person is not the purchaser of the article also to the purchaser, and in every case to the seller and to such other person (if any) as may be prescribed, and shall report to the Board of Agriculture and Fisheries in the prescribed manner the result of the analysis: Provided that if the agricultural analyst does not know the name and address of the seller he shall send the certificate intended for the seller to the purchaser, to be by him forwarded to the seller.

(5) At the hearing of any civil or criminal proceeding with respect to any article, sample, or whereof has been analysed in pursuance of this section, the production of a certificate of the agricultural analyst, or, if a sample has been submitted to the chief analyst, then of the chief analyst, shall be sufficient evidence of the facts therein stated unless the defendant or person charged requires that the analyst or the person who made the analysis be called as a witness: Provided that this subsection shall not apply—

(a) where the sample has been taken otherwise than in the prescribed manner; or

(b) where the sample has not been divided into parts and the parts marked, sealed, and fastened up as hereinbefore mentioned.

(6) If in any such legal proceeding (other than a proceeding which cannot be instituted until an

analysis has been made and a certificate given by the chief analyst) either party to the proceeding objects to the certificate of the agricultural analyst, the party objecting shall, on payment of such fee as may be fixed by the Treasury, be entitled to have submitted to the chief analyst the part of the sample retained by the agricultural analyst, and to have that part analysed by the chief analyst and to receive from him a certificate of the result of his analysis.

(7) Where a sample is, under this section, sent for analysis to the chief analyst or to an agricultural analyst, there shall be sent with the sample the invoice (if any) relating to the article from which the sample was taken, or a copy of the invoice or of any prescribed part thereof.

IV.—(1) The Board of Agriculture and Fisheries may make regulations—

(a) with respect to any matter which under this Act is to be prescribed;

(b) as to the qualifications to be possessed by agricultural analysts, deputy agricultural analysts, and official samplers;

(c) as to the manner in which analyses are to be made;

(d) as to the manner in which samples are to be taken and dealt with; and

(e) generally for the purpose of carrying this Act into execution:

Provided that nothing in this section or in any regulations made thereunder, shall affect the right of the purchaser of an article used for fertilising the soil, or as food for cattle or poultry, to have analysed by the agricultural analyst a sample of an article taken by him or at his request otherwise than in accordance with the regulations.

(2) All regulations made under this section shall be laid before both Houses of Parliament as soon as may be after they are made.

V.—(1) The council of a county or county borough may concur with one or more other such councils in making any appointment which they are authorised to make under this Act, and as to the apportionment of the expenses amongst the several councils.

(2) The council of any county or county borough may contribute towards any expenses incurred by any agricultural body or association in causing samples to be taken for analysis by the agricultural analyst.

(3) The council of any county or county borough may fix the fees payable in respect of the making of any analysis and the taking of any sample at the request of a purchaser.

(4) The expenses of the council incurred in the execution of this Act shall be defrayed, in the case of a county council as part of their general expenses, and in the case of a county borough council out of the borough fund or borough rate.

VI.—(1) If any person who sells any article for use as a fertiliser of the soil or as food for cattle or poultry commits any of the following offences, namely:—

(a) Fails without reasonable excuse to give, on or before or as soon as possible after the delivery of the article, the invoice required by this Act; or

(b) Causes or permits any invoice or description of the article sold by him to be false in any material particular to the prejudice of the purchaser; or

(c) Sells for use as food for cattle or poultry any article which contains any ingredient deleterious to cattle or poultry, or to which has been added any ingredient worthless for feeding purposes and not disclosed at the time of the sale;

he shall, without prejudice to any civil liability, be liable, on summary conviction, for a first offence to a fine not exceeding twenty pounds, and for any subsequent offence to a fine not exceeding fifty pounds:

Provided that a person shall not be convicted of an offence under paragraph (b) of this subsection if he proves either

(i) that he did not know, and could not with reasonable care have ascertained, that the invoice or description was false; or

(ii) that he purchased the article sold with a written warranty or invoice from a person in the United Kingdom, and that that warranty or invoice contained the false statement in question, and that he had no reason to believe at the time when he sold the article that the statement was false,

and that he sold the article in the state in which it was when he purchased it.

(2) In any proceeding for an offence under this section it shall be no defence to allege that the purchaser, having bought only for analysis, was not prejudiced by the sale.

(3) A prosecution for an offence under this section shall not be instituted except with the consent of the Board of Agriculture and Fisheries, and the Board shall not give such consent until the part of the sample retained by the agricultural analyst has been analysed, and a certificate of analysis given, by the chief analyst.

(4) In any prosecution under this section the summons shall state particulars of the offences alleged, and also the name of the prosecutor, and shall not be made returnable in less time than fourteen days from the day on which it is served, and there must be served therewith a copy of any analyst's certificate obtained on behalf of the prosecutor.

VII.—If any person fraudulently tampers.

(a) tampers with any article so as to procure that any sample of it taken under this Act does not correctly represent the article; or

(b) tampers with any sample taken under this Act;

he shall be liable on summary conviction to a fine not exceeding twenty pounds, or to imprisonment for a term not exceeding six months.

VIII.—If—

(a) the owner, or the person entrusted for the time being with the charge or custody of any article sold or intended to be sold for use as a fertiliser of the soil or as food for cattle or poultry refuses to allow an official sampler to take a sample of the article for the purpose of analysis; or

(b) the purchaser of any such article refuses to give to an official sampler the invoice of the article or a copy thereof or of any prescribed part thereof;

he shall be liable on summary conviction to a fine not exceeding ten pounds.

IX.—(1) Subject to the provisions of this Act as to the consent of the Board of Agriculture and Fisheries, a prosecution for an offence under this Act may be instituted either by the person aggrieved, or by the council of a county or borough, or by any body or association authorised in that behalf by the Board of Agriculture and Fisheries.

(2) A prosecution for an offence of causing or permitting an invoice or description to be false in

any material particular shall not be instituted under this Act—

(a) after the expiration of three months from the date when the invoice was received by the purchaser; nor

(b) unless a sample for analysis has been taken, and an analysis by the agricultural analyst has been made, and a certificate of analysis has been given, in accordance with regulations made under this Act.

But the proceedings may be taken as well before the court having jurisdiction in the place where the purchaser of the article to which the invoice or description relates resides or carries on business, as before the court having jurisdiction in the place where the invoice or description was given.

(3) Any person aggrieved by a summary conviction under this Act may appeal to a court of quarter sessions.

X.—(1) For the purposes of this Act the expression "cattle" shall mean bulls, cows, oxen, heifers, ewes, sheep, goats, swine, and horses; and the expressions "soluble" and "insoluble" shall respectively mean soluble and insoluble in water, or, if so specified in the invoice, in a solution of citric acid of the prescribed strength, and the percentage of soluble phosphates and percentage of insoluble phosphates mean respectively the percentage of tribasic phosphate of lime which has been, and that which has not been, rendered soluble.

(2) This Act shall apply to wholesale as well as retail sales.

XI.—In the application of this Act to Scotland.

(1) The expression "council of any county borough" shall mean the town council or burgh, and the duties and powers of councils of counties and county boroughs shall be performed and be exercisable in a county by the county council, and in a burgh by the town council, and the expenses incurred by a council in the execution of this Act shall be defrayed out of a rate to be levied, fixed, and paid in like manner as the local rate under the Diseases of Animals Act, 1894.

(2) The expression "burgh" means a burgh which returns or contributes to return a member to Parliament, not being a burgh to which section fourteen of the Local Government (Scotland) Act, 1899, applies.

(3) Penalties for offences under this Act may be recovered summarily before the sheriff in manner provided by the Summary Jurisdiction Acts, and any person aggrieved by a summary conviction may appeal therefrom

in accordance with the provisions of those Acts.

XII.—For the purposes of the execution of this Act in Ireland, inclusive of the appointment of a chief agricultural analyst, the Department of Agriculture and Technical Instruction for Ireland shall be substituted for the Board of Agriculture and Fisheries and in section seven-teen of the Agriculture and Technical Instruction (Ireland) Act, 1899, a reference to sections six, seven, and eight of this Act shall be substituted for the reference to section seven of the Fertilisers and Feeding Stuffs Act, 1893; and for the purpose of instituting prosecutions the said department may take samples of any articles to which this Act applies which have been sold or are kept or exposed for sale.

XIII.—The Fertilisers and Feeding Stuffs Act, 1893, is hereby repealed; provided that nothing in this repeal shall affect any regulation or appointment made under that Act, but every such regulation and appointment shall have effect as if made under this Act; and in Ireland an analyst holding office under the said Act both for a county and a non-county borough comprised in that county shall become the agricultural analyst for that county.

XIV.—This Act may be cited as the Fertilisers and Feeding Stuffs Act, 1906, and shall come into operation on the first day of January nineteen hundred and seven.

Short title and commencement.

Condition of Fertilisers.

"A fertiliser should be in a condition so fine and dry that it can be applied without hindrance by the drill. There are still some farmers who like to see bone manure in lumps showing partly dissolved pieces of bone, but this is surely a mistaken idea, because such a lumpy material cannot be evenly spread over the soil, and as a consequence some plants are apt to be injured by getting too much, and others are deprived of their proper supply. The fertiliser should be uniform in quality and uniform in condition, so that every plant receives its proper proportion of the fertilising constituents. The fertiliser, if it cannot be used at once, should be stored in a dry place. We have known bags of fertiliser actually left out overnight in the field, exposed to heavy dew or rain, so that it became quite damp and sticky, and could only be distributed by hand in a very rough manner. If a fertiliser is worth burying, it is worth careful treatment, in order to reap full benefit from its action on the crop."

THE

"BIBBY" CAKE IN THE FORM OF "CAKETTES."

"Send me two tons o' they nobbs same as Mr. Brown is a using," was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism, and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good," it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION

IN THE PUBLIC FAVOUR.

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

FERTILISERS AND FEEDING STUFFS ACT, 1906.

The result of the labours of the Departmental Committee appointed in 1903 to inquire into and report upon the working of the Fertilisers and Feeding Stuffs Act of 1893 is now apparent in the new Fertilisers and Feeding Stuffs Act, 1906, which passed through the Houses of Parliament during the recent session without prolonged discussion, and has just been issued by the Government printers.

It comes into operation on the first day of next January, and the old Act of 1893 is thereby repealed.

In this week's "Fertiliser" section we print it in *extenso* for the information and guidance of our numerous readers who are interested in the substances with which it deals, and we commend the details to their careful attention.

The old Act was a movement in the right direction, and effected a great deal of good, even although farmers have not availed themselves of its advantages so widely as had been expected. It served to stimulate manufacturers to look more carefully into the quality of the goods offered by them, and it acted as a deterrent against fraud; but in practical working it was found, as was quite natural in such a new departure, to be deficient in some respects. The object of the new Act is to remedy such deficiencies and to make the Act of more general utility.

It has been framed with a just regard for the interests of both users and manufacturers, and should be accepted by both as an equitable arrangement.

The duties of the Board of Agriculture and Fisheries will be somewhat extended, and the

Board will no doubt issue in due course amended Regulations to take the place of those issued in 1897 in their leaflet No. 18.

It will rest with the various authorities responsible for the administration of the Act to make it a success by taking such measures as may be necessary to ensure that its useful provisions may be widely known among the farming community, especially among the class of small farmers, who, more than anyone else, require the protection afforded by the Act, but who, partly from indifference and partly from ignorance, fail to recognise its value.

There should be a liberal distribution of leaflets, supplemented in backward districts by posters. If such steps are not taken the Act will remain of small effect. After the authorities have fulfilled their duties in this respect, it will still remain for the individual buyer to look after his own interests. He will be well advised to have his fertilisers and feeding stuffs regularly tested, as an ordinary matter of business precaution; the facilities at the disposal of the farmer are now so good and cheap that there is no excuse for neglecting this safeguard.

If buyers do not get good value it will be their own fault. Let there be no more vague charges against manufacturers who, as a body, conduct their business in an honest and intelligent manner. When, exceptionally, fraud is detected, it should be exposed and punished without mercy; but we hope and think that such cases will become rarer.

THE CEREAL YEAR.

I.—Breadstuffs.

The cereal year which Friday brought to a close was not one that farmers can look back upon with particular satisfaction. As we felt constrained to say in the "Notes of the Week" for our last issue—"we cannot truthfully depict agriculture in a happy condition if considered all round." The price of wheat on the average fell from 30s. 7d. to 28s. 9d. per quarter, and no especial relief is obtainable from the discovery that this loss of nearly £700,000 on the whole crop was utterly uncalled for.

The price at which wheat for the cereal year wound up was 30s. 9d., so that no decline need have occurred at all. The farmer with a little capital to back him would never have accepted 27s. for his wheat as he did last autumn. This is of course a matter which in some years is open to argument, but in the present instance we are saved discussion, the return to the original price proves the point exactly as an addition sum may be proved by a corresponding one in subtraction.

The real difficulty to consider is why the farmer does not in one way or another get financed.

All Advertisements ordered for the "Mark Lane Express" appear simultaneously in the *THIN* paper *COLONIAL AND FOREIGN EDITION*, for circulation abroad, WITHOUT EXTRA COST to the Advertiser.

He knows his own business well enough; he knows enough, too, of the foreign trade to be aware that English wheat is no longer a drug in the market. Every ton of it will be wanted. It is estimated that out of 7,500,000 qr. a single 100,000 qr. were handed on by the old cereal year to the new. There is, therefore, no plethora, no over production; there is simply over eagerness in selling at the commencement of the season.

After January the next six months represent a long dreary gradual, but on the whole successful, struggle against the false conditions induced by excessive and inordinate pressure of grain on sale from September to December. The uphill game at last succeeds, the stern chase is successful; and then there comes a new crop, and all has to be recommenced.

Imports of wheat for the cereal year actually fell from 24,523,000 qr. to 21,972,000 qr., and the only untoward sign in this department was the increase in flour imports from 4,375,200 sacks to 5,563,200 sacks. The Millers' Conference at Windsor looked on the landscape under sunset's roseate hues, and pronounced that American competition was practically extinct. But the sober figures of September 1 do not bear the July conclusion out.

If this increase in imports of flour had not occurred, we should not be confronted with the serious fall in flour prices which to-day is the millers' most serious (and let us haste to admit, very substantial) reason for refusing to pay for new English wheat such prices as the situation would otherwise warrant.

Why buy foreign flour? Who orders it? Let us make a frank admission. The miller of twenty years ago was not the competent man which he is to-day. Twenty years ago the foreign flour merchant had an absolute case in the inability of English millers to meet the national requirements. But since the Edwardian era succeeded to the Victorian this blot has been wiped out.

English mills can now grind all the flour England needs, can grind it as England requires it, and can show quality for quality and type for type all that buyers and bakers can possibly need. The finest pastry flour still comes from Hungary; we could make it here if workmen worked as hard as they do in Hungary. Anyhow it is a bagatelle in the general trade; it is the American flour with which we could, and ought, to dispense.

The great step forward of the cereal year so far as English wheat is concerned is probably to be found not so much at Mark Lane as at Rothamsted. The element of strength in wheat which in the nineties we had been told was a product of climate, a gift of Nature to Minnesota and Manitoba, to the Russian steppes and the Polish plains, is now seen—and seen the more clearly with each successive experiment—to be an element that can be cultivated, and if not perpetuated, perpetually and periodically renewed, a conclusion which in botany amounts to perpetuation.

England, for example, has plenty of elms, which are possibly our commonest trees. But who can grow an elm from seed? The Rothamsted experiments show that choice of seed is the first thing, and choice of seed the second thing. With these points borne duly in mind, English wheat growers can breed for strength in gluten as surely as English cattle breeders

can emphasise the beef-producing element or the milk producing element at will. Our readers must not forget, of course, that strength, as milners use the word, is rather factitious; strong wheat will not nourish the citizen more than weak wheat. It will make a more presentable and saleable loaf. That is all.

The sources of our wheat supply during the past cereal year have been the United States and Canada, Russia, India, and Australia, Argentina, Rumania, and New Zealand. The Russian, Canadian, and Argentine supplies show

a decided increase in business as compared with the other items. Russia, owing to political troubles, still remains very much of a dark horse, but the extensive purchase of lands by the peasantry look well for agriculture. Canada and Argentina are the coming wheat growers so far as the past cereal year has lifted the curtain. Both, of course, have in a sense, already arrived, but there seems scarcely any doubt that in a few years time the *ride* which they play will be far greater than it is at the present moment.

Notes of the Week.

During the early part of the past week the universal topic of conversation was the torrid heat, now fortunately a thing of the past.

The list of casualties reads almost like the record of a regular battle; the silver streak around our shores was no defence against the burning arrows of the sun.

The sun's perpendicular rays
Descended on land and on sea,
And oft was the sound of the cry:
"Oh, bring me a soda and B."

We could fill columns with the list of disasters attributed to the heat: suicides, fires, sudden death, and scarcity of water, milk and vegetables.

But why harrow the feelings of our readers with general details and particulars? Sufficient for everyone are the troubles and difficulties of his own district.

Not very long ago, people were saying that the climate of England was gradually reverting to the glacial period.

One good result of the tropical heat has been to ripen the cereals to perfection. Millers speak very favourably of the new wheats.

Much of the barley, too, is of superior quality, suitable for brewers' purposes, and should realise top prices.

The results obtained at the sales of growing potatoes indicate a healthy condition of the market.

At the important Biggar Auction some of the prices realised were considerably over the expectations of the sellers.

The crops in England and Scotland are generally free from disease, so the prospects for the growers are better than usual.

Enterprising sugar beet growers in this country cannot contemplate the sugar market with much satisfaction.

It does not seem to offer much encouragement for the industry, which, according to calculations, cannot prosper with sugar beet under 10s. per cwt.

Hopes placed on the high prices ruling during the early months of last year are doomed to disappointment.

Sugar was then worth 14s. 6d. to 15s. 6d. per cwt. in consequence of the short crop of 1904, but it soon receded to a more average level.

In September last year it was quoted at 8s. 9d. per cwt., and it has remained throughout the year at about that figure.

Considerable interest always attaches to the estimates of the world's cereal crops framed by the Hungarian Minister of Agriculture.

He seems to have a clear grasp of the subject, and to have at his disposal fairly reliable data.

According to his calculation, there is no striking difference between the total yields of last year and this harvest.

The yields of wheat and barley are slightly more, while oats, on the other hand, seem a little less.

If his figures are reliable, and the market remains undisturbed by any special circumstance, the prices of these three prime commodities should not be subject to any great fluctuations during the coming months.

Several correspondents have been writing to the *Times* suggesting that we ought to eat more brown bread.

They argue that the ordinary white bakers' bread is deficient in nourishment and lacking in phosphate of lime.

Why should we not cultivate rye for bread in this country? It is said to be as nourishing as wheat, and cheaper.

In Germany and Austria it forms the staple bread diet of the working classes, and is widely eaten in France, Spain, and Italy.

When on the Continent and in Canada I have eaten it with relish as a change. Rye cakes are not to be despised.

The old-fashioned fairs, which many of us remember as bringing a time of festivity, are gradually being abolished.

All things considered, this is a matter not to be regretted; they served a good purpose before the period of railways, telegraphs, and modern market methods.

But they are out of date now, and with few exceptions bring together a disreputable class of people. The genuine "fun of the fair" is conspicuous by its absence.

One of the useful survivals is, perhaps, Barnet Fair, which is still of some importance. There is a big trade done in ponies and cheap horses.

The character of prussic acid is not so bad as some of us have thought. It has its good points.

Scientific men have discovered that its production in plants, as in some kinds of beans, is the final stage in the assimilation by the plant of nitrogen.

Prussic acid is a derivative of cyanogen, and to this substance is assigned the chief place in the building up of plant proteins.

An engineer in Germany has patented an arrangement for controlling the temperature of the soil.

The good old plan of forcing plants in beds of manure, developing heat, he considers is uncertain in its effects and not economical.

Experiments on a small scale have been tried with the new system, and it is reported that very favourable results have been obtained with vegetables and fruit.

Two Men Burnt to Death.—On Wednesday night a large barn at Hall Place Farm, East Peckham, near Maidstone, in which four men travelling with a threshing machine had been given permission to sleep, caught fire and was destroyed. Two of the men, Harry Noakes and George Clowe, succeeded in escaping, the latter, however, being so badly burnt that he had to be taken to the hospital. When the flames were extinguished the bodies of the other two men, James Baikup, forty, and William Jenner, thirty-seven, were found charred beyond recognition. At an inquest on Thursday a verdict of "Death from suffocation" was returned.

Reduced Grain Rates on the G.E.R.

The goods manager of the Great Eastern Railway Company, in a letter to Mr. J. B. Forrester, the secretary of the Norfolk Chamber of Agriculture, makes the welcome announcement that, from September 1, reduced rates will be brought into operation on the carriage of grain from certain Norfolk stations to places like Burton, Retford, Leeds, Manchester, Birmingham, Warwick, &c.

The new rates are for truckloads of five tons and upwards, and the reductions vary from 11d. to 1s. 10d. per ton in the main, but there are some instances in which it is as much as 2s. to 2s. 1d. per ton; while between Norwich and Warwick the charge falls from 16s. 8d. to 13s. 4d., a saving of 3s. 4d. per ton, and further between Attleborough and Manchester there is a drop of no less than 4s. 2d. per ton—namely, from 19s. 2d. to 15s.

These new rates apply to wheat, barley, oats, rye, beans, peas, maize, flour, sent in sacks or bags. Norwich being the leading barley market, and almost the biggest wheat market in the country, the effect of these changes must be not only to increase trade, but also materially to benefit farmers.

Margarine as Butter.—John Edward Green, grocer, of Harewood Street, Bradford, was on Friday, at Bradford, fined 4s. and 7s. costs, or one month, for selling margarine as butter. It was stated that a shilling had been paid for a pound of butter, which on analysis was found to be entirely margarine.

Robberies by Hop pickers.—With the influx of hop-pickers from London into Kent, the number of burglaries and cases of housebreaking has increased alarmingly, and almost every village between Tunbridge Wells and Maidstone has suffered. In Tunbridge Wells, St. John's Church and St. Peter's Church have both been entered during the past few days, and the contents of the collection boxes stolen. Residences on the main country roads, and even small cottages, have been broken into and goods removed. Owing to their inability to obtain work in the hop fields, a large number of suspicious characters are roaming about the country lanes, and to these the police attribute the present epidemic of robberies.

With its fine connection amongst *Liver Stock Owners*, the *Mark Lane Express* is undoubtedly *ONE OF THE BEST MEDIA* for the *Disposal of Pedigree Liver Stock*, either by *Public Auction* or *Private Treaty*.

The Journal goes directly into the hands of likely purchasers at home and abroad.

Notes and Jottings.

THE effect of the scorching sun which accompanied the closing days of August and the opening ones in September will be felt in the sheep food supply in the dry southern districts for a long time. The basking which the soil has experienced makes it practically impossible to sow autumn catch crops, or for the crops to grow when they are sown; moreover, it will take sound rains to make the land sufficiently moist to start the crops. It is unfortunate that the districts which have most suffered from drought are those which rely most on autumn-sown catch crops. Sheep keep will require to be carefully handled during the coming months, for if the growing crops are folded before full growth is attained, there will be an undue enticement of the food to be consumed between now and next May. Little can be done to hasten up the crops, and the only means of saving the growing crops is to get the sheep on to dry food early. It is not a year when hay can be carelessly fed, and chaffing will repay its cost. Straw and hay chaff with a little meal will go a long way to help where other food is short, and it is quite as economical to use them early in the year as to wait until the other food has run out; in fact, it is more so, as by doing it a better chance will be given for the growing crops to increase in weight. Those who have had the good fortune to be blessed with rains during the summer and have thus got a good root crop, ought to have a very satisfactory winter's sheepling.

WE saw an instance recently of the mistake in following up the same strain of rams on a well-selected cross bred flock, belonging to one of the most skilled cross-breeders of our acquaintance. The ewes have gradually been bred up too closely to pure breeds; and though the quality has improved from a butcher's point of view and the wool is excellent, the sheep (being required for a district which will not carry a pure breed) have rapidly lost size, and the lambs will not grow to a satisfactory weight. The owner, who is a successful exhibitor of cross-bred lambs, held a little closer to quality than his better judgment would have guided him, as he had the show ring in view, and wanted to get a little more quality, and now regrets it. He has run long enough on one strain to get some of the effects of too much in-breeding. He has gone for distant blood in his rams this year, and will doubtless get size back again. This

is a case where following too closely on one flock has done harm, even where there is cross-breeding, and is much rarer than in ordinary pure-breeding. The owner was really working his flock into a pure-bred flock, although it was not a pedigree one, or one which he could enter in any flock-book, and has not sufficiently recognised the fact.

ONE result of the dry weather has been the severe attack by green fly, the cabbage aphid, on swedes and cabbages. On swedes it is destroying the heart leaves and checking growth; while on cabbages it is rendering the crop very unsafe for feeding, especially by lambs. It takes a lot of most things to upset an old ewe, especially if there is the chance to get other food than that which causes injury; but lambs are readily upset, and great caution is needed where cabbages are smothered with green fly. It is about the only time when cabbages are dangerous to feed. It is unsafe to fold lambs where the attack is bad, and much wiser to cut the sound cabbages and take them to the sheep. The ewes will clear up what can be eaten in the ordinary course of scavenging. Where trouble has been caused by the fly, the sheep should have a dose of salts to clear prejudicial matter from the system, and be given good sound hay in addition to the succulent food. It is quite hopeless to expect birds will clear off the fly; they will no more do it from cabbages than from hops, roses, or other plants it attacks. Birds repay little for the trouble taken to procure them, though starlings are useful in case of attacks by the cabbage caterpillar. There has been an unusual number of white cabbage butterflies about lately, and it is not at all unlikely that there may be a bad attack from their caterpillars; in the event of this nothing will do more to save the crop than to turn the poultry,

Mr. W. HOULTON,
Northleach, Gloucestershire.
BREEDER OF COTSWOLD SHEEP.

any sales of sheep have ever taken place in which so excellent an average has been made for so large a number of rams—representing as these did, thirty separate flocks. This so notable an average should have been realised is, however, only in keeping with the transactions in Lincoln sheep this season. It has been a year, so far as concerns this breed, such as Lincoln breeders have never before experienced—a year in which the old record price of 1,000 guineas for a ram, held by Messrs. Didding and Wright, has been broken by 1,450 guineas being made for one of Mr. H. Didding's rams, this year's Royal champion; a year in which a record average of £151 18 31 was made for six yearling rams by Mr. H. Didding; and last, but by no means least, the year in which the insatiable Argentine demand commenced to buy Lincoln sheep by the whole flock. This transaction—namely, the sale of Messrs. Wright's noted Lincoln flock as a whole to Señor J. M. De Cobo—was one of the most prominent themes of conversation the night before the sale, and one which the auctioneers made good use of when selling any rams with Nocton blood, reminding the bidders that this is a strain of blood which cannot, under any circumstances, be renewed, for its source will ere long be removed away from its home near Lincoln to Argentine, from whence no live sheep return. However, no further digression is permissible, and our reference must be kept to this notable sale, in which 375 rams were catalogued, thirteen being absent and 376 sold, leaving the small and insignificant number of six as being passed at the upset price. The total realised at the sale for these rams was £7,616 18, giving an average of £20 5s. 1d.

The auctioneers who officiated at this sale were Messrs. Dickinson, Riggall, and Davey, Everett and Burrell, J. Martyn Collins, Saul, T. B. Richardson and Son, Stephenson and Johnson, and J. E. Walter.

The best average of the day was that realised by thirteen rams from Messrs. S. Dwyer & Sons' Downby flock, namely £71 3s. 1d. All through the competition was good. The opening ram in the sale was a grand one; many wanted him, but the price was fast and furious, so that, to use a racing term, only the trained and well-tried runner lasted to the finish, which was run neck and neck from about 150 to 280 guineas between Mr. H. Dixon, of Brunelharton, and Mr. H. Didding; the latter won. Mr. J. E. Cresswell, another of the leading breeders, had a stiff contest before he got his choice, a real goal, at 150 guineas; one went at 60 to Mr. H. Smith, jun.; one at 52 to Mr. E. H. Cartwright, for Buenos Ayres (was reported); and one of the second prize pen of five at the Royal at 50 guineas to Mr. F. Wall; four made 40 and above, and others made 30 guineas. Mr. John Pears, one of the oldest breeders, sent forward a lot of rams that were highly appreciated. The consignment was the largest in the sale, and therefore, considering this time, the average, £17 13s. 1d., with a range of prices from 250 guineas, was most satisfactory. The leading prices include 270 guineas, at which Messrs. Needham, who are very old breeders, secured a grand stud ram, after a tussle with Mr. G. Myers; another made 200 guineas, and here the Argentine acquired one of the choicest rams of the season. Messrs. Hughes were the purchasers; these gentlemen took others at 43, 28, and 21 guineas. One

Mr. ALFRED TANNER,
of Shrawardine, Shrewsbury, whose
SALE takes place To-morrow (TUESDAY.)

especially ducks, into the crop. Washings and dressings cannot be used satisfactorily.

EVERY year at the Dublin Horse Show the side show of sheep demonstrates how well suited Ireland is to the raising of high class sheep; but in spite of the suitable country Irishmen are not instinctively sheep men. Probably the large number of small holdings is responsible for much of this, and it certainly is so in the west of Ireland, where there is winter commonage over the country generally, and where the old native heath breed or Cottagh may still be met with in its pristine condition of unprofitableness, though of late years some improvement has been made by crossing it with the Black Face. Even where the land is held in larger holdings there has not been the improvement there ought to be. It is satisfactory to see that the English breeders are being more developed there, and that the Shropshires steadily increase in favour. The Oxford's also gain favour, and pioneers in this breed like Captain Longworth Davies doubtless feel satisfaction in the increased number of pure-bred flocks. In a country where the greater portion of the animals are longwools, it is not surprising that the Lincoln becomes more popular, especially in this period of good prices for wool.

Lincoln Ram Sale: A Fine Average.

If this sale that took place at Lincoln on Friday last does not hold the record for the highest average realised at these sales since they were established in 1892, it is one that will in years to come be looked upon as one of the best, because the average for the whole sale, £20 5s. 1d., is based upon the sale of no less than 375 rams. Some casual observers might think the sale well, after all, this is not a great average, but if they, like we have, would search the records of any breed of sheep, we believe the result would be that they, like ourselves, would conclude, few, if

Mr. J. STOOKE,
Sherford, Brixton, Plymouth.
BREEDER OF SOUTH DEVON SHEEP.

of the youngest breeders, Mr. C. E. Howard, made a first-class selection, and though he paid 37 guineas for the ram, it cannot be termed an excessive price, quality, &c., being considered. Quite one of the choicest rams, and certainly a beautifully-fleeced ram, was got by Mr. W. Savage for Buenos Ayres at 75 guineas, a cheap ram; another went to the same purchaser at 45 guineas, and others 22 guineas, &c. Fifty guineas secured the first one of this lot for Mr. R. Dixon, of Brandesburton, and at 5 guineas more Mr. W. Searley got his choice; the remainder ranged down to 11 guineas. Mr. Henry Goodyear, with a well-matched lot of ten, realised an average of £20 13s. 2d.; 50 guineas was the best price to Mr. J. Evens, the well-known Lincoln red cattle breeder; a pair went to Laughton, Mr. J. E. Casswell's flock, at 36 and 34 guineas; another went at 33 guineas to Mr. W. H. Pate; and the rest ranged down to 14 guineas. Another lot of ten choice rams followed. These were Mr. J. E. Casswell's, and here again plenty of bids were found; Messrs. Dean, who will have the best, gave 64 guineas, Mr. Rudkin 32 guineas, Mr. Redmore 30 guineas, several made from 26 to 20 guineas, and the remainder ranged down to 14 guineas. Mr. W. B. Swallow's were a fine lot of rams; the average realised (£26 18s. 10d.) was lower than anticipated; why this was the case is difficult to understand, for the rams were of high merit and choice quality, and right through good competition was found. Mr. W. Savage, for Argentine, gave top price (66 guineas) for a beautiful ram, and the same buyer took others at 38, 36, 23, 22, and 20 guineas; Messrs. Dean gave 46 guineas, and Mr. Hughes 42 guineas, Mr. E. J. Turton 31 guineas, several others making 20 guineas and above, and the remainder ranged down to 14 guineas. A choice lot, but unfortunate in the ballot, for these were offered near the end of the sale, were those consigned by Mr. R. Richardson, whose wide, deep, and good fleshed rams realised £26 1s. 10d. for the half score. Two made 44 guineas each, and both went to leading flocks owned by Messrs. W. B. Swallow and W. Taylor Sharp; five others made 20 guineas and above, and the limit of price was 13 guineas. One of the most even and well-matched consignments was Mr. S. Yarrad's ten; here the average worked out at £24 9s. 3d., with 48 guineas for top figure, Mr. Grant taking this well-developed ram. Mr. Jessop gave 40 guineas, Mr. R. Chatterton 24 guineas, and Mr. G. Marris 23 guineas, &c. A

choice and well-bred lot represented Mr. W. Bayles, whose average for ten was £23 12s. 6d. The Argentine got the pick of the lot at 57 guineas to "Walker"; five others made 20 guineas and over, and the remainder ranged down to 13 guineas. Mr. James Cartwright found quite a demand for his rams. These were fine rams, well grown with good substance, and not overloaded with waste flesh and fat. Mr. C. E. Howard, after a tough contest with Mr. F. Ward, got a grand ram at 77 guineas, Mr. Ward taking an almost equally good one at 34 guineas. Messrs. Hughes, who were good purchasers in this lot, gave from 50 guineas. Mr. Herdman got a pair of fine rams at 36 and 29 guineas, Mr. Watson giving 36 guineas. The remaining prices were such that the average was £22 5s. 7d.

Sixteen from Mr. F. Money's flock were wanted particularly for export. Fourteen out of those offered were taken for that country, twelve by Mr. W. Ward at from 40 guineas, and Mr. Beck two at 25 and 24 guineas, the average working out at £19 8s. 6d.

The following summary of the other consignments sold will complete the sale:—Mr. C. E. Howard, six at £17 5s.; Mr. W. Taylor Sharp, twenty-four at £17 0s. 4d.—top price 45 guineas; Messrs. Needham, eight at £16 19s. 11d.; Messrs. Watson, fifteen at £15 10s. 9d.; Mr. J. Redmore, fifteen at £15 8s.—top price 42 guineas; W. Crowder and Sons, twelve at £14 12s. 3d.; Mr. C. S. Dickinson, eight at £14 6s. 1d.; Mr. J. B. Nelson, ten at £13 11s. 11d.; Mr. J. Brocklebank, fifteen at £12 17s. 7d.; Mr. T. S. Pearson Gregory, ten at £12 4s. 7d.; Mr. C. Hensman, fifteen at £11 12s. 4d.; Mr. C. M. Johnson, eleven at £9 7s. 1d.; Mr. F. Smith, eleven at £8 4s. 2d.; Major Pinder, five at £7 17s. 6d.; Sir J. H. Thorold, twenty at £7 14s. 10d.; Mr. John Evens, six at £6 18s. 3d.; Mr. R. Taylor, ten at £6 14s. 4d.; Mr. G. Langdale, fourteen at £6 14s. 3d.; and Mr. C. N. Anderson, eight at £6 4s. 8d.

Compared with the corresponding sale last year we get the following:—The 1905 sale, £5,586 for 284; average £19 7s. 5d., as against £7,616 1s. for 376 rams that averaged £20 5s. 1d. In 1905 the best price was £210; in 1906, £280; and the best average last year was £63 for ten, as against £71 3s. 1d. for thirteen this year.

THE WEEK'S SHEEP SALES.

Hempton Green Fair.

There was a large attendance of buyers and a full entry of sheep at Hempton Green Fair (Norfolk), on Wednesday. In all departments there was evidence of improved quality, trade was brisk in the public section, and at the auctioneer's sales of rams excellent prices were made. Messrs. Salter, Simpson, and Sons sold Messrs. T. Brown's Cotswolds for £11 10s. per head, against £10 11s., Mr. J. P. Case's Oxford Downs averaged £8 12s. 4d., and Mr. T. A. Barton's averaged £8 12s. 5d. Messrs. John Long and Sons offered Oxford Down shearlings, bred by Messrs. H. and G. Overman, of Weasenham, which averaged £11 14s. Messrs. Dixon's shearling rams averaged 11½ guineas, against £9 2s. 6d. last year. Messrs. Paxton and Holliday also sold twenty-nine Oxford Down ram lambs for Mr. Geo. Adams, Royal Price Farm, Faringdon, Berks. The average was £7 4s.

Bromsgrove.

Messrs. Cotton and Chappell held their annual sale on Wednesday last. The sale commenced with the lambs, when over 1,000 were on offer, and although the reputation of the district is somewhat threatened by the weather, the sale was very satisfactory. A lot of Hampshire ram lambs from Mr. A. Edwards made up to £5, while other entries realised the same figures.

Hereford.

Messrs. A. and D. Edwards's second annual special ewe and ram sale was held at the Hereford Cattle Market on Wednesday, when a good ring of buyers was present. The best prices paid for Shropshire rams were 9 guineas, 8 guineas, and 7 guineas. Other prices ranged from 6½ guineas to 5 guineas. Five guineas was the most paid for Ryeland rams, while the ram lambs reached no higher than £2 apiece. For ewes 4½s. was the highest price paid, and others ranged down to 3½s. and 2½s. 6d. apiece.

Cirencester Fair.

At this fair on Monday upwards of 5,000 sheep were penned. Trade was better than had been anticipated. Stock ewes made up to 46s. and 48s., and shearers up to 48s. and 50s.; store lambs to 42s. 6d. and 44s. 6d. Mr. R. W. Hobbs, of Kelmstock, for his thirty Oxford Down lambs, averaged over £8; Mr. J. Horlick, of Cowley Manor, averaged 27 11s. for twenty and Lord St. Akthyn's thirty secured £5 3s. 6d.; and Mr. W. Arkell, of Kempford, £5 17s. 3d. a head for twenty-five. Hampshire Down ram lambs averaged 4s.

Bury St. Edmunds Fair.

This fair was held on Tuesday. Considering the prolonged drought, there was a good trade. All the best bred ewes—which included several very fine consignments of Suffolk ewes—sold remarkably well. There was also a sharp trade for the lambs. Mr. Charles Simpson commenced the sale with the Suffolk rams, for which there was a good demand. Mr. G. B. Robbins (Moulton) sent a half-sire; two made 8 guineas each, one 7 guineas, two 6½ guineas each, one 6 guineas, two 5 guineas, and two 5 guineas each. From Mr. J. Wood's (Hengrave) consignments one animal made 8 guineas, and another 7½ guineas. Mr. H. Northend (Moulton) also sent five, and the top price reached was 8 guineas. A two-shear ram from Mr. J. T. Stockburn (Clare) made 9½ guineas, and another fetched 5 guineas, and among the shearlings from the same breeder one made 8 guineas, two 6½ guineas each, three 5½ guineas each, and one 5 guineas. Mr. R. Barclay (Higgham) sent 13 ram lambs, the highest price among which was 8 guineas. From a half-sire sent by Mr. R. Burrell (one fetched 10½ guineas, another 7 guineas, two 6½ guineas, and two 5 guineas each. Mr. Salter disposed of the Southdown rams in a separate ring. Among those from Earl Cadogan the top price realised was £6 15s. Cotswold rams from Mr. F. Craddock (Eastington) made up to 7 guineas. Mr. Russell Swanwick's (Royal Agricultural College Farm, Cirencester) made from 8½ guineas to 5 guineas.

Battle Fair.

Success attended the twentieth annual sheep and lamb fair held at Battle on Thursday. The catalogue included some 2,500 sheep, lambs and rams, and, in the words of the auctioneer, "everything worth selling found a ready purchaser." The keen bidding resulted in very satisfactory prices being realised. Mr. F. G. Ashton, M.P., of Vinehall, made the highest figure with twenty Southdown wether lambs, which were disposed of at 35s. apiece, while other breeders made 30s. and upwards.

Peterborough Fair.

This fair was held on Wednesday, when about 200 Down ram lambs were offered for sale. The prices realised were quite satisfactory in the Hampshire classes. Ten, consigned by Mr. Walter C. Young, Stratford-sub-Castle, Salisbury, averaged 5 guineas, the highest price of 5½ guineas being given by Mr. Jas. Bonser, Fother-

inghay, and Mr. Pensgood, of Ponton. The average price for 30 sent by Mr. J. H. Dibben, Bishopstow, Salisbury, was £6 each, Mr. W. Collett, of Upwood, paying the top price of 10 guineas for one. Eighteen sent by Mr. A. F. T. Drake, Dogdean, Salisbury, averaged £5 12s., Lord Willoughby de Eresby paying 11½ guineas for one. Twelve and a-half guineas was the highest price for one from forty sent by Mr. T. Fowell Buxton, Ware, Herts., being purchased by Mr. Bonser, of Holford, and the average price for the whole lot, which included three shearlings, was £7. The finest lot penned came from Mr. C. A. Scott, Murray, Hambledon, Henley-on-Thames, the pick of the splendid consignment going to Mr. T. F. Halling, of Fotheringhay, for 18 guineas. Other prices realised were Mr. Smith, Somersham, 15 guineas, Mr. Lane, Great Addington, 15 guineas and 11½ guineas, Mr. Bonser 11 guineas and 6 guineas, and Miss Pearce, Helpston, 11½ guineas. The prices given for Sir Richard Rycroft's forty sent from Kempsholt Park, Basingstoke, ranged from 3½ guineas to 5½ guineas, and twelve from Mr. E. B. Clift, of Basurstoke, made from 3½ guineas to 5 guineas. For some Hampshire Down ram lambs, the property of Sir Alexander Henderson, Bart., the average price realised was £5. Mr. J. Hays, of Warrington, gave the top figure, 9½ guineas.

Mr. J. Kidner's Dorset Horns.

When Messrs. Emsor and Son, in conjunction with Messrs. C. R. Morris, Sons, and Peard, sold by auction on Thursday week the entire flock of pure-bred Dorset Horn sheep, the property of Mr. John Kidner, of Dodhill, Taunton, the sale attracted a large number of breeders of the celebrated Dorset Horns in the West, and excellent prices were realised. Full-mouth ewes made 60s., six-tooth ewes from 49s. to 100s., four-tooth ewes from 57s. to 90s., shearing ewes from 49s. to 126s., and ewe lambs from 37s. to 58s. Wether lambs realised from 37s. to 45s. 6d., and ram lambs from 3½ guineas to 18 guineas.

Sale of the late Mr. J. P. Cross' Shorthorns.

On Friday last the herd of Shorthorns bred by the late Mr. J. P. Cross, of Cathorpe Towers, Rugby, was sold by auction in the presence of a large company, Messrs. Thornton and Co. being the auctioneers. It had been bred for very many years purely as a dairy herd, and animals sold from it have not only given large yields of milk, but have won numerous prizes at the London Dairy and other shows; it was, therefore, not a matter of surprise that breeders were attracted to the sale from far and near. Nearly all the animals were red in colour, and showed considerable uniformity. From first to last the prices were highly satisfactory, three of them made three figures, and many ran up to from 50 to 90 guineas. Mr. C. L. Agnew bought lot 2, Cathorpe Duchess Sarah at 45 guineas, Veronica 3rd at 51 guineas, and Cathorpe Nonpareil 35 guineas. Lot 4, a big fine cow, was taken by Mr. Bagnall at 52 guineas, and Carrie 25th, lot 50, by Mr. Hornby at 50 guineas. Lot 9 was Wild Cean, bred by Mr. George Taylor, and she was knocked down to Lord Trevelyan at 155 guineas, this being the top price of the day. Sir Oswald Mosley paid 90 guineas for Cathorpe Star, a three-year-old cow, and 115 guineas for a two-year-old Cathorpe Cranberry. Mr. G. C. Williams, of Cardiff, bought several, of which Darlington Cranford 13th 64 guineas, and Cathorpe Celia 8th 88 guineas, were perhaps the best. Mr. George Taylor gave 100 guineas for a two-year-old heifer, Cathorpe Celia 10th, Mr. J. C. Robinson 60 guineas for a cow, and Mr. Hobbs 60 guineas. Mr. Scott-Murray 54 guineas, R. Rodocanacha 56 guineas, and Lord Southampton 55 guineas for yearling heifers. A pretty yearling named Cathorpe Cranberry 2nd was bought by Colonel Beech at 85 guineas.

The two stud bulls Valiant and Lord Fisher oddly enough made the same figure, 41 guineas each, the former going to Mr. Townsend, and the latter to Mr. Wilson. There was a good trade for the younger bulls, although they did not make such high prices as the females. Cathorpe Bravery made 38 guineas to Mr. E. H. Bevan, Cathorpe Conservative 40 guineas to Lord Willoughby de Eresby, Cathorpe Testator 38 guineas to Mr. J. McMonies, and Cathorpe Rouge 45 guineas to Mr. C. Bathurst. The forty-nine ewes averaged £50 all but a few pence, the eleven bulls £30 5s. 5d., and the total of the sale was £2,848 2s. 6d.

Catalogues are now ready of the sale of Lincoln sheep which will take place on Thursday, the 13th, at Stenford. Messrs. Hincks, Earl, and Lawrence have received entries of 3,714 breeding thrives and ewes, 171 Lincoln rams. The judges for the prizes will be Messrs. Henry Duddery, of Riby, and B. Rowland, of Fishtoft. This sale is one of the largest and oldest established of Lincoln breeding sheep in the county.

Notes and Jottings.

SINCE my last notes were penned the abnormal work experienced has played terrible havoc with the pastures and root crops, particularly swedes, and has quite blighted the outlook for the stockbreeder during the next six or seven months, as the prospect for good autumn grass is now very bad, and the turnips and swedes that survive mildew can scarcely be expected to prove ordinarily nutritious. Cake and other artificial food can, however, make up very considerably for the loss of the above-mentioned roots and grass so far as the store stock are concerned, and at a comparatively easy cost; but when we come to the matter of beef and milk there is scarcely any means of keeping things going at a profit without a good and plentiful supply of roots.

MILK appears almost to have assumed famine dimensions, and this so rapidly as to have raised prices in many places. Many dairy farmers met with during the past few days have expressed themselves as being quite unable to fill their usual complement of churns, either by increased artificial feeding or by the purchase of more newly-calved cows. Prospects for dairying look very blue indeed for the coming winter. The best grazing districts have been depleted of a very large proportion of their fattest cattle, too, earlier than usual on account of the drought, water being as difficult to obtain in many cases as feed. The bullocks left in the feeding section, however, are looking in better condition than might have been expected.

THE show season still continues going strong, though now mostly confined to district shows and local tenant farmers' stock. These shows are excellent places for farmers and breeders to see what is going on, and equally good for them to decide upon the purchase of a bull should they be requiring such a thing. Not only can they have the assistance of other people's opinions which vary so considerably, but in looking at any animal the inexperienced would-be buyer is certain to have both the vices and virtues it possesses pointed out to him, for one seldom finds two or three people appreciating precisely the same points and the same animal, and the one who does not approve of a certain animal gives his opinion very freely, pointing out its shortcomings, whilst the man whose tastes the beast exactly suits will be equally enthusiastic in pointing out its superior properties, so that the buyer, in a very few minutes, is able to benefit by other people's opinions and experience as well as his own.

THEN, usually these autumn shows are but one-day affairs, and it is often so arranged nowadays that several district shows are held within a couple or three weeks in a comparatively small radius, so that fresh animals and people may be interviewed and reviewed with very little trouble. Vastly more may be learned by attending a few of these shows than by visiting a whole number of herds at home privately, and such a comparison of herds can be compared so much more satisfactorily and opinions formed when seen side by side in the showyard than when seen at miles distant, apart.

FROM the above point of view it will be seen how beneficial it is for farmers to attend these shows occasionally, as well as some of the more extensive shows in their season. Many new ideas will be given them whilst travelling in the train to and from the shows, as well as while standing at the ring-side, and when looking at the stock afterwards in their stalls in the show, where the judge's ideal may be at least in a measure ascertained. There is an old adage which says "The rolling stone gathers no moss," but there is such a thing as staying at home to the loss of any valuable experience which may be obtained at a very small cost now. Some of our railway companies might do much more than they do at present in facilitating farmers' visits to these shows.

DURING last week the great autumnal show and sale of Shorthorns was held at Bingley Hall, Birmingham, when the unprecedented number for an autumn sale of over 400 head were catalogued. The general quality of the autumn

show and sale is invariably of a lower standard than that of the spring exhibition and sale, and this year the difference was fully as marked as upon previous occasions. The foreign buyer has been very busy this year; and every show of importance has witnessed his presence, picking and choosing the best animals so long as their pedigree was eligible for his purpose. It is not to be wondered at, then, that the supply of "top notches," as our American friends style the best, should be forward in somewhat limited numbers.

It was satisfactory, however, to find that there were buyers in plenty for the best specimens, some for home use, some for American, and rather a good number for the Continent of Europe, and 200 guineas, which was obtained in several instances, is not a price to complain of under the conditions stated above and at such a time as the present. The judges of the female classes seemed to have paid greater attention than usual to the milking properties of the stock than has many times been the case, and perhaps the same remarks may be applied to the exhibits, for in looking through the catalogued pedigrees it will be found that a very considerable percentage of milk-bred animals were included, Bates blood being prominent in quite a number of very good bulls as well as females.

SEVERAL rather extensive auctions of Polled Angus cattle have taken place recently in America, and very satisfactory prices realised, or at least prices and averages that place the business on a footing as regards profit and loss that should give breeders confidence for the future of the breed. Averages of £40 and over of English money is an improvement as compared with many sales of the past twelve months. The time of year for this breed to assert its most valuable properties will soon be here, and reports lead us to anticipate some high-class specimens at Norwich, Birmingham, and Smithfield, when those important shows take place. It is to be hoped that ere the shadows lengthen and those days arrive beef will be in better demand and at advances in price than at present; or otherwise profits on the job will be very limited.

IRISH cattle are coming out remarkably well this year, the season in the Emerald Isle has been very satisfactory, as referred to in last week's notes. Just before sitting down to pen these lines I looked over a special train load of extraordinary good Shorthorn bullocks from that green island on their way to the metropolis. Big aged bullocks and well fed. It is not every day that one can see bullocks of that stamp now. Growth was evidently over with them, and their last few months had been devoted to the laying on of flesh, a time when it can be put on much more cheaply than when growth has to be carried on at the same time. A fully matured beast fattens very rapidly when his quality is good, as is seen by the short time required to fatten a cow that may chance to have proved barren or has been kept in that state purposely.

HEREFORDS continue to hold a very high position with the foreign buyers for several different countries. The Hereford breed of cattle stand heat and drought as well as most breeds; indeed we have many times during dry summers and scarce feed found them to be in better condition as regards ripeness and weight of beef than any other breed. This has been the case in many pastures during the present summer, and at the present time some excellent herds of fat Hereford bullocks are to be seen upon pastures so sunburnt as to be scarcely distinguishable from stubble fields. Travelling with a friend the other day, and discussing the difficulties of fattening cattle under the conditions of heat and flies coupled with scarcity of feed that has recently prevailed, the opinion was expressed that the North Devon was even a better feeder than the Hereford, being less terrorised by the flies and less affected by the heat, properties that help immensely in putting on flesh at such times. The Hereford and North Devon are both, however, very good to own at such times.

Mr. G. J. B. Chetwynd's Dexters.

At the sale of Mr. G. J. B. Chetwynd's Dexters, at Wyndthorpe, near Doncaster, on Friday week, 40 guineas was paid for Gastonia, a two-year-old cow, by Mr. J. Hay; 30 guineas for Genista, by Mr. T. A. Clarke; 34 guineas by Miss Lucy Bethell for Gentiana; and 22 guineas for Gagia by Mr. Stone. Good purchases were also made by the Duchess of Newcastle, Mr. Colin Campbell, Mr. G. H. Davy, and Mr. B. de Bertado. A number of Berkshire pigs were also sold at an average price of nearly £7, the principal purchasers being Messrs. Campbell, Cameron, Hoyles, and Watson.

VETERINARY PREPARATIONS, and Small Articles of a Portable Character, sell readily when brought regularly before the readers of the "Mark Lane Express."

HILL & SMITH
MANUFACTURERS OF
Iron and Wire Fencing, Hurdles, Gates, Netting, Galvanized Corrugated Iron Roofing, &c.

Catalogues free on application to
Brierley Hill Ironworks, STAFFS.

Sale of the Earl of Feversham's Shorthorns.

On Tuesday the herd of Shorthorns, as well as a number of young Jersey cattle, Leicester and Southdown sheep, the property of the Right Hon. the Earl of Feversham, was sold by auction at Duncombe Park, Helmsley, Yorkshire, by Messrs. Thornton and Co.

A very large company sat down to luncheon in a spacious tent previous to the sale. The Earl of Feversham presided, and he was supported by Lord Helmsley, M.P. (the heir to the estate), Sir George Wombwell, Bart., Sir Richard Graham, Bart., Sir Oswald Mosley, Bart., the Hon. H. W. Fitzwilliam, and a great number of prominent breeders and gentlemen. The herd is one of the oldest in the kingdom, and has been bred principally from the Bates blood for nearly a hundred years. The animals for sale included some grand cows and heifers of the Duchess, Waterloo, Cleveland, Craggs, and other good tribes.

The first cow, Lady Cleveland 35th, was bought by Mr. J. Watt, of Carlisle, at 40 guineas, who later in the sale also took her brother, Lord Cleveland 33rd, at 35 guineas. Caledonia Waterloo, lot 3, must be worth the 35 guineas Mr. W. Thompson paid for her, as her three heifers were particularly good and made 60 guineas and 95 guineas to Lord Middleton, and 35 guineas to Sir Oswald Mosley, Bart. Mr. J. A. Williams bought a fine cow with a rare udder in Thorndale Belle 2nd, bred by Mr. George Taylor, at 50 guineas, and Mr. T. H. Hutchinson and her highly-bred specimen in Warrior's Lady, at 70 guineas. Mr. W. Savage, buying for the Argentine, was an extensive purchaser; among his lots were Warrior's Maid, 66 guineas; Cheshire Princess, 125 guineas; Lady Cleveland 41st, 75 guineas; Golden Pride, 100 guineas; and Lady Matilda, 95 guineas, the last two being the property of Mr. R. Hornsby, of Hovingham. Sir Oswald Mosley was announced as the buyer of several nice young females, Susanna, 47 guineas, and Rose of Rievaulx, 41 guineas, being among them. Viscount Helmsley bought a splendid pair of heifers of the old Cleveland blood, at 81 guineas and 93 guineas, with the object, it was announced, of founding a new herd. Captain Duncombe paid 100 guineas for a sweet yearling of the Waterloo family, and Mr. C. H. Jolliffe got a Thorndale Rose heifer of Mr. George Scooby's at 46 guineas. A pretty calf, also of Waterloo blood, was selected by Mr. Rodocanachi at 67 guineas for his new herd in Warwickshire.

Dr. Malbrun, from the Argentine, was a good customer for the bulls, as he took three of the best. These were Gypsy King, 66 guineas, now four years old, a grand masculine animal, and a novel sire; also Trusty Lord, 54 guineas, and Rhombus, 85 guineas, both of which belonged to Mr. Hornsby. Mr. T. Stamper also sent a stylish young bull, which made 67 guineas, to Messrs. Medd and Moon.

The sale was considered highly satisfactory, as the forty Shorthorns realised the good average of £57.

Ten Jersey cows were sold at 15 guineas apiece, the best price, 23 guineas, being given by Mr. W. S. Hunter. Others made from 12 to 16 guineas, and Sir George Wombwell, Sir R. Graham, and Mrs. Hamerton, were the chief purchasers.

Thirty Leicester sheep were offered and made up to 62s. a pen, and the same number of Southdowns, which reached 51s. for a pen. Messrs. Walker and Sons, of York, afterwards disposed of a few young horses, mostly young Hunters. The following were the prices:—Bay gelding, 58 guineas (Sir George Wombwell, Bart.); black gelding, 80 guineas (Mr. T. H. Hutchinson); bay mare, 70 guineas (Mr. W. Brown); brown gelding, 68 guineas (Mr. W. Brown); brown gelding, 25 guineas (Mr. T. H. Hutchinson); bay filly, 25 guineas (Mr. Barker).

The grand total of the sale was £23,023 13s. 6d.

Aberdeen-Angus Sales.

Mr. W. S. Ferguson's.

The first of the September sales of Aberdeen-Angus cattle was held on Tuesday, when a draft from the well-known herd the property of Mr. W. S. Ferguson, of Kincloch, Coupar Angus, was dispersed. Bidding started at a steady rate, and at the fourth turn Mr. Fraser, Balgarvie, paid 30 guineas for the fine big cow, Alicia of Titpointe by Erica Lad, out of the excellent breeder Alice II. of Powrie, by Norfolk W. Mr. Ralston immediately after took a sweet breeding like cow in Pattern of Preston of the Rose of Drumm family at 24 guineas. An Irish customer, Mr. Moorhead, had perhaps the second best of the cows in lot six, Vine Pride of Lidnock, a six-year-old of taking character, and, like most of her companions, an early calver, the price in this case being 35 guineas. For Princess IX. of Moncrieff, a compact six-year-old by the show bull Chansan of Fordie, Mr. Cridlam left 30 guineas, but Colonel Smith Grant immediately after went to 42 guineas for Extract of Benton. The best cow of the collection was Mistress Nellie, the pretty five-year-old Ruth, which won second at the Highland, and for her Mr. Bainbridge's representative went to 33 guineas. The best of the two-year-old heifers came first on the list, this being a smart Pride, which passed to Auchoranach at 48 guineas. The noted bull Echador and the three-year-old Engager were offered, but as the reserve figures were not reached these animals were withdrawn.

The sale realised £1,004 2s., or an average for 43 head sold of £24 6s. 3d.

Mr. T. Buttar's.

Following the sale at Kincloch on Tuesday, the herd belonging to Mr. Thos. A. Buttar, of Corston, Coupar Angus, was dispersed. Mr. Buttar has been obliged to part with his blacks in consequence of the growing importance of his Shorthorn herd. The best price for cows was 29 guineas, paid by Mr. James Whyte, on behalf of Lord Strathmore, for Corston Pride 4th. Mr. Ferguson took the best of the two-year-olds, Sabrina 3rd of Corston, the Angus Show fourth prize-taker, at 41 guineas, her figure being the leading one for the day. The yearling heifer went cheap, several of these being of quite a promising order.

The sale total was £318 9s. 6d., or an average for forty-seven head of £17 8s. 3d.

Perth Joint Sales.

The third sale took place on Thursday at the Perth Auction Mart, the disposal being a joint one. There was something of a drag towards the finish for some of the bulls. Mr. Chalmers secured from Mr. Ralston, Glamis, the top price of the day, 65 guineas, for the eight-year-old Etocua, a big, naturally fleshed Erica. Thierunner-up for this good cow was Mr. Bainbridge's representative, who had experience of Etocua's sire in the Earl's herd. Some five minutes later Mr. Calder paid 40 guineas for Eudocia of Preston, a fine quality seven-year of Mr. Chalmers', and by the Champion Proud Duke of Ballindallock. A yearling daughter of Etocua was taken to Glamis at 49 guineas. Mr. Crichton, the Culdees factor, had the fortune to secure a good start at 39 guineas from Mr. Grant, Auchernach, Strathspey, for Culdees Erica, a most useful cow out of a Prince Inca dam. A beautiful heifer calf at her foot by Edridge (23085) was taken out for the Drummondfold herd at 30 guineas. Gypsy Eric 2nd, a half-sister to the one already noted, was only a five-year-old, and in excellent calving season, met fairly brisk competition, her destiny being Baltimore at 50 guineas. Mr. Robb, Belfast, secured her handsome bull calf at 18½ guineas. A daughter of the Prince Inca cow was turned out a little later, also at the even 50, to Mr. Stewart, Carse of Trovan, Crieff. Out of the two-year-old heifer group, Mr. David Cross, of Ingliston, had clearly the pick at 20 guineas each in Maya of Auchnagute and Rosina from Batsford Park. The leading figure for bulls was 49 guineas, paid by Mr. Davidson, the Cathness breeder, for Colonel M'Inroy's yearling Arrogant (24107), a dashing representative of the Prince family.

For fifteen cows Lord Redesdale had £258 6s., an average of £17 8s. 4d.; five two-year-old heifers £74 11s., average £14 18s. 2d.; one yearling heifer £17 6s. 6d.; fourteen bulls and bull calves £163 16s., average £11 14s.; five heifer calves £45 3s., average £9 0s. 7d. Ten cows from Culdees fetched £295 1s., average £29 10s. 1d.

Mr. J. E. A. Gwynne's Sussex.

On Wednesday Mr. J. E. A. Gwynne's Flockington herd of Pedigree Sussex cattle was brought under the hammer of Messrs. A. Burtenshaw and Sons, auctioneers, of Hailsham and Eastbourne, at Milton Court, Alfriston, in consequence of two of the farms being let.

Sir L. Lindsay-Hogg presided at the luncheon, and referred to the good example which Mr.

OIL and GAS ENGINES are growing in demand, and would be still further "boomed" if regularly advertised in the "Mark Lane Express."

Gwynne had set to landlords in the county by farming his own land. He pointed out that Mr. Gwynne started his herd with the very best blood obtainable, and had a herd of 500 or 600 cattle. He regretted that they had so many animals perfectly useless for breeding at the sales and shows. Mr. Gwynne said he had been for thirty years among Sussex people, and hoped the family would remain with them for many generations to come. There were no cattle which could produce results superior to Sussex cattle, and he never regretted his dealing in them. The best prices were:

Cows.—Good Old Sort 10th (calved August, 1901), Mr. Stanford, 15 guineas; her bull calf (April, 1906), Mr. C. E. Russell, East Dean, 6½ guineas; Fairmaid 8th, in calf (August, 1899), Mr. H. S. Greaves, 17½ guineas; Gentle Lady 30th (May, 1902), Mr. W. A. Haviland, 17 guineas; Celestia 10th (April, 1902), Mr. Knight, 14½ guineas; her bull calf, won (December, 1905), Mr. Minchin, Henfield, 7 guineas.

Bulls.—Folkington Fortune (April, 1902) and Bewbush Baron (January, 1901), bought by Mr. Poole for 13½ and 14½ guineas, respectively.

very forcibly that we have more good Thoroughbred mares—good-sized, wide, roomy mares with a fair amount of bone—shown in the Hunter classes than we had a few years ago. This is a good sign. Of course, there are not so many as one could wish to see, but there are a few, and they are more in evidence than they were.

THEN let us take the Hunters, confining ourselves first to what may be termed the breeding classes. At most shows I have visited this year the Hunter brood mares have been decidedly good, and such a thing as a bad show of brood mares I have scarcely come across. There have been some weak classes—weak, that is, numerically—but that is easily accounted for. Then let us look for a moment at the young classes—yearlings, two-year-olds, and three-year-olds. What a fine lot of young Hunters there are in the country, in spite of all that the grumblers have to say about them. Good-looking, well-bred young horses that look like growing into weight-carriers are more in evidence than they used to be. There is a great deal to desire in many of them, no doubt, but one cannot have everything at once, and we are moving in the right direction.

ABOUT the made Hunters I shall not say much, though I am of opinion that they will compare with any of a previous year. One thing, however, seems to be of the greatest importance in these classes, and that is that the weight-carriers show a great deal more quality and are more bloodlike in their action than was the case formerly. The weight-carriers of ten years ago even would not show to advantage beside those of to-day.

THE improvement in Shire horses during the last few years is remarkable. It is not so very many years ago that sidebones were a constant source of rejection, that Shire horses were upright on their pasterns and greasy-legged, when they got a few years over their backs. Their feather was coarse and curly, and their feet were anything but perfect. What an improvement there is in all these respects! Sidebones are never heard of at a show, or very seldom, and the Shire horse of the day has razor shaped bone of flinty texture, and is as correct on the ground as one could wish, whilst such a thing as "greaso" is rarely seen or heard of.

ABOUT the Hackney it is not so easy to speak. For some reason or another at many shows where the Hackney was once strongly in evidence, there was a great falling off in the Hackney classes. Not in quality, anything but that, for amongst the best end of the Hackneys the quality has been well maintained. But anyone seeing the numerically weak classes at the Yorkshire and at many Yorkshire shows such as Malton, Driffield, Pocklington, &c., would be inclined to think at first sight that Hackney breeding was on the decline. This, however, is a conclusion to which I cannot come just at present. To begin with, it is not compatible with the London Show in March, which was probably the best show of Hackneys ever held in England. Then, again, if in many places where Hackneys used to be seen in great numbers the classes have been small, I have seen some useful classes in districts where a few years ago very few, if any, Hackneys were shown. Perhaps the small classes of breeding animals—for it is in the breeding classes and young classes that the falling off has principally been—are due to the breed being a little more spread about, and to the exceptional excellence of a few individuals. At any rate, I shall be disappointed if we do not see an improvement in the number of Hackneys shown next year.

CLEVELAND Bays and Yorkshire Coach Horses are very seldom seen at shows of Yorkshire, but there certainly seems to have been a little more briskness amongst breeders than there has been for some years. Some excellent young stock of both breeds has been exhibited, and there is a number of good looking young mares coming on. Some very interesting, if not very large classes have been seen at many of the

shows—notably at the Yorkshire and Middlesbrough—and there is considerable improvement on four or five years ago, when things were in very low water.

NOW it must not be supposed that I think this the best of all possible worlds as regards horse breeding—far from it. There is a great deal of room for improvement, not only in the rank and file of the various breeds, but even amongst the best end of them. We cannot afford to let an opportunity for improvement go by. In mating our mares, in managing them and their offspring, there must be unremitting attention to details, and above all we cannot afford to part with our mares. Let no man think, because he sees a good class or two of horses or of brood mares, that we have plenty of good brood mares in the country, and that he can, therefore, sell to the foreigner. The temptation is great, I admit, especially when times are hard and the foreigner will give a little more than an ordinary market price. But a man who sells a good brood mare is probably selling a small gold mine.

I CAME across an instance of a man refusing to sell a filly foal a week or two ago. He is a farmer, and a not very large holding. He had a very good brood mare some years ago, and she had a fine filly foal. For this foal he was bid £30—a good price as filly foals were selling at the time. But he refused, saying that he would never sell a filly from the old mare till she bred him another. And she bred him several colts after that, and before she bred him another filly the first one was breeding herself. And she has bred him many a good horse. I believe every one of them prize-winners; and he is, undoubtedly, a much richer man than he would have been had he sold the foal. The foal might have died, you say. Yes, and the money might have been wasted in the honest endeavour to make more of it.

I HAVE purposely refrained from mentioning any name in the above notes. Plenty of instances in confirmation of what I have stated will occur to those who have gone the round of the shows examining carefully for themselves the various classes. And though, as I have said, there is a great deal to do yet—aye, and will be a hundred years hence—I think I have shown that horse breeders need not despair, and that they have done not so very badly—at any rate, in recent years.

THE LOOKER-ONS.

Chester Cheese Fair.

Mr. Challinor reports as follows:—Pitch about 60 tons; good attendance of buyers, which produced a fairly brisk trade. Prices: Best, 64s to 67s 6d; medium, 64s to 63s; lower grades down to 58s. A good clearance was effected.

Sheep Dog Trials at Ruthin.—In the open stakes on Thursday seven-teen dogs competed, and the winner was Lady, who is owned by Mr. W. Arkright, of Llanrhydol, Sedburgh. Lady manipulated sheep around flags, through hurdles, and gained 60 points for an excellent exhibition. Trip, owned by Mr. J. Moses, Oswestry, was second with 53 points. Dust, Mr. George Bancroft's famous dog, had 55 points. Mr. Arkright's Lady and Laddie won the special stakes for two dogs.

The well-known fair at Burnet was held last week when there were few cattle to be seen and a strong show of horses. The cattle consisted chiefly of two-year-old Irish Shorthorn cross-breds, with a few half-bred Dexters. There were no Herefords, Devons, or Scots, while dairy cows were eagerly competed for. The trade in horses was very brisk, there being a strong demand for good animals of any breed. The average price for heavy, strong horses was 30 guineas, while 50 guineas was paid for a young bay gelding. There were several Hackneys on the common, one fine horse realising 60 guineas. There were few ponies, being mostly Welsh, which were sold for an average of £12 to £15. The real strength of the horses were the cob and small horse classes.

Radiol

**THE NEW
CHEMICAL
LIQUID.**

REMOVES, by radiation, all soft swellings that disfigure the body, such as Wind-galls, Bog Spavin, Thoroughpin, Capped Elbow, &c. No blister; no scarring; no hair removed. It is less harmful than water to a horse's skin, the swellings disappear and return. It makes a worn horse's legs fine. —5/6 of Chemists, or from

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

ONE of the most successful of show seasons is rapidly drawing to a close, and perhaps there is no more fitting time for reviewing the situation, and considering whether we have made any progress as a horse-breeding nation, and, if so, what progress have we made. For we cannot, in an important industry like this, stand still. We must either go forward or go back. And there are not wanting grumblers who say we have gone back and are going back; that the show horses are in the hands of a few men; that the judges dare not, or will not, go against them; that showing is going to the dogs; and that there is scarcely a good horse to be found in the length and breadth of the land, with the exception, perhaps, of a few Shire horses, and even they are hairy legged and short of stamina.

I MET one of my grumbling friends "short time ago. He is a fine judge of a horse—but he could see nothing good in our horses of the present day, except one or two good, looking young ones he had picked up. I should say that he never shows, but if he did his horses would be amongst the best I asked him if any of the few men who win all the prizes—according to his statement—were to come to him with a big cheque for one of his horses whether he would take it. The answer was, as I expected it would be, in the affirmative. Of course he would, and those people who are continually pointing out that the bulk of the prizes go into the hands of a few so-called professional exhibitors forget that these gentlemen can afford to give a great deal more money for a good horse than anyone else; that it answers their purpose to do so, and that they can afford to spend a great deal more time and money in getting their horses fit than the general run of exhibitors can. They win because they lay themselves out to win. They have judgment, enterprise, and perseverance; they make showing the business of their lives, and they succeed. And they deserve to succeed.

SO much for the prizes going into few hands. Now let us look at the class of horses that have won these prizes. Let us begin with the Thoroughbred. Now the Thoroughbred of the day is a favourite topic with the grumbler, and "leggy," "weedy," "no stamina," are a few of the pet phrases by which he is described. There are far too many leggy, unsound weeds, but let us examine the Thoroughbreds that come into the show ring. And first of all, let us take the King's Premium horses. I have attended every show of the King's and Queen's Premium horses that has been held, and I was also at the show of Thoroughbred stallions at Newcastle in 1887, and I have no hesitation in saying that the Royal Commission on Horse Breeding has every reason to be satisfied with the progress that has been made. The horses that won eighteen years ago—aye, or for the matter of that, ten years ago or eight years ago, would have had a poor "look in" in a strong class this year, with perhaps one or two brilliant exceptions. And it must not be forgotten, when comparing the King's Premium stallions of to-day with those of former years, that if the competition against the Royal Commission on Horsebreeding was strong eighteen years ago it is much stronger now, and in good Thoroughbred stallions were never more in demand than they are at present. In another direction, too, the Thoroughbred shows considerable improvement. One is apt to forget when one has not taken a note, but it has struck the writer

NOTTINGHAM CORPORATION, Stoke Farm Herd Large White Pigs, estab. over 20 years. Boars and Gilt at moderate price. Inspection invited.—**A. AVIS**, Stoke Bardolph, Nottingham.

OWTRAM, HERBERT H., Newland Herd Pedigree Large White Yorkshire, winners many prizes, Champion Cup and Medal; Boars, Gilt, in pig Sows for sale.—**FARM BAILIFF**, Newland Hall, Bay Horse Station, Lancaster

THE NEWNHAM HALL HERD of Large and Middle White Yorkshire Pigs is one of the largest and oldest herds of pure-bred pigs in the country. Prices moderate. Inspection invited.—**NEVILLE J. HINE**, Newnham Hall, Baldock, Herts.

THE WATFORD HERD of Large White Yorkshire Pedigree Pigs of the choicest breeding. 150 to choose from. Send for Illustrated Catalogue. Grand young breeding stock always on sale.—Apply, **R. AYKE**, Bushey Lodge Farm, Watford, Herts. (17 miles from London).

WALTON HERD of Pedigree PIGS, owned by Sir Gilbert Greenall, Bart. Walton Hall, Warrington. Large and Middle White Yorkshires, unsurpassed for purity of breed, size and general excellence, as prove by the numerous Champion and Class Prizes won at all the leading shows. A choice selection of Boars and Sows for sale; stock carefully shipped.—For particulars apply to the Manager, **J. HALLAS**, Higher Walton, Warrington.

MIDDLE WHITES.

DEWHIRST, A., Rycroft Farm, Dudley Hill, Bradford. Pedigree Large and Middle White Pigs, also a few Berkshires of the choicest breeding. The following prizes have been won in 1902 by pigs bred by myself: 2 champion prizes for the best pig in the show, 30 shillings, 25 shillings, and 6 shillings, with numerous reserves and V.I.C. Send 3 stamps for Illustrated Book.

PEDIGREE MIDDLE WHITES.—Choice breeding quality, early maturity. Station: Bingham, G.N.R.—**HENRY SMITH, jun.**, Cropwell-Butler, Nottingham.

LARGE BLACKS.

CORNWOOD HERD of High-Class Pedigree Large Black Pigs.—Breeder and winner of numerous Prizes and Cup; Royal, Bath and West, and County Shows. Boars and Sows always on sale.—**JOHN H. GLOVER**, Cornwood, Devon.

PEDIGREE LARGE BLACKS of Choicest Strains, young Boars and Sows For Sale; prices moderate.—**H. J. CLARKE**, Norbury House, Newport, Shropshire.

STROUD HERD Pedigree Large Black Pigs.—Noted for length and depth; five 1st and 2nd Prizes at Bath and West of England Show, 1906; young Boars and Sows (sired by Borstal Masterpiece, 1st and Champion Royal Show) at very reasonable prices.—**WM. TOWNSEND**, The Mansc, Stroud, Glos.

SUSSEX.

SUSSEX PIGS, LARGE BLACK. Pure bred and of finest quality, with very small bone and fine hair. Not to be equalled for prime meat.—**FRANCIS N. HOIGEN**, Manor House, Appledram, Chichester.

BERKSHIRES.

CORY, CLIFFORD J., M.P., LLANTARNAW ABBEY, Monmouthshire.—Pedigree Boars and Gilt.

Live Stock Record.

DIRECTORY OF BRITISH PEDIGREE
STOCK OWNERS.

PIGS—continued.

CRIBB, ARTHUR LEWIS, Well End Lodge, Shenley, Barnet, Breeder of PEDIGREE BERKSHIRE PIGS. Young stock from noted strains, and eligible for Herd Book, for sale at moderate prices.

TAMWORTHS.

THE Melton Constable celebrated Herd of Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cups Smithfield. Several recently exported for Continental and Colonial herds.—Apply **R. OWEN GODDARD**, Estate Office, Melton Constable, Norfolk.

Suspended Animation.

We have arrived at the close of our hop year, and our interest in its history has practically ceased. We are now as it were "between the lights," and waiting for the dawn of a new day and a new season. The plantations are busy enough gathering in their harvest, anxiously inquiring, "What will the harvest be?"

Here in London we are waiting, in almost a comatose state, for some definite indication of the future course of events. Not only in England, but throughout the whole range of the hop world, suspense prevails, and business men are pausing for the moment uncertain as to the direction in which they should commence their new life. During the past week we have had many reports of the results of the picking as far as it has progressed, and we are told that in England the expectations of growers are not being realised, that the gardens are being rapidly cleared, and that the work in most districts will soon be completed.

If such reports are to be accepted as exact indications, we may conclude that the new crop will be very light, even much lighter than has been previously estimated. This outlook is attributed to the exceptional heat-wave that has passed over the country recently. But we are also reminded that only the earliest are yet being gathered, and that the sun is all the while adding condition to the later growths, which will probably be benefited thereby. Consequently many experts are dubious concerning the extreme views that are in circulation, and are disposed to believe that the final issue will not be unsatisfactory on the whole. These somewhat antagonistic opinions explain the calm which is characteristic of the present position of our market. A fair supply of new hops has arrived in the Borough, the average being of excellent quality and attractive colour.

An endeavour to ascertain current values reveals wide variations. Growers, encouraged by their immediate experience, are demanding prices ranging from 130s. to 160s., and finding that buyers do not respond, are apparently inclined to hold on for the present. Merchants are willingly looking at samples, but go no further, and thus the suspense is likely to continue until more definite knowledge is attained. I have discussed the probabilities with several of our sober-minded traders, and find that many of them are not disposed to persuade growers to look for an extremely high currency.

They base this view on the independence of consumers, resulting from the large surpluses from last year's crop. They also take into account the improved reports from the Continent, and the American supplies, which will doubtless be important, although not so heavy as were formerly expected.

As far as I can gather from these conversations, the general expectation seems to be that when business opens, and the market settles down to actual work, values will probably run from 110s. to 140s., and that the bulk of the hops will change hands at an average of 120s. Such prices will certainly be very disappointing to growers, as they cannot be thereby properly recompensed for their labour and outlay.

A firm of factors, in their annual circular, exhorts brewers to "take into consideration the

enormous expense the successful English grower has been put to to secure the hops," and thus, I presume appeals to consumers to pay fair prices for the produce thus so hardly won. I support this appeal with all my heart, but I fear that such consideration will not be found when the stern facts of business are being discussed, and that our well-deserving planters will have to fight a severe battle this season. I trust they will be satisfied in the end; otherwise I anticipate that further grubbing must result, and the door will be opened wider for our foreign competitors.

It is, from our point of view, satisfactory to know that the American crop will not be much above an average. There is the enlarged acreage to be taken into account, but the exceptional hot weather has so far interfered with the yield that we may only expect a normal surplus for the export trade, and even this may be lessened by the increased local demand, following upon the larger consumption of beer. Although the markets are quiet, prices are steadily rising, 22 to 23 cents being now quoted, both in New York State and on the Pacific Coast.

Very little business is passing in Brussels, and as the crop prospects have slightly improved, there is some tendency towards reduction of values. The picking in Poperinghe is progressing, and the quality of the hops is satisfactory. Quotations for new crop run from 92½ to 102½ francs.

The Nuremberg market is rather easier, as demand is slow. New hops are coming forward freely, some hundreds of bales having arrived. The sales that have been made have ranged from 70s. to 75s. for the lowest, and from 110s. to 130s. for the better sorts from Pottung and Hallertau. It must always be remembered that these market quotations are those paid to the growers for their air-dried produce, and that about 30s. must be added for loss of weight in the finishing, drying, baling, cloth, and other charges. From most of the German districts the reports speak of improvement in the prospects of the total yield. But there is little doubt that the crop will not exceed an average, if indeed it arrives at this point.

In the Saz district of Bohemia growers are expecting good returns, although their output will be only moderate. The demand for these special qualities by Bavarian and Austrian brewers is practically sufficient to absorb the whole production, and already business is being done in the new crop at prices equal to 160s. to 180s. per cwt.

Manger and Henley's Report.

So malignant and persistent was the blight that the ingenuity and perseverance of the growers of the greatest experience were taxed to the utmost. Wasting was continuous for quite nine weeks from daylight to dark, at an unprecedented cost of over £300,000. The result is that some gardens have been saved, and are a credit to the pluck of the planter; unfortunately, some thousands of acres have succumbed.

Last year our crop was very heavy, and so were the importations; therefore brewers have a considerable surplus from which to draw. From a most careful calculation we cannot to-day estimate the crop at more than 260,000 cwt., or £310,000 odd duty. The picking up to now corroborates this; for the universal complaint is that the yield is from one to three cwt. under the most conservative estimates. This is one of the shortest "vine" years on record, thus every hop can be seen, hence the mistake that has been made.

There is nothing to fear from Continental competition, and calculations of the yield in America are constantly diminishing, so that before the 1907 crop can be put on the market consumers must again be very short of supplies.

MANGER AND HENLEY.

59, Borough, S.E., September 5, 1906.

At Crewe, on Thursday, Nathan Brassington, a Manchester electrician, was charged with setting fire to four stacks of hay and wheat belonging to his brother, a farmer, of Barthomley, near Crewe. He had been staying at his brother's farm and assisted with the harvest. After hearing the evidence the magistrates committed him for trial.

A meeting of directors of the Scottish Chamber of Agriculture will be held within No. 5, St. Andrew Square, Edinburgh, on Wednesday, the 12th inst., at 10.30 a.m., to complete arrangements regarding programme, resolutions, speakers, &c., for forthcoming conference with Lord Carrington. Important decisions will require to be arrived at, particularly with reference to the Small Holders Bill (copy enclosed) and the Access to Mountains Bill (copy will be sent before the meeting).

ADVERTISEMENTS

received after Friday cannot appear under Classified Heading, as are inserted on the last pages of this late MARKET SUPPLEMENT.

THE WORLD'S BEST POTATO RAISER.

ALWAYS AT THE FRONT IN FIELD TRIALS.

Special Improvements for 1906.

Fitted with Ball and Roller Bearings, thereby securing great reduction in draught.

THIS EXHIBITION IS THE BEST MARKET FOR BUYERS OF GRAIN-CLEANING MACHINERY AND SEED BARLEY.

Advertisements can now be booked for the Official Catalogue.

SCHEDULES OF PRIZES AND ALL INFORMATION CAN BE HAD OF THE MANAGING DIRECTOR.

ARTHUR T. DALE, Exhibition Offices, 46, CANNON STREET, LONDON, E.C.

TENDERS.

ARMY CONTRACTS.

FORAGE, PEAT MOSS LITTER, AND
PAILLASSE STRAW.

SEALED Tenders for Military Services, during six months from the 1st November, 1906, will be received until 12 o'clock noon, on Monday, the 24th day of September, 1906, by the General Officers Commanding the undermentioned Districts:

ALDERSHOT ARMY CORPS COMMAND.—Aldershot.

EASTERN COMMAND.—5TH DIVISION.—Dover; 6TH DIVISION.—Colchester; **WOOLWICH DISTRICT.**—Woolwich; **THAMES AND MEDWAY COAST DEFENCES.**—Chatham.

IRISH COMMAND.—7TH DIVISION.—Curragh Camp; 8TH DIVISION.—Cork; **BELFAST DISTRICT.**—Belfast.

LONDON DISTRICT.—23, Carlton House Terrace, S.W.

NORTHERN COMMAND.—York.

SCOTTISH COMMAND.—Edinburgh.

SOUTHERN COMMAND.—4TH DIVISION.—Mooltan Barracks, Tidworth; Andover; **PLYMOUTH COAST DEFENCES.**—Devonport; **PORTSMOUTH COAST DEFENCES.**—Portsmouth.

WESTERN COMMAND.—Chester.

GUERNSEY AND ALDERNEY DISTRICT.—Guernsey.

JERSEY DISTRICT.—Jersey.

Forms of Tender and Conditions of Contract may be obtained on application at the above-named Head Quarter Offices, by letter addressed to the Officer Commanding, Army Service Corps, or in person between the hours of Ten and Four o'clock.

WAR OFFICE,
PAUL MALL, S.W.,
Sept.-mber, 1906.

METROPOLITAN CATTLE MARKET, ISLINGTON.

CONTRACT FOR HAY, STRAW, CLOVER, MIXTURE, OATS AND BRAN.

THE Cattle Markets Committee of the Corporation of the City of London will meet at Guildhall on **WEDNESDAY, SEPTEMBER 13,** at 2.30 o'clock p.m. precisely to receive **TENDERS for the SUPPLY of the finest Upland English Meadow Hay, Straw, Clover, English Mixture, Russian Oats and Bran at the Metropolitan Cattle Market for a period of twelve months from October 1, 1906.**

A printed form of Tender with conditions may be had on application at the Town Clerk's Office, Guildhall, or at the Office of the Clerk and Superintendent at the Market.

The Committee do not bind themselves to accept the lowest or any Tender.

Tenders must be delivered at the Hallkeeper's Office, Guildhall, on Wednesday, September 19, 1906, between the hours of 1 and 2 o'clock.

GUILDHALL, E.C.,
August, 1906.

AUCTIONEERS, AGENTS.

INVERNESS, WEST HIGHLANDS.—To Noblemen, Gentlemen, Land Agents, Farmers, and others. **JAMES ARNOTT,** Scotch Live Stock Commission Agent (Estd. 1870), Ellandnam, Inverness, selects and supplies in commission all classes of **SCOTCH STOCK** at lowest rates. Attends leading markets; orders receive personal attention. Classes with approximate prices on application; references given and required; terms cash. Telegrams: "Arnot, Inverness." **CATTLE.**—Short-horn, Friesian, and other Highlanders from the best herds in Scotland, and direct from their pools, Polled and Horned Crosses, Ayrshire Cows, and Pedigree and Show Cattle of all classes. **SHEEP.**—Border Leicester, Cheviot, Black-faced and Crosses, and Pedigree and Show Sheep of all classes. Cattle and Sheep bought throughout the Winter Season.

HIGHLAND CATTLE, SHEEP, AND PONIES.

Any class of the above can be supplied on short notice and at moderate prices. **ASSETS CAMERON,** Live Stock Agent, &c., Fort William, Inverness shire; or, Taynait, Argyshire.

EDUCATIONAL.

ROYAL AGRICULTURAL COLLEGE, CIRENCESTER.
Patron—H.M. KING EDWARD VII.
President—THE EARL SPENCER, K.G.
For Land-owners, Land-agents, Surveyors, Agriculturists, intending Colonists, &c.
Farming and Colonial Branch.
Estate Management and Forestry Branch.

For Prospectus of Curriculum, Fees, Entrance Exhibitions, Scholarships, Diplomas, &c., apply to the PRINCIPAL. Next Session begins **TUESDAY, OCT. 9.**

THE UNIVERSITY OF LEEDS, and THE MANOR FARM, GARFORTH.

COMPLETE Course of Agricultural Education. Lectures in the University and at the Farm from October 15, 1906, to March 16, 1907. Special provision for practical instruction. Fee £10. Students are prepared for the N.D.A. Examination. There is also a Special Course for the B.Sc. Degree. Prospectus from the REGISTRAR, The University, Leeds.

EDINBURGH UNIVERSITY.—Agricultural Course. Prospectus, Edinburgh Agricultural College; also regulations, degree of B.Sc., and Gorton Lectures on Colonial and Indian Agriculture. Apply to CLERK OF SENATES.

BANK.

BIRKBECK BANK.
Established 1851.
Southampton Buildings.

High Holborn, W.C.
2½ PER CENT. INTEREST allowed on Deposit Accounts.
2 PER CENT. INTEREST on Drawing Accounts with Cheque Book
All general Banking Business transacted. PROSPECTUS, with full particulars, Post Free.
C. F. RAVENSCROFT, Secretary.

PUBLICATIONS.

THE NEW ZEALAND FARMER. Bee and Poultry Journal. An illustrated monthly publication, containing practical and scientific information on Farming, Stock-raising, Cattle, Horses, Sheep, Dairying, Fruit Growing, &c. The only paper entirely devoted to Farming matters and circulating throughout the Colony. Price 1s. 6d. by post 1s. 4d. Proprietors, the Brett Printing and Publishing Co., Ltd., Auckland. London Manager, R. B. BRETTE, 7, Finsbury Pavement Buildings, Ludgate Circus, London, E.C.

"ARTIFICIAL MANURES." How to Make, Buy, Value, and Use. A Useful Handbook for Agriculturists, Chemical Manure Manufacturers, Merchants, and others. By Alfred Sisson, F.R.S., Consulting & Analytical Chemist. Revised and re-written by the Author and A. E. Sisson, F.R.S., F.R.I.C. Price 6d. Post free 8d.
W. A. MAY, "MARK LANE EXPRESS" Office, 8, Wellington Street, London, W.C.

POULTRY.

IMPORTANT.—Everybody having **OLD HENS for DISPOSAL** should communicate with **GRIFF & CO.,** Smithfield Market, London, the largest poultry buyers in England.

Situations, Agents, Wanted and Vacant.

OILCAKE AGENTS WANTED, to sell well-known Compound Feeding Cake, on commission, to farmers. Apply, stating qualification, to "OILCAKE," care of Birchall's Advertising Offices, Liverpool.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphate GUANOS and High-class Chemical Manures. All analyses and dry condition guaranteed.—Apply to **DANIEL DE PASS & CO.,** 1, Fenchurch Buildings, Fenchurch Street, London, E.C.

MISCELLANEOUS.

POWDER for DESTROYING LICE in CATTLE and HORSES, and FLIES and LICE in DOGS and POULTRY. Sure remedy; simply sprinkled on, no washing; quite harmless, 1s. per lb., over 3 lbs. post free. **DR. RUMSAY & CO.,** Handmill Farm, Carnarvon.

TRACTION ENGINES and Fixed Wagons, Portable, Ploughing, and Fixed Engines, Thrashing Machines, &c., second-hand, for Sale, cheap, or to be let on Hire—purchase. Full list free. Enquiries for all classes of Machinery solicited. Largest stock in England to be seen at our Works as below. We are agents for the best modern Engines at all times, for cash. Large stock of Beltings, Oils, and Engineers' Requisites of all descriptions. **HENRY LEWIS & SONS,** Thames Bank Iron Works, Reading.

MISCELLANEOUS.

RATS!! RATS!!—A Truro Farmer writes:—"After using a 1/2 Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or cats won't touch it. Price 6d., 1s., 2s., 3d., 3s. 6d. Postage 2d.—**M. L. HARRISON,** Chemist, Broad Street, Reading.

POLTRY Houses on Wheels, 7 ft. long, 5 ft. wide, 6 ft. high, nest boxes outside, 65s. carriage paid. For other sizes write for Catalogue to **WHITLOCK BROS.,** Great Yeldham, Essex.

BASIC SLAG.—Percentages phosphates guaranteed; lowest prices to any station; write us to-day.—**CANNOCK AGRICULTURAL CO., LTD.** (Established 50 years). Bone Manure Manufacturers, Cannock, Staffs.

WILLSON'S CANADIAN PIG POWDERS. Packaged in Tins, 7d., 1s., 1s. 2d.; boxes, 4s., 5s., 14s. 8s., all post free.—**STEPHEN WILLSON,** Peterborough.

IRON ROOFING.

of imperishable quality, as supplied to largest estates for 25 years. At present cost of labour it pays best to fix highest quality only, and to avoid all renewals. Full particulars, cash prices, and all necessary fittings in free Catalogue. The noted house for Iron Fencing, Water Tables, Wire Netting, Tanks, Troughs, Roofing Felt, and every estate requisite.—**JOHN ATTWOOD REEF, Stony Stratford.**

GALVANISED Wire Netting at lowest prices: Sheep Netting, 5s. 3d. per 50-yard roll; Galvanised Cisterns, from 7s. 6d.; Galvanised Pig Troughs, from 3s. 6d.—**DAVID & CO.,** Taff Vale Ironworks, Cardiff.

PEDICURE for HORSES. Cures Thrush, Seedy, Brittle, Shelly Hoof, Foot Smell of Feet, Greasy Heels, Itchy Mane, Tail or Legs, Mangy Skin, Fleas and Lice in all Animals. Tins, 2s. 6d.—**GREGORY AND CO.,** Temple, Bristol; or through Chemists.

MILK!! MILK!! MILK!!! **WELFORD & SONS' DAIRY COMPANY, Limited,** can always entertain offers of reliable dairies of well-cooled MILK. Full supply of **BRANDS PLATED CHURNS** provided. **CHEQUES WEEKLY.** Call, or write full particulars to the Secretary of the Company, Chief Dairy and Offices, Elgin Avenue, London, W.

FOOT-ROT.

TRADE MARK.
STRAWSON'S
CELEBRATED
FOOT-ROT OINTMENT.

Effective!—Speedy!—Permanent.
Used by the Chief Ram Breeders and Flock

IT RECOMMENDS ITSELF. TRY IT. May be had through any Chemist; or will be sent post free at the rate of 1s. per tin, 20s. per case of two dozen tins (not less than a case at the latter rate), by the Sole Proprietor,

G. STRAWSON, Chemist, Rishworth Castle.

JOHN PRIEST & SON, Ltd., Castle Iron Works, Bristol.

Wire Netting.—Best Galvanised, Cash prices paid on roll of 50 yds. 3 in. mesh, 2 ft., 4d.; 3 ft., 6s. 1d.; 4 ft., 8s. 1d.; 5 in. mesh, 2 ft., 4s. 6d.; 3 ft., 7s. 6d.; 4 ft., 10s. 3d.; 1 1/2 in. mesh, 2 ft., 9s. 6d.; 3 ft., 12s. 6d.; 4 ft., 15s. 10d. **BEST GALVANISED SHEEP NETTING.**—50-yard rolls, 3 ft. wide, 4 in. mesh, with centre strand, 2s. 6d.; 3 ft. wide, 3 in. mesh, 2s. 6d.; 50-yard roll. Strong Stakes, 6s. per dozen. Carriage paid on lots, netting or stakes, 70s. each.

Iron and Steel Riddles, Fences, Gates.—Excellent quality: 6 ft. hurdles, 4 rails, 33s. 1/2 cwt.; 5 bars, 38s. Steel fencing wire, 9s. per cwt.; galvanised wire strand, 15s. cwt.; galvanised barbed wire, 18s. cwt., 500 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wires and iron posts, 3d. per yard.

Spendid Galvanised Roofing.—Perfect quality: 5 ft. 1s. 6d.; 6 ft., 1s. 8d.; 7 ft., 2s. 0d.; 8 ft., 2s. 2d.; 9 ft., 2s. 4d.; 10 ft., 2s. 6d.

Riding, 2nd. perf. Best Wire Nails, 1s. cwt. **Galvanised Cisterns,** corrugated steel, 20s. cwt. **Corr. Bins,** Sheep, Pig, and Cattle Troughs at very low prices. Lists free.

J. PRIEST & SON, Ltd., Castle Iron Works, Victoria Road, Bristol.

RAILWAY NOTICE.

THE GREAT NORTHERN RAILWAY COMPANY announce an excellent series of facilities to Doncaster Races, the most popular event of the year in the North. The G.N. route is the most comfortable and by far the quickest, the journey occupying only 2 hrs. 49 mins. between King's Cross and Doncaster.

Special luncheon car expresses, at ordinary fares, and formed of corridor vestibuled stock of the newest G.N. pattern, leave King's Cross at 9.53 a.m. on Tuesday and Wednesday, September 11th and 12th, also at 9.45 a.m. on Thursday and Friday, September 13th and 14th, arriving Doncaster at 12.48 and 12.34 p.m. respectively, without an intermediate stop. The corresponding return dining car train leaves Doncaster at 5.45 p.m. Tuesday and Wednesday, September 11th and 12th, 6.22 p.m. Thursday, September 13th, and at 4.40 p.m. (3rd Class only) and 4.55 p.m. (1st Class only), Friday, September 14th.

Cheap Excursion trains, for 2 to 5 days, leave King's Cross at 10.35 a.m. 1.35 p.m., and 3.15 p.m., Monday, September 10th; also for 1 to 4 days on Tuesday, September 11th, from King's Cross at 8.40 a.m.; for 1 to 3 days on Wednesday, September 12th, from King's Cross at 8.40 a.m.; for 1 or 2 days on Thursday, September 13th, from King's Cross at 9.45 a.m.; and for 1 day on Friday, September 14th, from King's Cross at 9.45 a.m. Special attention has been given to the timing of these trains and, to some, luncheon or dining car will be attached.

Special Excursion fares of 2s. First Class and 13s. 6d. Third Class for 1, 2, or 3 days, and 28s. First Class and 14s. Third Class for 4 or 5 days, will be in force, whilst the ordinary fares King's Cross and Doncaster are: Single, 23s. First Class, 12s.; 11s. Third Class; Return, 46s. First Class, 25s. 11d. Third Class.

The price of luncheon tickets will be 2s. 6d. First and Third Class, and dinner tickets 3s. 6d. First Class, 2s. 6d. Third Class.

Tickets can be obtained at King's Cross, Woolwich, Greenwich, and all G.N. Suburban Stations.

Full particulars of G.N.R. arrangements will be given on application to the Chief Passenger Agent, King's Cross, or to the Great Northern Station, Town Office, or Agency.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

A large lithograph of the above "Rough on Rats" illustration (Household Troubles) which has convulsed the world with laughter, mailed free to any address. FRANCIS NEWBURY & SONS, Ltd., 27, Charterhouse Square, London, England.

The Unbeatable Rat Extremator.

WHY CONTINUE TO FEED RATS? "Rough on Rats" kills them. Rats are smart, but "Rough on Rats" beats them. Rats and Mice instinctively avoid the familiar forms of ready "prepared for use" doses; "Rough on Rats" is the original and old reliable, being unmixd, and all poison, can be disguised in many ways, thus completely outwitting the rats. One Six Shilling box will make or spread fifty or more lints and Mice, which will kill fifty or more lints and Mice. Originally designed for Rats and Mice, experience has demonstrated it the most effective of all exterminators (i.e. Hoaches, Crabs, and Bed Bugs). The only thing at all effective against the large Black Cockroach or Beetle. Always does the work and does it right. Pools the Rats, Mice, and Bugs, but never disappoints or fails the buyer. Safely used 30 years. Sold by **Chemists only** everywhere in Great Britain, and 8s. boxes.

The Trade Only supplied by

Seasonable Topics.

The Rainless West.

SINCE the passing of the great heat wave at the end of August and the early part of September, welcome showers have fallen in some parts, and if they were not sufficient to soak the ground, they did something to refresh the parched up crops. But in the west no rain has fallen for many weeks, and at the moment of writing the prospects of moisture seem very remote. Milk is scarce in the Vale of the Severn, and the price is going up, while on the shallow soil in the Cotswold country the leaves of the mangels are limp and yellow, and the growth of the roots appears to be at a standstill. In the orchards of Gloucestershire the leaves on the fruit trees are assuming autumn tints and apples are falling to the ground prematurely ripe. In short the whole district is parched and thirsty, and as for grass, well the pastures are dried up and brown everywhere, and one wonders how the stock manages to get a bite at all. There is a cry out for water in many parts, and this, of course, will get worse unless rain falls heavily before very long.

Farm Machinery.

IN these days it is the boasted desire of everyone interested in the question to adopt the education of rural districts to local requirements. Just so; but whether this is being done as it should be is open to question. In rural evening schools a good deal of stuff is taught which cannot be of much practical use to the pupils, and things that would be useful are set severely alone. Take machinery, for instance. What the farmer wants more than anything to-day is men who know something about the use of tools and the construction of machinery. Every year more machines are used in agricultural work, and these implements are manipulated by men of the labouring class. Now, if a fellow goes on the railway with the idea of becoming an engine driver, the first thing he has to do is to learn all about his engine, so that if anything gets out of order he will be able to render first aid. We wonder how many farm labourers there are who know anything about the mechanism of the machines they manipulate. They may know how to put the thing in and out of gear, but if the simplest thing goes wrong a mechanic has to be sent for, and the farmer not only loses time, but is put to expense. We do not want to make mechanics of labourers, but they ought to know sufficient about machinery to be able to render first aid, so to speak. Even the loosening of a nut will often cause a breakdown, but if the manipulator of the machine is a bit of a mechanic, he will make it his business to see that nuts do not get loose, and he will keep the implement in proper working order. It surely would not be a difficult thing to establish classes

in country villages, where farmers' sons and young labourers would learn a good deal that would be useful to them about agricultural machinery under the instruction of a qualified mechanic.

Fallows and Weeds.

THE dry weather experienced for some time now has been favourable for dealing with fallows and foul land, and farmers who miss the opportunity have only got themselves to blame. Ploughing of course is not an easy matter with soil in its present baked condition, and plough shares and points suffer so much that the spring drag is preferable, but where the weeds have been got up the sun has done the rest. There has been little need of late for raking up and burning twigs, for every live bit of this obnoxious weed brought to the surface has been quickly shrivelled up. We know some men who will trust no weather where twigs is concerned, and for fear there may be a spark of life left in the weed, they rake up every particle and burn it. The principle of this is good, and in ordinary circumstances the precaution is a wise one, but the sunshine of this summer has been exceptional in its brilliancy and capable of shrivelling the life out of the toughest of twigs that was exposed to its burning influence. A worrying weed in some parts is the creeping convolvulus, known locally as "bed-wind," which seems to revel in dry weather, but if the tops are persistently cut off the roots weaken, and the pests can be got rid of by this process.

Second Crop Clover.

THE influence of the weather may be seen on the second crops of clover which have been mown of late, and, generally speaking, there is not much for the stack, as the growth is short and light. But in this season of drought a little fresh green food of any kind is acceptable, and a good many people, instead of trying to make hay of the second crop of clover, are giving it to the sheep and stock. Considering all things, this is perhaps the best use to which it can be put, and the way the animals masticate anything that is green and juicy is good evidence of how much they enjoy it. As we have remarked before, those farmers, particularly keepers of milking cows, who make provision for something in the way of forage crops, have received the reward for their forethought this season.

Breaking the Law.

LAWs are made for the good of the community, and whether we think them just or unjust, we have to submit to them, even though we may be passive resistors. Just so, but it is surprising how many people there

are who seem possessed with a remarkable faculty for breaking laws. The motorist drives at express speed when he knows perfectly well that he had not ought to do it, and if caught he pays the penalty. The cyclists will turn out after dark without his lamp, and often spend more in consequence of his folly than would keep him in oil for years. Perhaps some of us feel that the law in regard to the removal of swine is at times hard and unjust, but it is the law all the same, and there is nothing to be gained by defying and ignoring it and then pleading ignorance. No matter what law is passed, it is bound to hit somebody hard, but if we cannot get the law altered we must submit. Of late we have seen a good many cases of prosecution through farmers failing to comply with the order to have their sheep dipped. Some have pleaded ignorance, and others have assumed a defiant air, but neither served any purpose, and they had to pay. With reference to sheep dipping most reasonable-minded people agree that it is a wise and beneficial order, and we confess to very little sympathy with those who fail to comply with it and are fined in consequence.

Home-baked Bread.

IN the old days it was a part of the education of every housewife to learn how to bake her own bread, and in most establishments there was a brick oven provided for the purpose. To say that home-baking is gone out of fashion would be wrong, because in a good many farmhouses still they have a weekly baking day, and in the North of England it is still customary for cottage wives to do their own baking. In spite of the above fact, however, the baker rules supreme, and on him the majority of people depend for their daily bread. The public taste now is for the snowy white and the light loaf that is new to-day and stale to-morrow, but for supplying stamina and staying power give us the good old-fashioned, home-baked loaf, like that which Mrs. Poyser (immortalised in *Adam Bede*) took such a pride in making. This type of loaf is not quite white, it is not puffed up, but it contains that which is satisfying, and makes bone and muscle. There are houses still where they bake once a week, but if you drop in on baking day and have a cut from a loaf made seven days before it has no suspicion of dryness, but is fresh and sweet. We have never had courage enough to test a loaf of ordinary baker's bread seven days after it was made.

Wasps.

PERHAPS this matter is of more importance to gardeners and fruit growers than farmers, but there is no mistake about it we are having a plague of wasps this year. There is never a no-land or a hedgeow without nests, and the thieves eat, ruin, and disfigure not only

the ripe fruit, but also apples and pears that are not nearly ready for picking. A friend of ours thought to lure the thieves to destruction by hanging up bottles containing a sweet decoction of beer and sugar in his fruit garden. It is true he caught hundreds, but thousands more came to see them die, and finding good things near at hand in the shape of fruit, they remained to feed, with the inevitable result that the last state of things was worse than the first. There is only one way of dealing with wasps in the summer, which is to strike at the root of the evil—in other words, the nests. A search should be made in the day time, and the nests be marked. Then in the evening, when the family is at home, a little cyanide of potassium put in the hole and the mouth closed up will do the trick.

Practical Nature Study.

WE hear a good deal about Nature study in these days, and we have people amongst us who are cranks on the subject; but speaking of

wasps reminds us that we have something here on which Nature study might be brought to bear with practical and useful effect, and the same remarks apply to other insect pests of an injurious character. It may be very interesting to place a tadpole in a bottle and watch it develop into a toad, but there is not much practical utility about it. Now wasps are a nuisance, and most of us know that every queen wasp destroyed in the spring means one nest less in the summer. Just so; then let the Nature-study youngsters in the village schools hunt for queen wasps and do some good by getting rid of them. We would go further and offer prizes to the children who accounted for the largest numbers. The subject here introduced opens up a wide field, for there are a good many insects injurious to agricultural interests that school children might seek and capture at different times of the year, and unless we see the matter wrongly this kind of Nature study would be more useful and practical than catching tadpoles and similar operations.

Agricultural Politics.

BY A LOBBYIST.

Are Scottish Landlords Wise?

Of course, the Scottish landlords are eminently justified in calling attention to the failures and mistakes—such as they conceive them to be—of the Government Scottish Small Landholders' Bill. Certainly it is the most draconic word yet uttered by a British Ministry on the problem of land reform. What avail it, however, to say that Scotland had not specifically asked for it? What avail it to say that the Bill means the arbitrary deprivation of the landlord of his property? Both contentions have a simplicity and naïveté associated with them which does not belong to a serious argument. It would not be difficult for official Liberalism to show that Scotland is quite sympathetically abreast of the demand. Whether these proposals had articulate voice at the general election is not so much to the point as is the fact that Scottish Liberalism gave a vast majority to the Liberal Party with the designed intention of securing a Radical policy. The incident meant that whatever was done for Scotland that majority wanted the achievement to bear the hue of incarnadine Radicalism. Had a Land Bill been introduced of the tepid character, then Scotland's Liberalism would soon have revealed its disapproval in resounding Doric. And, after all, even an English landlord can be arbitrarily deprived of his property—that is, at a price—if it be desired in the interest of the community. These frontal attacks on the Bill are pre-doomed to defeat. First of all, to aver that Scottish Liberalism does not want a Liberal Government's policy is—political human nature being what it is—simply to induce that Liberalism to an exuberant appreciation of it. Next of all, to seek to discredit a policy already embodied in a score of Bills is to be guilty of that mistaken strategy which is generally described as setting back the hands of the clock. No; this is an occasion not for bold frontal assault, but for craft, guile, attack in detail, for flank movements.

The Real Points of Attack.

The Scottish landlords are in their criticism on much more solid ground in denouncing the suggestion of dual ownership, in doubting the wisdom of calling into existence a fair-rent court, and in suspecting whether a fifty-pound-a-year farm would, even when worked under the most economical conditions, yield a desirable livelihood, and might not even reduce the holder to, as one of these landlords has put it, the level of a beast of burden. For my part, I am inclined to doubt whether the Scottish temperament—in which the feudal and tribal instinct still lurks, to be no doubt quickened into an active virility by an attack on the head of the clan or sept—is altogether in harmony with the principle which would fix rent without any regard for the particular desire or prejudice of the landlord. Despite their latter-day Radical expressions, there is a good deal of conservative fidelity to the race-and-landlord principle in the Scotchmen. No fair and dispassionate observer among our economists can be said to be enthusiastically in favour of the principle of dual ownership in agricultural holdings. It may mean discord, rivalry, and bitterness; and certainly cannot be

said in Ireland to have been any serious factor in evolving perfect contentment. Again, too, the discretion of the Land Commission, which is to be endowed with £65,000 a year for the purpose of setting up small holdings and enlarging existing ones, may well—even though its constitution be not known—be doubted. It is a fair rhetorical device, too, to declare that an absolute mathematical system of peasant proprietary would be far better than this half-and-half business, and that the Bill, indeed, can only mean—what a harmless hobgoblin over all!—the application of the three F's to every farm! All this is judicious comment, subtly-vised warfare—is ever much so more better than running your head against a principle as inflexible as adamant and as impossible of banishment from our midst as is the solar system or the letters of Mr. Algernon Ashton. If the positions I have indicated be astutely occupied, then, after all, the pang of this attack on the rights of Scottish landlordism may be assuaged. Landlords' defence associations are, I find, being called into existence. Let them not be associations for the revival of the out-of-date and the long since relinquished.

Is Mr. Collings' Purpose to be Realised?

Mr. Jesse Collings must have been, I mean, greatly gratified at the declaration of Mr. T. S. Dymond, an inspector of schools, upon our system of rural education, "an education which," he declared, borrowing, I would fain believe, the language of the MARK LANE EXPRESS, "has a tendency to send the pupils out of the country rather than to keep them in it." How far did this very intelligent official represent direct Ministerial intention when he acknowledged that "his idea was that rural elementary schools should take over two or three acres of land each and cultivate the allotment as a business concern, the pupils working it and receiving the current wages of the district"? Of course, this latter suggestion—which, after all, is only the leather and prunella of the idea—goes beyond the admirable intentions embodied in Mr. Collings' Rural Education Bill. However, if Mr. Dymond spoke in harmony with official resolve, Mr. Collings' Bill has been rendered unnecessary, or, rather, accepted. Mr. Collings has for years demanded the practicalisation of rural education—the shaping of that education in accordance with what may be the pupils' destiny as rural workers, and thus the implanting in them of a deepened instinct of fidelity to the country-side. Perhaps when Mr. Augustine Birrell has emerged from the morass of creedal tests, from the war of rival sects, from the atmosphere of doctrine mongering, he will tell us how far he is anxious to realise an ambition which will always be honourably associated with the Parliamentary achievements of the right hon. gentleman the member for Bordesley!

Mr. Burns and the Farm Colony Enthusiasts.

Despite all the assertions of those too-impressible and over-susceptible revolutionists that Mr. John Burns has taken his holiday abroad in order that he might be disillusioned of what

these same amateur economists describe as "his prejudices against farm colonies" as a means of redeeming the out-of-works of our towns, I doubt that the President of the Local Government Board—and I believe that I know something of his mind on the question—will ever seek to realise their fantastic visions.* Mr. Burns has too receptive an intellect, is too practical a man, to dogmatically declare that "I am against farm colonies under all and any conditions." I mean that the right hon. gentleman would even confess that, under certain conditions, farm colonies would be desirable things. His attitude, however, is, I take it, one of refusal to permit himself to be led astray by the whirling ecstacy of the easily-emotionised and untrained minds of the street-orator orators, who believe that the provision of a cheap excursion ticket to the country-side means the magical transformation of the unemployed, the unfortunate, or the unemployable—the human fotsan and jetsam of our civilisation—into complete agriculturists. He refuses to be a kind of Med Piper to prancingly lead to the depth and bathos of further misfortune. Mr. John Burns' purpose in his continental tour may have been to secure some first-hand information. If it has been, he has provided a very useful object-lesson for those amateur philanthropists who believe their tongue is fore-destined to proclaim economic evangels by the ton, and who denounce responsible men who refuse to adopt them as sacredly inspired. These men disdain even to look at the country-side to which they offer to bring perfect prosperity by means of their *protégés*, those poor deluded victims who include so considerable an alloy of loafers. Mr. John Burns is not going to be turned aside from the methods of practical administration by the turgid flamboyance of vine-leaved extremists.

The Marquis and the Land Tenure Bill.

Now, I fear me that both the temper and the purpose of the majority of the present House of Commons are not appreciated by those who are antagonistic to that majority. I am not quite sure whether the Marquis of Exeter meant his speech at Deepings on Friday to be accepted as a prophecy or a threat. If," said his lordship, "the new Land Tenure Bill passes, there will be more land out of cultivation than for many years." If his lordship means this declaration as a prophecy of the inevitable result of the operation of the new law, I fear me that he will not find an unanimous acceptance of him in the *ride of seer*. Why, for instance, should tenant farmers be driven from the soil because their rights as tenants are emphasised and extended? Why should they renounce the industry because the restrictions placed upon them as tenants have been modified, and because their tenancy and the improvements they themselves have created have been legally safeguarded in a manner that they were not safeguarded in the past? If the marquis means the declaration to be a threat that landlords will prefer to let their land lie fallow and derelict rather than accept what they may regard as the degrading conditions imposed by the new law—and yet I cannot bring myself to believe that the marquis, himself a good landlord who lives on excellent terms with his tenants, meant this—then I would ask him to remember that the present Lord Chancellor is the erstwhile Sir Robert Reid, and that Sir Robert Reid when in the House of Commons was the sponsor of a Bill whose purpose was to place a tax upon landlords who wilfully permitted their land to remain out of cultivation. Now, rancour may on occasions be justified and be even a good thing! It is well, however, to temper it with provident forthrightness. A landlord need not allow it to sear his own flesh.

Lord Carrington's Resolve.

I am able to make the interesting announcement that Lord Carrington is convinced that there ought not to be any avoidable delay whatever in carrying the Better Bill. He holds that this would be not merely an act of justice to the honourable butler interest, but is necessary for the good health of the poorer section of the community, too long the victims of toothsome but dangerous imitations.

Land Tenure and Small Holdings.—The Marquis of Exeter, speaking at the Deeping (Lincolnshire) Fox Show dinner yesterday, referred to the Land Tenure Bill, and said he thought that if the Bill were passed there would be more land out of cultivation in the country than had been the case for many years past.

THREE SHOW HUNTERS.

PERHAPS the largest and most successful modern stud of Show Hunters is that owned by Mr. J. H. Stokes, of Nether House, Great Bowden. Mr. Stokes began showing forty-three years ago, and during that long period he has only shown at four places at which he has not taken a prize.

His record for many years has been a big one, but last year his successes were exceptional, and it is not likely that they will be equalled, let alone beaten, for some years to come. The record—105 first prizes, 42 seconds, 18 thirds, 12 championships, 2 specials, and 5 medals, a total of 184 prizes taken by 41 horses at 52 different shows—good as it is, may be lowered, and it is quite possible that a larger amount of prize money than £2,053 may be won by one owner in a season.

What, however, is not likely to occur again for some time to come is for one man to take four first prizes, a second (both specials), and the championship at the Hunters' Improvement Society's show; practically the whole of the first prizes at the Highland and Agricultural Society's show; and first prizes in the three-year-old gelding, four-year-old gelding, light weight and weight-carrying classes, and the champion prize at the Yorkshire show, in one year.

Mr. Stokes has begun the present year well, his well-known horses, Dervische, Border Boy, and Sybarite, whose portraits are given, having, amongst others, won valuable prizes. The former has grown into a very good-looking four-year-old with short legs and good back and ribs. His shoulders are well placed, and he is a good mover in all his paces. He began the season well by taking second prize to Mr. F. A. Rickaby's Splasher at the Agricultural Hall. It was a near thing between the two, and "the form" comes out all right, as Splasher was reserve for the championship. Since then Dervische has won at the Oxfordshire show at Henley. Sybarite is a different stamp. A well-bred galloping light-weight hunter, he is quality all over. He has excellent bone, is beautifully turned, and is a fine model of a light-weight four-year-old. Border Boy, a weight carrier with fine quality and action, was a purchase from the late Sir James Miller's stud. Quite one of the right sort, he won in an excellent class at Henley-on-Thames, in which he led the London champion, King Edward, behind him. All three horses are decidedly above the average of high-class show hunters, and may be expected to win more prizes.

SYBARITE.

BORDER BOY.

DERVISH.

THE WEEK'S SHOWS.

South Tyne.

This show took place on Saturday week. Shorthorn and Galloway cattle were never better represented, some fine specimens being forward. In the latter class Messrs. Stothert, Cleughfoot, with a third successive win, secured the silver cup for the best three females of any breed. In the classes for black-faced sheep the honours were divided between Mr. Robson, Newton, and Messrs. Addison and Paisley, Bellingham. Agricultural horses were not quite so numerous, but nevertheless the quality was above the average, while the harness horses and Hunters included some well-known prize winners.

North Westmorland.

The sixteenth annual exhibition of the North Westmorland Agricultural Society was held at Appleby on the 8th inst. The entries showed a slight reduction on last year. The most considerable decrease occurred in the cattle classes, which fell short of the 1905 figures by twenty-nine head. Heavy horses figured as a strong class, but light horses, though fairly numerous, and comprising some noted winners, could not be described as uniformly good. The feature of the show was to be found in the sheep exhibits, which were of excellent quality, and formed a fine entry throughout.

Axminster.

Axminster Union District Agricultural Association held its fifth annual exhibition on Wednesday. In the Devon cattle classes Mr. Walter Darr, of Kilminster, won with Fairmaid, the prize for the best bullock in the show. The sheep were a capital lot right through, especially Downs, but lambs might have been better had there been more keep about. The champion prize went to a Down ewe, in lamb, belonging to Mr. S. L. Tatchell, of Lyme Regis. Hacks and Hunters were very good for the district, and a great improvement was seen, especially in the young stock, two-year-olds and yearlings, and mares with foal at foot attracting considerable attention. The champion prize offered in the classes for cart and hack horses was awarded to Woodlaine Toun, a Shire colt sired by Sowerby Boy, and exhibited by Mr. T. Trott, of Shute.

Wellington Farmers'.

The fifteenth annual meeting of the Wellington Farmers' Club was held on Wednesday. An interesting feature of the society's work is the encouragement given to long service on the part of agricultural labourers, and this year prizes were

given to eighty-six servants, whose total years of service were 2,733, or an average of thirty-one years and ten months. One servant had been in one situation sixty years, two fifty-nine years, one fifty-two years, and one forty-nine years.

The Cludde Challenge for the greatest number of points in all classes was won by Mr. R. H. Gwynne, Haygate, Wellington. The Shire Horse Champion Cup was secured by the president of the club (Mr. J. V. T. Lander), who also won the Shire Horse Society's medal for the best Shire mare, filly, or foal in the show, and the Hackney Horse Society's silver medal was won by the Misses Eytton and Horrocks, Admaston. There were fair entries for cattle, and a good entry of Shropshire sheep.

Montgomeryshire.

The annual exhibition of the Montgomeryshire Agricultural Association was held on Thursday at Welshpool, when rain fell in torrents, and the association has not had a fine day for the show since 1901. The entries were not quite so good as last year, but the falling off was perhaps slightest in the Shire horse classes. In this section the animals shown more than maintained past years' records. Mr. J. Marshall Dugdale, was the most successful exhibitor. He won in the stallion, two-year-old colts, brood mare, and two-year-old filly classes, and also carried off the champion prize with the mare Moss Rose, by Buscot Harold, and the Shire Horse Society's medal and £5 prizes for the best Shire mare or filly in the show, the £5 going to him as exhibitor. In the Hunter classes W. Ward, Crankwell, Chirbury, was the principal winner, and Evan Roberts, Hope, Butington, and A. H. Macgwire, Darland Hall, Rossett, were equally successful. In the pony classes, Mr. J. Marshall Dugdale, was the chief prize winner. The cattle classes, introduced for the first time last year, were fairly well filled, and competition was keen. Mr. Charles Evans, Bahallion, Kerry, with a bull under two years, which took first prize in the Herefords, was awarded the champion prize for the best animal in the show.

North Tyne.

The annual show of the North Tyne and Rededale Agricultural Society was held on Thursday. Mr. George Harrison, of Gainford, Darlington, cleared the first prizes in all the Shorthorn classes save one. Messrs. Rami and Son, Lewinsfields and Son, and T. Rutherford, Low Row, Carlisle, divided chief honours in Galloways. The Leicesters were weakest in number of individual classes, the principal awards going to Mr. W. Ridley, Stocksfield; Mr. T. White, Ridingmill; and Mr. J. Robson, Bellingham. In Cheviots, numerically larger, honours went to Mr. John and Mr. Jacob Robson, the well-known breeders of Newton and Symonds. First prizes in heavy horses were won by Mr. A. Bell, Aspertown Castle, Brampton; Miss E. H. Bell, Bellingham; Mr. T. Shanks, Barrington; and Mr. W. R. Trotter, North Acomb, Stocksfield. The chief award for saddle horses went to Mr. A. Rutherford, Haydon Bridge, who cleared four classes.

Wigton (Cumberland).

The Wigton and District Agricultural Society—one of the oldest in Cumberland—held its fifty-second annual show on Thursday in threatening weather. There was a remarkable falling off in the entries, which were about 120 fewer than last year, and the lowest for a quarter of a century. The bulk of the prizes for Shorthorns at Cumberland shows this season have gone to the Wigton district, and there was a splendid show in this department, all the prominent local herds being represented by about 130 animals. The decline in numbers was mainly in the horse classes, cart horses being thirty-one fewer, saddle horses forty-five, and harness horses forty-two.

Okehampton.

The annual show was held on Thursday. The total entry was not a record one, but it was a round century better than last year. Horses accounted for the biggest proportion of the increase, whilst there was also a very large show of poultry and pigeons, the department for which was one of the most interesting in the showyard. The cattle were, however, a disappointment in respect to numbers, and the sheep classes were not so well filled as they should have been to equal in merit the other departments. For the first time for several years the committee entered for pig breeders, and a couple of classes attracted a fair number of entries. The "horse" side of the exhibition was undoubtedly the strongest, and taking the exhibits all round they were a gratifyingly good lot. Hacks and Hunters were well represented, whilst several of the pony classes were very strong, the animals evidencing a good deal of care in breeding. The silver challenge cup for the best exhibit in the local Hacks and Hunters classes brought forth keen competition, and General Houlty, who won the trophy last year with it to Major Budworth's black gelding St. David. It was a pity that the quality of the cattle as a whole was no

quite up to the usually high standard, although this was, perhaps, due to the scarcity of "keep" resultant on the prolonged drought. Among the sheep the judges found a good class of animal, and in one or two cases had no little difficulty in coming to a decision. The Devon Longwools included two splendid pens of yearling ewes. Ram lambs of this type were poor, and ewe lambs were only moderate. Although not numerous, the pigs were an extremely good lot, as were also the sows.

Yeovil.

Improvement of quality was noted in all departments of the Yeovil Agricultural Society's annual show, which was held on Thursday. There was also an increase in the numbers of entries in each section, the horses and sheep showing a great advance. The horses were particularly well represented, both in the agricultural and Hackney classes. The cattle were of high quality if not numerous, and the president of the society, Mr. Troyte-Chayn-Grove, was a wonderfully successful exhibitor, no fewer than eight prizes going to him, and in three classes took both prizes. Sheep were a fine lot, and Mr. J. H. Creed, of Broadwinser, met with gratifying success.

In the agricultural horses were sound, useful animals, and a credit to their owners. Hunters were also prominent for the number as well as the quality of the exhibits, and Mr. T. H. Miller, of Osborne, was a successful prize-taker with Marmion. Mr. E. J. Legg, of Keynsham, with his well-known Marksbury, secured a first for heavy-weight Hunter. Messrs. Flower and Mattick, of Radstock, gained first for hack and second for light-weight Hunter. The jumping classes were exceptionally interesting. Messrs. Glencross's (Frome) Bampton jumped marvellously, and got first prize; and their Nomination shared the second prize with Messrs. Singer's (Frome) horse, so close was the competition.

As to the exhibits, the cheese, though not to be compared in point of entries with those at Bruton, Shepton Mallet, and Frome, was no whit behind either in quality of the best exhibits of Cheddar, which was of exceptional merit, and Mr. T. C. Candy, of Woolcombe, Cattistock, won the first prize.

Rugby.

The annual exhibition under the auspices of the Rugby and Dunchurch Agricultural Association took place on Wednesday, and was largely attended. It has become one of the most important in the Midlands, and the promoters have intimated their intention to make it a sort of Peterborough show. The entry numbered 356, which included 271 horses, 50 cattle, and 23 sheep; and there was the customary display of butter produce and implements.

There were some magnificent animals in the bull and milking cow classes, and some capital sheep and pigs were shown. The Shire horse classes formed the principal part of the exhibition, and here Messrs. F. Farnworth, Tooley Park, Hinckley; Sir P. Albert Muntz, Bart., M.P., Dunsmore; and Mr. G. G. Aterbury, West Haddon, were prominent among the prize-winners. In the hunting horse classes, Mr. H. R. Roe, Market Harborough; Mr. P. P. Rodocanachi, Dunchurch; Mr. G. F. Stops, Market Harborough; Mr. J. H. Sedgley, Church Langton; and Mr. J. H. Stokes, Great Bowden, carried off the principal prizes. Mr. J. Bradley, of Tilsen, Leicester, won the Shire Horse Society's medal.

A large crowd was present in the afternoon to witness the jumping and driving, some of the classes being open to all England. In the first jumping class Mr. Foster, of Brailford, Derby, was first with Lassie and second with Paddy, Mr. N. Smith, of Nutfield, Surrey, being third with Monarch. In the next Paddy was first, Monarch second, and Lassie third. The open driving class was headed by Mr. J. Raynor, of Mansfield, Notts, and Mr. Messrs. J. Morton and Son, Coventry, second, and Miss E. S. Ross, of Sale, third; and in the tandem team competition Miss Ross was first, with a pair of black geldings.

Bath and West Dairy Herds Competitions.

The Wilts Agricultural Association and the Gloucestershire Agricultural Society having made a monetary contribution towards the prizes offered by the Bath and West Society at its recent Swindon meeting, the latter body devoted a portion of such contribution to the following prizes:—

Herd of dairy cows (of any breed) over forty in number, the property of a *bona fide* tenant farmer farming land in the county of Wilts or Gloucester, or within a radius of twenty miles from the Town Hall, Swindon, £15, £10, £5.

Herd of dairy cows (of any breed) over twenty and not exceeding forty in number, the property of a *bona fide* tenant farmer farming land in the county of Wilts or Gloucester, or within a radius of twenty miles from the Town Hall, Swindon, £10, £10, £5.

There were seven entries in the first-named class and four in the second.

The judge was Mr. Arthur Hiscock, of Manor Farm, Moulcombe, Shaftesbury, Dorset, and the following is a summary of his report:—

"Although the entries for these prizes might have been more numerous, I was able to see, through the keen competition of the herds inspected, that in every case competitors had spent not only time and money, but had brought the best of judgment to their aid in their endeavour to obtain such coveted prizes.

"It may be of interest if I briefly state the system of dealing with the herds submitted for competition. I did not trust to the eye alone, but took each cow on its merits, marking them 'above average,' 'good dairy cow,' or 'under the standard,' afterwards working out the percentage in accordance with the size of the herd.

"I explained the system to the various competitors, who expressed themselves thoroughly satisfied with my mode of working. The competitors had, I am pleased to say, their milk yields for the year prepared and ready for my perusal, thus complying with the previous requests of both the secretary and myself.

"The competing herds lay very wide and to the full extent of the prescribed distance, and in order to get to the remote and isolated districts it was obvious the most convenient mode of travelling would be by motor car, making Swindon my headquarters.

"I will now deal with the largest of the herds inspected. I made my way to the extreme boundary of Mr. George Adams's holding by Uffington Station. Here I inspected the first forty of his herd of about 450 head, which were in about fifteen lots, in beautiful pastures covering an area of about seven miles.

"The method of Mr. Adams in showing the returns from his huge herd is worthy of imitation; and although, after most careful working out of figures, I was unable to award him higher than a second prize, it is only fair to say that his herd ran the first prize lot very close.

"I now come to another fine herd, the property of Mr. K. Hobbs, of Kelmescott, whose farm borders for some miles the River Thames, and five miles had to be covered by motor car to get from his first fifty to his last fifty, whilst the total number in some nine lots exceeded 200.

"Mr. Hobbs had determinedly worked up a herd of dairy Shorthorns where colour, type, and character exhibited itself; their milking properties also slightly exceeded the good average of the second-prize lot; and, as a large number were young Shorthorns, comprising among them many prize winners, my choice for first prize fell to the Kelmescott herd. Good management, too, in all branches presented itself in a marked degree, and if many of the young farmers of England would only avail themselves of the opportunity of seeing the two herds almost to their heart, it should prove an advantage to them in future as agriculturists.

"My next visit was to the extreme eastern boundary of Wilts, where at Ogbourne St. George Mr. Stevens and his son showed me a herd numbering seventy-three, over sixty of which were close to the old homestead in which Mr. Stevens resides. Some few were specimens of real good dairy cattle, but I soon discovered that this herd had not been fed to any high pitch, specially for this competition. Although the milk yield was good, I could understand why, as a large majority of the herd were young and not on such rich pastures as many of the competitors' herds, the yield was less abundant than was the case with other herds inspected. I was, however, unable to give them a less distinction than very highly commended.

"I next proceeded to the farm of Mr. Froeth, at Cricklade, where I found an exceedingly nice, though small herd, numbering just over forty, but a real rent-paying lot, matching in colour, type, and character. I cannot forget a few of the beautiful cows that were being milked in the open yards, and certainly they had not been in any way pampered, but showed themselves most satisfactory, winning at the finish the reserve number.

"I next inspected a well-managed herd, the property of Mr. Balch, of Swindon, where I found slightly the highest milk yield, and, although I was able to pick out many very nice dairy cows, several failed to reach the high standard in character of those placed above them. The herd was, however, entitled to a high commendation.

"I was obliged, very reluctantly, to pass what I knew to be a very good herd belonging to Mr. J. Macey, of Baverstock, Dinton, Wilts, which had, owing to the illness of its owner, been withdrawn from competition.

"Mr. W. J. S. White, of Zeals Park Farm, Wilts, exhibited eighty of quite the best Hereford cows I have ever seen together, and without any hesitancy I can say that seldom is to be found in this handsome and fine grazing breed such a tendency to milk. It is certainly unusual to find a Hereford herd able to win a dairy prize, but I had no hesitation in awarding the third prize to this herd, and would add that it was of uniform type, and, though small, was in the highest condition. This herd was established in 1819 by the grandfather of the present owner.

"I have now to deal with the class not exceeding forty in number. I started at Hannington, Highworth, the residence of Mr. Hussey-Fiske, where I found thirty-two neat dairy Shorthorns. The selection no doubt had been made with care, but the number under the average rather told against them, and, with a milk yield under others in the competition, my award could not exceed a reserve number.

"I next took a long journey by train to Berkeley, Gloucestershire, where at the farm of Mr. Cullimore, a tenant under Lord Fitzlarding, a very nice herd of thirty-two called for careful attention. There were among them some of extraordinary merit as rent-payers, but lacking in type and character; many others were really nicely bred,

good in colours, level, deep, and with rare legs. I was under the impression when leaving that they would be hard to beat, but at the finish I could only award them second prize.

"Mr. Dixon, whose farm adjoined the show ground at Swindon, next showed me a nice group of thirty-seven in one lot, a herd doing justice as rent-payers. They had not been fed up, but lacked uniformity, and they secured third prize.

"My last visit was to Winterbourne, just outside Bristol, where Mr. Matthews showed me an excellent lot, numbering about thirty. I quickly observed that money had gone with judgment in securing such animals, every thing under the average having been ignored. They easily won the first prize, and were the utmost credit to their owner."

SHOW GOSSIP.

The Bath Horse Show will be held on Wednesday and Thursday, September 4 and 5, 1907.

The annual show of the Herefordshire and Worcestershire Agricultural Society will be held at Hereford on June 18, 19, and 20, 1907. Entries close for stock classes, May 11; ring competitions, June 5.

The executive of the Yeovil Agricultural Society had the misfortune to fix upon a showery day for the annual show, at which they offered about £350 in prizes. A source of keen regret, and one which evoked very general and sincere expressions of sympathy, was the illness of the secretary, Mr. E. H. Oakley, whose portrait appears on this

Mr. J. J. PENTY,
Secretary of the Easingwold Agricultural Society.

page, which has confined him to his bed for a fortnight. He had, however, got the work in connection with the preliminary arrangements well in hand, and his son, Mr. F. I. Oakley, has made an efficient substitute for his father since he has been laid up.

At the annual meeting of the Tiverton and District Shire Horse Society, Mr. Courtenay Haydon reported that the year's receipts amounted to £269. Mr. Haydon drew attention to the lack of entries of Shire horses at the Tiverton Agricultural Show, and asked how a better entry could be ensured in the future. The chairman said the most important question before them that day was whether they should hire or purchase a horse for 1907. The hon. member had circulated the members, but had not had many replies. After reviewing the circumstances and noticing the risks of purchasing, the chairman strongly advised hiring as before. The meeting accepted this view by sixteen votes to eight.

Judges for the Smithfield Club Show, 1906.

CATTLE.

Devons, South Devons, and Sussex: C. N. Skinner, Shortlands, Kent; Daniel Swaffer, Mumford, Kingsnorth, Ashford, Kent. Herefords and Red Polled: John H. Yeomans, Withington, Hereford; Fred. Smith, Woodbridge, Suffolk. Shorthorns and Cross-Breds: Arthur S. Gibson, The Elms, Ruddington, Nottingham; John Wortley, Shipham, Norfolk. Aberdeen-Angus and Galloways: C. W. Schroeter, Bella Vista,

Haywards Heath; A. B. Matthews, Newton Stewart, N.B. Welsh and Highland: R. W. Pritchard, Coedmarion, Carnarvon; J. R. Campbell, Shinness, by Lairg, Sutherland. Kerry, Dexter, and Small Cross-Bred Cattle: H. D. Betteridge, "Drayton," Woodstock Road, Sumner, Oxford; Henry C. Webb, Audley End, Saffron Walden. £25 Cup, £50 Cups, Champion Plate, and King's Challenge Cup: Samuel Kidner, Biekeley, Milverton, Somerset; William Reid, 160, Central Meat Market, E.C.

SHEEP.

Leicesters, Border Leicesters, Cotswolds, and Lincolns: George Harrison, Gainford Hall, Darlington; Robert Wright, Nocton Heath, Lincoln. Kentish or Romney Marsh, Devons, and South Devons: F. Austin Bensted, The Lawn, Sittingbourne, Kent; J. G. Pedler, The Barton, Sampford-Peverell, Tiverton, Devon. Cheviots and Mountains: M. S. McKerron, Boreland of Southwick, Dumfries; James Moffatt, Craick, Hawick, N.B. Southdowns and Shropshires: George F. Hempson, Estate Office, Gatton Park, Reigate; Matthew Williams, Whiston Hall, Albrighton, Wolverhampton. Hampshire Downs and Suffolks: Cary Coles, Manor House, Winterbourne Stoke, Salisbury. D. Abbott Green, Fingringhoe Hall, Colchester. Oxford Downs and Cross-breds: John White, Ham Court Farm, Bampton, R.S.O., Oxon; George Stimpson, 71, Central Meat Market, E.C. Ryelands and Dorset, &c.: F. Hawkins, Sugwas, Swainshall, Herefordshire; L. C. Attrill, Bowcombe Farm, Carisbrooke, Champion Plates for Long and Short-wooled Sheep and Prince of Wales's Challenge Cup: Henry Smith, Junr., The Cottage, Cropwell Butler, Nottingham; James P. Case, Binham, Wighton, R.S.O., Norfolk.

PIGS.

Small White or Small Black, Middle and Large White breeds: Herbert Broom, Wissett Hall, Halesworth; John Angus, Whitefield, Morpeth. Large Black and Berkshires: A. H. Cobbold, Eldo House, Bury St. Edmunds; William A. Barnes, Haslucks Green Farm, Shirley, Birmingham. Tamworths and Cross-Breds: D. W. Philip, The Redlands, Whitacre, Birmingham; Robert Wallace, Auchenbrain, Mauchline, N.B. Champion Plates and Prince Christian's Challenge Cup: Col. F. A. Walker-Jones, The Manor House, Burton, Westmoreland; S. R. Sherwood, Playford, Ipswich.

CARCASE COMPETITION.

Cattle and Sheep: William Coggan, Bracmar, 58, Thurlow Park Road, Dulwich, S.E.; G. H. Walker, Abbey Gateway, Great Malvern. Pigs: J. W. Bowyer, 230, Central Meat Market, E.C.; W. E. Hoare, 220, Central Meat Market, E.C. Champion Prizes and Challenge Cups: William Haydon, 411, Brixton Road, S.W. Table Poultry: W. Bellamy, 118, Jermyn Street, S.W.; John Bailey, 116, Mount Street, Grosvenor Square, W.

Date of the Royal Counties Show.

An important meeting of the council of this society was held at Basingstoke on Wednesday, Mr. E. Whitefield (vice-chairman) presiding.

The secretary reported that the Bath and West of England Society had arranged to hold its 1907 meeting at Newport on Wednesday, Thursday, Friday, Saturday, and Monday, June 5 to 10, thus terminating its show the day before the usual opening day of the Royal Counties Society, viz., Tuesday, June 11. He read correspondence which had taken place between himself and Mr. Ploymman, the secretary of the Bath and West of England Society, with reference to the possibility of that society finishing its Newport meeting on Saturday, June 8, but he regretted to say that Mr. Ploymman held out no hopes of this being done. The secretary further reported that he had addressed a circular letter to all the members of the council of the Royal Counties Society, laying the facts of the case before them, and asking in the event of inability to attend the meeting for an expression of their views on the subject, and there appeared to be a unanimous consensus of opinion

that the Royal Counties meeting should open on the usual date, viz., Tuesday, June 11, this being convenient to the Maidenhead authorities, and it was also pointed out that inasmuch as the Ascut Race Meeting commenced on the following Tuesday, there was virtually no other date open to the society.

It was unanimously resolved, on the motion of Mr. James Stratton, seconded by Mr. James Harris, "That the Maidenhead, 1907, meeting be held on Tuesday, June 11th, and three following days."

It was further unanimously resolved that the secretary be instructed to write to the secretary of the Bath and West of England Society, suggesting that in the event of the society being unable to omit Moulday, June 10th, from its Newport meeting, and in order to minimise the inconvenience to exhibitors of stock wishing to show at both meetings in consequence of the clashing of dates, the council of the Bath and West Society should allow exhibits entered for the Maidenhead Show to leave the Newport showyard on the evening of Saturday, June 8th, so as to enable them to be received at Maidenhead on Monday, June 10th. Various business of minor importance was transacted.

Chiltern Hills and Southern Bucks Show.

The seventeenth annual show of the above Association was held on Wednesday at High Wycombe. The weather was for the most part fine, although a slight shower fell in the afternoon, but this did not in any way mar the proceedings, and there was a large attendance of the public. The entries numbered 472, being a reduction of twenty-seven of last year, when they reached the total of 499.

There was a fairly good display of agricultural horses, the principal prize-winners in this department being Mr. R. W. Hudson (Danesfield, Marlow), the Hon. W. F. D. Smith (Greenlands). The Hunters and hacks were rather short in numbers, but there were some good animals in the open classes. Mr. J. H. Stokes was again successful with Whiskey, which has now won about £70 in prizes in various parts of the Kingdom. In the open class for hacks over 14 hands 2 in., Mrs. W. C. N. Chapman, of Canterbury, was successful with Miss Trix, whilst in that for hacks under 14 hand 2 in. Colonel E. N. Henriques, of Mursley, took the premier award with Bumpkin. There was only a small entry of polo ponies, Mr. E. Bell of Henley-on-Thames, winner with The Rajah.

Much interest was taken in the jumping and driving competitions, the former being better than usual, the large entry in the open class providing some good sport for the numerous onlookers. Miss Marion Dyer, of Mill Hill, Middlesex, took the premier honours in this class with her horse Alfred, which was second at Buckingham on the previous day, Mrs. E. M. Clarke, of Skindles, Maidenhead, being second with Topp. Mrs. Clarke also secured the first prize in the local class with Settee, and Mr. B. Robins, of Rickmansworth, was second. In the second open class for horses not exceeding 14.2, the first prize went to Mr. R. Tugwell, of Tetbury, with Dainty, an animal which did well at the Royal Show at Derby, the Bath and West at Swindon, and the Oxfordshire at Hanley. In the driving competitions the single harness horses were excellent, and in the local classes the animals were shown in good condition.

Mr. E. H. OAKLEY,
Secretary of the Yeovil Agricultural Society.

CORRESPONDENCE.

Marketing Eggs and Poultry.

Sir,—With reference to the interesting paragraph given in the "Midland Notes" in your issue of Sept. 3, it is a satisfaction to find that you have thus called attention to the districts where considerable opportunities should present themselves for the organisation of the trade in eggs and chickens. Hitherto we have not been able to do anything in the Midlands for various reasons, one of which is that in some districts, more especially contiguous to the great centres of population, the local demand is far greater than the supply, and the produce is marketed on the spot.

Under these circumstances it will be realised that the returns, as a rule, are fairly good; but there are many other parts of the counties to which your note specially refers where these conditions do not prevail. Under those circumstances, however, what has been wanting is the local initiative or the disposition of persons who are interested in this question to take first steps.

It will be realised that when once a depot has commenced, the work depends upon local effort, the National Poultry Organisation Society being the centre for information and for combination in respect to marketing. Until the minds of the people in any given district are roused to the importance of this question, nothing can be done. The success of a depot must depend upon the loyalty of its members, and to secure that loyalty it is essential that they shall see the necessity for better methods, and be ready to adopt them. Where this is the case, and the system of marketing expedited, a guarantee is thus given to traders and consumers which enhances very considerably the returns. Not only so, but very often the establishment of a depot in a district compels others who are engaged in the trade to modify their system and bring it up to modern requirements.

Whilst thanking you, therefore, for calling attention to this matter, I shall esteem it a favour if you would permit me to say that we shall be pleased to hear from anyone disposed to help in this direction in any part of the country, and also to send copies of our literature to applicants on receipt of a stamped envelope for reply.—I am, yours faithfully,

EDWARD BROWN,
Secretary.

National Poultry Organisation Society,

12, Hanover Square, London, W.
September 7, 1906.

Hodge and His Prospects.

Sir,—I intervene with some timidity in the War of the Roses which has been going on in your correspondence pages for so many weeks. One knows what often happens in such cases—both the contestants fall upon the interloper. But on the question of the farm labourer's position and prospects there is something more to be said. Is it a fact that our friend Hodge is nowadays so very badly off? Frankly, I do not think so. There are hard cases, of course. It is but a few days since I was listening to the woes of a Worcestershire farm hand, who is endeavouring to keep a wife and young family on 14s. a week, with only 30s. extra at harvest, and neither beer nor cider nor anything in the way of food provided for him. This man—a fair specimen of a good many in his district—pays 1s. 9d. a week for his cottage and garden; but the latter is large and productive, so that in the course of the year he does pretty well out of it. But in every village one finds men who have spent a lifetime on the land, lived healthily if poorly, and contrived to bring up sturdy and numerous families, by whom, in turn, they are supported in old age. One cannot regard a man who can do all this as other than a useful, deserving, and successful member of the community. "But," it is said, "the farm hand must always be a servant, and has no way to independence." The only possible answer to that is that it is demonstrably untrue. Farming is not an easy business to start in, because even the smallest farm requires a good deal of capital to work it; but wherever there is a chance for the market-gardening and fruit-growing small holder to thrive, one may find men who have risen from the foot of the ladder to positions of prosperity and independence. There are plenty to-day in Worcestershire who have done so. Nor is it only in such favoured regions as this that the small man has a fair chance of coming to the front. While week-ending in Cumberland a little time ago it was pleasant for a Midlander to learn of the comfortable position of the hinds in that picturesque country of lake and fell. Considering how much is done for him in the way of free board and lodging, a north country labourer of a careful and saving disposition can manage, I am told, to put by a matter of £20 to £30 a year, so that at a reasonably early age he can expect to be in a position to take and stock one of the small farms

which are common here. Of course, the small amount of arable land, and consequent small outlay on implements, is all in his favour. How far these impressions of a visitor are correct I leave it to the natives to say; at any rate, they are supported by the fact that one finds, so far as my experience and information go, comparatively few married men working for hire on these north country farms. No; the position of the farm hand is by no means so hopeless as the pessimists would have us believe, and if local authorities cared to exercise their powers in the way of starting small holdings where there is a fair chance of their success, there would be very little to complain of in his prospects.—Yours faithfully,
WORCESTER.

The Butter Tests and Milking Trials at Tring Show.

Sir,—I notice a letter from a correspondent referring to my remarks in "Notes and Jottings" anent the very low records of some of the animals in the milking trials and butter tests at the above show. I fail to see where any charge of unfairness or carelessness is implied, but as far as ordinary mistakes are concerned, I have yet to learn that judges are any more infallible than other people; at least, I must admit that this remark applies to myself.

Your correspondent mentions that the separated milk was retained and examined before churning, and where any cream presented itself it was skimmed and added to its legitimate cream lot; nothing, however, is said about the buttermilk. Now it is well known that a degree or two in the temperature of the cream at churning makes a great difference to the yield of butter, a quantity often escaping in the buttermilk, and though it is well known that every care is taken to have all these lots of cream started in the churn at a uniform temperature, I contend that it is next to impossible to do this. Many times, when judging in churning competitions, I have noticed how very quickly some of the dairymaids take out the thermometer the moment it shows the desired temperature; it is not allowed time to reach its level. Between this hurry and the varying thermometers (for these instruments often vary), especially when more than one person is concerned in taking the temperatures, it is most difficult to assure oneself that they are uniform. Then when a churn is required to be used a second time straight away, it is next to impossible to allow sufficient time for it to return to the low temperature of 52 deg. required, and I have no doubt in such cases, were the temperature taken again a few minutes after the churner has commenced the second lot, it would be found to have risen very considerably.

Your correspondent mentions the average butter ratio of the Jerseys tested for the past nineteen years. I presume he refers to the showyard tests. About the commencement of that period named I went to a great deal of trouble in ascertaining the home butter ratio under ordinary feeding and management of several of our breeds of cattle where well-bred and well-managed herds were kept. The records I received then were—Jerseys 18 lb. of milk to one of butter, Shorthorns 27, Friesians 25, Red Polls and Ayrshires 22, so that it appears under the higher feeding, which is usually given to animals competing in these tests, the quality of the milk deteriorates. The publication of such terribly low ratios as some of those referred to cannot but be prejudicial to our British breeds of cattle, and I little wonder that so many foreign buyers should patronise the Continental breeds in preference to our own, as they are now doing. One of the greatest safeguards of the prosperity of British farmers will ever be the maintaining the highest possible quality in everything they produce, and to allow animals yielding these impoverished qualities of milk to remain in the competitions is, to say the least of it, a very questionable policy.—Yours, &c.,

September 7, 1906. NOTES AND JOTTINGS.

Shortage of Milk.

Sir,—The chief cause of the shortage of milk during the past month is that so few farmers have had their milk to sell, nearly all being sold by contracts made months ago when milk was plentiful, at prices that do not pay for the increased outlay that would have been necessary to keep up their supply during the drought. I know that some dealers have offered their farmers a greatly-increased price for all the milk they could make, over and above the minimum quantity contracted for, but are they likely to exceed their minimum quantity, which must first be produced at a loss?

Those farmers whose contracts expire at Michaelmas should take advantage of the present scarcity and demand a price in their new contracts that will recompense them for their losses during the pre-

British Possessions beyond the Seas

sent drought and provide for a similar contingency in the future.—Yours truly,

September 11, 1906. A DAIRY FARMER.

The Knavish Dealer or the Innocent Farmer?

Sir,—In reading the interesting letters which appeared on the correspondence page in the last issue, one cannot help observing how true it is that there are two sides to every question. "Cumberland," for instance, made a suggestion a few weeks ago that dealers in feeding stuffs should, in common with farmers, be able to get their wares analysed through the MARK LANE EXPRESS free of cost. The reply given to the request was a sound and logical reason for non-compliance, and evidently "Cumberland" anticipated it, judging from his letter in the last issue. Revenge is sweet, and your correspondent indulges in a little poetry into the other side of the question. He is not unreasonable, for we certainly do hear a good deal about the unfair methods of dealers and traders who victimise farmers, and while everyone is expected to sympathise with the protection of the latter, the former must look after himself.

From the traders' point of view this does not seem hardly just, and in the way of taking advantage of customers perhaps the methods of many farmers who sell are no more above criticism than those of the traders from whom they buy. This is the other side of the question, however.
September 13, 1906. Lrx.

Cause of Wheat Failing.

Sir,—Can you through your valuable paper give me any information as to the cause of my wheat being scrawly or stubble fallen before cutting? My land is rather strong, and I find where the strongest land the worst fallen is the wheat.—Yours faithfully,
W. CALLWOOD.

Westminster Farm,

Hailstorm and the Crops—£55,000 Uninsured Losses.

Sir,—Will you kindly permit us to appeal through your columns to the generous public on behalf of the sufferers from the recent hailstorm in Bedfordshire, Cambridgeshire, and Huntingdonshire? In many cases allotmenters have been completely stripped of their produce, cottage gardens have suffered severely, and fine crops of all kinds of corn battered out of all hope of even paying for their insurances.

The damage done to uninsured persons has been valued at £29,000 in Bedfordshire, £20,000 in Cambridgeshire, and at £15,000 in Huntingdonshire. Each of these counties has started local relief funds, which have received liberal support from their own inhabitants, but the sum required is too large for local help only, and we therefore ask all those who are interested in the welfare of the farming and labouring classes to assist us.

All sums collected from this appeal to the general public will be equally divided between the three counties, unless any subscriber requests that his subscription may be put to any particular county's fund.

Subscriptions may be sent to us, care of our respective clerks.—We are, yours faithfully,
ST JOHN, H. M. Lieut., co. Beds.
ALEXANDER PECKOVER, H. M. Lieut., co. Cambs.
SANDWICH, H. M. Lieut., co. Hunts.

Prevention of Butter Frauds.—Sir Edward Strachey, M.P., speaking at the Yeovil Agricultural Society's dinner on Thursday, said, speaking on behalf of the Government, they had every desire to introduce a bill at the first possible moment to put down fraud in the butter trade. It was not possible to attempt to introduce such a bill during the autumn sitting, for the reason that the recommendations and the evidence upon which the bill would be founded were to be carefully investigated and considered by those who would be responsible for bringing it in. It was well known that the intention of the Government in connection with the autumn sitting was only to complete the business left over.

WE MAKE GUNS

We sell to the user with only one small profit.
We sell for cash direct to the user.
We buy the finest materials to be obtained.
We pay cash for all materials.
We employ some of the finest workmen in the Gun Trade.
We use finest machinery for machine operations.

RESULT.

We sell for £25 Guns of a quality for which sportsmen have previously paid from £50 to £80.

We sell thoroughly reliable Guns.

We got the finest shooting it is possible for guns to make.

Our "Field" H hammerless ejector gun—A perfect Ejector Gun of the finest quality, £25. If made with the best single trigger mechanism ever invented, £30. A perfect pair of these Guns, beautifully matched, £50. A perfect pair of Single Trigger Guns, £50.

"The Gun of the Future," as an Ejector, £15. "The Gun of the Future," without Ejector, £10. A sound and reliable gun, well made, and perfectly balanced, which will give entire satisfaction.

Pattern 8662, £16.—A sound and reliable hard shooting and hard wearing hammerless gun. Better than many sold at double the price.

Pattern 8358, £4.—A sound and reliable hard shooting and hard wearing hammer gun. Better than many sold at double the price.

ESTABLISHED 20 YEARS.

Bankers: London and Midland Bank, Temple Row, Birmingham.

PRICE STREET, BIRMINGHAM.

Northern Notes.

THE harvesting of cereals was completed within a month on large holdings in East Yorkshire, with the minimum of breaks caused by untoward weather. On one of these farms were counted forty-three stacks of corn. The two yards were filled to repletion, and it was necessary to build three stacks outside. The descendants of the first cultivator of the soil, Father Adam, never worked harder than these Yorkshiremen, and none could look happier, with their rufous faces, at the month's end. Threshings are common after the rapid harvest, as there is some anxiety to ascertain whether the yield of grain responds to the great bulk of straw. Most farmers agree that a "lot of stuff" has been stacked.

MANY instances have come to notice of longevity amongst farmers and labourers who have taken a turn in the harvest-field. A patriarchal individual at Driffield, aged ninety-six, broadcasted some seed corn in the spring of the year, and during harvest he looked well enough to undertake some light duty. He has been a worker on the soil all his life, and is now as straight as a Grenadier Guardsman. In the Bedale district a labourer, aged ninety, gave assistance in the field; and four others, averaging eighty-four years apiece gave a hand with the scythe.

SO far, the number of farm fires caused by spontaneous combustion or wilfully have been few in the North. There is a fear of heated stacks, as a result of hurried carting; but one must not anticipate troubles. Produce should be insured at the earliest possible moment. When a serious fire breaks out in a district far removed from a town possessing a fire-engine the possibilities of wholesale destruction are great. A farm fire recently broke out at Crowswick in Yorkshire, and consumed the barn and other buildings. Great fear was felt that two casual labourers had met their death in the conflagration, and the brigade, summoned from a distance, after subduing the outbreak, were set to work "to recover the bodies" from among the debris. Fortunately, the men had slept away from the farm that night, and luckily escaped a terrible fate.

THERE is no question that, at the time of writing, rain is wanted very badly in grazing districts all over the North of England, and the absence of showers is aggravating the scarcity in the supply of milk, caused to some extent by the increase in the demand. Graziers find it necessary to "cake" the cattle under present conditions, as outdoor feed is rapidly diminishing. Frequent showers would be regarded as a Godsend, as white turnips, as was predicted, if a spell of droughty weather was experienced, are showing unmistakable signs of mildew, and swedes are only doing moderately, in some places very badly. A bad account is also given of grass land, for are stunted in growth, and seeds are fast disappearing. The weather is of the most desirable character for finishing up the tail end of harvest; but it spells disappointment and loss to the grazier and to the farmers of mixed holdings. Lambs are cheapening and becoming somewhat difficult to move in the face of the unpleasant circumstances. A strong reserve of dry fodder is at hand in the hayricks, but the situation for the flockmaster is full of perplexity.

CO-OPERATION among the working classes is developing rapidly in several Northern counties. The principle is not taking root very rapidly among the farmers. The problem of practical co-operation in farming is much more difficult than its application to keeping shop for the distribution of domestic requirements. An impartial examination of the successful foreign systems of land working leads inevitably to the conclusion that their success is because of two factors common to them all. The first is a very complete system of agricultural technical education; the second a highly developed system of co-operation between the farmers. In our own country these factors exist only in a minor degree, and our problem of agriculture is mainly the problem of how to make technical education and co-operation a vital part of English farming. So far as technical teaching is concerned the way lies very clearly. The Education Act of 1902 placed in the hands of county councils very full powers to provide the most complete system of education that the ratepayers will sanction; and if the councillors and their electors chose there is no reason why the English farmer should not be as well educated, technically, as his fellow in Denmark.

SOME time ago publicity was given in this column to a proposed sale of portions of two great landed estates in the county of "broad" acres. The first of the sales by auction of large farms on the estate of the Downe family has proved abortive, none of the holdings (some with the richest land in East Yorkshire), fetching anything approaching the reserve prices. Next week and the week after, fifteen farms, comprising

nearly 13,000 acres of mixed land, at present included in the Lodesborough estate, will come into the market. These opportunities, it was thought, would be seized by some of the sitting tenants. In the first case this speculation was unrealised. At the forthcoming sale, maybe, the tenants may choose to become their own landlords. As an indication of the value of land up here, one may mention that a 180 acre sheep farm, 5½ miles from a station is let at £180 a year, or £1 an acre. Another sheep and barley farm of 275 acres brings in a rental of £215, while a third property, upon which there is much winged and ground game, and containing 1,615 acres, produces a rental of £1,167 per annum; there seems to be a shyness about sinking money in land, notwithstanding.

September 13, 1906.

The Borough.

What can I say about the hop market, when it is practically non-existent? The condition of "suspended animation" to which I referred last week still continues. Merchants will not recognise the shortage reports to the extent they are circulated by growers, and postpone their operations until more convincing or conclusive evidence is forthcoming.

The larger growers are determined to see the business through, and show no anxiety to sell, the only persons who seem to desire business being a few of those who understand the meaning of financial pressure, and who are therefore asking for bids.

I understand that some choice Mid Kents have changed hands at £8, and I hear of a few other sales at £7 to £7 10s., but these are but as drops in a bucket, for as regards the general market, it is nearer to stagnation than anything else. Some of the men one sees hanging about the factors' offices with depressed expressions of face, sucking their pipes for comfort and apparently finding none, are, I hear, very willing to sell, and the money they are open to accept ranges from £5 10s. to £6. But they cannot meet with buyers disposed to buy, and they will return home with no results unless, as is probable, some friendly factor has taken compassion upon them and advanced them cash wherewith to meet the demands of their pickers.

An important buyer from the Midlands was in town to-day, but he laughed at all the current quotations, and departed without placing an order for a single pocket. The under current that appears to create this stationary position suggests that perhaps we still, after all the alarmist reports, see a fairly good harvest. For myself, I can say that in the districts that I have visited this week there is no fear that we shall be short of hops. I have seen garden after garden in which picking was in full swing, and where the pickers were contentedly and cheerfully at work on the tally of seven for a shilling.

Such a rate does not indicate a very short crop, and this idea is confirmed when I hear in many places that 12, 14, and even 16 cwt. per acre have been secured. Of course there are some poor yields, but if I am to judge by what I have personally come in contact with, and the reports that have come to me from other districts, I may be satisfied that we shall not get less than 300,000 cwt. when the harvest is finished.

This is but a small crop, and considering the great cost at which it has been secured, should certainly be well paid for. Unhappily in this cruel world we do not all obtain our deserts, and I am very much afraid that our hard-working planters will mark this season in their memories as one in which their anxieties and labour were excessive, their returns poor, and their profit nil.

Our Foreign Trade.

The Years' Balance-Sheet.

The returns just completed enable us to survey the results of the trading during the past hop year, ending August 31. We find that our receipts have been—

	Cwts.
From the U.S.A.	95,694
From other countries	97,723

Total imports for 1905-6 ... 193,417

During this period we have shipped to our Colonies and other parts of the world, the following:—

	Cwts.
English hops	16,602
Foreign hops	4,504
Total exports	21,106

After deducting the exports from the imports, we are left with the important balance of 172,311 cwt., supplementing our large crop of last season, and loading our market unduly, the results being evident in the low range of prices at which we have been compelled to sell our produce.

If we estimate the stocks in the hands of brewers and merchants at the close of the 1904-5 season at the moderate figure of 100,000 cwt., and take into account the 1905 crop as officially returned, adding thereto the balance of imports given above, we may fairly conclude that during the past twelve months we have had to deal with something like 1,000,000 cwt. of hops. What has become of them? We have good reason to believe that the quantity now remaining in the hands of dealers and growers is comparatively small.

The average consumption as declared by brewers during the past five years hardly reaches 650,000 cwt. per annum, the latest return being 636,793 cwt., so that after making allowance for the hops used for dry hopping, and by all other consumers, we cannot safely calculate upon an annual demand of over 650,000 cwt.

If this be approximately correct there must be left in stock somewhere, from last year, some 350,000 cwt. or thereabouts. From all we can learn, nearly the whole of these are under the control of consumers, and as, from the reports to hand, we have reason to expect that imports will be quite up to the average this coming season, our growers can hardly look towards the future with unalloyed satisfaction, especially when they consider the small returns they have this year obtained from their plantations, on the whole.

If we could shut out the foreign competitor, or call upon him to pay for the privilege of being permitted to compete with us, we should have a more encouraging prospect. But there is no hope at present in this direction, therefore I fear that a very trying time is in front of English planters, and I shall not be surprised if the next return of our hop acreage shows further important reductions.

The Latest Word About Hop Drying.

It is now fully recognised by all who are interested in the hop industry, that Ezra Meeker, the pioneer of hop growing on the West Coast of America, spoke the truth, when he said "the manufacture of hops for the brewer's use commences when the cones are brought to the kiln." The previous operations of cultivation, training, washing, &c., in fact, all that is done in the field, require skill, good judgment, outlay, and persevering labour. But climatic influences, and other workings of Nature form such an important element in the growth of the crop, that frequently, as in the present year, the efforts of the planter are thwarted, and his expectations are disappointed. But as soon as the crop is safely gathered, and the pokes are landed at the Oas the further process is entirely in the hands of the grower, who can spoil or perfect his produce according to his knowledge and desire.

In old times there was, unfortunately, much ignorance of the conditions necessary for proper curing, with the result that hops were burned or slack-dried, and their value for brewing was not seldom seriously depreciated. But during later years careful consideration has been given to this most important branch, and many improvements have been introduced, each having for their object exact curing, whereby the delicate flavour and colour of the cones may be preserved, and the superfluous moisture expelled, so that the contents of the pockets may be kept in store free from any danger of depreciation. It is now acknowledged that an ample supply or draught of air, not unduly heated, is essential to success, and the recent discovery that poisonous gases, emanating from the fuel, may be condensed by the passage of the products of combustion through the drying floor, has induced the conclusion that the air employed to remove the moisture must be pure.

In order to secure all these desirable results, steam-driven fans running at high speed have been designed, and many of our most advanced planters have, at considerable cost, erected the necessary machinery. Such systems have been proved to be very effective, and have in most instances satisfied those who have adopted them. But the greater number of planters are not possessed of sufficient spare capital to be able to incur the outlay. It has therefore become necessary for some simpler and less expensive arrangements to be made that would secure equally good results. My own thoughts have been actively engaged in this direction, and certain suggestions made to Mr. Joyce, the inventor of the well-known Reek Dissipator, have resulted in a combination which I had the pleasure of seeing in operation this week at the

Hempstead Oast of Mr. George H. Dean, of Tong, Slittingbourne.

Mr. Dean has many kilns, all of which have been fitted with the Reek Dissipator for several seasons. He is completely satisfied with the working of this system, but was at once attracted by the further advantages offered by the combination that I will now endeavour to describe:—

The kiln placed at Mr. Joyce's disposal is 20 ft. square. Within the space usually occupied by the open fire, an iron casing is erected. This contains a closed furnace, fitted with hollow fire bars and a series of large pipes made of sheet iron, through which the heat and all the products of combustion are conducted from the furnace. Thus the first object is gained, as all the gaseous emanations from the fuel are discharged into the open air, and cannot by any possibility come into contact with the hops. The pipes being affected by the passage of the heat arising from the furnace, provide the means of heating the air, which is admitted in such volume as may be desired through valves placed at the lower part of the outer casing already mentioned.

Thus the regulation of the air and its heat are under the complete control of the drier. The upper part of the casing is expanded to the full size of the drying floor, by the construction of what may be described as a false floor, which is within a short distance of the Hair, and with the help of a baffle, distributes the pure hot air evenly through the load of hops. The current of air from below being thus arranged for, there is also in action another heated current, which is discharged on the upper side of the load, this being affected by the action of the hollow furnace bars, through which cold air, drawn from the outside of the kiln is passed and heated, and being conveyed by a separate pipe which is taken through the floor and the air it warms the upper half, dispersing the reek and creates a strong draught. Provision is made for burning brimstone as required, and it appears as if every point had been considered, and everything necessary for the accomplishment of the object in view had been arranged.

The claims of the inventor of this combination have been fulfilled in the experience of the past fortnight, during which time the kiln has been in constant use. Any kind of fuel can be burned, the quantity of it is reduced, the hops cannot be contaminated by it, the heat can be managed to a nicety, only pure air comes in contact with the hops, and a larger bulk of hops can be cured in a given time. Last, but not least, simplicity is the chief feature of this system: it can be comprehended and managed by any man of ordinary intelligence, and it has the additional merit, as I am informed, of being comparatively inexpensive, both as to installation and maintenance. It is distinctly a step in advance, and will, I should think, commend itself to the favourable attention of our planters.

North-Eastern Farmers' Federation Conference.

The second annual conference of the North-Eastern Agricultural Federation will be held on Saturday, October 13, in the Great Hall of the Armstrong College, Newcastle-on-Tyne, which has been kindly granted by the college authorities for the purpose.

The conference will be presided over by Mr. J. Kuox Lyal, of Peep (the president for the year), and the Earl of Carrington, President of the Board of Agriculture and Fisheries, has signified his intention of being present, and will take part in the proceedings.

The following subjects have been placed on the agenda with a view to bring them before his lordship:—

1. The Inequalities of Rating as Applied to Land.
2. The Sheep Dipping Orders.
3. Land Tenure.
4. The Legal Disabilities of Dairy Farmers and the Remedy.

Education, as applied to Agriculture.

As all of these subjects have been entrusted to speakers who understand the needs of farmers from the practical side, it is expected that the exchange of views with Lord Carrington will be both interesting and productive of good results. It is intended to invite all the Members of Parliament in the district covered by the Federation (as listeners), and, of course, all farmers will be welcome.

It may be useful to point out that the North Eastern Railway Co. have kindly agreed to issue cheap return tickets from all stations on their lines to members of any of the federated societies on production of a card signed by the secretaries. These cards will be issued to members through the local secretary of each society in ample time.

Under these favourable circumstances it is hoped that a gathering of farmers and others interested in agriculture worthy of the district may be expected to meet Lord Carrington, whose deep sympathy with farmers is so well known, as is exemplified in the liberal management of his own estates.

Midland Notes.

AS these lines are being written rain is descending gently upon the parched fields, the first we have had since a week ago, when expectations of a break-up of the long-continued drought were sadly disappointed. Only here and there have been occasional local showers, and the water scarcity, which was referred to yesterday by Mr. T. S. Townsend at the Rugby Show luncheon, is still a source of serious inconvenience and anxiety. Even Evesham and Pershore, which are usually plentifully supplied from the Cotswolds, are going short, and North Warwickshire is anxiously awaiting the development of the local company's scheme for the supply of villages between Birmingham and Coventry. In the southern part of the county the farm water cart is to be met almost everywhere carrying water from the Avon and its tributaries, and in default of proper water carts, waggons laden with milk churns and similar extemporised receptacles are pressed into service. Round about Rugby and Coventry it is not unusual for farmers to have to cart water two or three miles for their stock, while so far as one can gather the failure of wells and pumps is, if anything, even more general on the Leicestershire side. An outbreak of fire—and we have had a good many farm fires lately—would be a very serious thing indeed in many of our villages just now. On all accounts, then, one is glad to hear that Mr. Townsend purposes raising the whole question of the water

Pershore plums have averaged some 10s. a pot and Victorias half as much again, the fortunate people who have marketed a third to half a crop of them—as some few have—must have had an excellent year.

MILK producers in the Nottingham district have set an example which might be advantageously followed in other parts, having entered into an agreement with the local dealers, who are to raise the retail price by a half-penny per pint, and to share the extra twopenny per gallon thus extracted from consumers equally with the farmers. No difficulty in obtaining the higher price from consumers is expected.

VISCOUNT HOLDSWORTH'S recent advice to farmers—i.e., that they should pay more heed to the lessons of the various experiment stations—would be less needed if other parts of the country were all so well served in this direction as the Midlands. On the one side we have the Harper-Adams College, which Staffordshire and Shropshire farmers have quickly come to recognise as an entirely practical and useful institution; on the other there is the Midland Agricultural and Dairy Institute at Kingston, Derby, whose report has just been sent to me. On thirteen farms in Notts, eleven in Lincoln, nine in Derby, and eight in Leicester, experiments of one kind or another are being conducted in connection with the institute, with the result that many who would never think of making a journey to headquarters or writing for an official report are made acquainted with what is being done. Especially useful are

POULTRY.

Enemies of the Poultry Yard.

Poultry-keepers who reside in the country have some disadvantage as against their many advantages as compared with those who live in towns, and amongst these are the depredations made by rats in both farmers' and cottagers' holdings, and by foxes in fox-hunting countries. In spite of the various remedies which have been invented for the demolition of these pests there are hundreds of chickens and duckings killed. They are really difficult things to destroy, as they are so cunning. Many poultry-keepers attempt to poison them, but, unfortunately, in doing away with rats by this method they are apt to lose their chickens unless great care is taken.

There are several kinds of four-legged animals we, as poultry-keepers, have to guard against. In villages and towns cats are a great nuisance, though poor puss is useful for many things. Then in country places there are weasels, which will often clear off half a dozen chickens in a night, and they will frequently come in the daytime too. The worst of these animals is they do not kill the chickens and eat them, but merely kill them for their blood, therefore they are rather dangerous things to have round a poultry-yard.

Young weasels and stoats are easy to shoot, as they often play about very early in the morning, like young kittens, and if one is shot and left dead on the ground, very often in a few seconds the mother finds it, and it commences to carry it away, so that when a person shoots a young weasel or stoat he should always wait for five or ten minutes. If he does this he is almost certain to see the old one coming to take her dead young one away, and there is a good opportunity to dispose of the mother also.

Poultry-keepers who live in fox-hunting districts are very much tormented with those animals, but it is certainly easier to guard against foxes than weasels or rats. During the night at this time of the year they will often fetch the chickens away, and occasionally the stock birds too, their depredations sometimes extending to the middle of the day. If the poultryman puts half a charge of powder and shot in his gun and stings them a bit they will not come again. In districts where no fox-hunting is carried on it is best to give them a whole charge and settle it at once, as then they are neither use nor ornament.

It is rather remarkable that if half a charge is fired at a fox, dog, or cat from a moderate distance, when they are prowling about after chickens, and it hits them, not one out of twenty will be seen in the same spot again. It is different if a stick or stone is thrown at them (even if they do get it), as they will return again in a few days; but when the shots rub their skin, this, together with the sound of the gun, seems to make such an impression on them that they appear not to forget it in a hurry.

We have met a good many poultry-keepers this year who have lost their fowls and chickens by foxes. In most hunting districts compensation is allowed. It is very annoying when foxes kill the chickens and no compensation is allowed, especially if the young ones are intended for stock purposes, or are bred from, birds of value for any certain purpose, as in such cases money cannot fully compensate for the loss.

Some people are very fond of fox-hunting, and we have heard them say they do not mind losing a few fowls. It must be remembered, however, there are scores of people living in the country who do not go in for fox-hunting, but at the same time are greatly troubled with the depredations of these animals. We will therefore mention a remedy which came under our notice some time ago.

We went into a field where there were about 500 chickens, and there were young foxes in the woods all round, and instead of destroying them, the owner kept a cross-bred dog, which was half Scotch terrier and half beagle. The animal would lie and watch for the young foxes as a cat would for a mouse, and as soon as one came into the field he would run it through the wood.

Neither dog, cat, nor anything will keep the poultry-yard entirely free from rats, which are, if possible, far more cunning than foxes. After studying the habits of rats, we notice that unless they are very hungry they will not come out until it is getting dusk. There is often a great difficulty in catching them during the day, and sometimes in the hot weather, though they may have holes all about the place, not a rat can be seen in the daytime.

These pests are very much like rabbits in one respect, especially during the summer months, as sometimes they will go a distance away from home and make a hole in the bank, and have their young ones in a hedgerow. Frequently they will not bring their young home until they can run well and are able to take care of themselves. In many districts they keep the young ones out in a cornfield, and the old ones seem to know when harvest time is coming, as they

A PAIR OF PLYMOUTH ROCK COCKERELS.

supply of rural Warwickshire at the next county council meeting. It is impossible to serve small country villages as adequately as the big cities, but certainly the present state of affairs is far from satisfactory.

THE Worcestershire County Council has just decided to purchase something over forty-six acres of land at Littleton for the purpose of small holdings. When one remembers the outlay necessary for dividing up the land and providing useful buildings, the initial cost of practically £37 18s. per acre may seem heavy; but it is not so heavy that it need cause any anxiety as to the future of the venture. In the fertile Avon valley, so heavily cropped with fruit and market garden produce, land is valuable, and quite a small amount will keep a family in decent comfort; there are, indeed, already over 10,000 acres of small holdings in the Vale of Evesham district close at hand, mostly in tenancies of three to eight acres, and probably the future occupiers of the council's new possession will get their holdings on quite as favourable terms as their neighbours.

IT is pleasant, by the way, to hear that this Vale of Evesham district has had a better season than seemed at all likely when the late frosts practically destroyed the plum crop in the spring. Early in the year growers made very fair profits out of spring cabbage and other green-stuffs, while the asparagus season was quite a good one. Peas and beans have not ranked among the profitable crops this year; both were much too plentiful, with the result that markets were glutted; and pears have been as great a failure as plums. Indeed of the fruit crops, strawberries alone gave anything like general satisfaction. But apples at 6s. to 10s. a pot are profitable to grow; and as

the trials of different varieties of seed one against another. That sort of thing is done much more thoroughly in Canada than here, to the manifest advantage of farmers in the Dominion. One would like to see an extension of enterprise in this direction, for there is still a great future before the scientific seedsman and improver of farm crops, and only by the help of the experiment stations can we hope for timely knowledge of the really good things among the much praised new introductions that are constantly being made.

September 13, 1906.

DAIRY.

Western Counties Cheddar Cheese School.

The third draft of cheese, weighing over 36 cwt., made during the month of June last at the above-named school, carried on at Glendale Farm, near Wedmore, has just been sold to Messrs. Hill, Bees, of Exeter, at 70s. per cwt. of 112 lb. Four thousand five hundred and fifty-four gallons of milk made 4,317 lb. of green cheese, which when sold weighed 4,079 lb., showing a shrinkage of about 54 per cent.

The following particulars relating to the manufacture of the cheese will be of interest to cheese-makers:—Temperature of milk when renneted, 84 deg.; acidity of milk when renneted, 19 deg.; temperature of first and second scalds, 88 deg. and 93 deg.; acidity of milk at close of second scald, 15 deg.; acidity of whey when vatted, 83 deg.; average time when cheese was put in press, 3 p.m. A large number of pigs have been, and are being, fattened in connection with the school.

begin to clear out and make their nests in the fields. Occasionally when the last patch of corn is cut there will be found from ten to one hundred rats, especially when it has been cut down by horsepower.

In the breeding season the old does rats should be cleared off, as each one killed at this time of the year means twenty or thirty young ones, as the latter begin in their turn to breed when they are two months old. Though the rats have their holes in the field, if there is no corn they are almost sure to take young birds if they get half a chance.

Perhaps one does not see signs of them for a week, and all of a sudden swarms of them come. They travel about a great deal, but not so much in flocks during the summer as in winter. The reason of this is because during the hot weather all the does are breeding, and therefore cannot leave their nests; but the bucks go about in flocks during the summer from place to place.

The most effective way of preventing the accumulation of rats is to keep a sharp terrier who is game for vermin, and unless there is grain about in store-houses or barns this method answers well, but when there is a lot of grain about their collecting cannot be avoided, but they may be disposed of by having a supply of specially prepared virus put down, which causes them to disappear altogether. When foxes are the pest, the birds can be saved by having wired-in runs with a strand of barbed wire fastened with tying wire to the edge of the wire-netting, as foxes have never been known to scale this.

Weather, Crops and Stock.

Exclusive Reports.

Durham.

IN the Darlington district of the county of Durham a good average crop of hay has been exceedingly well got, and the major part of the corn has now been cut and some little stacked. But in the dales to the west there has been a good deal more rain and a quantity of grass is still to cut, and I am afraid a good deal of what has been cut is very much spoiled. Barley and wheat are good average crops. Oats are lighter; under average. Beef is selling very badly. Mutton and lamb very

well. Lamb sales are very good—in fact, they were considered good last year, and are making 3s. or 4s. a head more this. Turnips, early sown, good; late sown, almost a failure.

Essex (North-West).

SPLENDID harvest weather is enabling us to carry a good all-round crop of wheat, barley, peas and beans, oats being of a variable character in our neighbourhood. The wheat will be above the average, the barley an average crop, whilst beans, though short in the straw, are very well podded. The clover seeds are maturing, and promise a fair yield. Mangolds, notwithstanding the severe drought, look well, though swedes and white turnips have felt the effects of want of water. This district has been exceptionally dry, and but for a very heavy rain on June 29, which saved the situation for the corn (though it killed the partridges), we have had no rain to speak of, excepting occasional showers and slight thunderstorms. Sheep, lambs, and pigs have met with a ready sale, and prices seem likely to hold good. Wool has also been a valuable asset, ranging from 1s. 2d. to 1s. 3d. per lb. Another ten days of fine weather will see the harvest home, and give us good time for preparation for winter tillage and sowings.

Hampshire.

WHEAT is good, and some very fine pieces where the land is farmed well. Barley and oats are good this season; of course there are a few exceptions—bad farming, bad crops. Many a piece of wheat that is threshed has yielded ten sacks (or 40 bushels) per acre. Tares are a good crop, in many instances yielding up to 40 bushels per acre. Hay, with the exception of sainfoin, is not good; clovers are light; meadows are very poor for want of rain; sainfoin is good. Roots are a poor crop; both mangolds, swedes, turnips, and rape are very paltry, and in the majority a complete failure, owing to so much dry weather. Sheep have done well this summer, and free from any disease, but are not selling well, owing to the scarcity of keep. Beasts have done well; no disease of any kind.

Sussex.

REPORTS to hand on the harvest of 1906 indicate that the season in Sussex has been a good one. In both east and west the wheat

crop is spoken of as being thoroughly up to the average. This is speaking generally, but some slight qualification is necessary, the yield having been disappointing in one or two districts owing to blight. On the whole, however, the wheat harvest in Sussex appears to be a bountiful one, and both barley and oats are spoken of as yielding average crops and threshing out in good condition. All the reports agree on one point, and that is that the harvesting weather has, so far, been as favourable as could be wished. This has enabled the crops to be harvested by the self-binders with the minimum of trouble and expense, and in the best of condition. Rain is now badly wanted for the root crops, and unless it comes soon they will be much below the average.—*Sussex Daily News.*

Westmorland.

WE are still haymaking, having had wet weather since the middle of July, which is our time for starting the hay on the sheep farms, as the ewes and lambs crop the meadows till nearly June. The weather seems improving now, and a fine month is badly wanted. Hay crops are good, and grazing land has had good feed all summer. Roots are a good crop, corn is fair, straw being rather short in some cases. The lamb crop has been a good one, and prices at present are good. Wool has made a fair price again; the earliest sellers, as last year, got the best price.

Cumberland.

TAKING results as a whole, so far it has proved a favourable season. The first crop of the hay has proved an abundant one, and in the early districts the bulk of it has been well secured, but on high-lying grass farms and the intervening valleys the hay crop has suffered serious damage, and large quantities of the best grass has lost half its value by exposure to the continuous showers and drizzling rains which fell day after day for nearly three weeks. A most remarkable and beneficial change has now taken place; for the last four days we have had almost uninterrupted sunshine, bringing the corn crops to maturity and setting the reapers to work on all sides. The root crop is nearly all round a record crop. Potatoes, however, with few exceptions are short and weak in the shaws and thin in the tubers, and have been within the last week exhibiting signs of disease, but more in shaws than the tubers.

ROBSON'S FEED CAKE.

Great care is exercised in selecting the ingredients to make this Cake specially adapted for all classes of Stock.

EVERY FARMER SHOULD TRY IT.

Fertilisers and Feeding Stuffs.

BASIC SLAG.

Brief History.

Attention was first drawn, about twenty-five years ago, to basic slag as a phosphatic fertiliser; many agricultural scientists were then rather disposed to pool-pool its value, but experiments and field trials soon demonstrated that the plants—the most practical judges—availed themselves of it with eagerness. Excellent results were obtained in different parts of the country, and this fact led to further investigations into its special properties, when it was discovered that the phosphoric acid in basic slag was not combined so closely and rigidly with the lime as the ordinary raw phosphate of lime; hence the fertilising constituents in it are more easily available as plant food. In this matter, as in many others of a scientific nature, Germany led the way, and basic slag has gradually taken its place as one of the most important and valuable aids to agriculture.

The world's consumption is estimated in round figures to be annually about 2,500,000 tons, of which Germany uses nearly 1,300,000 tons, while in the United Kingdom we employ only about 170,000 tons. The average consumption per acre of grass and tillage land in Germany is 32 lb., and in the United Kingdom about 8 lb. As a possible correlative of this fact, it may be pointed out that the yield of grass land in Germany has increased nearly 20 per cent. since the application of basic slag became general in that country.

In the cultivation of crops, the return to the soil of the phosphoric acid is the most vital. Whereas the potash is returned to a great extent in the animals' excretions, in the straw and other debris, the phosphoric acid is carried right off the farm in the grain, milk, wool and stock. To convey a concrete idea of the relative importance of phosphoric acid, lime and potash, it may be said every ox sold off the farm takes these three constituents in the following proportions:—

Phosphoric acid, as much as is contained in two wagon loads of hay.

Lime, as much as in one wagon load of hay.

Potash, as much as in a barrow load of hay.

Manufacturing Process.

The process by which basic slag is obtained has only a theoretical interest for the farmer, but it may be briefly mentioned that it is a by-product in the manufacture of steel by what is known as the "basic" process, introduced in about the year 1880 by Messrs. Thomas and Gilchrist. Hence basic slag was for many years following its introduction in England called "Thomas' phosphate powder." The process consists in submitting the molten "pig" iron from the blast furnaces to tremendous heat in pear-shaped vessels, called, technically, converters, lined with lime. An air blast is injected through the converter, and the phosphorus in the pig iron combines with the lime, thus forming the slag phosphate of lime, which is then easily separated from the steel. We are able to give a few illustrations of the process.

Qualities.

As the proportion of phosphoric acid in the iron ore varies, it is a matter of course that the percentage of phosphate of lime in the bye-product, basic slag, should vary to the same extent. Sufficient regard was not given to this circumstance at first, but manufacturers have for some time recognised the importance of exercising care in keeping separate the different grades. There are now several grades in the market, the minimum guarantees of which range from 24 per cent. to 42 per cent. Though the shade of colour in the various grades may differ slightly, this possible variation gives no clue as to difference in quality, which may be ascertained. Therefore the buyer has to depend on the reliability of the seller, and hence the absolute necessity of buying only good standard brands, as well as having the quality of parcels received tested by analysis.

Basic slag is offered according to its respective grades of quality, but it must be especially noted that only the minimum percentages are guarantee. The seller may offer to supply 24 to 28 per cent., or 42 to 50 per cent., but his obligation does not extend beyond respectively 24 and 42 per cent., and the buyer must be legally satisfied with these limits, although he might naturally expect that he would get something more, and would receive about the mean of the offered percentages.

These wide margins are the custom of the trade, but it is often thought that they are too wide, and apt to confuse the buyer. Why should not the seller simply offer just what he is prepared to guarantee?

Solubility.

By "solubility" of basic slag is understood the percentage of phosphate of lime soluble in a 2 per cent. solution of citric acid, and the importance of the percentage thus soluble is recognised by the new Fertilisers and Feeding-Stuffs Act making it a legal guarantee. Whereas under the old Act the law only recognised two kinds of

compared, one having a fineness of 77 per cent. and a solubility of 89.7 per cent., the other a fineness of 90.5 per cent., but a solubility of only 36.5 per cent., and it was found that the more soluble slag gave the better yield, although the less soluble slag was more finely ground. The result is rather important, as it is often the custom when buying slag to notice only the percentage of phosphate in, and fineness of it; but from the above results it will be seen that it is advisable also to know the solubility of the phosphate in dilute citric acid.

The best makes are guaranteed 80 per cent. of the total phosphates to be soluble in a 2 per cent. solution of citric acid, according to Wagner's method.

Fineness of Grinding.

Of great importance is the fineness to which the material is ground. In this respect there has been much improvement during recent years, in consequence of the introduction of more powerful grinding machinery, and a condition is now attained enabling sellers to guarantee that a minimum

BLAST FURNACE.

phosphate of lime, viz., the soluble and insoluble "in water," it now accepts three kinds, the soluble and insoluble in water, and the soluble in a 2 per cent. solution of citric acid or other solvent of prescribed strength.

This was a necessary extension of the old Act, because as the Department of Agriculture said in one of their useful leaflets:

"It has been shown by experiments that the efficacy of basic slag is directly proportional to the quantity of the total phosphate of lime which is soluble under certain conditions in a 2 per cent. solution of citric acid. Ground mineral phosphates may be added to basic slag in order to increase the total amount of phosphate of lime. Such ground phosphate is not so valuable a manure as the phosphate of lime in genuine basic slag and unless it has been specially treated is not so soluble in a 2 per cent. solution of citric acid. It is, therefore, of great importance to insist on being supplied with slag containing a high percentage of phosphate of lime soluble in citric acid as used in Wagner's test."

And in the Agricultural Report of the County Palatine of Lancaster it is mentioned that:

"In a third experiment basic slag was tried on meadow land. Of late it has been pointed out by distinguished chemists that the value of slag depends to some extent upon the solubility of phosphate of lime when treated for half-an-hour in 2 per cent. solution of citric acid. Two slags were

num of 80 per cent. of the meal will pass through Amandus Kahl's standard sieve No. 100 E. As a matter of fact more than this minimum is usually attained, and 85 per cent. fineness is not uncommon.

When Buying.

When arranging a purchase of basic slag, buyers should obtain a clear guarantee on the following points:—

1. Minimum percentage of phosphate of lime.
2. Minimum of 80 per cent. solubility in a 2 per cent. solution of citric acid.
3. Percentage of the slag capable of passing through the standard sieve beforementioned.

They should also insist on receiving a prompt invoice, in which the above conditions should be recorded.

Adulteration.

Most of the basic slag manufactured in this country is of a satisfactory character, but there is a good deal of imported stuff offered to farmers, and this makes it especially desirable to exercise care, as the imported slag is not always of genuine quality. Some unscrupulous merchants on the Continent mix it with low-class, raw, ground phosphate, which greatly reduces its efficiency. The trade paper *L'Engrais* had the following note on the subject:—"In Belgium the sale of basic slag is made on the basis of its contents of total phosphate of lime. Some fraudulent sellers have mixed raw ground phosphate with the slag,

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Com-pounds.	Special Manures.	Kainit.	Sulphate of Potash.	Murrate of Potash.
	Raw or Equa-lised.	Phos-phatic.	Dissolved (sol-uble).										
Ammonia, organic as in Guano and Bones ...	s. d. 15 0	s. d. 12 6	s. d. 15 0	—	s. d. 10 6	s. d. 12 6	—	—	s. d. 15 0	s. d. 15 0	—	—	—
„ in Sulphate of Ammonia ...	—	—	—	—	—	—	—	—	—	12 6	—	—	—
„ calculated from Nitrogen in Nitrate of Soda ...	—	—	—	12 0	—	—	—	—	—	—	—	—	—

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids ...	2 8	3 0
Oil or fat ...	2 8	3 0
Carbohydrates ...	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. unit of albuminoids and of oil is at least $2\frac{1}{2}$ times that of 1 per cent. of unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by $2\frac{1}{2}$ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids ...	22.1 x	24 = 55.2
Oil ...	5.2 x	24 = 13.0
Carbohydrates ...	33.2 x	1 = 33.2

Total feeding units ... 101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

6 FEEDS FOR ONE PENNY INTERNATIONAL STOCK FOOD.

March Farm, Hoxley, near Huddersfield, March 31st, 1906.

Gentlemen,—Please forward another 25lb. pack of International Stock Food. I have great pleasure in saying International Stock Food is unequalled as a milkier for cows and a conditioner for horses. I have also tried International Poultry Food with good paying results.—Yours faithfully, (Signed) JOE THEAKER.

PRICES: 1/- packet, post paid, 1/4; 2/- packet, post paid, 2/6; 4/- packet, post paid, 4/7; in pails, 14/-, carriage paid. Poultry Food prices same as for Stock Food.

PRICES FOR VETERINARY PREPARATIONS AND POULTRY REMEDIES ON APPLICATION.

MILK SUPPLY IN SUMMER DROUGHTS.

That there should have been a shortage in the milk supply from country to town during the burning-up-pasture weather of the past month, is only what might naturally be expected. A drought late in summer, lasting into autumn, causes less milk production on a general scale than one earlier, because many more cows have been longer in profit, and are naturally diminishing their lacteal secretions, and their owners are unable to discover any profit in buying costly auxiliary feeding stuffs or giving home-grown corn to any milkers but those in full profit. To quote an old proverb, "the toll" would be "bigger than the grist" if they were to resort to artificial feeding promiscuously for those which had been six or seven months since their calvings yielding milk. Then, again, a very large proportion of ordinary farmers never give corn, meals, or cotton-cake to dairy cows under any circumstances if the pastures are burnt up. They serve them with hay in the early morning when they milk them, and the animals have to forage for the remainder of their diet through the day. When this system is resorted to, diminishment of milk-yield almost invariably takes place to a very great extent. The cows find it hard work to get food enough to keep flesh on their bones, and the inner machinery secretes flesh before milk. Sometimes a precarious living is obtained by pickings of leaves and spray from bushes in the fences, and there is great nutriment in some leafage if to be obtained in sufficient quantity. The fact was stated in the Journal of the R.A.S. for 1893, on the authority of M. Vigel, at that time the French Minister of Agriculture, that

in France, Italy, and Spain it is common practice for the spray of forest trees to be cut and stacked every autumn, and that the farmers considered dried leaves superior to their meadow hay.

There is also another fact given by Mr Beadell, of Bedfordshire, in the Journal above mentioned, that of a herd of twenty bullocks in the severe summer drought of 1893 being fed-throughout the greater part of June entirely from branches cut from elm trees. One man was employed one-half of every day to cut down the branches, and the animals did well on their pickings, having a burnt-up hill pasture to roam in where there was only an abundant supply of drinking water. The late Mr. C. S. Read, in view of winter scarcity of stock food, recommended, in the same Journal, that every blade of coarse grass and rank herbage from under trees and in plantations, together with rushes and weeds rendered from the banks and borders of dykes, lakes, or fences, should be ensiled green is not only such waste products, but turnip tops and mangal tops when the roots are stored. Thousands of acres of swede leaves are allowed to wither and decay, he stated, which ought to be collected and pitted for silage.

The rational practice of the better class of dairy farmers in summer droughts always has been to give ample supplies of cotton-cake, home-grown grain, or other auxiliary feeding stuffs in conjunction with straw or hay chaff, and with an ample supply of water cows are found to sustain their milk yield satisfactorily, although the diet is dry.

THE CEREAL YEAR.

II.—Feedingstuffs.

To say that the price of linseed has been the leading event of the cereal year, so far as feedingstuffs go, is somewhat like saying that Polonius is the most interesting character in "Hamlet." The example is chosen because Hamlet with Hamlet left out is a proverb for the incomplete, and maize, of course, has every claim to be regarded as the Hamlet of the year for feedingstuffs. Still, there is this to be said, that whereas the young man not quite equal to his responsibilities is with us always, the man who is a sage statesman in public affairs and general council, yet a foot in his own home is a study which marks—Shakespeare. The humbler case of trade which is now before us presents a like problem. The great trade—maize, and then the barley and oat trades, which united about equal that in maize; these three protagonists are not usually so interesting as this fourth trade, in linseed, which has controlled so much. The average price of linseed for the cereal year 1904-5 was about 38s. per qr., for 1905-6 it was 41s. per qr. Now a rise of 3s. per qr. is, in these days of small profits, considerable, and as linseed grows

to perfection under the Union Jack, in India, East Africa, and elsewhere, the matter may even claim an Imperial importance. Is linseed likely to keep up in price? That is the question already addressed to us, and on due consideration we feel inclined to answer in the affirmative. With every wish to make matters agreeable for owners of live stock we feel bound to say that the price of fattening meal, of oilcake, and of oilseeds themselves is likely in this new cereal year to be rather enhanced than reduced. Linseed, in short, is worth its present value, and the more early maturity is appreciated in the stock breeding world the more will wild yet forcing and fattening food, such as linseed is, be in request.

With respect to maize a new cereal year starts with over a million quarters on passage, and there is no fear of scarcity therefore for some weeks or so to come. After December the American and Roumanian new crops will be arriving, and then in March and April an Argentine new crop will be reaped, or rather, husked. Maize is likely to be cheap for another twelvemonth.

Barley and oats depend very largely on a country which at the present moment is most unsettled; we mean, of course, Russia. This Empire is now credited with a good crop of barley, but with a mediocre yield of oats. No very precise news is, however, obtainable, and we can only advise our readers that feeding barley and light oats in this new cereal year must needs depend very largely in value upon a most unreliable country.

There are two feeding stuffs which have for the whole year, September 1 to August 31, been in request and scarce and at a good price. These are beans and peas. English farmers should grow more of them, for they fetch a far better price than wheat. Even the commonest dun peas go up to 32s., and are seldom under 31s., while 34s. would be about an average price for beans.

Of foreign small pulse more and more is imported every year. Duri, dholl, and mutton, canaryseed, and millet and gram all find a ready market at Mark Lane. The feature of the year in this branch of business has been the abundance—and resulting cheapness—of canary seed. It used to be worth 60s. to 100s. per 44 lb., and as such was the food of small birds and other pets. But canary seed, as Dr. Fraeme long since pointed out, is a genuine cereal, and it is rather pathetic to note that it is the year of its decrease which has seen the fact for the first time brought home to the trade. Duri has gone up in sale steadily all through the cereal year. As it is exceedingly cheap and exceedingly nutritious, and as it is very largely the product of our Indian Empire, the fact may be recorded with unalloyed satisfaction.

In connection with the fatal farm fire which occurred at East Peckham, near Maidstone, when two men were burned to death, it has been discovered that an extraordinary mistake was made as to the identity of one of the victims. One man was supposed to be James Baitup, of Hooks Green, Sussex, and at the inquest the jury returned a verdict to the effect that Baitup was accidentally burned to death. Last week, however, Baitup turned up at his home alive and well. It remains a mystery whose body it was that was mistaken at the inquest for that of Baitup.

Notes of the Week.

The steadily-growing appreciation of colonial and foreign stockowners for our pedigree breeds is a gratifying sign of the times.

At recent sales some very satisfactory business has been done in animals for exportation. In one case an entire flock of Lincoln Longwool sheep was sold for shipment.

And in connection with this developing trade it is a pleasing reflection that, in order to improve the character of the vast herds of cattle and flocks of sheep in South America and elsewhere, there is scope for the use of our pedigree stock for many years to come.

Our breeders are fortunately pre-eminent, and the prospects offer them every encouragement to maintain the high reputation of their stock.

This consideration should impress upon our legislators the vital necessity of keeping our shores free from the danger of imported disease.

On many an acre of arable land the plough will be busy during the next few months—"God speed the plough."

It is not known who invented the first plough, yet, as Cotton said, the inventor has done more for the happiness of the world than the whole race of heroes and of conquerors.

Any sympathetic reader who has not yet sent in his subscription to the fund being collected for the sufferers from the recent hailstorm in Bedfordshire and neighbouring counties can still do so.

As some of the correspondents to this paper have pointed out, the application of the moral connected with the disaster is, that farmers should insure their crops.

The annual cost of the premium is not heavy, and would be well repaid by the pleasant feeling of security, even though such storms are quite exceptional.

We are glad to learn that the Chilean Government have decided not to increase the export duty on nitrate in order to raise money for the relief of the sufferers from the earthquake.

The export duty is already very heavy, and to increase it would be adopting the policy of killing the goose that lays the golden egg.

As it is, farmers will be hard hit in other ways. Hay is very short, and feeding stuffs will be dear. Fertilisers are up in price, and jute has advanced in value considerably.

The last point will be felt by potato-growers and other farmers who require large numbers of bags and sacks.

The value of jute has risen from 11s. 8d. per cwt. in 1900, to 15s. 9d. per cwt. at the present time.

And, as usual, directly prices advance, adulteration creeps in. There are complaints of quality, and it is said that the jute is being adulterated with water and sand to increase the weight.

The row between two parties of hop pickers in the Worcester district last week afforded some startling head lines for the daily papers.

The party of gipsy pickers seem first to have struck work, and then struck the other party who were willing to work at the rate offered.

It was a case of the usual peaceful picketing, which is now legal.

There was only one solitary policeman on the spot, and for the time "his lot was not a happy one."

I was glad the other day to hear a hop-grower in Kent say that he was well satisfied with his crop. He estimates he will get about 10 cwt. per acre of prime quality.

He did not spare cultivation and continual washing, and expects to reap the benefit of his enterprise.

I hope there are a good many in the same fortunate position.

The "distressful" island across the Channel can be congratulated on its agricultural prosperity.

According to the Irish agricultural returns recently issued, agriculture is in a flourishing condition.

There is an increase in the cereal crops, green crops are more cultivated, and there is a substantial advance in the number of cattle and pigs.

There have been rumours of potato disease in the western districts, and there is an agitation for Government assistance, but it is now said that there is nothing very serious the matter with the crop.

Poison in butter, perdition in milk, ptomaines in meat, &c. These are the sort of lively titbits served up in the papers to be digested with our breakfasts.

The insurance companies should charge a higher premium to a man who eats anything that has not first been analysed.

And we shall all have to keep analysts on the premises to test our food, just as in Turkey the Sultan keeps a taster, whose pleasing duty it is to taste everything to see if it has been poisoned.

Fortunately we don't believe half we read; otherwise we who are obliged to pass much of our time in towns would eat nothing, or have been poisoned, and thus not be alive to take an interest in such alarming news.

Heigh ho! for a country life with milk and eggs direct from the producer, and butter fresh from the cool dairy.

Bristol Wool Fair.

On Wednesday Down fleeces were quoted at from 1s. 1d. to 1s. 3d., and matchings 1d. per lb. above the quotations of the corresponding fair. In skin wools there were no more encouraging facts, business being small and at a considerable reduction in values. Sellers were naturally reluctant to part.

PUBLICATIONS RECEIVED.

We are in receipt of a copy of Mr. Hugh Robert Mill's "British Rainfall, 1905," a volume of close on 300 pages, the compilation of which must have involved an enormous amount of work and time; in fact we are told that it represents, in round figures, 1,000 hours of Mr. Mill's work, and at least as many of that of three assistants, to say nothing of the time bestowed on the subject by the 4,000 observers in Great Britain and Ireland, upon whose reports, it is based. Yet all is done by voluntary subscriptions, and it is not surprising to hear that for the last two years the cost of collecting the returns, paying assistants, observers in remote localities, rent, stationery, printing, postage, and the innumerable minor expenses, has exceeded the income from subscriptions and the sale of publications; and so far from there being any surplus available for the remuneration of the editor, he has been obliged to divert time from a work on which he would gladly concentrate the whole in order to make up the deficit and earn his own living. Surely there is no similar instance of a voluntary assistant of scientific observations of equal magnitudes unaided by the State or by a learned society, and seeing the importance of the subject, we think that the work should be put on a more satisfactory financial footing by an annual grant, for experience proves that the strain on the compiler is far too great, and unless the financial basis is made stronger, the work will sooner or later have to be suspended. The volume, which is published at 10s. by Mr. Edward Stanford, 12, 13, and 14, Long Acre, W.C., abounds with interesting data, and it is one we can commend to all interested in the subject of rainfall.

Paid no Rent for Forty Years.—An owner of property at St. Osyth, Essex, has obtained an ejectment order against a tenant, whom he said had not paid any rent for forty years.

The memorial portrait of the late Mr. John Hungerford Arkwright, of Hampton Court, late Lord-Lieutenant, of Hereford, was unveiled in the Shire Hall, Hereford on Tuesday. Nearly 2,400 was collected, and the painting was executed by Mr. Frederick Beaumont, who was intimately acquainted with the late Mr. Arkwright. In addition to holding the office of Lord-Lieutenant, the late Mr. Arkwright had been a president of the Hereford and Worcestershire Society, representative member on the Council of the Royal Agricultural Society, and as a highly successful breeder and exhibitor of Hereford cattle, he will be long remembered.

THE FARMERS' DIARY.

TUESDAY, SEPTEMBER 18.—Leighton Buzzard Show—Agricultural Fairs at Bury, Carmarthen, Egrement, Kingston, and Partney—Sheep Fair at Machynlleth—Ottley St. Mary Fair—Ware Fair.

WEDNESDAY, SEPTEMBER 19.—Easingwold Agricultural Show—Loughborough Agricultural Show—Kingston Show—Worcester Cheese Fair—Shap Show—Aylsham (Norfolk) Agricultural Show—Show of Shire Horses—Wimbor—Cardiff Horse Show, first day—Entries close for the Dorchester Show—Fairs at Carlisle, Farnes, Northampton, Worcester, Abingdon, and Malmesbury.

THURSDAY, SEPTEMBER 20.—Cardiff Horse Show, second day—Abingdon Agricultural Show—Hay Horse Show—Market and Drayton Agricultural Show—Market Harborough Agricultural Show—Oswestry Agricultural Show—Stokesley Show—Annual Agricultural Fair at Lutterworth—Reading Hop Fair—Hinkley Hiring Fair.

FRIDAY, SEPTEMBER 21.—Corwen Agricultural Show—Reading Horse and Cattle Fair—Lowes Sheep Fair—Harvey (Cambridge) Horse and Sheep Fair—East Dereham Fair—Downham Fair—Peters Special Horse Sale—Entries close for Dalbeattie Show.

SATURDAY, SEPTEMBER 22.—Stevenage Cattle Fair—Alston Sheep Fair—Alnwick Cattle Fair.

MONDAY, SEPTEMBER 24.—Llan Ymynydd Show—Entries to J. Sillson, Merton, Oswestry—Kidleigh Cattle and Sheep Fair—Rugby and Southwell Cattle Fairs—Kidwieldy Sheep Fair.

TUESDAY, SEPTEMBER 25.—Great Gransden Show—Cattle Fairs at Haverfordwest, Hay, Barno dswick, Easingwold, and Burgh—Eaton Cheese Fair—Fairs at Cambridge, Market Rasen, Abergavenny, Bungay, Marden, Chesterfield, Chertsey, Spalding, Stourbridge, Pickingering, and Bowden—Sheep Fairs at Spalding, Pickingering and Melton Mowbray.

OBITUARY.

Mr. Henry Smith.

A well-known figure in the commercial life of South Staffordshire has passed away in the person of Mr. Henry Smith, of Summerhill, Kingswinford, who was eighty-two years old. Mr. Smith belonged to an old Pedmore family, whose names in the parish register go back between 300 and 400 years. He was one of the founders of the firm of Messrs. Hill and Smith, the Brierley Hill Ironworks, a business of world-wide reputation. For some years he was Deputy-Lieutenant for Staffordshire, and he greatly interested himself in county work in a variety of directions. Thirty-eight years ago he was appointed a justice of the peace for Staffordshire.

Mr. Fergus William Park.

Mr. Fergus William Park, of Headon Manor, near Retford, a well-known agriculturist, died on Tuesday, aged eighty years. Mr. Park was for many years agent for Mr. Harcourt Vernon on the Grove Estate, and after his retirement went to reside at Headon Manor, where he continued to carry on farming on his own account. He had a great reputation as a breeder of Shire horses and Shorthorns, but the greater portion of his herd was dispersed in 1902.

Dr. Max von Eyth.

We regret to announce the death of Dr. Max von Eyth, on August 25, the president and founder of the German Society of Agriculture, who had just celebrated his seventieth birthday on May 6, shortly after which he visited the society's show at Schöneberg. He had arranged to visit Wittenberg in the autumn to help in selecting a site for the society's show in 1908. The ex-president had been for twenty-four years an engineer in England.

Mr. James W. Lord, of Church House, Northiam, East Sussex, a prominent breeder of pedigree Sussex cattle, has just shipped two bulls for East Griqualand, South Africa. Some time ago a couple from the same herd were dispatched to South Africa, where they gave excellent results. The breed is not so well known abroad as it should be, but it is pleasing to know that wherever they are they give satisfaction.

Horse Breeding in Japan.—H.M. Embassy at Tokio have forwarded a report on horse-breeding in Japan, which may be seen on application at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, E.C. It stated that the announcement made regarding the contemplated purchase by Japan of 1,300 stallions abroad is incorrect; this is the total number of entire horses which will be in the establishments of the new administration at the end of the eighteen years covered by the present programme.

Notes and Jottings.

THE very slight increase in the number of sheep in the country, having in view the long run of mild winters, shows how sound a business sheep farming is likely to be for some years to come. The chief increase lies in the number of breeding ewes, and, as a result in normal conditions, of lambs. A healthy sign among the older sheep, although at first sight it may not seem so satisfactory, is the decrease in old sheep not kept for breeding, as it is pretty safe to infer that the decrease in the number scheduled is due to their being drafted into the breeding flock. The increase in the number of sheep—not merely a jump in one year owing to some special feature in the food supply—is a good indication of the position of matters agriculturally, for when sheep lose in numbers things are generally going pretty badly all round. A steady increase is therefore satisfactory, and though one might like to see it bigger, a 6% increase is not to be despised. The hot weather since the returns were sent in may have caused some to shorten the number of ewes in accordance with the prospect of food supply; but a good harvest well got will probably prevent diminution below the numbers recorded.

AT the time of the Royal Show some objection was taken to criticisms on British methods of wool marketing, which were made in an address to the National Sheep Breeders' Association. The lecturer on that occasion was a Colonial; now the Home Wool Buyers' Association has supported many of his contentions. No doubt much of the bad work is due to want of better knowledge in the treatment of wool; though some of it is caused by the desire to be over clever, so as to secure more than the wool is worth. That all wool is not handled in the best manner cannot be denied, and it is a mistake to try to deny the fact, even though a vast number of growers do put their wool on the market in good condition, and after exercising all reasonable care and skill. The members of the association know how the article reaches them, and the effect on their pockets is too unmistakable for them to be bluffed in the matter. As showing their sincerity it was decided that the committee should draw up in a convenient form suggestions as to the best methods for wool growers to adopt in the care and treatment of the fleece, and to use the best means available to get this information set before farmers. Those who do exercise skill and care in their methods will not mind their good management being supported by the purchasers, while those whose management has fallen short of the advice which is to be set before them should accept it in the best spirit, and act upon it.

FARMING is subject to criticism from those outside, and sometimes one is inclined to be a bit tired of it. However, everyone is glad when these outside throw useful light on matters affecting farming; and it is interesting to know that the inventor of the modern phonograph is trying to aid the sheep industry. It appears that Mr. Bell conceived the idea that if the blind teats about the udder of an ewe could be developed, the ewe would attain to greater fecundity. With this view he has selected and bred until he has raised sheep with active teats, where previously the milking properties were latent. It may not be so rare a feature for the super-numerary teats to possess the power of producing milk as he may have thought, for it is met with in cows as well as sheep, and it is generally regarded that these teats were active in the very far off past. Having got the milk, however, he has not yet attained to a higher breeding rate, but the fact that he has got a strain of sheep which constantly produces milk from more than the two ordinary glands is, at any rate, interesting as showing what may be done in the way of awakening latent features in a breed. How far the breeding organs of an animal are subject to the milk organs, or the milk organs to the breeding ones, is rather an interesting question, and it is to be hoped that Mr. Bell will throw some light on the subject.

SOME breeds of sheep are notably good mothers—that is, give a large quantity of milk—while others give less than is desirable; but the same applies to breeds of cattle, and the endeavour to obtain earlier maturity and greater aptitude to fatten is generally accompanied by a loss of milking properties. The ability to raise a high percentage of lambs is a very important matter, and

it is doubtful if there is much attention paid to the udder possibilities as there might be. Of course, most shepherds draft the ewes with absolutely useless udders, whether caused by disease or other agencies, but beyond this little is done, the food supply being regarded as the easiest means of securing milk, though it is not always successful. Perhaps Mr. Bell's experiments may throw some useful light on the subject.

THIS mild September weather affords an excellent opportunity for dipping sheep. No one can tell when colder weather will come, but the season is here when it may be expected, and it is an advantage not to chill the lambs; moreover, they can be allowed a longer dip whilst the weather is warm. The hot season has been favourable to the development of insects, and most probably they will be more vigorous for the pleasant conditions in which they have been brought into existence. Even if sheep are bought with a warranty of having been dipped, it is desirable to make sure that the animals are clean, especially if they have been through the markets. We never believe in experimenting with doubtful dips; there are plenty of well-known and safe ones, and it is far wiser to keep to these.

SALES OF THE WEEK.

The Quarrington Rams.

There was a record attendance of ram breeders and agriculturists at the sale of the Quarrington

LINCOLN SHEARLING RAM.

rams, at Quarrington, near Sleaford, on Saturday week, when Messrs. Ward and Robinson offered by auction 120 Lincoln shearling rams (flock book) No. 155.

Mr. Richardson offered 117 rams, the king of the flock by Scopwick Better Times, which was a prize winner at Gainsborough show, being secured by Mr. Marris, of Kirmington, at 105 guineas, the top figure of the day. A fine animal by Mere Ringleader was knocked down to Mr. Dudding, of Riby Grove, for 100 guineas, and grand sheep were also secured by the following buyers:—Mr. Yarrad, Swaton, 45 guineas; Mr. J. E. Carswell, Loughton, 70 guineas; Mr. Savage, of the Argentine, 35 guineas, 38 guineas, 28 guineas, 24 guineas, 27 guineas, 32 guineas, 22 guineas, 32 guineas, 20 guineas, 17 guineas, and others at smaller prices for exportation. Mr. Walker, of Buenos Ayres, was the next largest buyer, at prices ranging from 28 guineas to 11 guineas each.

The average last year for 100 yearlings of this flock was £20 2s. 4d., and this year the total realised for 117 was £22 4s., an average of £20 14s. 8d.

Lazonby.

On Wednesday Mr. John Kidd commenced a two days' sale of cattle and sheep. The lambs were shown in first-class condition, and as buyers were very numerous, a good trade was the result, prices being about 1s. a head up from last week. A large number of sheep were bought to go south, whilst several lots went into the west of Cumber-

Lincoln Shearling Ram.

Our illustration on this page is of a Lincoln shearling ram, the property of, and bred by, Mr. H. Dudding, of Riby Grove, Great Grimsby, Lincolnshire. This ram won the first prize in its class at the Bath and West Show at Swindon this year.

land. The greyfaced lambs were a splendid lot, over 7,000 in this class being penned, and they were eagerly sought after and made good prices, one of the best lots—that shown by Messrs. Ruine, of Thornhorpe, Slaggyford—making as high as 30s. 3d. a head. This was the best price obtained amongst the large consignments, although several small lots made more money. Blackfaced lambs were not up to the quality of last week, but for the best lots there was a keen demand, although a few lots of the smaller sorts were reserved.

Kerry Hill Society's Show and Sale.

Messrs. Morris, Marshall, and Poole held the ninth annual show and sale, under the auspices of the Kerry Hill Flock Book Society, at Kerry, on Friday week, when between 5,000 and 6,000 sheep passed through the sale rings. Prizes amounting to £43 10s. were offered, and there was good competition in each of the nine classes. Prices were higher than last year, and we understand that many lots made up to 5s. over expectations, and only one lot of ewes were unsold. One vendor sold ninety-five ewes privately just before the auction began; the purchaser sent them through the sale ring, and took over 4s. a head out of them.

The rams were sold by Mr. Morris. Among ninety shearling rams, the red card was given to a sheep from Brompton Hall, and Mr. Lawton Moor was declared the buyer at 24 guineas. The second prize ram was sold to Mr. Evans, Newcastle Emlyn, at 22 guineas. The fourth ram found favour with several breeders, and Mr. J. R.

Bache had to pay 32 guineas before he could claim it. The four rams from Winsbury averaged £21 5s. 3d. The third prize was awarded to a thick-set ram on short legs. It realised the top price of the sale, 40 guineas, which was given by Mr. Alderson, Glanmiheli. Another ram from this flock made 25 guineas, to Mr. Jones, The Graig, the twelve averaging £15 19s. 4d.

In the old ram class a two-shear from Great Weston was placed first, and was purchased by Mr. Thomas Davies, Vronleau, at 25 guineas. The second prize ram came from Brompton Hall, and realised 20 guineas. A ram from Penygelly was awarded third prize, and was sold for 14½ guineas to Mr. Langford. A good three-shear ram from Cwm Eral was sold at 15½ guineas to Mr. Griffiths, Dolwen. A ram lamb from Brompton Hall was placed first, and one from The Graig second, whilst third prize and reserve went to the Great Weston exhibits. A highly commended lamb, sent by Mr. John Anwyl, realised the highest price. It was a lengthy, suppy youngster, with a grand head, and Mr. Lawton Moore did well to buy it at 18 guineas. The three lambs from this flock averaged £11 0s. 6d. The seven Graig lambs averaged £6 9s. 8d., and the twenty from Great Weston £6 9s. 8d.

Mr. A. Tanner's Shropshires.

A numerous company attended Mr. Alfred Tanner's annual sale of Shropshire sheep on Tuesday. The prices realised were as follows:—Shearling rams: 18 guineas, Mr. E. J. Frank; 17 guineas, Mr. E. Instone; 40 guineas, Mr. F. H. White; 32 guineas, Mr. P. Eversall; 13 guineas, Mr. P. Instone; 18 guineas, Mr. T. Cartwright; 17 guineas, Mr. Powell (Hereford); 8 guineas, Mr. Powell; 9 guineas, Mr. Jackson; 7½ guineas, Mr. Eves; 30 guineas, Mr. Shaw; 13 guineas, Mr. R. Timmis (Wolverhampton); 14 guineas, Colonel Lovett; 19 guineas, Mr. Murch (Hereford); 9 guineas, Mr. T. D. Wyley.

10 guineas, Mr. Jas. Whitaker; 8½ guineas, Mr. P. G. Hughes; 7 guineas, Mr. Rogers (Prescott); 6 guineas, Mr. Wadlow; 5½ guineas, Mr. Davies (Eytton); 6½ guineas, Mr. T. Wadlow; 6 guineas, Mr. Tudor; 6½ guineas, Mr. P. Hughes; 8 guineas, Mr. G. Lloyd (Milford); 9 guineas, Mr. J. Wicksted; 5½ guineas, Mr. Marsden (Craven Arms); 5½ guineas, Mr. Richmond; 11 guineas, Mr. J. H. James-Moore; 10 guineas, Mr. Farmer. A pen of five shearing ewes was bought by Mr. F. Bibby, at 5 guineas each, and Mr. Wilson Slater bought three pens at 13 guineas, 3½ guineas, and 3 guineas a head.

Kidderminster.

Messrs. Nock and Joseland held their nineteenth annual sheep sale at Kidderminster on Friday week when all previous records were broken, both as regards quantity and quality, the sale being the best all-round supply of breeding and feeding sheep ever held in the district. The entry totalled nearly 6,000 sheep and lambs. The ram section started with the Shropshires, and included sixteen shearlings from the old-established flock of Mr. Geo. Gerrard, Offerton, which made up to 9½ guineas, and averaged nearly £7; six from Mr. J. Lee, Woodville Hill, up to 6 guineas. Six grand Oxford shearlings from Mr. Jas. Horlick, Cheltenham, reached 10½ guineas, and averaged 8½ guineas; six from Mr. J. Phipps Smith, Evesham, up to 7 guineas; twenty splendid Oxford lambs, from the noted Ryte Hill prize-winning flock of Mr. W. A. Treweeke, Chipping Norton, made up to 11½ guineas; twenty from Mr. Geo. Adams, Faringdon, up to 5½ guineas. The large entry of Hampshires met a ready sale. Eight shearlings from Mr. C. Laing, Reading, made up to 5½ guineas, eleven very choice lambs from the Pendley Manor flock, Herts., of Mr. J. Groat Williams 11 guineas, and averaged over £8, ten from Mr. A. C. Hall, Chipping Norton, 11 guineas, and averaged nearly £7. The Ryeland lambs, which attracted those who want early maturity lambs, were a new feature. Six shearlings from Mr. W. T. Barneby, Saltmarsh Castle, made up to 6 guineas, and two from Mr. W. H. Davies, Claston, 4½ guineas. Kerry Hill rams made 4½ guineas.

The breeding ewes were the finest lot ever seen in the market. The best consignment came from Mr. Alfred Holgetts (Northfield), whose 500 grand young Shropshires made up to 61s., whilst 170 Radwors from the same owner made up to 48s. There was a very large attendance of agriculturists at the sale from Wiltshire, Gloucestershire, Oxfordshire, Hertfordshire, Warwickshire, Shropshire, Cheshire, Staffordshire, Herefordshire, in addition to breeders and feeders in the district.

Mr. W. S. Ferguson's Border Leicester.

The annual sale of Border Leicester rams at Pictontahill, Perth, took place on Tuesday. Mr. Bryden, New Mains, Stone, paid the leading figure, £20, for No. 1 ram, which had led at Crieff, Perth, and the Stormont. The Hon. A. D. Murray had a thick, well-clad sheep in No. 4 at £13 10s. For fifty-nine rams sold the sum was £216 10s., an average of £3 15s. 1d., against £9 14s. 10d. for forty-six sold last year. Twenty-one gimmers disposed of yesterday made £78 7s. 6d., or an average of £3 14s. 8d., against £3 19s. 4d. for twenty-four last season.

Sale at Ipswich.

Messrs. Robert Bond and Sons held their annual special sale of Suffolk sheep from registered flocks on Friday week, in conjunction with Mr. Ernest Prentice, at Gippeswyk Park, Ipswich. The sale was a satisfactory one, having regard to the fact that it was the second sale, and that there appeared every indication of the present severe drought continuing over a good part of East Anglia. The rams formed the feature of the sale. Twenty-one ram lambs consigned by Mr. D. Abbott (Green, Fingringhoe Hall), averaged £10 4s. 6d., with a top price of 18 guineas paid by Mr. G. T. Harrison for Mr. Felix T. Cobbold, M.P., for a ram lamb, Fingringhoe Grange 2nd. Eighteen consigned by Mr. S. K. Sherwood, Playford, averaged £8 17s. 4d., Mr. G. T. Harrison giving the top price of 17 guineas for a choice ram lamb by Playford Scott 2nd. Mr. Herbert E. Smith's sixteen averaged £9 13s. 7d., Mr. J. W. Eagle giving the highest price of the day, 35 guineas, for a prize-winning ram lamb by (Grange Bismark 6th).

Sale at Driffield.

At Driffield on Wednesday the auctioneers had a busy day selling breeding sheep and rams. Messrs. G. W. Clark and Sons sold by auction fifteen Lincoln shearling rams from the registered flock of Mr. T. D. Robinson. The best price was £7. The average for the lot was £5 10s. per head. Messrs. Hornby and Wilberforce also sold fifteen rams by Lincoln sheep belonging to Mr. Appleby, of Wiltshire. These made £3 12s. 6d. to £4 17s. 6d. per head, averaging just over £4.

Tavistock Fair.

There was between three and four thousand sheep at this town fair. The fair, of which principally for the disposal of breeding ewes, of which there was a large supply, at prices ranging

from 38s. to 43s. each. There were more than 150 rams. The average prices ran from £4 to £8 10s. each. A few exchanged hands at £10.

Newingreen Sale.

Messrs. W. and B. Hobbs conducted a successful sale of sheep and lambs at Newingreen, Kent, on Wednesday, when practically the whole of the entries—6,000—were disposed of. The prices made continue good. The top figure for half-bred lambs was 31s. for Kent wether lambs 28s. 6d. and Kent ewe lambs 29s. 6d., and the average price for good working lambs was 25s. and 20s.

Lichfield.

Lichfield sheep sale was held on Thursday by Messrs. Winterton and Sons, when 3,500 sheep were offered and met a sharp trade. Mr. A. S. Berry's rams made 8 guineas; Mr. George Brown's sixteen, 20½ guineas, 17 guineas, 18 guineas, 10 guineas, and averaged 11 guineas each; Mr. J. Brown's thirty, 14½ guineas, 10 guineas, 12½ guineas, 9½ guineas, 8½ guineas; Sir Richard Cooper's rams 9 guineas, Mr. Boston's lambs 10½ guineas, Mr. Corbisheley's Oxford lambs 4½ guineas, Mr. White's Oxford lambs 6 guineas, Mr. Dodd's Hampshire lambs 8 guineas, Mr. W. J. Wood's rams 7 guineas, Mr. Wint's ewes made 54s., Mr. Wylie's 50s., Sir Richard Cooper's 85s., Mr. M. Booth's 57s., Mr. A. S. Berry's 60s., Mr. J. L. Coxon's 52s., Mr. George Brown's 89s., Mr. J. Brown's 60s., Mr. Myatt's 55s., Mr. Hulme's 55s., Messrs. Averill's 52s., Mr. Hunter's 51s., and Mr. Martin's 51s.

Lothian Ram Society's Show and Sale.

A two days' show and sale in connection with the Lothian Ram Society was held last week at Murrayfield, Edinburgh, in good weather, and before a large attendance of buyers.

Blackfaced and Cheviots were brought under the hammer, the numbers being an increase over the previous year, and clearances were effected at prices showing a distinct improvement. Messrs. Dobson and Murray, Parkhall, secured the premier show honours for Blackfaced shearling rams with an animal by Woolford's sire, and Mr. A. Archibald, Oversheils, was given the first prize for the Blackfaced group. Mr. J. Elliot, the well-known Hindhope breeder, took first place for Cheviot rams, and Mr. Geo. Hogg, Newlands, for the Cheviot group. Mr. Archibald's lot carried fleeces extremely well suited for the manufacturer, and Lord Rosebery gave £30 for one, this being the highest price of the sale. Mr. Elliot, Ardnornish, secured another at £27, and a contingent of twenty-five realised £290. Mr. Mitchell, West Loch, had an average of £12 9s. for ten animals, the highest being £20. In the Cheviot section Mr. Davidson, Woodhall, paid £28 for the best of the famed Leaston stock (Messrs. Smith).

Truro Ram Sales.

Over 2,000 sheep were penned in Truro Market on Wednesday, and there was a strong demand for the best type of animals. Messrs. M. L. Blaney and Son sold several rams from Mr. Jennings's flock at an average of 7 guineas to 8 guineas, and some two-teeth ewes realised 55s. per head. Mr. W. H. Brewer sold the following registered South Devon hog rams:—Six from Mr. J. A. Spry, Veyran, averaged £8 10s.; six from Mr. R. H. Ward, Grampound Road, £6 7s. 6d.; four from Mr. G. A. Northey, St. Allen, £8 10s., the top price being £15 2s. 6d. Messrs. Henry Thomas, Son, and Co. had a consignment of 1,500 sheep. Two-teeth ewes made up to 55s. each; four-teeth, 48s.; full-mouthed ewes, from 45s. to 50s. Nine South Devon long wool lambs from Mr. M. H. Holman, Mylor, averaged 6 guineas; four from Mr. J. C. Dabulwz, 5 guineas; six from Mr. Hallett, Brixton, 7½ guineas. Oxford Down lambs ranged from 2½ guineas to 4 guineas, and three Shropshire Down hog rams from Lord Falmouth fetched 3½ to 7 guineas each.

Wilton Great Sheep Fair.

This great September sheep fair was held at Wilton on Wednesday, when the sheep penned numbered about 33,000, which was several thousand less than last year. The attendance was large, but below that at some of the previous fairs, and trade was hardly as good as at some of the recent fairs; but Britford and Salisbury quotations were fairly well maintained. Mr. J. Fitcher, of Fovant, secured as much as 38s. per head more for his ewes than a similar lot realised last September, but, as a general rule, sales were effected at rates very similar to those prevailing twelve months ago, when trade was exceptionally good. The quality of the sheep penned called forth high commendation from experienced judges, and, considering the weather, the shepherds are much to be congratulated in bringing the sheep to hand in such excellent condition. General quotations were as follows:—Fat wether lambs 42s. to 48s.; working wether lambs up to 49s., chivver lambs 36s. to 39s., mixed lambs 28s. to 35s., regular and draft ewes up to 45s., two-teeth 45s. to 50s., fat ewes 42s. to 54s.

The Corporation of Wilton offered a prize for tenant farmers' wether lambs, and the Earl of Pembroke gave a cup in an open class for similar sheep, but the knowledge that Mr. H. Hitchings, of Broadchalke, would enter the magnificent pen of lambs which had previously won prizes at Salisbury and Britford kept away other intending exhibitors, and there was no competition. Both prizes were awarded to Mr. Hitchings. The prizes were distributed at the fair office by the Earl of Pembroke.

Messrs. Waters and Rawlence held their usual great sale of ewes, lambs, and rams, the catalogue comprising no less than 17,500 head, and with a large attendance of buyers from all parts of the country, practically an entire clearance was effected. The entry of ram lambs and rams numbered 180, being the last drafts from well-known breeders. Forty-six from Mr. J. Flower made up from 4 guineas to 7½ guineas; 27 from Mr. A. F. T. Drake, 3½ guineas to 12½ guineas; 36 from Mr. Diben, 4 guineas to 7 guineas; 20 from Mr. C. Coles, 5 guineas to 9 guineas; 40 from Mr. H. J. Hulse, 4 guineas to 6½ guineas; a few others making 3 guineas to 4 guineas each.

Messrs. John T. Woolley and Wallis held their important sale of fat and store ewes and lambs in the fair. The catalogue comprised 188 lots, and, with a large attendance of buyers, a good clearance was effected at very satisfactory prices:—

Best wether lambs, 40s. to 46s.; working wether lambs, 31s. to 38s. 6d.; best chivver lambs, 33s. to 38s.; small chivver lambs, 29s. to 32s.; mixed lambs, 31s. to 42s. 6d.; culs, 20s. 6d. to 30s.; regular draft ewes, 46s. to 50s.; two-teeth ewes, 41s. to 52s. 6d.; over-aged ewes (good on tooth and udder), 32s. 6d. to 44s. 6d.; grazing ewes, 25s. to 35s. 6d.; two-teeth wethers, 46s. A number of rams from Messrs. H. P. Taunton, B. J. Waters, H. Hitchings, the Hon. Louis Greville, R. E. Coles, and others were also disposed of.

John Jeffrey and Son's sale comprised 4,108 store sheep and lambs, and thirty-one ram lambs and lambs. Trade was good, and a capital clearance was made at prices about the same as at the fair last year. Regular draft and draft ewes made 38s. 6d. to 45s.; two-teeth ewes, 38s. to 48s.; grazing ewes, 21s. 6d. to 42s.; working wether lambs, 30s. to 40s.; ewe lambs, 29s. 6d. to 38s.; mixed lambs, 21s. to 34s. Ram lambs and rams, 2½ guineas to 5 guineas each.

Sale of Berkshire Pigs in Dorsetshire.

The sale of the choice herd of Berkshire pigs belonging to Mr. J. Chick, of Stratton, Dorchester, was held in a meadow adjoining this hospitable homestead last Friday. There was a good company, most of the breeders being represented, and the stock (although not of quite the same length as the old Stratton herd) were of good quality and met a good demand. Lord Cawdor secured a couple of good sows to go to Pembrokehire, Mr. A. S. Gordon purchased Stratton Heauty 2nd, the second prize sow at Dorchester last year at 13 guineas; Mr. Edney Haxter several to go into Hampshire; and Mr. H. C. Cameron many of the best gilts to go to Argentina. Messrs. A. Brown, Arthur Hiscock, D. Mutton, J. Jefferson, and H. Standfield also obtained some of the best lots. A couple of good sows were also purchased for the Hon. Mr. Mouldsworth in Guernsey. An all-round average of £3 6s. 3d. was made for eighty-eight head, sixty of which were born this year.

Whitchurch Cheese Fair.

On Wednesday at Whitchurch Cheese fair, there was a pitch of 67 tons, and, with the exception of a few heated lots, the quality was excellent. Most of the cheese changed hands promptly at prices ranging from 63s. to 67s. 6d. best qualities; mediums, 57s. to 62s.; and lowest down to 52s.

Notes and Jottings.

THERE is at least an appearance of a break-up of the long drought at the time of writing, and the weather, particularly after sunset and in the early morning, is distinctly colder. Many cattle of all breeds stare their coats now in the early morning terribly, a sure sign that some warming food is needed. In many places the very short supply of grass has necessitated foddering with hay, but this scarcely suffices to keep things together, and progress is out of the question. Now the colder evenings and mornings have come, some cake or meal are practically a necessity if beefers are to progress and down calves to be got into a state likely to make them milk well when parturition is over. Longer delay in attending to these now means loss later on.

THE milk supply is an awful subject to touch upon at the present time. For years and years the supply of milk from October to February 1 has been practically inadequate for our large towns and cities, and the drought, with its accompanying scarcity of pasture and green food, has added immensely to the difficulty. One of the great features of the future in stock-keeping, depend upon it, will be the discussion and consideration

ONE thing the writer has observed in respect to the last statement is that the majority, indeed, nearly to a man, of those who have been most successful have been those who have bought or bred the best animals and kept them in the highest conditions. This is by far the most important point in the dairying business. Good condition means harder nature or ability to withstand the many ills that are apt to befall the dairy cow. When well fed she can throw off a slight chill that would prove very damaging, indeed, often fatal, to a weakly, ill-fed companion. And so it is with those dreaded scourges, tuberculosis and abortion. The well-conditioned cow will stand much more of infection or other causes that may conduce to the former disease, whilst when the latter difficulty comes the high-conditioned cow is worth much more money to go to market than the thin one.

READING the results of the milk and butter yields of the Holstein Friesian cattle in some of the American herds, the quantities of both products obtained are remarkably good; the quantity of milk yielded is very great, but the butter-fat percentage is still more remarkable in a breed that was at one time more noted for the poverty of its milk than in any other desirable property. This is speaking of many years ago, when these cattle were imported into England in large numbers at certain times of the year. Probably climate and feed may have a hand in the excellent results recorded; indeed, it is well known that the same kind of feed is vastly more nutritious grown upon some soils and in certain localities than in others.

THE difference in the nutritive properties of Scotch-grown oat straw and Scotch-grown turnips when compared with the same articles produced in the south of England is almost incredible. So far as the oat straw is concerned, it has been proved that the straw from oats, cut a little before being half ripe, is much more nutri-

likely, with the succession of dry seasons, that we shall have to fall back upon new plants.

AS soon as the soil is sufficiently soft to break up and seed on these farms that have some tillage that can be applied to the use of the cattle, some rye or other green food should be sown for early spring use. Though the season will soon be getting on, growth is certain to be very rapid after the great heat that must have so thoroughly warmed it. Italian rye grass and trifolium also make very bulky and profitable crops for early summer cutting, either to feed green, or if they are not required for that purpose, to be made into hay. Last April we also saw a crop of the famous thousand-headed kale nearly a yard high that made an enormous bulk of keep, and this we were told was not drilled until the first week in the previous October.

THE Chicago markets appear to have been heavily supplied with cattle of late, which, so far as condition and prices are concerned, have been fairly satisfactory. The demand for the best finished cattle apparently keeping very firm, and, as in our own country, it is scarcely likely that this class of beef will come to market more plentifully than it is required for the next few months, if all between this and another summer. These steers and heifers that were turned on the pastures in poor condition last April and May will not, through the drought, have gained flesh sufficiently fast for them to be brought out before the first months of next summer have been made use of, and Christmas will see the end of a very large proportion of those that were turned out more fit.

THE necessity for keeping our ports closed to foreign cattle is well seen by the outbreak of what is called East Coast fever in South Africa, a disease said to be even worse than the rinderpest which proved so disastrous in England in the sixties of the last century. When disease of this kind or these kinds once breaks out, the temptation to be rid of those animals that are not infected, though in the company of diseased ones, is too great for the ordinary man to withstand, and so the healthy portion of herds are at once, upon the outbreak of disease, railled or walked to the nearest market and allowed to spread the seeds of the disease broadcast throughout the length and breadth of the land. Were we importing store stock from over-sea countries to-day, it is most probable we should be importing disease of some kind or other.

TUESDAY next, the 18th, will witness the dispersion of one of the leading herds of Red Polls in this county, that of the herd belonging to Lord Amherst, of Hackney, and consisting of some hundred head that have been carefully bred and furnished a number of prize winners since 1850. The present is a very opportune time for those who have the means, pecuniary and otherwise, for purchasing some of these cattle to do so. As intimated in the above notes, the supply of milking cattle is quite inadequate for the demand, and a herd of Red Poll animals started upon such a foundation as the prize stock of this famous herd would furnish should be worth thinking about, and would be pretty certain to turn out a pecuniary success, especially if located in a suitable district.

ON the day following the sale of the Red Polls mentioned, another important sale of a breed that seldom are found in the market took place. We allude to that of the Welsh herd belonging to Mr. Thomas Roberts, near Aber Station, Carnarvonshire. The herd numbers about fifty head, and has supplied a good number of the highest class stock of this hardy and useful breed for several years past. Local demand may probably be fairly brisk, but the scarcity of feed in many parts of England is certain to have a very prejudicial effect upon prices in general. The Welsh breed deserves to be better known and more extensively patronised than it is. It is a general or dual purpose breed; the cows give a good yield of butter and milk, and the steers supply the best of beef and with great development at an early age.

Sale of Mr. Lysaght's Herefords and Horses.

Another important sale of pedigree animals, the property of Mr. W. R. Lysaght, was held at Amberley Court, near Monmouth, on Tuesday afternoon. The following are some of the chief prices and purchasers:—Two-year-old Hereford bull, Amberley Chieftain, bred by Lord Llangatock, 50 guineas—purchaser, Mr. E. W. Well, Amberley; yearling pedigree Hereford bull, 164 guineas—purchaser, Mr. T. James, Gilestone, near Ross; pedigree yearling Hereford heifer, 19 guineas, Mr. D. A. Thomas, M.P.; two-year-old Hereford heifer, 24 guineas, Mr. Henry Williams, Llanarth; Hereford heifer (calved in March, 1905), 18 guineas, Mr. D. A. Thomas, M.P.; Hereford cow Hendre Pansy, 25 guineas, Mr. D. A. Thomas, M.P.; her bull calf, 12

TYPICAL SHORTHORN DAIRY COW, IFORD FANCY.

Property of Messrs. J. and H. Robinson, Iford, Lewes. She gave 1,857 gallons of milk in 10 months.

of the milk supply of Great Britain. What may be done in the way of importing milk from abroad is not at present known, but there is little doubt that necessity, the mother of invention, will devise some means, and it is to be feared that the necessity for a vastly larger supply of milk than is at present possible will be needed.

THE enormous quantity of beef imported in the shape of live cattle and dressed beef prevents any scarcity or even rise in price of that article, and the beef supply from foreign countries can easily be multiplied many times over, and perhaps will be, whether needed or not. This would certainly leave a greater—vastly greater—portion of our own land in the keeping of dairy cattle and the production of milk, and there is little doubt, too, that by careful selection and good feeding and management our present milking might be made to produce a greatly increased quantity. The price of new milk to the producer during a great part of the year is not too high, and there are many milk-selling farmers who find a difficulty in making ends meet; at the same time it may be truthfully said that there are many farmers who have done well in the business.

tious than that from a dead-ripe crop. This may, in a measure, account for the superiority of Scotch-grown straw, as it seldom attains the same stage of ripeness in the north country that it is allowed to do in the south and Midlands of England. To maintain a regular and heavy supply of milk from a dairy all the food used during the autumn and winter months should be made as succulent as possible and be of the most nutritious kinds.

IT is quite likely that the terrible drought through which we have been passing will be the means of causing a much greater breadth of lucerne and sainfoin to be grown in the future. Travelling during the present week we noticed two or three herds of cattle on first rate pasture of these crops, and there can be no disputing their value on soils that are at all suitable to their growth, whilst both plants have the additional recommendation of making the best possible hay should they not be required for feeding off green, or should the season prove more prolific so that pastures overgrow the head of cattle. Mangels have increased very much of late years, so far as the area sown is concerned, and it appears quite

CATTLE WASH.

 out the United Kingdom early in Decem-
 ber. Price One Shilling per copy,
 through any bookstall or bookseller; by post,
 One Shilling and Fourpence.

ORDER EARLY.

Publishing Offices: 3, Wellington St., Strand, London.

guineas. Other pedigree hereford cows fetched
 from 25 guineas to 33 guineas.

The Shire mares, colts, and hackneys aroused
 much interest, but in some cases the prices, con-
 sidering the expense and trouble Mr. Lysaght has
 gone to in breeding pedigree horses, were dis-
 appointing. A promising young bay Shire mare,
 by Lord Rothschild's Birdsall Minstrel dam
 Heather Belle, was sold for 37 guineas to Mr.
 Sease, Monmouth; and for 14 guineas and 10
 guineas, respectively, the same buyer obtained
 two other Shire mares. For 33½ guineas Mr.
 Albert Lewis, Priory Farm, Monmouth, purchased
 the black Shire mare Steadily Deborah. A blue
 roan Shire colt by Hindle Baronet went to Mr.
 Morgan, Glebe Farm, near Lydney, for 14½
 guineas. Other colts made from £10 10s. to
 £17 17s.

Sale of South Devon Cattle.

The sale of the herd of pedigree South Devon
 bullocks at Higher Leigham Farm, Egg Buck-
 land, on Wednesday, attracted a good company.
 The lots, fifty-eight in number, were, with one
 exception, the property of Messrs. Butland Bros.,
 of Leigham Barton, and Mr. W. J. Crossing, of
 Woodford Farm, Plympton. The auctioneer was
 Mr. John Pearce, of Plymouth, and most satis-
 factory prices were obtained for the various lots
 of cattle. Altogether over 1,200 guineas were
 realised, more than 1,000 guineas being Butland
 Bros.' share of the proceeds. It is interesting to
 note that Leigham Champion (1667), which was
 bred by the late Benjamin Butland, was the sire
 of twenty-four of the heifers and seven yearling
 bulls disposed of. One of the heifers, Handsome
 3rd, obtained the highest bid at the sale—namely,
 67½ guineas. The following are the best prices
 realised:—

Property of Messrs. Butland Bros.—Cows:—
 Buttercup, 3692, 30 guineas, H. Heller,
 Kingsbridge; Handsome, 4040, 57½ guineas,
 J. Stoke, Sherford; Dairymaid 4th, 4817,
 30 guineas, Whitley, Paignton. Heifers:—
 Princess 2nd, 5825, 40 guineas, Whitley;
 Snowdrop 2nd, 5828, 65 guineas, Tucker;
 Perfection, 5270, 51½ guineas, W. Symons, Kings-
 bridge; Beauty 7th, 5814, 25 guineas, Whitley;
 Honesty 2nd, 5825, 40 guineas, Whitley. Bulls:
 Right Sort, 2477, 35 guineas, R. Clarke, St.
 Austell.

Property of Mr. William J. Crossing.—Heifers:—
 Iris, 4885, 18½ guineas, Sandover, Kingsbridge;
 Rose, 5336, 21½ guineas, W. H. Payne, Kings-
 bridge; Polite, 5888, 27 guineas, Whitley.

 Street, Strand, London, W.C.

Warts.

These excrescences, though of little importance
 from the point of view of the health of the
 animal, are often a source of considerable
 trouble, and are at all times unsightly. Techni-
 cally, warts are described as circumscribed
 hypertrophies of the papillary layer of the
 dermis, and they are considered by modern ob-
 servers to be parasitic in their character, the
 micro-organism being the bacterium puri. Our
 fathers considered dirt to be the exciting
 cause, but this cannot be regarded as constant,
 because among animals living under exactly the
 same conditions as to cleanliness many will not
 develop a single excrescence, while with the few
 they may be seen from one or two in number up to
 as many hundreds, and from a grain of mustard
 seed in size up to several pounds in weight.

The parts on which they are most often met
 with are the muzzle, eyelids, abdomen, thighs,
 sheath, and teats. In horses they are exceedingly
 troublesome when they come in the way of the
 harness, and when they interfere with movement,
 or are subjected to friction or bruising
 they assume a raw, ulcerated appearance, and
 bleed at the slightest touch. In cows they are
 often found on the teats, and here they are par-
 ticularly inconvenient, because they greatly inter-
 fere with the milking, and in some cases they
 occur at the end of the pap, completely block the
 orifice, and effectually prevent removal of the
 milk. They are most frequently seen on the teats
 of heifers carrying their first calf, one or more
 teats being completely covered with small "seed"
 warts, as they are popularly called, with an oc-
 casional large one, that seriously interferes with
 the grasp of the teat by the hand in milking, and
 which from friction become sore.

Unless steps are taken to remove them before
 the calf is born, there is often difficulty in getting
 the animal to stand to be milked, and the gentle
 heifer develops into a kicking or vicious cow, so
 that in this position it is not, as it may be in other
 parts, merely a question of unsightliness or dis-
 figurement, but their removal becomes a matter of

urgent necessity, if milking is to be profitably per-
 formed. A strange thing about warts, which
 many will have observed in their schoolboy days,
 is that they frequently disappear spontaneously,
 even when not "charmed" away, and in the
 case of warts on the teats of heifers they some-
 times disappear as mysteriously as they came, but
 it is not by any means a safe plan to depend on
 this, for if they persist removal becomes most dif-
 ficult, since any attempt at treatment increases the
 soreness, and interferes with the milking. There
 are several methods of removing or destroying
 warts—by ligature, by excision, with the caesear,
 with the actual cautery, and by the application of
 certain caustic or corrosive agents—and they are
 varied mainly according to the character, size, and
 position of the growth. Removal by ligature is by
 the best method where the character and position
 of the growth will permit. It is safe, surgical,
 and effective, and more easily practised by the
 owner than any other method. In the case of a
 pregnant cow, for example, cauterising, so as to
 effectually use the hot iron or the knife, would be
 highly inconvenient, not to say risky, but a ligature
 can generally be applied without imposing
 any such restraint.

(To be concluded).

Death of Ewes.

SIR,—I have lost 4 ewes within the past month.
 The first thing I noticed was one-half of the udder
 swollen, and walk stiff in the hind legs. In a few
 hours they die, and get nearly black. The last
 one I had killed, and when it was skinned the
 flesh was very yellow all over the body; the gall
 about four times the proper size. Before death I
 noticed the urine a very high colour. Two ewes
 died since the lambs have been weaned. They
 have been kept on sound grass land.—READER.

Answer: Clearly what the ewes have suffered
 from, or died of, is gangrene of the mammary
 gland. This mortification, or death of the part,
 during the life of the animal is not at all an un-
 common sequel to acute mammitis in ewes, and
 is not infrequently seen in cows that are udder
 between the thighs. In cases so rapidly fatal as
 those described there is, of course, nothing to
 be done; but it is not the rule that death
 supervenes so rapidly, and we can only suggest
 that the beginning of the inflammation of the gland
 structure has been overlooked or neglected.
 Gangrene of the udder may cause death from
 shock, or from general blood poisoning, owing to
 the absorption of poisonous products. The dead
 parts are sometimes removed by excision, but
 generally are allowed to separate from the living
 structures, the horrible fetor of the discharges
 being in the meantime modified by deodorising
 and disinfecting agents. Yet need not be really
 sorry the ewes died, for with ordinary animals
 treatment is not profitable. The loss of condition,
 the length of time occupied in recovery, and the
 cost of getting the animal fit to kill for the butcher
 —for it is of no further use for breeding—is such
 that treatment does not pay. It is noted that the
 cases occurred subsequent to the weaning of the
 lambs. The complete want of attention to the
 state of the udders of the ewes from which the
 lambs have been removed is responsible for many
 cases of mammary inflammation, and, of course,
 for gangrene as a sequel.

Scour in Calves.

SIR,—What is generally the cause of scour in
 calves six months old? Is it infectious, as last year
 several in the same district died from this cause?
 What is considered the best food and treatment
 for sufferers from it? A reply in your valuable
 journal will oblige.—S. S. LEWIS.

The "general cause" of "scour" in calves six
 months old is indigestion and over or improper feed-
 ing. There is an infectious scour in calves—popu-
 larly known as a "white scour" or "white skit,"
 and technically as dysentery neonatorum, but this
 "white scour" is peculiar to newly-born animals,
 and there is no evidence of an infectious dysentery
 affecting calves six months old. Scour in calves
 is, or used to be, very rife in certain districts in
 your country, and it was investigated, and the
 cause elucidated, by no less an authority than
 the late M. Nocard, assisted by the veterinary
 staff of the French Board of Agriculture. It
 was determined that the infection took place
 at birth, through the open umbilicus, and that
 calves born on infected premises all died.
 This must, however, be quite a different matter
 from the scour in calves six months old, from
 which several animals have died in your district.
 As to the treatment of this, we cannot form any
 reliable opinion as to its cause, as nothing is
 said as to the character of the scour, or under what
 conditions the animals are kept, fed, and managed.
 "Scour," or diarrhoea, is not in itself a disease,
 but only a symptom, generally of disease of the
 digestive organs. It may, however, be a
 feature of several other bovine diseases. We
 will refer again at an early date to the in-
 fectious white scour in young calves. In the
 meantime you may be able to tell us something
 about the character of the "scour" to which the
 deaths in your district of six-months-old calves
 has been attributed.—M. R. C. V. S.

HORSES.

SHIRES.

BLAGDON SHIRE HORSE STUD. (Established 1879). Proprietor, CLEMENT KEVIL, Billington, Leighton Buzzard, Beds. (late of Blagdon, Malden, Surrey). High-class animals for sale of all ages and both sexes; also massive sound Stallions to let for the season.

CROSS, J. L., Catthorpe Towers, Rugby. Shire Stallions, Mares, &c. Also Red Shorthorn Bulls from milking strains, and Oxford Down Sheep.—Apply F. CAMPBELL, Catthorpe, Rugby.

MUNTZ, Sir P. ALBERT, M.P., Dunsmore, Rugby.—SHIRE-BRED STALLIONS, COLTS, MARES and FILLIES. About a hundred of all ages. Prize-winners London and other leading shows. Also high-class Shirehired SHEEP, winners first prize at Royal Agricultural, 1886, second in 1887, and first in 1888.—Apply THOMAS E. WART, Dunsmore.

NOTTINGHAM CORPORATION, Stoke New Farm.—Shire Stallions, Mares, Fillies, and Geldings of fashionable breeding, including prize-winners on sale. Inspection invited. Visitors met.—Address A. AVIS, Stoke Bardolph, Nottingham.

WHITEHEAD, Robert. Fashionably-bred Mares, Fillies in natural condition on Sale. Stallions: Bodenham King 17177, Whitton Prince Alfred 22030.—Apply, CLIFFORD, MUCKLOW, Hargate Hall, Buxton. Stn., Teleg. Miller's Dale (2 miles).

HUNTERS.

ROBINSON, ERNEST W., Brookleigh, Esher. Irish-bred 1, 2, 3, and 4-year-olds, brood mares, made and unsold Hunters for sale.

HACKNEYS, &c.

CORNBAR, JOHN, Wydale Green, Birmingham. Breeder of High-class Hackneys. Several have been successful in the showyard. Colts and Fillies by the leading Stallions of the day.

HUNT, Mrs. William, Findon, Sussex.—Carefully inbred Hackneys for sale, suitable for export; moderate prices. Blood: Denmark, Cornmaught, Danegett, Lord Derby II.

MOORE, HENRY, Burn Butts, Cranswick, Hull. Pedigree Stud of HACKNEYS, including many prize-winners, yearlings, two years, and others.—Can be seen on application to Henry Moore.

CLYDESDALES.

CLYDESDALES.—The Seaham Stud Co. have Mares, Fillies, and Colts of the choicest breeding always on Sale.—Apply, R. BRYDON, Seaham Harbour, County Durham.

PONIES.

MILLER, W. S., Forest Lodge, Brecon, South Wales. Extensive Breeder and Exporter of best class of Welsh Mountain Ponies and Cobs.

CATTLE.

SHORTHORNS.

COWLEY Manor Shorthorn Herd, property of James Horlick, Esq. Bulls and Heifers of choicest breeding. Cruickshank and Bates blood, successful in dairy and showyard.—Apply, W. HITCH, Estate Office, Cowley, near Cheltenham.

DENNY, F. A. & E. H. M., Bore Place, Chiddingfold, Eden Bridge, Kent. A carefully selected herd of choice Shorthorns. Stud Bulls, Ascot Constellation 8284, by Silver Mini 7095; Princess Pride 7906. Young Bulls for sale.—Apply, G. MACLEAN DAVIDSON, as above. Telegrams, Bore Place, Rought Beach Railway Station, Pen-hurst.

WORDSWORTH, Duffcarrig, Gorey, Co. Wexford, Ireland. Pedigree Dairy Shorthorns (Cruickshank and Scotch blood). Successful in dairy and showyard. Young Bulls and in-calf Heifers of good colours for sale. Exportation orders executed.

HEREFORDS.

THE SHEEPCOTE HEREFORDS, property of Peter Cotes. Established 1904. This herd has, in 1904, won more first and champion prizes than any other in England. Headed by those celebrated bulls Holmer, Endicote, and Bago-Proctor. Young stock on sale. Inspection invited.—Apply, J. K. HYSLOP, Estate Office, Sheepcote, Clifford, Herefordshire.

JACKSON, K. NEWTON, Blackbrooke, Pontillas, Herefordshire. Pure-bred Hereford Cattle, with pedigrees dating back to very early volumes of Herd Book. Bulls and Heifers for sale at reasonable prices. Shire Horses and Shropshire Sheep.

SOUTH DEVONS.

ROWE, F. W., Trevejo, Lostwithiel, Cornwall. Breeder of pure-bred South Devon Cattle of best and purest strains of blood. Bulls, Cows and Heifers for inspection and sale.

CATTLE—continued.

ABERDEEN-ANGUS.

SWAYLANDS ABERDEEN-ANGUS HERD. The Property of Mr. George Drummond. Stock always on sale.—Stud Bull, Eboniser 2172, Winner of 3 Firsts and 2 Champions 1905.—Apply, W. E. ROGERS, Bowens, Pen-hurst, Kent.

For Sale.
PRIZE BRED POLLED ANGUS
COWS, BULLS, and HEIFERS.
Finest Strains. Inspection Invited.

GEORGE HOYLES,
Skidby Manor, near Hull.

RED POLLS.

CRANWORTH, Rt. Hon. Lord, offers reasonably, from his prize-winning herd of Red Polls, Bulls, Cows, Heifers, from good milkers.—Apply, C. F. SREZANSKY, Letton, Bedford.

RED-POLLED COWS for Sale, down Calving, bred specially for MILK. Also some grand young Bulls, Pedigree Herd.—H. WALNE, Kettleburgh Hall, Wickham Market, Suffolk.

JERSEYS & GUERNSEYS.

TICHBORNE PARK GUERNSEYS, property of Sir H. D. Tichborne, Bart. Bulls, Cows and Heifers of very best breeding for sale.—D. NICHE, Tichborne Estate Office, Alford, Hants.

THE MERTON GRANGE HERD of Pedigree Guernseys. The property of Frank Hargreaves, Esq. Largest prize-winning Herd in England. Buyers can be supplied with show animals of either sex or for dairy purposes. For full particulars, address W. J. EMPSON, Merton, Gamlingsay. Telegrams and station: Gamlingsay.

KERRIES.

CORY, CLIFFORD JOHN, M.P., Llantarnam Abbey, Monmouthshire. Pedigree Kerries. Champion ship and other prize-winners. Royal and other Shows. Llantarnam Station, G.W.R.

SHEEP.

LINCOLN LONGWOOL.

DUDDING, HENRY, Riby Grove, Gt. Grimsby, Lincolnshire, has always for inspection and sale a large flock of pure LINCOLN LONGWOOL SHEEP, including many prize-winners, having taken the leading prizes for many years at the Royal and other shows for both rams and ewes, including champion medals at both the Paris Exhibition, Vienna, Amsterdam, Canada, Australia, New Zealand, and all the leading prizes at Chicago; also the first for the best collection of Lincoln fleeces of wool at the Royal Windsor Show, which proves the character of this flock, which is most famous for their great size and 125 years' good breeding. Rams from this flock made the highest average on record last year. Riby Grove is seven miles from Great Grimsby, and 3 from Stallingborough Station. Telegrams, "Dudding, Keelby."

For Sale.
SKIDBY MANOR FLOCK,
Shearling Rams.

PURE LINCOLN LONG WOOL.
Fine Lustrous Wool. Even Fleeces. Strong Constitution. Suitable for Export.
Inspection Invited.
G. HOYLES, Skidby Manor, near Hull.

HAMPSHIRE DOWNS.

TAMWORTHS.

THE Melton Constable celebrated Herd of
Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cups Smithfield. Several recently exported for Continental and Colonial herds.—Apply R. OWEN GODDARD, Estate Office, Melton Constable, Norfolk.

We learn that Mr. Harry W. Bishop, now located at Bentley, near Tring, is taking the necessary steps to establish as fine a herd of Middle Whites for Mr. Williams, the owner of the fine estate at Bentley, as he quickly built up for Mr. T. Simpson Jay, at Wimbledon. Mr. Bishop journeyed a few days since to the estate of Middle White pigs, and purchased two yelks, winners of the second prize at the Royal, and bred from the bluest of the blue blood at Holywell Manor, and one young sow, which has reared one litter of eleven pigs, and is again to be mated with one of Messrs. Sanders Spencer and Sons' stock boars. One of the yelks is by Holywell Viscount, a Royal gold medal winner, and the other is by Holywell Rosario, own litter-brother to the boar sold to Mr. T. Simpson Jay for 100 guineas; the second yelk being a daughter of Holywell Victoria Duchess, a prize winner, the dam of three Royal gold medal winners, and at the present time suckling a very fine litter of pigs, albeit she is in her ninth year. The young sow is a daughter of Holywell Barbara, a winner three years in succession at the Royal; this sow is out of Holywell Cury Rose 2nd, the dam of twelve Royal winners.

Notes and Jottings.

"He doth nothing but talk of his horse."
"Merchant of Venice."

A GOOD brood mare has often been the making of a man, and there is a considerable amount of romance about horse breeding. Indeed, this is one of the attractions of a fascinating, but at the same time risky, branch of farming. I have on previous occasions drawn attention to successful hunter brood mares. To-day I wish to draw attention to a Cleveland Bay mare, and also to a Hackney brood mare, both of which have a very unique history.

THE Cleveland Bay brood mare was Tommy Peart's famous mare Darling, by Master George out of Jolly by Admiral III, her dam by Barnaby XV. Jolly was owned by Mr. Peart, for whom she bred fourteen foals, amongst them

Rudby, who did a large business in the fifties, bought him as a foal, and sold him for £100 to Mr. Olde, for the German market. This was considered a good price in those days. The other four stallions she bred were Brilliant, Lord of the Manor, Captain Cook, and Roseberry, all of them by Wonderful Lad. Brilliant, the second of the name, was bought by the late Admiral Chaloner for the late Earl Fitzwilliam, the price being £100. He stood at Coollatin several years, but it is stated that he was not a great success in Ireland, though he certainly sired some good Cleveland Bay mares. Lord of the Manor was, perhaps, with the exception of the Brilliant that remained in England, the best of the stallions. He was bought by Mr. John Robinson, of Hutton Rudby, for £100, and was sold by him to Mr. George Holmes, of Beverley, for £300 when three years old, his ultimate destination being India. Captain Cook was a useful horse that won some prizes as a foal. He was sold at weaning time to Mr. Grayson, of Pickering, who kept him a few years and sold him to go abroad. Roseberry, who was bred by Mr. James Peirson, who bought the old mare. He was a very good horse, and was sold at a big price to Captain Jordan.

CURIOUSLY enough, Darling only bred one pure-bred Cleveland Bay filly. This was Duchess of Cleveland, who was bought by Mr. Thomas Darrell, of Spiker's Hill, when a foal, and for him she bred two good stallions, Duke of Cleveland and Roseberry, and she also bred a useful mare in the dam of Duke of Ryedale.

DARLING bred nine other foals—seventeen foals in all—but most of them were sired by

CLYDESDALE STALLION "BLYTH THOMAS."

the two sisters Damsel and Darling, both of whom made a great mark at the time. Damsel was the dam of a famous prize-winner in 'Mr. Robinson Watson's Sunflower; but Darling, who was retained by Mr. Peart for many years, was perhaps the most successful brood mare of the breed of which any record remains. Darling was mated with Cleveland Lad LXIX., but not proving in foal to him, Mr. Peart sent her to the game little Perion, a thoroughbred horse, and filled Cleveland with good hunters. The result was a bay colt foal, which was sold to Mr. John Robinson, of Hutton Rudby, and by him to a London dealer.

IT is as a breeder of stallions that Darling is principally known. She bred no fewer than half-a-dozen of them, and all of them good ones. Five out of the six went abroad, or at any rate left England; the other, fortunately, happened an accident, and so was kept in his native country, which he filled with good horses. This was Brilliant by Zetton Lad, whose blood is perpetuated through Sportsman and other good horses. The first stallion Darling bred was Master Thomas by Cleveland Lad. Mr. John Robinson, of Hutton

Thoroughbred horses. One of these, a filly by Perion, had an eventful history. She won in a big class of Hunter foals at Stokesley, and was bought by Mr. William Dale, of Pressick House, for £15, and she grew into a very good-looking filly. At three years old she was mated with Newport, a well-bred horse of Mr. John Mewburn's that was not particularly successful as a sire. History, however, would have had to be written differently if all Newport's stock had turned out like this one. Mr. H. W. Thomas, of Pinchinthorpe House, took a great fancy to the three-year-old, and gave Mr. Dale £200 for her. They fancied she was not in foal, and she was hunted—though not hard hunted—till the end of the season. Then she dropped a good-looking filly foal which Mr. Thomas sold to his brother-in-law, Mr. Henry Wilson, of Barnaby side. She was hunted for a season or two when old enough, and then she was shown in the open Hunter class at the Cleveland Agricultural Society's Show at Redcar and von. She was seen by Mr. John Harvey, then the master of the Durham County Hounds, and he gave £100 for her. She was a famous hunter, and carried Mr. Harvey for many seasons.

Clydesdale Stallion Blyth Thomas.

Blyth Thomas won first prize for Clydesdale stallions foaled in 1904, and also the Clydesdale Horse Society's champion prize for the best Clydesdale stallion at the Royal Agricultural Society's Show at Derby. He was shown by Mr. James Kilpatrick, Craigie Mains, Kilmarnock, but was bred by Mr. A. W. Law, Mains of Saughbar, Forres, and is by Prince Thomas out of Utopia.

HERE is an interesting item. In the days when Mr. Henry Wilson's mare won at Redcar, the Cleveland Show was one of the best and most important in England—as a horse show standing considerably above the Royal, and perhaps equal to the Yorkshire. It took quite as good a horse to win there as it does to win at any of the great shows of the present day with a few conspicuous exceptions. And here we have a good winner selling to a gentleman for his own riding

for the, in these days, insignificant sum of £100—the price of a good three-year-old. The probability is that a mare such as Mr. Henry Wilson's would sell for £250 or even £300 in these days.

THE other mare to which I would draw attention is the Hackney, No. 3, bred by Pride of the Isle 1104—Jan by Sir Edwin Landseer 779, her dam by Pride of England 630, her granddam by Mousetrap 1526, her great granddam by Fireaway 201. Bounce was a good winner in her day. As a three-year-old she was never beaten, and she was winning prizes at fourteen years old, her last appearance in the show ring being when she won at the Lincolnshire Show. She was thirty-three years old when she died, and it is said that her produce so far has realised over £8,000. Like Pearl's Darling, she has been a breeder of stallions, amongst them being the famous horse Gentleman John 3623 by Lord Derby 11, 417. That horse, it will be remembered, was fourth twice, first and reserve for the special cup, and second once at the London Hackney Horse Society's Show, and he also won the group prize for the best three stallions at that show in 1899, whilst two years ago he won the challenge cup at the New York Show right out. His other prizes are too numerous to mention. Topper 1350, another of her stallions, took eight first prizes at county shows and has been the sire of many famous winners, and Gentleman George 7438 is the third of her stallions.

SHE has been a most prolific breeder, and when twelve years ago her owner, Mr. D. R. Sowerby, had a sale at Burwick most of the animals sold were descended from her either on one side or the other. And now, after this long interval, Mr. Sowerby is having another sale on Thursday next, and with a very few exceptions the horses to be offered are descendants of this fine old mare. She was not a very big one herself, but her quality was of the best; she was a beautiful brown in colour, her action was remarkably true, and she moved well off her hocks. In richness of colour and in action her descendants take after her in a remarkable manner, and it is unnecessary to insist on their excellent breeding.

WHEN I was in Holderness a few weeks ago, I had a good deal of talk with some of the most prominent Hackney men, and again when I paid a second visit. And from what I can gather from them Hackney breeding is decaying in Holderness proper—by which I do not mean the district hunted by the Holderness Hounds, but that part of Yorkshire which lies between Hull and Spurn Head, embracing Hornsea, Withernsea, Patrington, Hedon, &c. In the early days of the Hackney Stud, this was one of the great Hackney strongholds, and there are, of course, some famous breeders still keeping up the reputation which they made many years ago for breeding high-class Hackneys. But I am told, and from what I have seen, I can well believe it, that there are not two-thirds of the Hackneys—perhaps not half of the Hackneys bred in the district that there were ten or a dozen years ago. And the reason given is the motor car. I asked my informant if he thought the motor car was driving the horse out directly—whether people really preferred the motor car as a means of locomotion to the high-stepper. He said he thought not, but that people were afraid of the risk now entailed by driving on the roads where scorching motorists are only for their own selfish pleasure. He told me of several instances of people who had given up driving simply because they dared not run the risk to life and property.

THERE can be no doubt that the agriculturists of Holderness are feeling and will feel this very acutely. Their Hackneys were a considerable source of income to them, and this they are losing through the selfish misconduct of so called gentlemen, who care little for convenience than they care to others. The serious accident which took place at Bainton only a week ago is but one amongst many. A gentleman saw a motor car coming in the distance, he stood at his horse's head full in the light of the lamp of his own conveyance, and signalled to the motorist to steady up, so that he might lead his horse past. But steadying up was not in the motorist's mind at all. He came on at a reckless pace, his car swerved, knocked the gentleman down and ran over him. Stop to pick him up? Of course not, what business had he on the road? Now such people as these are caught occasionally, but when they are they do not get half the punishment they merit. At the same time I would point out that if farmers would really combine on the question of motor-cars they could have pretty nearly all their own way about them. It only needs a little organisation. The motor-car is all very well in its way, but the time is coming when they will have to be more moderate or they will be sent off the roads altogether. Already in some of the worst cases the licenses for motor omnibuses have been withdrawn. This may be regarded as a sign of the times.

THE LOOKER-ON.

Sale of Polo Ponies in Yorkshire.

Mr. C. Howard Taylor's entire stud of choicely-bred polo ponies were sold by auction on Monday, September 10, at Middlewood Hall, Barnsley, by Messrs. John Thornton & Co. Established some ten years ago, the ponies have been bred from some of the greatest prizewinners of the present day. Among them might be mentioned the mare Confidential (herself a winner of many prizes) by Rosewater 37, a horse that was never beaten, and Marechal Niel, bred by Mr. G. Norris Midwood. Being the first day of Doncaster week there was only a small but business-like company, the older mares selling cheaply. Lot 9, Fine Fleur, a well-grown chestnut, going to Mr. Stockburn's bid of 40 guineas in Northamptonshire; lot 11, Grey Wings, to Mr. W. H. Cooke, of Cheshire, the same purchaser also securing Confidential at 44 guineas, Camelia at 43 guineas, and a yearling colt at 56 guineas. Marechal Niel, looking in the pink of condition, was taken by Mr. R. Wright at 75 guineas to go to Argentina. The twenty-five head belonging to Mr. Taylor, including several foals, realised £753 18s., an increase of over £30 each. Among other purchasers might be mentioned Mrs. Hayes Sadler, Mr. John Barker, Dr. Sullivan, Mr. Vincent Taylor, and Mr. T. H. Weetman.

Radnor Polo Co.'s Stud Dispersion Sale.

A great number of people from all parts of the kingdom were attracted to the Stud Farm at Bledfa, Knighton, on Wednesday afternoon, when Mr. Bernard Pocock of the firm of Messrs. Morris, Marshall, and Poole, acting on an order of the High Court in the case of Aubertin v. the Radnorshire Polo and Riding Company, Ltd., sold by auction a number of valuable yearlings, brood mares, Thoroughbred and cob stallions, and polo ponies. The price amongst the Welsh ponies averaged from 6 to 15 guineas. The celestine, Bledfa Pigeon was knocked down to Mr. W. H. Cooke (Chefford) for 17½ guineas; and the famous Welsh cob stallion, Keidd Loyre, was purchased by Mr. Moore (Oll Hall) for 31½ guineas. The Welsh Mountain stallion, His Lordship, fell to Mr. Knight for £30, and Whitehall went for 16½ guineas. The noted gelding, Lord Keynsham, was not sold.

The Merits of Sussex Cattle.

The Sussex Herd Book Society has published an interesting booklet on "The Merits of Sussex Cattle," a course which might well be followed by other societies connected with our less well-known breeds.

Few breeds of British cattle, if any, can trace back their origin further than the Sussex. As long ago as 1795, when Arthur Young wrote his remarkable series of letters published in his "Annals of Agriculture," they were recognised as a well-established breed of very high repute, and were in the hands of very capable breeders, for he reports an experiment in feeding which proves the breed had then a remarkable proclivity for rapid development. Summing up their merits, he declared that "Sussex oxen are as remarkable for the fineness of their hides as they are for the closeness and delicacy of their flesh." The breed is in great favour on the weakland clays and the marsh lands of Sussex, Kent, and Surrey, compared as the qualities of grazing land, from the poorest to the strongest, and it was on the first section it was mainly bred, and on the latter finished off by the butcher.

In the olden time, and, indeed, down to a very recent period, the steers were largely used for draught purposes in cultivating the land and clearing the produce of the woods, for which these powerful oxen were admirably adapted, as with their constant and steady pull they were able to move great weights with few breakages. It is probable that as the cattle were so much used in the before-mentioned districts for draught purposes, the earlier breeders did not endeavour to lead buyers from outside. In fact, it may be said they had always at home a ready market at remunerative prices for all the cattle they could produce. An advantage, however, and one that the expert breeder and buyer should fully realise, has resulted from the practice, which prevailed until the middle of last century, of breeding Sussex cattle largely for draught purposes—it being necessary that they should have thoroughly sound constitutions. They have for ages been bred with the object of producing an animal capable of withstanding the rigours of cold and exposure, and of furnishing a good carcass of beef after the close of its working career.

Absolutely red in colour, they are esteemed as one of the hardiest of breeds, and for their ability to thrive and do well under the most unfavourable circumstances as regards feed, soil, and climate, being practically free from disease. It is no exaggeration to say that the Sussex are unequalled for b. f. production, draught purpose, hardiness, early maturity, and thriving disposition—in fact, experience has proved the breed to be one of the most profitable in existence.

IMPORTANT.—Everybody having old HENS for DISPOSAL should communicate with **GREEN & CO., Smithfield Market, London**, the largest poultry buyers in England.

SOCIETIES.

GRANDSEN AND DISTRICT AT GREAT GRANDSEN.
SEPTEMBER 25, 1906.
Entries closed September 11.

R. J. KISSEY, Secretary, Great Grandsen, Sandy, Bedfordshire.

CLYDESDALE HORSE SOCIETY.

STUD BOOK, VOLUME XXIX.

Entries now being received at 50 per cent. additional on ordinary fees.
No Schedules issued after 1st October.
ARTHUR MACGILLIVRAY, Secretary.

93, Hope Street, Glasgow.

AUCTIONEERS' AGENTS.

INVERNESS, WEST HIGHLANDS.—To Nobleman, Gentlemen, Land Agents, Farmers, and Graziers:—**JAMES ARNOTT, Scotch Live Stock Commission Agent** (Est'd. 1870), Ellandinn, Inverness, selects and supplies on commission all classes of SCOTCH STOCK at lowest rates. Attends leading markets, orders receive personal attention. Classes with approximate prices on application, references given and required; terms cash. Telegram: "Arnott, Inverness." **CATTLE.**—Short-horns, Polled Angus, Highlanders from the best herds in Scotland, and direct from their folds, Polled and Horned Crosses, Ayrshire Cows, and Pedigree and Show Cattle of all classes. **SHEEP.**—Border Leicester, Cheviot Black-faced and Crosses, and Pedigree and Show Sheep of all classes. Cattle and sheep brought throughout the Winter Season.

HIGHLAND CATTLE, SHEEP, AND PONIES.

ANY class of the above can be supplied on short notice and at moderate prices.

ANGUS CAMERON, Live Stock Agent, &c., Fort William, Inverness-shire For, Tainnill, Argyllshire.

TENDER.

BOROUGH OF HAMSTEAD.

TO CORN MERCHANTS.

THE COUNCIL of this Borough invite TENDERS for the SUPPLY of HORSE PROVENDER for six months, from October 1 1906. Forms of Tender, containing full particulars, may be had of the Borough Engineer, at the Town Hall.

Tenders to be sent to me by 4 p.m. on Thursday, September 27. The Council do not bind themselves to accept the lowest or any tender.

By Order,

ARTHUR P. JOHNSON, Town Clerk, Town Hall, Haverstock Hill, N.W., September 11, 1906.

BANKS, INSURANCES, &c.

BIRKBECK BANK.
Established 1851.

Southampton Buildings, High Holborn, W.C.

2½ PER CENT. INTEREST allowed on Deposit Accounts.

2 PER CENT. INTEREST on Drawing Accounts with Cheque Book.

All general Banking Business transacted. PROSPECTUS, with full particulars, Post Free.

C. F. RAYNES-CROFT, Secretary.

PHOENIX FIRE OFFICE.
19, Lombard Street, London E.C.

Established 1822.
Lowest Current Rates.
Liberal and Prompt Settlements.
Assured Free of all Liability.
Electric Lighting Risks Supplied.

ACCIDENTS OF ALL KINDS.

EMPLOYERS' LIABILITY, SICKNESS, BURGLARY and FIDELITY GUARANTEE RISKS

Insured against by the **RAILWAY PASSENGER'S ASSURANCE CO.** Capital (fully subscribed) £1,000,000. Claims paid £5,000,000.

A. VIAN, Secretary, 64, Cornhill, London.

"HAMPEL" MANURE DISTRIBUTOR

Can be used for sowing Basic Slag, Superphosphates, Kainit, Ground Lime, Bones, and all kinds of Artificial Manure.

The advantages are Equal Distribution, Lightness of Draught, Simplicity of Construction,

thereby requiring little repairing and ensuring easy cleaning and **capability of adjustment** for sowing all kinds of manures.

The handling is very simple, no other assistance being required beyond that of the driver, and one horse will pull it with perfect ease.

No 3 sowing 8 ft. wide. £10
No 4 sowing 6 1/2 ft. wide. £9
If with arrangement to transfer wheels from ends to sides for narrow lanes and gateways, £1 extra.

J. & H. KEYWORTH & CO.,
LIVERPOOL.

TRAIN LOAD OF WALLACE'S MANURE DISTRIBUTORS.

A DAILY SCENE MORE OR LESS AT CASTLE DOUGLAS STATION DURING SEVEN MONTHS OF THE YEAR.

WALLACE'S MANURE DISTRIBUTORS more successful than ever. This year's output in excess of all previous years. Several important improvements for 1906, and prices reduced.

PRICES AND PARTICULARS ON APPLICATION TO—

J. & R. WALLACE, THE FOUNDRY, CASTLE DOUGLAS.

COULTAS' New Manure Distributor.

Royal Letters
Patent.

The only Perfect Manure Distributor.

JAMES COULTAS PERSEVERANCE IRON WORKS **GRANTHAM.**

Awarded Silver Medal
of the
Royal Agricultural Society
of England.

Silver Medal. Cornwall
Show.

Awarded Silver Medals
also at
Birkenhead and Alnwick,
and this season at
Peterboro, Hanley, New-
port, and Leamington.

Prices and
further particulars on
application.

Seasonable Topics.

The End of Hopping.

AS a rule, when the East-end hop-picker takes his family down to Kent for the annual outing, he does so with the idea of being away about a month, but this year has proved an exception, for the hop-picking was begun, continued, and ended in about a fortnight. We do not know whether this is a record, but its effect must be felt in many quarters. It is true the weather during the picking season was of an ideal character, but to finish the picking in so short a time points, in the first place, to a very light crop, in consequence of which the farmers must suffer. Secondly, not nearly so many pickers were employed as usual, and those who were engaged in the hop gardens did not earn anything like as much money as in an average season. This means that they will have less to spend, and tradesmen will be hard hit, as the latter always expect to reap a little harvest out of the proceeds of hop-picking. There are hundreds of working families in Kent who depend on hopping for the purchase of various necessities and comforts for the winter, but this year we fear many of them will have to go short.

The Value of Cabbage.

THE dry season has taught its lessons, and amongst them the usefulness of cabbage as a feeding crop. Of late years there appears to have been a general move in favour of mangolds and swedes, with the result that comparatively few farmers go in for much cabbage. Is not this a mistake, particularly on the part of those whose business it is to produce milk? During the past few weeks there has been a general outcry about the shortage of milk, and the reason of course is a scarcity of suitable food. Cows cannot make milk on brown and dried up pastures, and if the dairy farmer has nothing else to give them he stands to suffer. But with a few acres of good ripe cabbage to cut at he has the very food for milk production, and is safe. Some people estimate that an acre of cabbage is worth as much as four or five of swedes; and be that as it may, this season has proved the value of the former crop. Give it plenty of manure and reasonable cultivation cabbage is not a difficult crop to grow, and those people who do not want the trouble of sowing seeds and raising their own plants can always buy what they want at a low price.

Maincrop Potatoes.

POTATOES, like everything else, are ripening off quickly this season, and many people who usually leave their digging till October are pushing on with the work. The fears that if much rain falls now the potatoes will either commence to grow again or contract

disease, hence the anxiety to lift them while they are dry and clean. Second early potatoes, lifted in September, have come out perfectly clean, and the growers have gained none of the advantage in weight which they do in a wet time through a certain amount of earth adhering to the tubers. In the way of crops it is the people who manured liberally that will gain the advantage this season, because dung holds moisture, and where little or none of it was used the tubers are coming out small. It is a peculiar fact that we do not hear much about many of the boomed varieties that sold at inflated prices a few years ago, and the old Up-to-date, which it was said would be wiped out by Northern Star, easily holds its own. By the way, one does not hear much of Northern Star in potato circles just now. Poor Northern Star! Its triumph was shortlived.

Drought and Fruit Crops.

THIS year the western counties have been particularly hard hit by the dry weather; the effects are to be seen on every side, and nowhere more so than in the orchards. Even before September was a fortnight old leaves on the apple trees commenced to turn yellow and fall, and now a good many old specimens are to be seen quite bare of foliage. As with leaves, so with fruit, a lot of which have ripened prematurely and fallen. Even cider apples, which, as a rule, hang late, are ripening before the ordinary time, and it looks as if grinding will commence early this year. What effect this will have on the cider remains to be seen, but it is hardly to be expected that the average quantity of juice will be crushed from the fruit this season. Perhaps the dry season is responsible for the general anxiety which prevails to get everything harvested in a hurry. For instance, we saw a man the other day picking Blenheim orange apples, and his argument was that they would do no more good on the trees. He will probably find out his mistake if the fruit all shrivels before Christmas, as it most probably will.

Over the Cotswold Hills.

A LITTLE more than a week ago we made a circular tour round a few of the big Cotswold farms, where the once very lucrative occupations of corn growing and sheep farming are still carried on. It was still early in September, but over the miles of hilly country hardly a shock of corn could be seen—nothing but brown stubble, which indicated a quick and early harvest. The Cotswold farmer admits that he has been favoured this year. Sheep have done well, and never of late years have corn crops been better. Add to this the glorious harvest time, when in a few cases the corn went straight from the field to the threshing machine,

and in every instance it was ready as fast as it could be carried. He would be a grumbler indeed who complained under such circumstances. There was one exception to the general expressions of satisfaction, namely, the roots. They were simply dying for the want of rain, and the farmers were naturally anxious; but since the day referred to the Cotswold country has been visited by showers which have given the roots a new lease of life, and we hope the crops will be satisfactory, though they can hardly be heavy.

Implements After Harvest.

THE other day we observed standing in the corner of a meadow a raking machine that was new in the early summer, and had stood out there ever since the close of the hay harvest. On another farm we saw a mowing machine standing in the rick yard exposed to the weather and just as it was after it had finished its last day's work. We fail entirely to see any reasonable excuse for this kind of thing, and cannot understand a farmer paying money for expensive machines and then allowing them to be neglected in this way. The cost of machinery is now a big item to farmers, but we are convinced that implements would last considerably longer if better care were taken of them when not actually in use. The harvest is now practically over, the autumn is coming on, and in the ordinary course of events we shall have wet days when little can be done in the way of outside labour. Surely the time on wet days could not be better spent than in overhauling the harvesting implements, cleaning, oiling, and putting them away in good order, against the time when they are required once more.

The Care of Harness.

THIS is another matter to which we venture to call attention. Happy is the farmer who has got a careful, hundy-man waggoner who has an eye for seeing when a strap is coming off or a buckle needs attention. A stitch in time saves nine, and perhaps an accident into the bargain, and the waggoner who makes a point of keeping the things at hand and can do a simple repair if necessary is worthy of encouragement. We know that it is a good thing at times to call in the services of a saddler to overlook the harness and do any necessary repairs, but it is the little things that need prompt attention at home. It is surprising how some men will see a strap or a buckle getting more and more loose everyday, until at length it comes off and is lost, and the master is put to the expense of a new one. It is these little losses that good servants attempt to avoid, and the example should be set by the employer whose interests are most affected. How utterly it looks to see a harness buckle the day with

a piece of string when with a few simple tools and proper thread it would be fastened permanently in about the same time.

Fire Insurance.

FIRE brigades have been kept busily employed of late, and the burning of hay and corn stacks, sheds, and farm buildings have been frequent occurrences. When the details of a farm fire appears in the local paper we read at the bottom that the damage is covered by insurance, or it is partly covered, or, again, in some cases that it is not insured at all. We sympathise with any man who has a fire, even if his property is insured, but it is with the satisfaction that we can, to a great extent, repair the damage. But what of the man, like unto the unwise virgin, who never takes the trouble to insure his ricks and property generally? Perhaps he is fortunate and never has a fire at all—maybe he goes on for years without one—but supposing the fatal day comes, as it has come in many cases just lately, what must the feelings of the careless one be as he sees the cruel flames licking round his worldly goods, and he observes later in the blackened ruins of his property also the ruin of his worldly prospects? Surely the possibility of such

a calamity ought to be sufficient to prompt every man to protect himself by means of insurance.

Harvest Festivals.

THE harvest is now gathered in, and in accordance with a time-honoured and beautiful custom religious people of every denomination are decorating their sacred edifices with the ripe fruits of the earth and celebrating the harvest thanksgiving. There are some people who condemn harvest festivals as being more of an ostentatious display than a heartfelt thanksgiving; but we fail to see how one can judge the motives of another, and there is something about the annual harvest festival in village church or chapel that appeals to us. We see farmers reserve willingly the finest fruits from the orchard and the best sheaf of corn for the festival, and equally willing hands manipulate the flowers, the berries, and the tinted leaves, and take a pride in making the sacred house look beautiful on this great occasion. Then we hear the dear old harvest hymns sung out in a manner that leaves no suspicion about heartiness, and thanks are returned to Providence for the blessings of the harvest. We cannot help thinking that the harvest festival is something that is real and genuine in agricultural Britain.

British Possessions beyond the Seas

AND THEIR London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr JOHN HOWARD, 57a, Pall Mall, London, S.W.

A Remonstrance with Lord Carrington.

Now a word with Lord Carrington: Does his lordship actually mean that "home killed" meat has been substituted for "home-bred" meat in the supply of the army, because in the past (under the "home-bred" regulation) it was impossible to distinguish between home-bred meat and home-killed meat? Well, if this be so, it means that the Government has been coerced into this policy by nothing more or less than fraud! In order that the nation may not be swindled Ministers have been compelled to deprive the British meat-producer of a market he had a right to expect should be his. Let me put a parallel case to his lordship. At this moment he is possessed by the laudable anxiety to pass his Butter Bill. In this he is so far resolved not to be coerced by fraud that he is determined to fight it, to penalise the fraud-monger, and to make him appear before the world as he is, as a malefactor. Why have we been fighting the adulterationist these years past? Instead of doing this, according to his lordship, the wiser plan would have been to accept his standard of goods as the desirable standard. Of course, I am not saying that home-killed meat may not be honest meat. I am, however, entitled to say that Lord Carrington's apology and excuse are based upon an illogical premise, which is out of harmony with his own shrewd commonsense. If it means anything it means this: "Yes, we know we ought to supply the army with home-bred meat; but in the past the men who sell home-killed or foreign meat circumvented us—so you see we yield the market up to them." Not a very brave attitude, in all sooth.

A General, Honest Quixote.

Excellent Sir Carne Rasch—this Parliamentary sphere would be sadly uninviting without his chivalrous fidelity to the past, his unyielding loyalty to the impossible. What other man would have had the courage, the Quixotic courage, to boldly declare that "if all the money wasted on education had been spent on artificial manure the agricultural interest would do a lot better." Now, if I mistake not—and one loves to argue with Sir Carne; he hath such a delightful gift of *non sequitur*—Sir Carne Rasch is in favour of the cost of education being an entire Imperial charge. We know, however, or rather assume, that his latest anxiety is to see education displaced. As a natural corollary of his contention, the cost of manure should be a national charge. What picturesque electoral visions this opens out to us: "Vote for So-and-So and Manure," "Manure for ever," "Old England, Mr. So-and-So and Manure." But how would the most excellent Sir Carne Rasch have this manure distributed? Should acreage or number in family be the standard of distribution? These are serious problems, and I pray that Sir Carne will have fully considered them ere he submits any formal proposal to the Legislature. Well, well, Sir Carne, there be many men who at least would rather more be taught in our rural schools of the component parts of our agricultural dressings, of their quality and possibilities. If the doctrine of manure were taught in our rural schools rather than that Euclid, which is now being discarded, the children would be the better for it.

A map of considerable interest to the dairying industry has recently been prepared. It represents the kingdom of Denmark, and shows all the dairies situated within its borders. These total 1,383, and it is shown that only twenty-three used exclusively other separators than Alfa-Laval, so that of the cream separators in use in Denmark over 98 per cent. are Alfa-Lavals. Our readers can obtain a copy of the map on application to the Dairy Supply Company, Museum Street, London, W.C.

Agricultural Politics.

BY A LOBBYIST.

Lord Carrington and the Land Tenure Bill.

Yes, Lord Carrington is emphatically right. The noble landlords who have been appalling themselves by spectral fears, the noisome but unnecessary offspring of the Land Tenure Bill, have imagined for that measure a progeny of which it never could be the parent. Such a result would be more than an unnatural experiment in freemasonry. Let us, after all, confess the fact—indeed, Lord Carrington's speech to the Lincolnshire farmers' deputation on Tuesday was so sequential in its illustrations as to place the matter beyond a doubt—that so far from the Bill being a mere irresponsible amateur effort at revolution, it is in harmony with the moderate projects of moderate reformers. Its pallidness is in strange contrast to the lurid recommendations of a body like the Welsh Land Commission. In one place it emphasises a desire which did not rebuke the soul of Mr. Chaplin. In another place—that is, in omitting the words relating to "the inherent capabilities of the soil" in estimating the amount of compensation due—it actually seeks to realise the desire of Mr. Walter Long, who is assuredly no economic revolutionary Camille Desmoulins. In another place, it is but following out the explicit suggestion—more particularly in regard to compensation for damage by winged game—of the Royal Commission on Agriculture, which, when it was first propounded, was regarded as an inevitable development of the existing law. True, in regard to the improvements which may be carried out, without the landlords' consent, it goes beyond the suggestions of the Royal Commission on Agriculture; but yet, even in this, I aver that it is only following a precedent suggested by the Market Gardeners Act. I repeat that the Bill—aye, even in the matter of compensation for capricious improvement, and remember that the tenant would, under the measure, only receive the actual loss sustained in moving from the farm—is but the necessary sequel of the Conservative legislation of 1875 and the corollary of the Conservative legislation of 1900. "Oh, Romeo, be some other name; 'tis thy name which is my enemy." And I do not hesitate to declare that had this Bill a Conservative origin, it would have been hailed as a judicious and wise compromise, and as a suggestive and sagacious substitute for bolder legislation.

Character of Radical Criticism

Lord Carrington may be held to have indulged in a threat—a threat which should be emphatically resented—by his assurance that the rejection or emasculation of this measure would inevitably be followed by an agitation in favour of a more emphatic reform. Well, let the warning be greeted as it may, I know that it but epitomises the actual fact. Lord Carrington's desire is to harmonise the new reform policy with the very method followed by the best landlords. There are, however, Radical land-reformers—and they have a place

in this Government, too—who hold that the customs of the best landlords are pursued only in the interests of landlordism, and that Radicals should not be chloroformed or seduced by a suggestion to crystallise them in a formal legal enactment into acquiescence with economic anomalies. It is not necessary to argue that they are unwisely suspicious—that they perceive the outline of a gaunt conspiracy where no conspiracy exists; we have to accept the fact as it is. These men have actually been coerced into acceptance of the present Bill by party discipline. They regard it as an immature bantling, weak, puny, and destined to be but of feeble growth. I have even heard the restriction of compensation for unreasonable disturbance to the actual loss sustained by the tenant in leaving the farm denounced as "an unnecessary concession to Kenyon-Slaneyism," whatever that may mean. I have heard the moderate character of the protection against damage done by game denounced as a recalcitrance to the promise of Sir Henry Campbell-Bannerman that Liberalism is determined "to convert the land from being the pleasure-ground of the rich into being the treasure-house of the people." I have even heard the Bill epigrammatically described by one fevered Radical as "a Conservative measure designed to conserve a Conservative class." These men have adopted as their motto (*vide* Gambetta)—"landlordism, there is the enemy."

What Radicalism Would Prefer.

I repeat with all the emphasis begotten of actual knowledge that Radicalism would rejoice if the Bill were so emasculated that it would be better to abandon it. Then, in its view, it would have the pathway cleared for real, effective, dramatic reform. I have heard many Radicals demand, as a to-be-preferred measure, Mr. Channing's Bill, with its extended protection against damage by game, and with its extended protection against capricious and unreasonable eviction. I have heard as many express a preference for Mr. Jesse Collings' Purchase of Land Bill, with, however, compulsory methods of expropriation and purchase substituted for voluntary arrangement, and, with allied to this, the proposal once sponsored by the present Lord Chancellor imposing a serious taxation on landlords who allow land to remain fallow or derelict. "To re-peopled the land"—this is the much-advertised desire of these politicians; and they do not believe that this can be accomplished by a dulcet Morisson pill fashioned in the political laboratory of mild Mr. Agar-Robartes. "Landless soil," "hired serfs," "villages bereft of virile girlhood and manhood," "forces of degeneration at work which, unless arrested, will mean rotten decay"—these be the attractive watchwords of the faith. They would, too, at once have an army at their command ready to use them should this Bill be treated with incontinent ungenerosity or unmerited prejudice.

THE WEEK'S SHOWS.

Cardiff Horse.

After many years of wet weather on show days the Cardiff Horse Show seems to have found favour with the clerk of the weather, for the twenty-fourth animal show was held on Wednesday and Thursday last in splendid weather, thus repeating last year's success in this respect. Thanks to this and an excellent entry of stock the show proved one of the most successful of the series, particularly as regards quality, which it was generally agreed would be hard to beat anywhere. The Hunters in the open classes included some of the best bred animals in England, but the local classes on the whole, were rather disappointing. Starting with the yearlings, the judges found some promising youngsters, and there was no questioning the decision that Mr. Nickisson's chestnut Ensign was entitled to the first place, although Mr. Arthur Master's Angelo showed bone and muscle which will, undoubtedly, make him a useful Hunter.

The two-year-olds were also a good lot, and the class was well filled, but does not call for particular comment. But when the three-year-old Hunters came out the judges had a difficult task. They would, probably, have liked to commend the whole class, but there was one which stood head and shoulders above the others—namely, Penylan Ormerod, which beat Mr. Mullens' Paleface at Bath after the latter had taken the premier position in his class at Dublin. There is no questioning the fact Penylan Ormerod is one of the finest horses shown in this part of the country. Mr. Leonard Taylor's Windgill, which came second, is also a fine stamp of Hunter, but there was no difficulty in placing the local horse first. Great interest was shown in the judging of a large class of four-year-old Hunters, and the judges had a by no means enviable task. Not only did they send the horses round the ring several times, but, as usual, tested them by taking the saddle themselves. There is no limit as to height or weight, and judges, as a rule, lean on the side of weight carriers. The result was that Mr. J. H. Stokes took first with Twister, and second with Karmak. Undoubtedly Karmak was the best horse, but with regard to his stable companion opinions differed round the ring. Mr. Drage's Workman, which came third, seemed to be a horse which would do well in a close country, but had not the movement for an open district.

In the light-weight Hunter class Mr. Stokes was again successful in taking the two first prizes in a well-filled and very nice class, Mr. Drage's Pretty Polly coming third. In the middle-weight Hunter class there was keen competition between Mr. Drage's Matchbox, a noted winner, and Mr. Stokes's Gold Leaf, another very fine horse. Unquestionably, Matchbox was the smartest in a class of about a dozen, although Gold Leaf ran the winner very closely. In heavy-weights, which was one of the best in the list, Mr. A. Cory-Wright, who won at the Bath Show, again took the first place with Ebony, a horse which won in the name of Mr. Stokes in the four-year old class at Cardiff last year. Mr. J. Drage came second with Birr, while Mr. Stokes had to be content with a third prize.

The champion classes for Hunters were of such excellent quality that the judges had the greatest

difficulty in making their awards. The light-weight Hunters class included many of the best show horses of this and many other years. Mr. J. H. Stokes had a good shot with Riddle and Chello, two well-known horses, but Mr. Drage's Nugget caught the judges' eyes from the first, and kept it, Mr. Stokes' animals being placed in the order given. But good as this class was, it was

better account of themselves. Mr. Biriell Tubbs took the first for brood mares, but Mr. James Howell came second with Campanula. The first horse, Nunery, a nice-looking four-year-old, has not so far been beaten. Campanula is also well known, and took the championship two years ago, as well as coming second on two other occasions. In the local class there was nothing to touch her, and Mr. Howell's Crusiform took third place, a very pretty mare belonging to Messrs. T. and J. James, Carmarthen, dividing the honours. A chestnut filly by Lady Kate Cadet, also belonging

Mrs. W. C. N. CHAPMAN'S MISS TRIX.

Winner of First Prize for Covert or Lady's Hack at the Cardiff Horse Show, last week. Miss Trix has won 18 First Prizes this season.

equalled by the heavy-weight Hunters. Here we had quality and age, and proportionately monetary value. It was a splendid class, well filled by the best horses which the country could produce, including, as they did, Karmak and Goldleaf, owned by Mr. J. H. Stokes, Mr. Cory-Wright's Ebony, and Mr. Drage's Birr. An Irish horse, Ramhill, from Cork, was also a fine animal, but the interest of the judges centred in the first four, and the difficulty which presented itself to them was a great one. They mounted the horses and rode round the ring; they examined them "fore and aft," they sent them round the ring again in order to watch their paces, and it was not without some trouble that they agreed to give the first prize to Mr. A. Cory-Wright's black gelding Ebony. It was a turn of a hair between Ebony and Birr, the property of Mr. Drage, and it is not at all improbable that the decision would have been reversed at another show. Goldleaf got a reserve number, and Ramhill a he, both being typical weight-carriers.

The Hackneys made a good display all round, and in this section local exhibitors gave a much

to Mr. Howell, was the best foal, while in the yearlings he took first and second. Mr. W. J. Tatem came first with yearling fillies, Mr. Howell in this case being second. In the open class for two-year-old colts Mr. Howell took first and second, and won many other prizes in the various classes.

In single Harness Horses not exceeding 15.2, Mr. Gerard Jurgens, Kent, was first with Radiant, one of the finest goers in England in single harness. Mrs. Hartley Batt, Hyde Park, London, was second with Prince Edward, another grand goer, who has previously been a winner in the Hackneys in saddle at this show, whilst Miss Ella S. Ross, Cheshire took third place with Rowton Blackthorn. In the single Harness Horses not exceeding 14.2 and not above 15.2, which was one of the best in this section, Messrs. Carr and Co., Clyde Vale Stud, Carlisle, were first and second with Heathfield Squire and Clyde Vale Hero, the former having come back to his old form. Mr. S. R. Tennant's Authority, another exceedingly fine goer, made a good third. For the single harness horses, not exceeding 13.2 and not above 14.2, Tissington Kit Cat won again for Mr. Howard Frank, Wimbledon Common, London. Both behind and before, this horse was superior to Miss Grace Clark's Highbrook Hero, which was second, with Mr. H. Rodmell's Holly King third. In the open tandems Mr. Howard Frank was first with his well-known pair, Tissington Kit Cat and Burlington Sir Horace, which, as usual, made a very fine show. The remaining prizes went to Miss G. Burston's Massey Dot and Pinderfield's Sapphire.

In the champion harness class there were eight entries, but six of these did not put in an appearance, thus leaving the two prizes to be divided between Heathfield Squire and Radiant, both prize-winners in their class. Radiant, the property of Mr. Jurgens, Kent, was given the preference, so for once in a while Messrs. Carr and Co. had to be content with a second place for their well-known horse Heathfield Squire.

As has been the case in other years, the display of cart horses left much to be desired both as regards quantity and quality, though there were, of course, some first-rate animals amongst those shown. Mr. Thomas Skeats, of Whitechurch, for instance, took the first prize with a grand lay gelding of 17 hands, beating Doldford Duke, the property of Mr. Fred Cole, of Clippenham, which was the reserve champion in London. The cart mares were weak as a class, but the yearling colts were a highly creditable lot, including, as they did, Mr. Muntz's King Forest, one of the best yearlings in the country, and Dewstone Conqueror II, owned by Mr. Oakley, of Chepstow, was not far behind it.

The trotting and jumping competition proved as

Messrs. CARR & CO.'S CLYDE VALE HERO.

Winner of Hackney Championship at the Cardiff Horse Show last week.

popular as ever, whilst the classes for polo ponies introduced last year received such good entries that the society will doubtless be considering the advisability of extending this section.

Brackley.

Brackley Agricultural and Horse Show, held on Tuesday, proved a most successful one, there being an increased entry in all departments, and a very large attendance of visitors. The horse show was the principal attraction, and among the judges was the Right Hon. Walter Long, M.P., the one time President of the Board of Agriculture. Mr. S. Clarke, of Lillingstone, was the Brackley Challenge Cup, given by the subscribers to the Grafton and Biester Hounds, with Mr. G. A. Elliott, of Hulcot, in reserve. In the open jumping class there was a large entry, and leading honours went to Mr. W. Kelvey, of Wheathampstead, with Bouncing Girl, a beautiful bay mare and a splendid jumper. Mr. J. Wheeler, of Studley, with Royal Enfield, came second. The Shires were the best that have been seen at Brackley for some years, and Mr. Bruce Fry, with Mollington Manners, won the Brackley Challenge Cup, this filly defeating her sister, Mollington Movement, which won the championship at Banbury and Kington. Messrs. Flowers, of Beachdon, won the silver medal of the Shire Horse Society, with Mr. Fry in reserve.

Ampleforth.

Situated in the midst of a horse-breeding and hunting country, Ampleforth Show can hold its own against any local exhibition, and the tenth annual show was no exception to this rule. There was a record entry of stock, and eighty exhibits more than last year were catalogued, whilst the weather was beautifully fine, and there was a large attendance. The quality of the horses was very good, and the yards in some cases were difficult to make, whilst there were creditable displays of sheep, pigs, dairy and agricultural produce, but cattle only consisted of one class.

Easingwold.

The forty-sixth annual show of the Easingwold Agricultural Society, held on Wednesday, maintained the good reputation of this society's shows in every respect. The horse section comprised almost an equally strong show of Hunters, riding and driving horses, and agricultural horses, the character of the competition being worthy of note in that order. A fair proportion of the wins were those of animals which have during the season distinguished themselves in greater or less degree at local shows. No fewer than four of the five premier awards for roadsters fell to Mr. Stephen Cliff's exhibits. A nice sprinkling of well-bred Hackneys was seen. Mr. S. R. Tennant's bay four-year-old Astonishment was adjudged to be the best gentleman's Hackney, and Mr. Edward Harrison's Hermia was the pick of the lady's class, both in open competition, and the former also led the open driving class. There were a capital lot of coaches; and the agricultural classes, though not all well filled, included some of quite the right sort of stock. The young bulls and heifers were of good features, the cattle section, together with a creditable display of dairy cows. Sheep, Leicesters and Lincolns, and some few Wensleydales, made an attractive show; and there was also good competition in the pig classes.

Colehill.

The show of the Colehill Horse Society consists almost entirely of Shires, and although it is a purely local exhibition it always brings together a collection of animals of remarkably good quality. The country round Colehill is admirably adapted to the breeding of Shires, and the rivalry created by the annual show has undoubtedly improved the stock of the neighbourhood. There was a small increase of entries in the Shire classes at the fourteenth annual show held on Wednesday, and in addition there were two classes for Welsh cob colts and fillies, but there was a decrease in the entry for the driving and riding competitions. There were several promising youngsters among the Shire foals, and the fillies were a better class than the Shire section. The mares were, however, the best of the Shire section. The driving and jumping competitions in the afternoon provided excellent entertainment for the large crowd of spectators, whilst in the tradesmen's turnouts there was some keen competition.

Kington.

The Kington Horse Show Society's twenty-sixth annual show was held in the Recreation Grounds, Kington, Herefordshire, on Wednesday, when entries were numerous and highly creditable as regards quality. The challenge cup for cart foal was won by Messrs. Edwards, Byford, and the champion prize for best exhibit in agricultural classes 1 to 13 inch six fell to Mr. Cotts' Dukes of York. The sections for Hunters and Hackneys brought out some excellent quality. Mr. B. W. Hockley Heath, showed the first prize winner in the class for three year old gelding or filly. A

yearling gelding shown by Mr. Swallow, Worcester, took first prize in his class. In the Hackney section, the two-year-old class found Mr. J. B. Brooks, Bromsgrove, first. Mr. Robert Bach, Rushock, Kington, carried off the challenge cup for Hackney fillies not exceeding three years old. The winner in the class for Hackney gelding or mare exceeding 14.2 was the property of Mr. R. Jackson, Pershore. The jumping and driving trials in the afternoon proved very attractive to the large company present.

Loughborough.

The Loughborough Agricultural Association were fortunate enough to get a record entry (601) for their show on Wednesday, and with a good attendance of visitors, the show proved most successful. Considering the year, there was an average show of cattle, and dairy cows formed the two best classes. The bulls were only of moderate quality, and competition was not very keen, but the Jerseys were good dairy cattle. Sheep have suffered on account of the drought, and many of the customary breeders in the district were not represented. The two winning pens of ewes were good big sheep and more typical of the Lincoln breed than the remainder. Pigs made a nice display. Horses were undoubtedly the feature of the show, the Shire section being exceptionally good. Hunters were, as usual, in strong force, whilst the harness classes were creditable.

Stokesley.

Favourable weather was experienced by the Stokesley Agricultural Society for their show on Thursday, and though the entries were eighty less than last year, they reached the big total of 1,869, and made a good all round display. There was a capital show all round of cattle, and the Shortorns exhibited included cattle which had previously carried off premier honours both at the Royal and local shows. Some first class sheep were shown, notably Leicesters and Wensleydales. The feature of the show, however, was the display of horses—Hunters, Cleveland Bays, and agricultural horses being all well represented.

Westmorland.

The show of the Westmorland and Kendal District Agricultural Society was held at Kendal on Thursday, and proved one of the best ever held by the society. The total number of entries was 861, a falling off from last year of 68, but equal to the average of the last five years. Westmorland has long been noted for the excellence of the Shortorns bred in the county, and last week all the classes were fully up to the standard. The competition was exceptionally keen, and in some of the small tenant farmers' classes it was gratifying to note that there was quality little inferior to that in the open classes. As usual the Short-horn Society gave large premiums for the best Short-horn bull in the county, and the best pedigree Short-horn dairy cow, and both attracted large entries, particularly the last-named. The best bull was produced by Mr. J. Handley, Greenhead, and the best dairy cow by Mr. A. Dobson, Carlisle. Sheep were unusually well represented, particularly the Wensleydales, whilst rarely has there been a better display of horses at Kendal, both heavy and light breeds, though the number of Hackneys was less than usual.

Leighton Buzzard.

The Leighton Buzzard and Linslade Foal Show Society's annual exhibition, held on Tuesday, showed a marked improvement on previous years both in the quality of the animals and the number of exhibits. The number of entries in twenty-four classes was 176, a few more than last year. The cart colts shown were very good, and in the hunting classes there were some excellent colts and brood mares, and although yearlings were rather short, they included a few exceptionally good animals. The society offer the respectable sum of £120 in prizes as well as silver cups and medals, so that they deserve the support of the breeders.

Abingdon.

The Abingdon Agricultural Society's 59th annual show was held on Thursday and was most successful from all points. The entries were a good average, and the judges expressed the opinion that it was one of the best shows of the character held in the neighbouring counties. The horses were the feature of the show, and Shires made the best display. Nearly all the prize winners had competed in other local shows during the past two or three weeks, and received awards. For instance, all the three winners in the class for Shire mares had previously taken prizes at Thane, Woodstock, and Biester. In the class for Shire mares under four years the three prizewinners were by the successful sire Lookinge Forest King, formerly owned by Lady Wantage. The cart horses were all of the Shire breed, and the chief awards were taken by animals which had previously secured awards in other shows this autumn. They were an exceedingly good class all through.

There was a very good show of Hunters, and these were much admired. There was a very fair show of cattle for a local show, Shortorns predominating, this class of animal being particularly suited to the grass land in North Berks. Sheep were not numerous, but good, whilst other sections included a remarkably fine show of mangolds, swedes, and turnips considering the adverse season.

Shap.

For their show on Wednesday the Shap Agricultural Society secured a record entry, the total being 480, as compared with 424 last year, whilst the quality was, in many instances, above the average, so that the society is to be congratulated on its success. Some first class cattle were shown, among the exhibitors being Lord Lonsdale, who took first prize for a heifer calf, second for two-year-old heifer, and first and second for a collection of cattle. The horse classes were, perhaps, the feature of the show, and the heavy animals predominated. There was also a good display of sheep, both White and Black faced, and in the latter section Lord Lonsdale was the chief winner, he taking the championship.

Hay Horse.

The Hay Horse Show seems to be increasing in popularity each year, for last year's record of 519 entries was at the show held on Thursday beaten by thirty-nine, whilst quality also showed an improvement; further, there was an increased attendance of visitors, so that the show may be described as the most successful ever held at Hay. The agricultural horses made a splendid show, and were admired on all hands. The hacks, roadsters, and cobs formed a very strong feature of the exhibition, and some animals of first-class merit were brought to the notice of the judges. The ring competitions attracted much attention, and some of the turn-outs were really smart. An additional attraction to the exhibition this year, and one which was no doubt responsible for an increased attendance, was the holding (under the Kennel Club Rules) of a very commendable and interesting dog show.

Pedigree Seed Wheat.

The county of Essex has long been famed for the excellence of the seed grown in its soil, and the extent of this industry perhaps hardly appreciated by the average agriculturist and horticulturist. We had an insight into the industry on a recent visit to the seed farms of Messrs. John K. King and Sons, of Coggeshall. The farms, which we spent a whole day in visiting, are seven in number, and the impression left upon our mind was not only the great extent of Messrs. John K. King and Sons' cultivations, but also the constant care and attention to every detail which is essential to produce good results in the seed growing business.

All sorts and varieties of seeds are arranged on these septette of farms, which extends to five parishes, and in each case the farms are kept entirely distinct. The portion that was of most interest was that devoted to the production of seed wheats. The process of pedigree selection is carried on by the firm on a scale which would surprise the great bulk of growers.

The aim of Messrs. John K. King and Sons has been to produce varieties of wheat which will give the largest ears, thick-chested and closely packed with grain, with stout clean straw which will stand up in unfavourable weather. This the firm has largely succeeded in doing, and we may note that among the many visitors to their farms no less an authority than Mr. Vilmorin (Vilmorin, Andreux, et Cie), of Paris, expressed surprise at the splendid results attained by Messrs. King as a result of their many years labour.

Of white wheats there are several good ones, sent out by Messrs. John K. King and Sons. Their Emperor, which is claimed to be the largest earred white wheat in cultivation, has ears 50 in. length, thick chested and very heavy cropper. The crop we saw looked like yielding 7 to 8 qtr. per acre. Again Rent-Payer was a grand crop, many ears were 4 1/2 in. in length, remarkably well set, and a good miller's wheat. We also liked their pedigree selection of Stand-Up white wheat, with its closely set ears and fine quality of grain.

Among red wheats, none impressed us more than a grand crop of "Essex Conqueror," with its splendid ears, some 5 1/2 in. in length, frequently six chested, with a splendid quality grain and clean outstanding straw. The crop was estimated at seven quarters per acre, and it looked it, for it was as level as a billiard-table, and one mass of ears and straw nearly 5 ft. 6 in. in length. A fine pedigree selection of Square Heads Master sowed good results, while a large acreage of "Essex Square Head" was remarkably true in type.

The importance of pedigree selection was very evident from a visit to Messrs. King and Son's trial and experimental grounds; among these were nearly fifty plots of French sorts, none of which came up to the standard of the home grown varieties.

SHOW GOSSIP.

The Royal Agricultural Society is receiving the hearty co-operation of the Lincolnshire Societies for their show at Lincoln next year. The Lincolnshire Agricultural Society propose to abandon their show for the year and offer £100 in prizes at the Royal Show; whilst the Lincoln Red Short-horn Association will give £210 in prizes, and the Lincoln Long-Wool Sheep Breeders' Association £110.

We hear that close on 120 competitors will take part in the milking contests at the forthcoming Dairy Show at the Royal Agricultural Hall, Islington, and of the number no fewer than eighty-three are women and girls, so that dairymaids are not so scarce after all.

The Richmond (Surrey) Horse Show Society have fixed on Friday and Saturday, June 14 and 15, as the dates of next year's Royal Horse Show at Richmond.

The Pytchley Hunt Horse Show has had to be

there having been a general increase in receipts, whilst the expenses had been less.

At a meeting of the council of the Wirral and Birkenhead Agricultural Society held on Tuesday, it was unanimously resolved to hold the society's next show at Beblington, on Wednesday and Thursday, July 10 and 11, 1907.

The show of the Frome District Agricultural Society, which is acknowledged to be the largest cheese show in England, will be held on Wednesday next, and there is a record entry of no less than 830. The cheese entries are above the usual average. The large cheese tent, 240 ft. long and 42 ft. wide, will contain nearly 400 entries of some of the finest Cheddar that can be produced. The butter classes are patronised by the best makers. In the working dairy, the actual making of butter by forty-five exhibitors may be witnessed, many of the competitors being crack hands. Miss Stubbs, of the County Education Butter School, will give demonstrations in butter making. Table poultry and eggs are a large entry.

In the jumping and driving competitions, of which there is a record entry, most of the best horses are competing, and some fine jumping and driving is anticipated. There is a capital entry of cart horses and colts. Shorthorn and Jersey cattle include some from the best herds. Sheep and pigs are also a good entry. There is also a large entry of roots. There will be a display of fireworks and concert in the evening, and a large attendance may be expected, for the usual excursion trains will run from all parts.

At the annual meeting of the Cheviot Sheep Society held on Tuesday a letter was read from the Royal Agricultural Society asking if, in the event of the Royal giving two first prizes of £10 each in the Cheviot section, the society would give two prizes of £5 each, which would bring the class into line with the others, and probably induce more people to exhibit. Mr. John Robson, Newton, said it was stated that the Cheviot classes would be done away with at the Royal unless they could be made uniform. Mr. John Borthwick, Oxnam Row, the president, said it was desirable to keep in touch with the Royal Society, because they could sell sheep better at the Royal than at the Highland, although the latter represented this breed a little more than the Royal. It was resolved to accede to the request for the year.

Sale of Clydesdale Horses at Perth.

A sale of pedigree Clydesdales was held at Perth on Monday by Messrs. Macdonald, Fraser and Co., who brought under the hammer close on sixty animals from several well known studs, and they met a very good trade. Excellent bidding was experienced for Mr. Kerr of Harviestoun's animals, and out of seven horses exposed four of them reached double figures. Mr. Montgomery paid 70 guineas for Bell of Harviestoun, a mare which was first at Inverness and Elgin in 1906, and first at Perth in 1905. The filly Blushing Rose took the eye of a number of bidders, and before she was sold to Mr. Anderson, Pitteary, £120 was realised for her. Lady Grace, foaled in 1904, started at 50 guineas, and was knocked down at 115 to Mr. Kilpatrick, Craigmains, while Lady Primrose, which started at 40 guineas, made the highest price of the day—namely, 160 guineas, the purchaser being Mr. Kilpatrick, a frequent buyer. Mr. Montgomery took out May Belle at 100. For his seven animals Mr. Kerr realised an average of £100 ls. Mr. George A. Calder, Anchorscross, Dunblane, received £100 for his Harmony, an animal which took a first at Crieff in 1905, first and champion at Doune and Arloch in 1906, and first at Crieff and third at Perth in the same year. Lord Polwarth, Mortoun, received 110 guineas for Miss Dee, which secured a first and championship at Galashiels, first at Newcastle, and second at Kelso, and for his lot of nine his lordship had an average of £60. Six from Hedderwick Hill, belonging to the late Mr. St. Clair Cunningham, realised the fine average of £78 2s. per head. They included Flower Bloom, a five-year-old by the famous Baron's Pride out of the equally well-known Rosebud, and she was sold at 105 guineas to Mr. Johnston, Bognon, but her foal was even more fancied, and Mr. Patrick, Craigie Mains, had to bid 145 guineas before he could secure her. Lady Lochfergus, a five-year-old by Baron's Pride, was sold to Mr. Montgomery, Netherhall, at 105 guineas, whilst the others sold up to 62 guineas. Altogether forty-four animals were sold for a total of £2,639 3s. 6d., which gives an average per head of nearly £60.

Mr. J. H. James-Moore's Hunters.

The first sale of Hunters belonging to Mr. J. H. James-Moore, High Recall Hall, Wellington, Salop, took place on Tuesday and attracted a large company, for Mr. Moore has had some notable successes in the showyard. For instance, this year he has won champion prize at Birkenhead Show for the best mare and foal, first and reserve earl and two silver medals at the London Hunters' Show, first and reserve for mare and foal at Shropshire and West Midland Show, first and second at Newport, first and second at the Welsh National Show at Aberystwyth, &c.

Mr. Alfred Mansell, Shrewsbury, who conducted the sale, explained that some years ago Mr. Moore commenced breeding hunter stock, and now found himself considerably overstocked. He had taken every possible care to breed high-class animals, using the best mares and high-class sires. The result was that Mr. Moore had been most successful as an exhibitor at many of the leading shows of the country. That was the first venture of the kind in Shropshire, and they were able to place in the ring that day a sple did lot of hunters or "youngsters" likely to grow into good hunters.

The sale then proceeded, and fairly good prices were realised. The chestnut gelding Doz Star by Dog Rose, a promising weight-carrying Hunter, and a prize-winner at the Shropshire and West Midland Wem, Wellington, Newport, and Wenlock shows, was bought for 120 guineas by Mr. E. B. Fichlen, Condover Hall. The same gentleman also gave 55 guineas for Duke, a black gelding by Dubuque, a fine, stylish horse, likely to make a first-class hunter, or suitable for a charger. Mr. R. G. Warner, Shrewsbury, was the purchaser of the bay filly Banfletta for 50 guineas. This filly has won prizes at Birkenhead, Aberystwyth, Bath, Shropshire, and West Midland Shows, and at Wem. The Clown, a chestnut gelding, likely to make a valuable hunter, was bought by Mr. T. Shaw, of Sherlow, for 50 guineas, and others made up to 30 guineas.

Mr. Henderson's Red Polls.

The entire herd of Red-poll cattle belonging to Mr. R. F. Henderson was sold at South Newfield, Surrey, on Thursday, by Messrs. Thornton and Co. The attendance was not a large one, and prices were by no means high, the 34 lots aggregating 389½ guineas, the cows and heifers averaging 11 guineas, and the bulls 13 guineas. The top prices, 25 guineas and 24 guineas, were paid by Mr. Howard Vyse and Mr. Sam Woodiwiss respectively for the cows Hazel and Red Duchess. Mr. Woodiwiss, who is establishing a herd at Gravelley, also gave 20 guineas for Dewdrop.

At a meeting of the Liverpool and District Farmers' Club on the 15th inst., a resolution was passed to the effect that the members were extremely disappointed with the report of the Motor-car Commission, and felt convinced that the seriousness of the dust nuisance had not been fully realised or appreciated by the commissioners, and that immediate legislation was necessary to meet the urgency of the case. They also expressed their conviction that the time had arrived when the taxation of motors should be revised, the weight and horse-power forming a basis on which such taxation should be made.

Mr. DAVID KEMP,
Secretary of the Ampfearth Agricultural Society.

Mr. F. H. CHAFER,
Secretary of the Doncaster Agricultural Society.

abandoned this year on account of insufficient entries.

The success of the foal futurity classes at this year's show has induced the East Berks Horse Show Society to continue these valuable and interesting classes, and breeders of Hunters and Shires should give the classes whole-hearted support, for they undoubtedly encourage the retention of good mares in this country and also the breeding of high-class stock. The society offer from £150 to £170 and two champion silver cups as prizes to be competed for by the producer of mares covered in 1905, and for these the preliminary entries close on October 1, so that early application for entry forms is essential. Forms and full details can be had of the hon. secretary, Mr. C. H. W. Dixon, 4, Henrietta Street, Covent Garden, W.C.

At a meeting of the Council of the Suffolk Sheep Society held on Tuesday it was resolved to contribute to the Royal Agricultural Society's Show at Lincoln next year the same amount as this year, viz., £36 for two classes.

A large and influential public meeting was held in the Town Hall, Maidenhead, last week, in support of the proposal to hold the Royal Counties' Agricultural Show at Maidenhead next June, and a resolution was unanimously carried endorsing the invitation given by the town council to hold the 1907 show at Maidenhead, and promising to promote the success of the show in every way possible. The mayor announced that promises amounting to about £870 had already been received towards the necessary local fund, including £100 from Colonel V. W. Bates van de Weyer, who is to be nominated as president of the society for the year.

A special meeting of the Welsh National Agricultural Society was held at Aberystwyth on Wednesday to consider the future location of the show, and, after some discussion, it was decided that the show remain at Aberystwyth for another year. The secretary stated that this year they were £80 in hand, as against a deficit of £200 last year.

THE "MARK LANE EXPRESS" REGISTER OF FORTHCOMING LIVE STOCK AUCTION SALES.

DATE.	NAME AND ADDRESS OF AUCTIONEER.	CLASS OF STOCK FOR SALE.	PLACE OF SALE.	NAME OF OWNER.
September				
25	Messrs. Thornborrow and Co., Penrith	Agricultural Horses	Southwaite Auction Mart	Various.
25	Messrs. R. Bond and Sons, Ipswich	Suffolk Sheep	Ipswich	Various.
25	Messrs. Howkin and Sons, Rugby	Foals	Rugby	Various.
25	Messrs. J. Thornton and Co., London, W.	Jersey Cattle	Marwell Manor, Eastleigh	Late Miss L. C. Standish.
25	Messrs. Tattersall	Foal and Riding Ponies	Ditto	Ditto
25	Messrs. Turner, Rudge, and Turner, East Grinstead	Horses, &c.	Brook Farm, Tanridge	Mr. M. Michealis.
25	Mr. J. G. Villar, Cheltenham	Live and Dead Farm Stock	Dowdeswell	Mr. F. H. Unwin.
25	Messrs. Macdonald, Fraser and Co., Perth	Cheviot Sheep	Lairg, Sutherlandshire	Various.
25	Messrs. R. Harrison and Son, Carlisle	Blue Grey and Galloway Cattle	Carlisle Auction Mart	Various.
26	Messrs. J. Harris and Son, Winchester	Shire Horses	Colemore, Hants.	Messrs. J. Borrowman and S. Channon.
26	Messrs. Macdonald, Fraser and Co.	Blackface Hill Sheep	Tyndrum, Perthshire	Various.
26	Messrs. R. Harrison and Son, Carlisle	Shorthorn Cattle	Carlisle Auction Mart	Various.
26	Messrs. W. F. Ingram and Son, Lewes	Southdown Sheep	Falmer, Sussex	Earl of Chichester.
26		Wensleydale Sheep	Northallerton	Members of Wensleydale Sheep Breeders' Assn.
26		Ayr	Ayr Cattle Mart	Members of Ayr Ram Soc.
26	Messrs. J. Thornton and Co.	Shorthorn Cattle	Lilford, Oundle	Lord Lilford.
26	Messrs. T. B. Richardson and Son, Lincoln	Shorthorn Cattle	Hurn Hall, Holbeach	Mr. H. C. Tinsley.
26	Messrs. J. R. Eve and Son, Bedford	Live and Dead Farm Stock	Howell, Berks.	Mr. H. J. Marsh.
27	Messrs. Stride and Son	Live and Dead Farm Stock	Arundel, Sussex	Mr. D. Humphrey.
27	Mr. F. Charles, St. Albans	Shorthorns and Berkshire Pigs	Radlett	Mr. R. C. Phillimore.
27	Messrs. Lythall and Walters, Birmingham	Aberdeen-Angus Cattle	Bingley Hall, Birmingham	English Aberdeen-Angus Association.
27	Messrs. F. Lloyd and Sons, Crewe	Hackneys	Manoravon, Llandilo, S. Wales	Mr. Evan Jones.
27	Mr. J. Kidd	Sheep and Lambs	Lazonby Auction Mart	Various.
27	Messrs. Dickinson, Riggall, and Davy	Lincoln Red Shorthorn Cattle	Cotterstock, near Oundle	Mr. Everett King.
27	Messrs. H. F. Russell and Son, Pembroke, R.S.O.	Hereford Cattle	Glanusk	The late Lord Glanusk.
27	Messrs. J. Risdon & Son, Williton	Devon Cattle	Harwell Junction	Mr. Tremayne and Mr. H. H. Earle.
27	Messrs. Ensor and Son, Dorchester	Dorset Horn Cattle	Dorchester	Various.
27	Messrs. Macdonald, Fraser and Co.	Cattle and Sheep	Inverness Auction Mart	Various.
27	Messrs. Escritt and Barrell, Grantham	Horses	Grantham	Various.
27	Messrs. Macdonald, Fraser and Co.	Highland Cattle	Kenmore, Aberfeldy, Station	Marquis of Breadallane.
27	Messrs. R. Harrison and Sons	Clydesdale Horses	Carlisle Auction Mart	Various.
27	Messrs. Barber and Son, Wellington	Sheep	Wellington, Salop	Various.
28	Messrs. J. Harris and Son	Cart Horses	Binsted, Hants	Mr. J. Chalerat.
28	Messrs. Salter, Simpson, and Sons, Bury St. Edmunds	Horses, Cattle, and Sheep	Letheringsett Holt, Norfolk	Mr. C. H. Hardy Cozens-Hardy.
28 & 29	Messrs. Winterton and Sons, Lichfield	Horses	Lichfield Repository	Various.
28	Various	Kent or Romney Marsh Sheep.	Ashford	Kent or Romney Marsh Sheep Breeders' Assn.
28	Messrs. A. Mansell and Co., Shrewsbury	Cattle and Sheep	Shrewsbury Cattle Mart	Various.
28	Messrs. J. Thornton and Co.	Shorthorn Cattle	Chipping Norton Junction	Various.
28	Messrs. Sexton, Grimwade, and Beck, Louth	Horses	Peterborough Repository	Various.
28	Messrs. Nightingale, Philips and Page, Kingston-on-Thames	Hunters, &c.	Brookleigh Stud, Esher	Mr. E. W. Robinson.
28	Mr. E. J. Vidler Rye	Dairy Cows	Northiam, Sussex	Mr. E. J. Bates.
28	Messrs. Thornborrow and Co.	Sheep	Southwaite Auction Mart	Various.
28	Messrs. Spelman, Norwich	Live and Dead Farm Stock	Waxham, Stalham, Norfolk	Messrs. Reeves.
October				
1	Mr. F. Charles	Horses	Rickmansworth	Various.
2, 3, & 4	Messrs. Sexton, Grimwade and Beck	Shire Horses	Derby	Various.
2	Messrs. J. Thornton and Co.	Shorthorn Cattle	Brayton, Carlisle	Late Sir Wilfrid Lawson.
2, 3, 4 & 5	Messrs. F. Lloyd and Son, Wrexham	Horses	Wrexham	Various.
2	Messrs. Walters and Rawlence, Salisbury	Norfolk Red Polled	Salisbury Repository	Earl of Radnor.
2	Messrs. W. F. Ingram and Sons, Lewes	Live and Dead Farm Stock	Falmer, Sussex	Earl of Chichester.
2	Messrs. J. Harris	Cart Horses	Bentley, Hants	Mr. E. Biagnt.
2	Messrs. Macdonald, Fraser and Co.	Cattle and Sheep	Stirling Auction Mart	Various.
3	Messrs. Winterton and Sons	Sheep	Lichfield Smithfield	Various.
3	Messrs. J. Croall and Sons, Edinburgh	Shetland Ponies	Edinburgh	Various.
3	Messrs. Macdonald, Fraser and Co.	Cattle and Sheep	Perth	Various.
3	Messrs. Mansell and Co.	Shropshire Sheep	Shrewsbury Smithfield	Various.
3	Messrs. J. Thornton and Co.	Shorthorn Cattle	Hesket Hall, Wigton	Mr. J. Graves.
3	Messrs. Burtenshaw and Sons, Eastbourne	Horses, Cattle and Sheep	Westdean, near Eastbourne	Duke of Devonshire.
3	Messrs. Waters and Rawlence	Lincoln Red Shorthorns	Little Langford, Wilts.	Mr. H. Andrews.
4	Messrs. J. Thornton and Co.	Jersey Cattle	Whitley House, Frome	Mr. J. H. Shore.
4	Messrs. Dickinson, Riggall, and Davy	Lincoln Red Shorthorns and	Bonniwalk, Donnington-on-Bain	The late Mr. T. Bett.
4	Messrs. King and Chasemore, Horsham	Aberdeen-Angus Cattle	Pulborough, Sussex	Mr. R. L. Batchelor.
4 & 5	Messrs. H. F. Russell & Son	Live and Dead Farm Stock	Home Farm, St. Devereaux.	Capt. P. A. Clive.
4	Messrs. Stride and Son	Southdown Sheep	Lavant, Chichester	Messrs. Waters and Son.
4		South Devon Cattle	Totnes	Members of South Devon Herd Book Society.
4	Messrs. J. Harris and Son	Cart Horses	E. Worldham, Hants	Mr. W. Dryland.
4	Messrs. Lythall and Walters	Tamworth Pigs	Chokendun, Salisbury	Mr. H. C. Stephens.
4 & 5	Mr. H. J. Burt, Steyning	Horses, Cattle, Sheep, and Pigs	Okehurst, Billinghurst	Mr. H. F. Locke King.
5	Messrs. Cobb, Highnam, near Rochester	Sheep	Frindsbury, near Rochester	Various.
5	Messrs. J. Thornton and Co.	Shorthorn Cattle	Kelmscott, Lechlade, Glos.	Mr. R. W. Hobbs.
5	Messrs. Sexton, Grimwade, and Beck	Shire Horses	Fareast, Peterborough	Mr. W. Willis.
9 to 13	Messrs. H. Manley and Sons	Horses and Foals	Crewe Repository	Various.
9	Messrs. Simmons and Sons, Reading	Horses, Cattle, and Pigs	Manor Farm, Reading	Reading Corporation.
9	Messrs. Macdonald, Fraser and Co.	Shorthorn Bull Calves	Tillycairn, Old Meldrum	Mr. Duthie and Mr. J. Marr.
9	Messrs. Davis, Newland, and Hunt, Chepstow	Live and Dead Farm Stock	Trelleck Grange	Mr. C. M. Compton Roberts.
9	Messrs. J. Harris and Son	Cart Horses	E. Worldham, Hants	Mr. H. Turvill.
9		Dartmoor Ponies	Okehampton, Devon	Various.
10	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Newton Insh	Messrs. Gordon, Wilson, and Simmers.
10	Mr. F. Charles	Horses	St. Albans Repository	Various.
10	Messrs. Perks and Lanning, Waterloo Place, London, S.W.	Live and Dead Farm Stock	Tolleshunt D'Arcy, Essex	Mr. T. G. Binney.
11	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Aberdeen	Various.
11	Messrs. J. Thornton and Co.	Jersey Cattle	Magdalen Laver, Ongar	Mr. E. St. John Phillips.
12	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Inverness	Various.
13	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Perth	Various.
16	Messrs. J. Thornton and Co.	Jersey Cattle	Tring	Lord Rothschild.
17	Messrs. J. Thornton and Co.	Jersey Cattle	Bletchley	Various.
17	Messrs. Macdonald, Fraser and Co.	Clydesdale Horses	Perth Auction Mart	Various.

Further Particulars of many of the above Sales will be found in our Advertisement Columns.

CORRESPONDENCE.

A Suggested Hop Combine.

SIR,—“Hop-growers,” says the trade circular of a leading Worcester firm, “have come to market with inflated ideas as to the value of their product,” and consequently merchants “have set their backs firmly against any such wild notions,” preparing to wait for a more reasonable demand. Probably, in the long run, the buyers will have their way, for the expenses of cultivation have been inordinately heavy this year, equalling in some cases the freehold value of the land, and growers will be wanting ready money. But the same circular admits that at the prices merchants offer a further loss to producers and a consequent further grubbing of hops are likely.

May I suggest that if ever a hop pool offered fair prospects of success the time is now? At present the position is admitted by factors to be something like this: A third of our total yield will be absorbed by some half-a-dozen big breweries, half the remaining growths are practically taken up, and the balance for general consumption cannot exceed more than about 50,000 pockets. That would not be a large quantity to “corner,” and there would be the less work, as nearly all the Worcester and Hereford hops this year are level and good in quality—probably as good as those of 1902. Somebody is bound to make money out of them. Surely it is the growers’ turn. Will not the organisers of the last hop pool come forward and help?—Yours faithfully, H. I.

Maize as a Forage Crop.

SIR,—I venture to think that the enclosed photograph of a crop of maize grown here this year may be of interest to your readers, and es-

pecially to those who have felt the pinch of the late drought.

There are millions grumbling at the present condition of things, but they are disinterested units, powerless against the numerically small but collectively wealthy united body of motorists. In view of the serious injury done to crops and property in country districts, and the many hindrances to farming and other businesses, I think the Agricultural Press ought to move in the matter. Could not you place yourself in communication with the Protection Society, and find means by which you could help country readers to combine? It seems to me that if the Society were to arrange with you so that every copy you sent out should contain a sheet on which desiring members could attach their names, a vast membership could be obtained. I am not aware what sum is required for membership, but if a large number were obtained a small fee would be enough. I also believe that the feeling of need to protect oneself from the motor nuisance is so great that most of those who received a sheet would canvass their neighbours. Beyond payment for membership, I think there are those who cannot afford the fee who should be allowed to become honorary members on undertaking to use their influence to resist the present unwarrantable position of affairs.

so that your numerous country readers, who are suffering from the carelessness and callousness of motorists, should be able to get into touch with it. I am not at all sure that you could not go a good deal further than this.

There is no real opposition to the motor properly constructed and driven with proper care. Everyone admits it is a valuable means of locomotion; but motorists are taking advantage of the fact that “it has come to stay.” Having come to stay, however, is no reason why it should become a greater nuisance than advantage; or that the value of property, the growing of crops, the health and safety of men and animals, and the ordinary carrying on of businesses, should be imperilled by it. If the inconveniences were temporary they might be put up with, but as the motor has come to stay, something must be done to control the selfish and thoughtless, for with an increase in number the troubles will become even greater. While recognising the good features of motors, the public has become utterly disgusted with those who drive them; and, unfortunately, the few who would use them in a decent manner and with proper regard to the well-being of others, are wholly unable to influence others. The Automobile Club professes to try to restrain the wild drivers, but at the same time urges them to rashness by trying to defeat the efforts of the police—the only body that has any power—to detect those who drive wildly. The recommendations of the Commission as to no speed limit, and the provision of roads that make suitable motor racing tracks by those who do not use motors for the benefit of those who do, are so distinctly unreasonable that no one should lose an opportunity to oppose them.

MAIZE GROWN BY Mr. A. H. BARING, THE GRANGE, ALRESFORD, HANTS.

pecially to those who have felt the pinch of the late drought.

The seed was ploughed in on June 7, and cutting commenced about the end of August. The photograph was taken September 15. I think there is no forage crop in the world which can give such a return in the time.

Cattle take to it readily, and the way every stalk disappears, however thick it may be, is quite marvellous. Horses, too, are very fond of it, but it must be cut up for them.

I have sown it as early as May 20 and as late as July 7, and I am of opinion that the first week in June is quite soon enough.

Not only is there less risk from cold nights, but I have found that the later it is sown the less trouble the rooks give. If there were no rooks I am sure we should see a very much larger average of it sown every year.—Yours truly,

A. H. BARING.

The Grange, Alresford, Hants, Sept. 20.

We Maintain the Highways. Cannot We Retain Them? Means by which Agricultural Papers May Help.

SIR,—I believe there is a society formed to protect the interests of those using the roads, and those having properties adjoining highways, against the damage done by inconsiderate motorists and unsuitably constructed motors. I think if the society is one which is active, it would be an advantage if you were to publish its address

grumbling at the intolerable state of affairs will not take a little trouble when an opportunity occurs to put them on a proper basis, and prefer to take their mauling “lying down.” Of course the motorist domination must be with us for all time, and a jolly expensive thing it will be for farmers, who will have to pay an increased highway rate to provide pleasure trucks for those who pay nothing, but who shove them off the roads.

Sept. 21, 1906.

ROADSTER.

Foreign Cattle Competition.

SIR,—It is well that a certain variety of stock, such as sheep, is profitable, for cattle are of no use in the way of yielding a reasonable return for outlay on keep. Cattle, as a rule, only return a reasonable allowance for six months’ keep during the twelvemonth. This is far from what it should be; but as long as foreign cattle for slaughter and dead meat are sent to this country on such a large scale from countries where the production is remarkably low, nothing else need be looked for. Home farmers are handicapped in every way, and legislation does little to ease the burden that crushes agriculture to the earth.

If any other industry suffered in the same way more noise would be heard, but farmers are too quiescent; they only complain a little above the breath, the complaint is lost in the passing breeze, and there is no result. The time may come when the folly of allowing the agricultural industry to be ruined will assert itself; but that time is not yet here. Come it will, for all that. J. B.

Aberdeenshire, September 20, 1906.

A Wail from the West.

SIR,—None of the crop reports one sees make any mention of a pest which is causing us a good deal of trouble—the brown-rot fungus in apples. In many West Midland orchards one may see the diseased fruit ringed round with the fungus spores, and remaining dry and withered upon the tree until the following spring. In the last few years this parasite seems to have obtained a firm hold on many orchards, and there seems to be little doubt that it is extending; as, indeed, it must inevitably do unless concerted measures are taken to put an end to it, for it is little permanent use to wash one’s own trees and burn affected fruit while one’s neighbour’s orchards on either side remain uncared for to spread the infection. Perhaps some day a reformed Board of Agriculture will be empowered to deal as drastically with rapidly spreading fungus and insect pests as the present Board does with infectious diseases in live stock. In the mean time would it not be well to circulate a warning leaflet in the districts where the fungus has made its appearance.

Another grumble. The Le May hop report, which we all read with interest, speaks of the dwindling hop area of Great Britain as a most serious thing for the brewers. Perhaps it is; but it is surely a much more serious thing for us who grow the crop and lose on it because the said brewers, our only customers, steadfastly refuse to pay a price that will cover the cost of cultivation. Even this year they talk of getting supplies at 110s. and 120s. per cwt. for the finest qualities. If they can do no better than that, assuredly more hops will be grubbed up. Are the profits of the brewery industry so small that its materials have to be bought at less than cost price? One would not suppose so, to see the extravagant way money has been laid out the last few years in buying and decorating and reconstructing tiel houses.—Yours faithfully, SEVERN SIDE.

Carlisle Latter Fair.

Carlisle Latter Fair, the largest of the year held in that city, with the exception of the “Great Fair” in August, took place on Wednesday. The supply of Irish store stock was smaller than usual, numbering about 300, most of which were wintering heifers. The attendance of buyers was also small, and a slow trade was done at £7 10s. to £13 for wintering heifers, and up to £14 for animals suitable for putting on fog for finishing purposes. The show of lambs altogether numbered over 20,000, not being quite so large as last year. Trade was pretty busy, as reported at the auction marts.

At Hetherington’s Auction Company’s mart, about 10,000 sheep and lambs were exhibited. They included half and three-quarter bred cross and Cheviot lambs, feeding sheep, ewes and gimmers, and also a prize show of Border Leicester and Down rams. Buyers showed a decided disposition to keep down prices and sellers resisting it as much as possible. Trade was slow, with the result that lambs changed hands at figures which indicated a decline of 1s. to 1s. 6d. a head as compared with the quotations at recent markets.

Messrs Harrison held a special sale of rams, ewes, gimmers, and all classes of lambs, of which there was the large entry of 1,100 head. Trade opened brisk for all classes of breeding sheep, and prices were from 3s. to 3s. 6d. per head in advance of last year’s prices for ewes and gimmers. Rams also sold well, making from 11 to 3s. higher prices than at the corresponding sale a year ago.

Northern Notes.

MR. S. R. TENNANT, the well-known Hackney breeder and the owner of the famous Authority, has purchased two of Lord Downe's large farms in the Driffield district of east Yorkshire for about £26,000. He is the sitting tenant of one of these farms called Wold House, containing 608 acres, and for which he is paying £538 a year rent. He has also bought the adjoining farm, Great Kendale, in the occupation of Mr. Wood, who has combined with a successful career in agriculture a very large trade in artificial manures. This farm extends to 328 acres, of which only forty-six are grass land. To increase his pasturage, Mr. Wood some years ago bought several lots of old grass land near Kendale, which has made his holding more valuable to him personally, enabling him to carry much more stock. Wold House, like Kendale farm, is very short of grass, as only one-twelfth comes under that denomination. The land is splendid. Kendale lets for £601 a year, and is only a mile and a half north of Driffield, while Wold House is three miles distant, and has 30 acres of woodland. Mr. Tennant has received many congratulations on his purchase, and his friends wish him good luck in his speculation.

THE harvest festivals are now in full swing in the north. The "objects" of the offertories are singularly chosen, especially in Nonconformist places of worship. We have Scripture precedent and warrant for associating religion with the harvest, and more especially for giving fullest explication to one of the divinest manifestations of moral and religious feeling—that of being bountiful to the bereaved, forlorn, and destitute.

THANKFULNESS should find its outlet in charitable acts; therefore it is very desirable that the offerings at these annual festivals should be appropriated to the maintenance of hospitals and other institutions carried on in the cause of humanity. Is it too much to ask that offertories received this year should be given to some charity rather than passed on to "funds" variously denominated? The Royal Agricultural Benevolent Institution is somewhat neglected in the north of England.

ARE we to some extent getting out of touch with homely arts? It is no longer necessary to regard the spinning chair and wheel as anything more than curios. Is there not a tendency in these modern days to abandon the manufacture of home-made jam, of wines and syrups, for the sometimes questionable productions sold in the shops? The efforts of the Agricultural Department of Leeds University to resuscitate an interest in home industry connected with fruit is highly commendable; and one of the professors is giving lectures in several centres on the bottling of fruit. He paid a visit to Darlington this week, and addressed the Chamber of Agriculture and a number of ladies, who formed the major portion of the audience.

THE process is not one that requires the use of choice fruit, as the cheaper varieties lend themselves equally well to the process, which is a very simple one. The lecturer gives instruction in the "art," and exhibits the most suitable bottles, and tells his audiences where they may be purchased. It is possible in this way to have fruit all the year round at a trifling cost, and it may be equal, and in some cases superior, in colour, flavour, and consistency to fresh fruit, and by employing the method recommended can be kept fresh for years.

IN the dales of Yorkshire some of the finest of butter is produced by the farmers' wives and daughters. The president of an agricultural society recently took the butter-makers to task for turning out an inferior article; and at the same time he expressed his belief that the reason was not by any means that the art was lost, but that the young men did not choose their wives properly. He gave them the excellent advice not to go by looks, but to ascertain before marriage if their sweethearts could make butter.

THEN he followed up this excellent advice with the amusing suggestion that perhaps the district council might help the young men in so momentous a decision. This is a piece of rural philosophy that should not be lightly dismissed by any whom it may concern.

LAST week farmers were in a very doleful mood over the prospect for roots. The drought of three full weeks in Yorkshire had given a set-back to the crops, turnips being badly mildewed in some districts. Now timely rains have fallen, and put some heart into the despondent ones. Before was certainly a period of great anxiety, lambs having been bought very dear, and it seemed unlikely the buyers would be able to keep what they had purchased to profit.

THE spell of drought was broken on the 13th, and nice rains have since fallen, and roots now give promise of being a heavier crop than last year. The sunnier cheerful report comes from the Cleveland and Whitby districts, and in Northumberland are some splendid turnip flats.

THE Durham County Agricultural Society some time back sent a protest to the Durham Education Authority relative to the alleged excessive expenditure of that body on education. Nothing has been heard of the protest, which, if we remember rightly, was not confined to educational matters, but to the general expenses of the county council. In the colliery districts, where the farmer is hopelessly outnumbered, he is compelled

to contribute heavily to lighting and other rates for village improvements miles distant from his house, and he has no benefit whatever, only the satisfaction of feeling that he is acting the part of a good citizen. He feels the hardship pressing heavily upon him, and that he must endure it so long as the present system of levying rates remains in operation.

NEXT March new councils will be elected all over the country, and ratepayers must be careful to vote for candidates who will set their faces against extravagance. The agriculturist is a long-suffering individual. He is under many heavy clouds; but we are told if we wait long enough they will all roll by.
Sept. 21, 1906.

Midland Notes.

ONCE again this year has shown the wisdom of our weather experts in closing their summer records at the end of August. The change which has lately come upon us could hardly be more complete. Already we have had just a touch of night or early morning frost in exposed situations, and the perpetually clouded sky and lower temperatures by day are typically autumnal, making manifest the nearer approach of "chill October," and forcibly reminding us of the arrival of the turning-point in the year when the sun sets at six o'clock or earlier, and the hours of daylight become shorter for six months than those of darkness.

AUTUMN tints, usually so varied and brilliant in these heavily timbered Midland shires, threaten to be of the poorest this year, for even deeply rooted forest trees have suffered from the universal lack of moisture, and the leaves, of elm and chestnut especially, are drying, dying, and falling abnormally fast and early. The rain of the past week or so has refreshed all growing things wonderfully, but the state of grass lands compares sadly with the very best of a flourishing condition a year ago, and the roots lost more ground during the drought than can be expected now to make up. With the scarcity of hay which is so general in many districts, on the Eastern side especially, and the current expectation of dearer foodstuffs, the future is not free from anxiety. But a mild and moist autumn would relieve the situation in every way, and we are still hopeful.

MANY have been the trials of our hop growing friends this year, and not the least the trouble they have had in so many instances with the pickers. The addition of several bands of alien gipsies to the ordinary Black Country gangs has not exactly made for peace and quietness; strikes, too, have been rather numerous, as generally happens in a year when the crop varies much in different gardens; while here and there gangs disappointed at not finding the expected amount of work have failed to understand why they should be shut out from gardens where the hops are too few to be worth picking.

EVEN this year some of the hoppers have been able to earn good money. Working at the rate of six bushels for 1s., small families have made up to 8s. or so a day, with full lodging and liberal allowances of cider or beer, which is decidedly more than their own trades would bring in. But the supply of labour offering has been more this season than the bulk of the crop warrants, so that distress among the pickers has been more than usual.

GRADUALLY we are learning to do something in the way of brightening up village life. The newly formed Bredon's Norton Guild, of which Miss Edith Bradley, well known by her association with the women's agricultural movement—is hon. secretary, is the latest move in that direction, but in Staffordshire we have Lord Harrowby giving all his help and influence to the encouragement of village clubs, and Worcestershire boasts its workmen's clubs and institutes, with Lord Cobham as president, and over sixty affiliated institutions. Not all of these, of course, are strictly agricultural, some being located in suburban districts. But the Union's experimental gardens, now extended to six acres by the help of the late Dr. Corbett, are already a model to other counties, and they will be still more worthy of imitation if it is found possible (as is now proposed) to start a thoroughly good horticultural school with moderate fees in connection with them. So, too, the book boxes as they are circulated bring sound and desirable literature within the reach of the humblest members, and wherever the clubs exist the landowners and other leading people are found taking a most sympathetic and helpful interest in the welfare of their workpeople.

THE scarcity of stone fruit this season has made the humble blackberry more worthy of attention. At 2d. per lb. to the pickers they pay for gathering, so that one hears of anything from one to two tons at a time being sent away daily in open 6 lb. baskets from small stations in Worcestershire, whence they travel to centres as far distant as Leeds and Hull.

IT would be a good thing for the cottagers of England if they could make a little more of the opportunity offered by the blackberry crop. As it is this country pays £6,000 a year or so for berries which the wives and children of the thrifty Brittany peasants gather and despatch to St. Malo, where they are graded and packed for shipment by agents.

CERTAINLY the Brittany folk are fortunate in enjoying greater freedom of access to unclosed lands where blackberries abound; but there are miles and miles of quiet by-ways, footpaths, and farm hedgerows in the country along which blackberries ripen in abundance, only to rot for want of picking.

SOME of the industrious French families continue to make £10 to £12 a year out of them—no small addition to a cottager's income; and given a moderately business-like system of marketing our own country labourers in blackberry districts might no less certainly be some thousands of pounds a year better off.
September 20, 1906.

Worcester Fair.

Worcester Great Fair, which takes place annually on September 19, is one of the oldest of the many ancient institutions of the city, and on Wednesday last there was the usual large influx of visitors and business men into the city. Intestaken centres chiefly round the Cattle Market and the Hop Market, the Cheese Market, which years ago assumed considerable importance, having now almost entirely disappeared. What English cheese was shown was of excellent quality. Canadian and American were well up to the average, but prices ruled 10s. per cwt. higher. The Cattle Market was a scene of activity from early morning.

Nearly 5,000 sheep were penned, and though a somewhat unequal lot, the Hampshire and Oxford Down rams and ram lambs were of splendid quality. Shropshires, too, were good, and the best classes found a ready sale. Lord St. Alwyn sent fourteen Hampshire ram lambs which made only 4 guineas, but Mr. H. C. Stephens, Salisbury, secured as high as 8 guineas, and averaged 5½ guineas. Mr. George Garrard's Shropshire shearing rams averaged 6½ guineas, the best price being 8½ guineas, while a dozen sent by Mr. J. W. De averaged nearly 7 guineas. Ewes made up to 51s. 6d., heaves up to 52s., wethers 50s., and store lambs 32s. 6d.

Good many horses were on offer, twenty Hunters making up to 30 guineas for three-year-olds and 35 guineas for four-year-olds. The cattle trade was quiet.

The amount of business done in the Hop Market was less than usual, merchants being unwilling to operate extensively in the face of large stocks held by consumers, while, on the other hand, the cost of production has been so high this season that many growers say they cannot make any profit on current prices, and prefer to await developments. Prices ranged from about 45 to 48 per cwt. for common to fair medium qualities, rather more money being bid for some choice samples. Only 56 pockets passed the scales, compared with 953 weighed out on the first day of last year.

A fine flour mill, built by the Hovis Bread Flour Company, not far from the banks of the Ship Canal, in Trafford Park, was opened by the Lord Mayor of Manchester on Tuesday. A large company was invited to inspect the works, and the plant, which represents all the latest improvements in flour mill machinery, was much admired.

LINCOLNSHIRE FARMERS AND THE LAND TENURE BILL.

Deputation to Earl Carrington—"The Government desire to see the Bill passed into Law during the Autumn Session."

The members of the Lincolnshire Farmers' Union have expressed the warmest approval of the Land Tenure Bill, and with a view of getting the measure an actual statute as soon as possible they decided to send a deputation to the President of the Board of Agriculture and urge him to push on the Bill. The deputation, which consisted of Mr. Colin Campbell (Chairman of the Union), Mr. E. W. Howard (Vice-Chairman), Messrs J. D. Blanshard, W. S. Fox, J. T. Glen, C. Powell, J. Fowler, C. Featherstone, J. Thurlby, C. E. Andrew, H. Hopkinson, E. Crawford, G. Morris, W. C. Wood, T. Harrison, and H. W. Palmer, was received by Earl Carrington at the Board of Agriculture on Wednesday, and it is satisfactory to record that their suit proved successful, for the noble earl assured them he would do all in his power to get the Bill passed, and added that the Government desire to see it passed into law during the forthcoming autumn session.

Mr. Colin Campbell, who introduced the deputation to Lord Carrington (who, by the way, was accompanied by Mr. F. A. Jones, assistant legal adviser, Mr. F. L. C. Flood, and Mr. R. Wifney, M.P.), expressed the warmest approval of the general principles of the Land Tenure Bill, but urged that the arbitrator to be appointed under the Bill should be directly under the control of the Board of Agriculture, and independent of local considerations and influences.

Mr. W. E. Fox said that further protection was desired under the Bill against damage by game. Mr. E. W. Howard, representing the land, ships to farmers which they urged would follow from the substitution of the specification of "home killed" for "home bred" in the supplying of meat to the army. He also urged the views of the small tenant farmers against the requirement of large public abattoirs, which it was contended would drive the small butchers into the towns.

Other speakers followed, one of them urging that farmers summoned to serve on juries should be paid their expenses. Some small farmers, he said, had to set their pigs in order to attend the assizes, and get no return.

Earl Carrington's Speech.

The President of the Board of Agriculture then replied as follows:—It has given me great pleasure to hear that such a representative body of tenant farmers heartily approves of the principles of the Land Tenure Bill, and I can assure you that the Government desire to see the Bill passed into law during the forthcoming autumn session. I am very glad also to have this opportunity of calling attention to the needless alarm which is being expressed in many quarters as to the alleged disastrous results which will follow the passage of the Bill.

The history of legislation on the subject during the last thirty years shows that some interference between the landlord and tenant is absolutely necessary if the latter is to be protected against being deprived of the fruit of his labours, and the Land Tenure Bill merely carries a few steps further the protection given by the earlier Acts. The Duke of Richmond's Act of 1873 was the first to recognise the right of a tenant farmer to compensation for unexhausted improvements, but the provision it contained allowing contracting out was so largely taken advantage of by landowners that it was practically inoperative. Mr. Gladstone's Government therefore passed the Act of 1883, which made the right to compensation under the Act inalienable and forbade contracting out, and this was followed by Mr. Long's Act of 1900, which simplified the machinery and made certain improvements in detail which experience had shown to be desirable.

The evidence given, however, before the Royal Commission on Agriculture and the Welsh Land Commission has convinced us that the statutory relations between landlord and tenant required further revision, and we welcomed therefore the introduction of the Land Tenure Bill of this session, so ably brought in by Mr. Agar Robartes and Mr. Soares, and the second reading of which was carried by a majority of 253 in March last.

In view of the considerable misapprehension which exists as to

What the Bill Actually Proposes.

it may be convenient that I should state shortly the effect of the various provisions. It omits the words relating to the inherent capabilities of the soil in estimating the amount of compensation due. But the Royal Commission on Agriculture, including such men as Mr. Chaplin and Mr. Walter Long, saw no objection to the omission of these words, and they were actually omitted in the Act of 1900 as introduced by Mr. Long, only to be reinserted in the House of Lords.

It provides for compensation for damage by

winged game. This was recommended by the Royal Commission on Agriculture. It contains a clause extending the shooting rights of the tenant farmer in relation to ground game, but I understand that, in order to disarm opposition, the promoters of the Bill do not intend to press this clause.

Clause 4 will relieve the tenant from harassing restrictions and covenants which on some estates hamper the tenant in the cultivation of his holding, and merely gives to all tenants the freedom of cropping which is at present allowed on the estates of many large land-owners. Indeed, the Act of 1900 can fairly be said to have secured freedom of cropping subject to payment for any consequent damage or deterioration, and I would remind you that Major Birch, president of the Land Agents' Society, said in his evidence before the Welsh Land Commission:—"I believe these agreements are simply waste paper. I would not sign any agreement which would interfere with me if I did not know it was going to be a dead letter. I hate the sight of these agreements myself because they are of no use."

It provides for compensation for unreasonable disturbance, but the amendments proposed by the Government will confine the compensation payable to the actual loss sustained by the tenant in moving from the farm, and I am sure that no fair-minded man would deny the justice of such compensation in the case of capricious or arbitrary eviction.

To extend the class of improvements which may be carried out without obtaining the landlord's consent. In this respect it goes beyond the recommendations of the Royal Commission on Agriculture by including laying down of permanent pasture and fruit and vegetable culture; but the enormous increase in the fruit industry in recent years is ample justification for this proposal, and it must be remembered that the tenant on quitting his holding only receives such sum as fairly represents the value of the improvement to an incoming tenant.

The other provisions of the Bill are of minor importance, but I have said enough to show that so far from the Bill being of a revolutionary character, most of its provisions have received the support of the Royal Commission on Agriculture or prominent Conservative statesmen, and that practically the only new departure—viz., the compensation for disturbance clause—is of an extremely moderate, if not inadequate, character.

This being so it has been with great disappointment that I have read the speeches of Lord Londonderry, the Duke of Portland, Lord Zetland, and Mr. Victor Cavendish in opposition to the Bill. They are universally recognised as some of the best landlords in the kingdom, and no doubt any interference is absolutely unnecessary in the case of their own estates. It is therefore all the more to be deplored that they should object to the Bill when it merely proposes to give all tenant farmers the advantages already enjoyed by their own tenants; advantages which are refused, and legally refused, by landlords of a different type to themselves.

No one can be ignorant of the fact that there are estates in chancery, estates in lunacy, estates in the hands of mortgagees often administered by loan officers or lawyer agents, and estates where the owner, either by his own fault or extravagance, or by that of his predecessors, has been reduced to practical insolvency, and where the absentee landlord cannot keep the house or buildings in repair or even make both ends meet. It is for the tenants on estates such as these that the Bill is designed, and the Government are determined that they shall not look to them in vain for that protection to which they are entitled by every law of justice and equity.

At the same time I do not hesitate to say that many Liberals do not pretend to regard the Bill as in any sense a full satisfaction of the legitimate demands of land reformers. It is, after all, only a modest measure dealing with a limited part of the question; and should this Bill be thrown out or emasculated it is possible that future legislation may proceed somewhat on the lines recommended by the unanimous report of the Welsh Land Commission, of which I had the honour to be the chairman. To the vision, expressed in this report, I still adhere, and many land reformers believe that great hopes for the future of agriculture are to be found in the directions there indicated.

The Supply of Meat to the Army.

I am very glad also to have an opportunity of answering the attacks which have been made on the Government for the change which has recently been made by the substitution of "home-killed" for "home-bred" in the meat contracts for the Army.

For the last five years a condition was made that the beef supplied should be home-bred, but it has constantly been pointed out that even an expert could not distinguish the difference between home-bred meat and home-killed meat unless he was actually on the spot when the animal was slaughtered. The War Office endeavoured therefore to protect themselves by requiring the contractor to give a certificate with each quarter of beef, guaranteeing it to be the produce of a beast reared in the United Kingdom. It was, however, generally agreed that this certificate was not worth the paper it was written on, and the Army Council therefore came to the conclusion that no adequate precautions were possible, without entailing great additional expense, whereby they could be certain that the meat supplied was actually home-bred.

The foreign meat, is killed at Deptford, Birkenhead, Glasgow, and Bristol, and from there it is distributed to butchers all over the United Kingdom. Nearly every butcher sells imported meat as well as that which he slaughters himself, and unless the actual meat supplied for the troops was slaughtered under the eyes of War Office inspectors there could be no guarantee that the Government were getting what they paid for. So long as a contractor did not consign meat direct from one of the slaughter-houses used exclusively for foreign cattle, he knew that there would be no possibility of detection. A great deal of the meat for the Army comes from the Central Meat Market in London, which is supplied with home-bred meat from Islington, and with foreign meat from Deptford, and the only means of ensuring that all the meat supplied to the Army was home-bred would have been to employ an army of detectives to watch every quarter of meat from the time it entered the market till it was sent out. The cost of any such system of inspection would be prohibitive.

The question resolves itself, therefore, into a pure matter of business. Were the Government in the present state of the public finances, with the income tax at 1s. in the pound, and acting as trustees for the taxpayers, justified in declining, for purely sentimental reasons, to make a very considerable economy which involved no substantial difference in the quality of the article purchased? I cannot doubt that farmers, as hard-headed business men, will agree that there could be only one answer to this question.

In view of the exaggerated statements that have been made as to the disastrous effect of this change on the prosperity of the British farmer, it must be remembered that it does not mean that only foreign meat will be supplied, for at several of the largest stations, such as Aldershot, the Curragh, Shorncliffe, and Chatham, live cattle are taken for slaughter by Army butchers, and the meat in these cases must therefore be home-bred. The decision will probably make little or no difference in the character of the meat supplied, while a substantial economy will have been effected in the annual estimates for the Army.

I can assure you that it is from no want of sympathy with agriculture that this change has been made. The Government are fully determined to do all in their power to help the agricultural interest, but they intend that any assistance they may give should be of a really practical and useful character, rather than it should take the form of a merely sentimental sympathy which is of no practical benefit whatever to the British farmer.

This brought the proceedings to a close.

Sale of Hay.—Some good prices were obtained at a sale of hay at Settles Farm, Otten Belemph, the property of the Earl of Wilton. Three large stacks of mixture hay (1906) were sold for the respective prices of £52, £62, and £58, and a small stack of sunfist seed was knocked down at 7s. Immediately afterwards a large stack of upland meadow hay, at Hobart's Hall Farm, Otten Belemph, was brought under the hammer and sold for £43 to Mr. W. Whitlock, of Yeldham, who was the purchaser in each instance named.

Need of an Agricultural Party.—Sir Carne Rasch, M.P., speaking at an agricultural show at Bungay last week, said farmers had plenty of advisers. They were told to go in for jam and sugar, and that the cause of depression was rent, but they knew that rent was not in it. He himself had had to let a farm rent and tithe free. It was high rates and low prices that were responsible for the depression. Unless they could get all rates swept off the land, agriculture would never look up. They wanted a solid body of eighty or ninety members in the House of Commons prepared to stand firmly by agriculture. There were something like 180 agricultural members in the House now, but they were all gone to pieces. If they had eighty members strong for agriculture they would not have to sit sniffling when a Tory Government first, and a Liberal Government afterwards, brought in a useless Education Bill, putting additional rate on the land. If all the money wasted on education had been spent on artificial manure the agricultural interest would do a lot better. Agriculturists must do something or they would be wiped out before very long.

**By Lupulin.
Home Notes.
The Borough.**

The Borough trade remains at a standstill. In some of the factors' show rooms we can find growers discussing the situation, but in others there is nothing to be done beyond waiting for visitors. Very little seems to arise out of these meetings, as buyers are conspicuous by their absence. Now and then a bid is made, which is now and then accepted. But there is no doubt that business is abnormally flat, and the reason is not far to seek or difficult to explain.

There are "two Richmonds in the field," each equally determined to do or die. The merchant will not pay the price demanded, and the grower will not listen to the offered bid. The two opponents stand with swords drawn and watchful eyes, waiting for each other to move. How long the suspense will continue, nobody knows, but from the present temper of the combatants it does not appear likely that they will commence operations just yet. I have heard of some small transactions, but the rates at which they were carried through are by no means encouraging. It is painful to speak of £5 in a season like this, and yet I am assured that this low figure has been accepted for a decent parcel of very good quality and colour. I think we shall be obliged to wait for the beginning of next month before we shall see any substantial movement in the direction of real business.

Worcester Hop Fair.

I much regret I was not able to pay my usual annual visit to the "Faithful City," therefore I am compelled to rely on the reports of my friends

who were present at this gathering of hop buyers and growers. One of them writes to me as follows:—"The market at Worcester yesterday cannot be described as a 'Fair.' It was simply a gathering of people interested in hops, talking things over. There was certainly a fair attendance, but you must only use the term in this connection. Without actually seeing a transaction, I heard of a few, the lowest price named being 25 3s., and the highest 47—'Worcester' terms which are at current rates about 10s. better than London—at least, this is my experience.

"There is evidently a feeling of uncertainty among merchants as to what the market will settle down to, and my idea is that they will be glad to meet growers' views directly brewers begin to operate. There is no pressure to sell at present, and if this attitude is maintained for a week or two, our Worcester trade promises to be satisfactory to all concerned. The outstanding feature yesterday was doubtless the extraordinary quality of the growth, which I imagine is one of the finest on record. We have all that is wanted, so far as quality is concerned—good colour, good side, whole, healthy, well-matured hops, and it was quite the exception yesterday to see a sample that could not be thus described."

From other informants I hear that as far as real trade went the fair was a fiasco. The leading local merchants bought nothing, the London men who were down could not get on, and the growers were almost to a man absolutely indifferent, and would hardly quote a price. On the other hand, I am told that some fairly good hops were bought by a London house at about 84s., but I should gather that this was quite an exceptional case, and probably is open to explanation.

The Kentish Hop Crop.

(From a Correspondent.)

Picking is finished, having occupied one of the shortest periods on record, owing to there being so few hops to pick in the majority of grounds.

In Kent the crop is pronounced one of the smallest ever gathered. So far as the Weald is concerned, in the neighbourhood of Paddock Wood and Yalding, usually one of the most prolific districts, the crop was to a great extent a failure; but not many miles off, at Tonbridge and Hildenborough, satisfactory yields have been gathered.

At Goudhurst also the produce was fairly good. Picking over the border into Sussex, in most cases

the results of the year's work are very discouraging to the growers. Some fairly good crops were secured at Wadhurst, but in the adjoining parish of Burwash almost total failure describes the result of the efforts of the planters. Very few hops were gathered anywhere, and in several grounds no attempt at picking was made.

At Hartfield and Witleham, where as a rule good crops are obtained, the quantity picked is very meagre, and striking instances were to be found of extraordinary contrasts in close proximity. For example, in one part of a large field the produce was relatively satisfactory, while in the remainder it was quite the reverse. As the whole field had been treated alike, the case seems to point to the conclusion that the failure must be attributed to influences unconnected with either good or bad farming.

Perhaps there was never a year in which the effects of good cultivation and careful treatment were more apparent; yet many who have "done" their hops will have been grievously disappointed. There are growers who habitually leave things to chance, believing that money spent on cultivation seldom comes back. They spend less, but the results in a season like this may be easily imagined.

With regard to quality, there is little fault to find, and in many cases some really splendid hops have been gathered, and the fine weather that prevailed during most of the picking time helped materially in their being secured in the best condition. Such *ought* to make good prices, but (well, it is a big "but") that has yet to be proved.

The grower has to contend against too many adverse influences to be able to anticipate a reasonable reward for his year's work, and grubbing may be expected to continue.

Foreign Notes.

NUREMBERG.—Business has been very active since the opening of the new market for hops. Local consumers have picked up the prime qualities as fast as they have arrived, and the general trade has been assisted by orders for shipment to America, the demand for consumption there being heavier than usual so early in the season. Therefore prices are well maintained, ranging from 75s. to 95s. for the lower grades, 80s. to 115s. for Hallertaus, 115s. to 120s. for Spalts, 95s. to 125s. for Wurtembergs, and 105s. to 115s. for Badens. The crop is coming in freely, some large quantities

ROBSON'S FEED CAKE.

Great care is exercised in selecting the ingredients to make this Cake specially adapted for all classes of Stock.

EVERY FARMER SHOULD TRY IT.

Manufactured by the

BRITISH OIL & CAKE MILLS, Ltd., HULL.

Sold by Cake Merchants and Dealers.

WE MAKE GUNS

We sell to the user with only one small profit.
We sell for cash direct to the user.
We pay the finest materials to be obtained.
We pay cash for all materials.
We employ some of the finest workmen in the Gun Trade.
We use finest machinery for machine operations.

RESULT.

We sell for £25 Guns of a quality for which sportsmen have previously paid from £50 to £80.
We sell thoroughly reliable Guns.
We get the finest shooting it is possible for guns to make.

Our "Field" Hammerless Ejector Gun—A perfect Ejector Gun of the finest quality, £25. It made with the best single trigger mechanism ever invented, £30. A perfect pair of these Guns, beautifully matched, £50. A perfect pair of Single Trigger Guns, £60.

"The Gun of the Future," as an Ejector, £15. "The Gun of the Future," without Ejector, £10. A sound and reliable gun, well made, and perfectly balanced, which will give entire satisfaction.

Patagon 8652, £6.—A sound and reliable hard shooting and hard wearing hammerless gun. Better than many sold at double the price.

Patagon 8358, £4.—A sound and reliable hard shooting and hard wearing hammer gun. Better than many sold at double the price.

ESTABLISHED 20 YEARS.

MIDLAND GUN CO.

Demon Gun Works,

PRICE STREET, BIRMINGHAM.

having arrived, but the sales are keeping about on the same level. The latest report speaks of the trade having become rather calmer, but values, especially of best qualities, remain very firm.

There were some fears that the excessive heat would have interfered with the later pickings, but as the temperature has lowered and some rain has fallen all such fears are removed, and the results of the end of the harvest are quite satisfactory. The total yield will be heavier than was anticipated a month ago.

BRUSSELS.—The picking in Poperinghe is completed, and although the quality is satisfactory, the yield does not come down so heavy as expected. In the Alost yards the harvest is nearly over, and as the weather is fine a crop of good quality is expected, although the weight will be light. Business is slow at present both in old and new crop hops, but something has been done in Pops at 95 frames, and in Alost at 102½ to 105 frames, representing about 76s. to 81s. per cwt., f.o.b. Ghent. But these hops are being offered landed in England at about these figures, the results of earlier contracts.

The World's Crop in 1906.

It is perhaps full early to make any definite pronouncement concerning the total yield of the hop plantations of the world, and any opinions that are now put forward must necessarily be of a speculative character, and can only be thus considered. But as the harvest is now practically concluded in every hop-growing country, we have arrived at a period when estimates can be made with a fair approach to correctness, and experts are busy reckoning and publishing figures for the guidance of their clients. Many of these have reached me, and therefore I have compiled the following, which I present to my readers with the qualification mentioned above.

England	...	230,000 cwt.
British Colonies	...	55,000 "
U.S. America	...	500,000 "
German Empire	...	410,000 "
Austria-Hungary	...	175,000 "
Russia	...	55,000 "
France	...	45,000 "
Belgium and Holland	...	50,000 "

These figures give an approximation of the world's production this year, amounting to 1,550,000 cwt., which compared with the estimated total of 1905, shows a deficiency of about 850,000 cwt.

The World's Consumption

of hops is estimated, in round figures, to be about 2,000,000 cwt. annually, and on this basis this year's supply will fall short of requirements by something like 450,000 cwt., therefore, if this were the only element in our calculations, we might reasonably expect that the demand would speedily create a famine, and values would arise to an excessive point. But the unconsumed surplus from the large crops of last year must be taken into account together with the stocks on hand at the commencement of the 1905 season, and when this is done it will be seen that there is every probability that sufficient hops will be forthcoming to satisfy consumers, and to keep prices within moderate limits.

The Utility Poultry Club's Laying Competition.

Arrangements have now been completed by the Utility Poultry Club for holding their Tenth Annual Laying Competition.

The competition will begin on October 22 and end on February 10, 1907—a duration of four months—and will be under the management of Mr. E. W. Richardson, the hon. secretary of the club, at Rayne, near Braintree, Essex.

In view of the recent discussion as to the relative merits of the scratching shed and colony systems, and for greater convenience the club has decided to divide the competition into two sections, providing accommodation for twenty pens in each section, or for four more pens than on any previous occasion. The birds in Section A will be confined to scratching sheds without runs, those in Section B in the ordinary portable house with grass runs. All the plant is being erected for the competition, and the land has not previously been used for poultry.

A number of prizes and specials are being offered, including the Tamin Silver Cup, and these are supplemented by the gold and silver medal, and the first and second class certificates of the club should the standard reached be sufficiently high.

Important alterations and additions to the rules of the competition have been made. In scoring three points will be given for every egg weighing 2 oz. or over, two points if 1½ oz. and less than 2 oz., and one point if less than 1½ oz. Hitherto any egg weighing over 1½ oz. scored two points only. Birds must have been in the possession of the competitor for at least three weeks prior to the entry being made, and any sick or dead bird may be replaced.

The entry fee is £1, and entries close on September 29.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Super-phosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equivalised.	Phosphatic.	Dis-solved (soluble).										
Ammonia, organic as in Guano and Bones ...	s. d. 15 0	s. d. 12 6	s. d. 15 0	s. d. —	s. d. 10 6	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 15 0	s. d. —	s. d. —	s. d. —
„ in Sulphate of Ammonia ...	—	—	—	—	—	—	—	—	—	12 6	—	—	—
„ calculated from Nitrogen in Nitrate of Soda ...	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water ...	2 0	—	2 0	—	—	—	1/10-2/	—	2 0	2 0	—	—	—
„ assimilable ...	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
„ insoluble ...	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure) ...	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids ...	2 8	3 0
Oil or fat ...	2 8	3 0
Carbohydrates ...	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids ...	22.1 × 2½ =	55.2
Oil ...	5.2 × 2½ =	13.0
Carbohydrates ...	33.2 × 1 =	33.2

Total feeding units ... 101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Sulphate of Ammonia.

According to the figures given in the annual report of the Government Inspector of Alkali, &c., Works, the quantity of sulphate of ammonia produced from all sources in the United Kingdom during the past three years has been as follows:—

	1905.	1904.	1903.
Gas works ...	155,957	150,208	149,489
Iron works ...	20,376	19,568	19,119
Shale works ...	46,344	42,486	37,553
Coke oven works ...	30,732	20,848	17,438
Producer gas and carbonising works (bone and coal) ...	15,705	12,880	10,265

Total ... 269,114 245,990 233,664
It will be noted that a substantial increase has taken place, and this is the more satisfactory as, in consequence of the enhanced price of nitrate of soda, there will be a larger demand for sulphate of ammonia, in which the unit of ammonia is considerably cheaper than the equivalent fertilising unit in nitrate of soda.

In view of the high prices for all nitrogenous fertilising material, it is more important than ever that all waste substances should be added to the manure and compost heap. The labour of clearing up round the barns and stables will be amply repaid in the conversion of all useless material into manure.

Atmospheric Nitrogen.

On the Continent the industry of extracting nitrogen for agricultural purposes from the atmosphere continues to make substantial progress. The material, nitrate of lime, is now being regularly manufactured in Norway, and so successfully that the results are stimulating the erection of fresh factories for the same purpose. It is reported that one of the most important chemical companies in Germany has arranged to erect in Bavaria plant at a cost of over a million pounds for the production of this new and valuable nitrogenous fertiliser. We shall welcome the introduction of the material on this market, in the hope that before long it will be manufactured in the United Kingdom.

Prices of Nitrogen-Units.

The Engineering Supplement of the *Times* has the following note on this subject:—

An analysis is given in the *Journal des Usines à Gaz* for September 5 of the respective values of the unit of nitrogen in ammonium sulphate, calcium cyanamide, and calcium nitrate to show the possibilities of the competition likely to arise from the conflict between the sulphate of ammonia derived from gas, the Chile nitrates, and the new compounds of nitrogen obtained by means of electric action. The total annual production of nitrates from Chile, with an average of 16.5 per cent. of nitrogen, may reach 1,567,000 tons, each kilogram of nitrogen in which is valued at 14½d. The estimated amount of ammonium sulphate produced annually by the chemical industries varies from 500,000 to 600,000 tons, and the kilogram of nitrogen in this salt is set down at 14½d., taking 21.2 per cent. of nitrogen throughout. In calcium cyanamide the value of the nitrogen may range from 13½d. to 15½d. per kilogram, while in calcium nitrate, under certain conditions, the kilogram of nitrogen may be produced at 12½d. Of course, the relative cheapness of the new nitrogen products will depend entirely upon the use of electricity generated by water power at very low rates. (A kilogram is about 2 lbs.)

If a material is offered as a fertiliser at a price which appears temptingly low, it should be scrutinised with more than usual care. As a rule, high grade fertilisers are the cheapest and best.

Disastrous Fire at Basic Slag Works.

We regret to record that on last Wednesday night the works belonging to the Chemical Works, late H. and E. Albert, at Frodingham, North Lincolnshire, were completely gutted by fire. At this factory the firm grind the basic slag supplied by the Frodingham Iron and Steel Company into the well-known fine powder, used as a fertiliser. The flames, fanned by the north-west wind, spread rapidly, and the principal buildings being of wood, the fire quickly demolished them.

Perhaps, fortunately, there was no available water supply to extinguish the fire, and, therefore, the stock of basic slag in the warehouse was not injured to any serious extent.

We are advised that rebuilding will be begun with the least possible delay in order to cope with the demand in the district.

Sale of Nitro-Guano.—Fine and Costs.

At the Norton (Malton) Police Court, on Saturday, Arthur R. Furniss, 37, Great Tower Street, London, was charged with selling to Thomas Martin Beswick, of Potter Brompton, 4 tons of guano under a false description.

Mr. J. R. Proctor, Beverley, prosecuted on behalf of the East Riding County Council, and said that the case was of immense importance to agriculturists.

From the evidence it appeared that Mr. Beswick took up the agency of the Nitro-Guano Company, and received 4 tons of nitro-guano, for which he paid £3 10s. per ton. The guano was guaranteed to contain from 2 to 2.5 per cent. of nitrogen, 5 to 7 per cent. of soluble phosphates, and 1.50 to 2 per cent. of insoluble phosphates, whereas it only contained 1.08 per cent. of nitrogen, 3.69 per cent. of soluble phosphates, and 4.73 per cent. of insoluble phosphates.

The Bench fined defendant £5 and costs.

To renew an old strawberry patch, plough away from each side of the row, leaving it but six to eight inches wide. Thin out the plants in the row, leaving only the young and vigorous, and pull out all the weeds. When this is done, clean out the middles by the use of a cultivator with narrow teeth.

Tree Leaves as Fodder.

The great scarcity of grass and other green food, in consequence of the exceptional drought of the present season, must be a serious fact for many farmers, who will find themselves compelled to incur a heavier outlay than usual in artificial foods in order to maintain their stock in a satisfactory condition.

Catch crops are being resorted to as much as possible, so as to get a provision for the late autumn, winter, and spring to help out the small stock of hay and roots.

Attention may also be directed to the advantage of utilising the leaves of trees. They furnish a feeding material which is not to be despised, good, either in the green or dry state, for animal consumption.

According to a report in the *Journal d'Agriculture Pratique*, their richness in food constituents compares favourably with that of grass, and when dried they are equal to good hay.

The foliage of almost all trees can be employed, that of the elm being particularly excellent, but the leaves of nearly all trees—the ash, the lime, the acacia, &c.—can be gathered and fed with advantage to stock.

The walnut tree should, however, be avoided, and the leaves of the thorn and alder should be dried before given to animals, as they contain an irritant, which disappears during the drying process.

For the purpose of drying, the leaves should not be exposed to bright sunshine, but should be allowed to gradually dry off in the shade. If the operation takes place in full sunshine the leaves become brittle and crumble up, whereas in the shade they retain their texture and can be easily gathered up.

They should be stored in a dry place, otherwise they are liable to become mouldy and lose their value.

They can be used through the winter with advantage, and combined with other substances constitute an agreeable and nutritive food.

Mixed with chaffed straw or with grain they form a good ration which horses soon become accustomed to and eat with avidity.

Milking cows are said to do well on them. The dry leaves should be soaked for half an hour in warm water, and then mixed with a little bran or cake. The cows eat the mixture readily, and it is found to exercise a favourable influence in the yield of milk.

It may be noted that small animals—rabbits, for example—eat the leaves of trees with almost as much relish as they do a green crop, which seems a natural indication of the nourishing quality of leaves.

So that in a season of drought such as we are passing through it is wise not to neglect such a source of additional fodder.

When Plants take Nutrients.

Regarding the nutrients of plants, Messrs. Wilfarth, Rouner, and Wimmer (as reported in "Landw. Vers. Stat." Germany) made pot and field experiments which were conducted for several years to study the quantities of fertilising materials taken up by different crops in various stages of growth. The work is described and the analytical data secured are reported in tables. Barley, spring wheat, peas, and mustard

were found to have taken up the maximum quantity of fertilising materials at the time of blossoming, or at the beginning of fruit formation. With the exception of phosphoric acid, part of this quantity of food elements returned to the soil as the crops approached maturity, and this movement seemed to be dependent upon the supply of available plant food. As determined for potash, relatively larger amounts returned to the soil when the supply was inadequate than when it was sufficient. Potatoes continued to take up plant food until ready to be harvested and a return movement to the soil did not take place. When the food supply was normal the quantity of dry matter increased until the plants were ripe. Starch also increased up to maturity in all plants except mustard, in which fat is substituted for the starch grains.

The Object of Ploughing.

The object of ploughing may be said to be fourfold.

1. The loosening of the soil.
2. The stimulation of bacterial activity.
3. The destruction of weeds.
4. The burial of manure.

The first is essential in order to prepare a good seed bed and to enable the plant roots to penetrate more deeply, so that they can get nourishment and moisture from lower strata of the soil. A further advantage of ploughing is that it opens up the soil to the atmosphere, the oxygen of which changes the character of some injurious combinations, and renders it available for food fertilising material of a slowly-soluble character. Not less important is the improvement of the moisture conditions of the soil caused by the loosening of the soil by ploughing. A friable soil allows the water to percolate down, and on the other hand the fine soil is able to retain more moisture, which otherwise drawn from the lower soil by capillary action, would be lost by evaporation.

Land must not be ploughed in a too-wet condition; otherwise it cakes still more.

An important benefit of ploughing is the stimulation of bacterial life. This subject is now engaging more and more attention, and much remains to be cleared up, but it is certain that light, warmth, air, and moderate moisture are all beneficial, and all these conditions are promoted by ploughing.

Cover Crops in Orchards.

The importance of a winter cover for orchard lands that are given clean culture during the summer should not be overlooked, reports the Maine Experimental Station. The advantages are:—

1. The cover crop utilises soluble fertilising material which would be wasted, and prevents washing of the land.
2. Adds humus to the soil.
3. Protects roots during the winter and holds the snow.
4. Helps to dry out the soil in spring, thus permitting earlier working of the land.
5. In some cases adds directly to the store of nitrogen in the soil, as when leguminous crops are used.
6. Growth of trees late in the season is checked.

Geological Definitions.

The *Primitive Earths* are four: clay, sand, lime and magnesia.

Clay is called by geologists alumia, alumine or argillaceous earth.

Sand is called siliceous, silica, siliceous earth, or earth of flints.

Lime, as it exists in the soil, is commonly called calcareous earth. The term calcareous is not properly applied to any soil, unless it will effervesce with acids.

Each of these earths answers a determinate and specific purpose in the economy and growth of plants; and the perfection of soil lies in the mixture of the whole.

Base of the rocks.—The primitive earths which enter into its composition.

Vegetable matter.—All vegetable substances in a decaying or rotten state.

Animal matter.—All animal substances in a putrefying state.

Organic matter.—A term applicable to both animal and vegetable substances in a putrefying state.

Vegetable mould.—The earthly remains of vegetable substances which have either grown and decayed on the soil, or have been conveyed thither in the progress of cultivation.

Loom is a combination of vegetable mould with the primitive earths.

Marl is a substance consisting of lime with a small portion of clay, and sometimes of peat, with a marine sand and animal remains. It is useful as manure, and is distinguished by *shell clay* and *stour marl*.

Increasing the Yield.

Expenses are reduced when the yields are increased because in many instances it requires but little more labour to secure a large yield than a small one, and expenses are also lessened when fertilisers are used to increase the yield, because the cost of the fertilisers will be more than regained as well as assist in securing greater results from the labour. Labour cannot alone make a crop. The soil must be fitted to derive the largest possible product by the proper use of plant food, which permits of the application of labour to the best advantage. Small farms can be made to largely increase their yields more easily and rapidly than large areas, because the manure or fertiliser can be concentrated instead of spread over a wide surface at an increased cost of labour for men and teams; hence, proportionately, as the yields increase the expense decreases.—*American Fertiliser*.

Experiments show that rye and winter wheat will germinate in a soil the temperature of which is 32 deg.; barley, oats, flax, peas, and clover will sprout at 35 deg.; turnips the same; carrots at 38; and beans at 40 deg. If these experiments have been carefully conducted they demonstrate that some plants will sprout even below the freezing point.

A test of the value of the new inoculating material for leguminous plants was conducted by Professor Gilechrist at Cockle Park on beans, on peas, and on alsike clover. Every care was taken in the conduct of the test, but the results do not show at present much advantage from use of the cultures.

'CAKENUTS'

RAPID FATTENING AND DAIRY CAKE,

Manufactured by a patent process in "NUTTED" Form, thereby saving LABOUR and MONEY.

No WASTE or DUST.

The cheapest way to produce Beef or Milk is by Feeding Cakenuts on Grass.

What practical Farmers think of "CAKENUTS":—

Mr. JOHN RAMSEY, Nupend Farm, Horsley, Nailsworth.

"There is no waste whatever in taking the proper quantity out of the bags from time to time, compared with using the Cake Crusher. For Feeding the Cattle on pasture, the Nuts cannot be excelled, as every bit is picked up by them."

Mr. JOHN DANIELL, Bowcott, Dursley.

"It is the cheapest way of Feeding Cake on Grass. No boxes are required, as the cattle will clear up every bit off the grass."

Mr. EDGAREDDOLLS, Woodshaw Farm, Wootton Bassett.

"If you do not want to bring the Cows in, put the Cakenuts down on the Grass, and they will pick up every Nut without any waste whatever."

THE

"BIBBY" CAKE

IN THE FORM OF

"CAKETTES."

"Send me two tons of 'they nobbs same as Mr. Brown is a using,' was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism; and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good"; it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuses to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION IN THE PUBLIC FAVOUR.

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it:—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply:—those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

RICK-COVERINGS OLD AND NEW.

In olden times no one entertained the thought that either hay or corn stacks could be covered with anything but thatch. The thatcher was quite a famous man in the parish, especially in harvest time, being often sought after by half-a-dozen farmers at once. The art of thatching ricks does not seem a very difficult one to acquire, yet it is perfectly well known that very few of the rural labouring class ever attempted to master it. The cause, no doubt, was the want of any very active demand for the thatcher's services after haying and corn-harvesting had terminated.

If we go back far enough it is true we shall find that almost all the dwelling houses in rural parishes were thatched, the repairs and recoverings of which then gave work for the winter. But tile manufactories and slate quarries have long since been resorted to in preference not only in the interests of economy, but as a safeguard against those terrible conflagrations which sometimes depopulated an entire street in a few hours in olden times.

The agricultural literature of the last century deals very prominently with the evil of ricks after being made in time of harvest, having to remain a long time exposed to the elements, owing to there being an insufficiency of hands to thatch them.

But agricultural engineers have relieved farmers of their worst anxieties in this matter both by supplying them with thatch making machines to save the heavy manual operations, and corrugated iron roofing sheets, by adoption of which straw thatch and the art of laying it can be dispensed with altogether. Both inventions have long since been found of great value,

the former to ensure expedition as well as to save labour. Often, since so much arable land has been sown down to grass, farmers find the whole of their straw consumed at the end of spring and none left to make thatch of. In such cases a day's thrashing has been given to the first fruits of the new crop and the machine set in motion to convert the fresh threshed straw into thatch. But straw has become so valuable as fodder for stock that many deem it wasteful either to employ it for this purpose or even to litter cattle with it.

A set of iron roofing tiles with due care lasts a man's lifetime, so that those who can afford the capital of laying in a stock the outlay would be handsomely repaid in the long run. This appears all the more evident when it is considered that any common labourer can hinge the iron adjustments, one or the other, so as to cover the entire rick in perfect security in about twenty minutes after it has been erected.

But the best of all devices to deal most effectively and economically with the weighty matter is the erection of lofty corn sheds, spacious enough to contain the whole of the corn grown, so that as soon as there has been sufficient conditioning in the field, it can be carted into them in perfect security. A light corrugated iron roof fixed on poles in the front need not be a costly erection. Many a renting farmer has seen it to be necessary to erect one in recent times.

A Petition for Cheaper Railway Fares for Exhibitors, &c., at Shows.

It will be remembered that at a conference of the Federation of Lancashire Agricultural Societies, held on the showyard of the Royal Agricultural Society of England, at Derby, the following resolution was unanimously adopted:—"That the sub-committee appointed at our last meeting, draw up a petition, asking the various railway companies 'That facilities now given to delegates and representatives at conferences and other meetings, anglers, golfers, &c., of travelling at cheap rates be extended to exhibitors and official attending shows.' This petition has now been drawn up and is being circulated for signatures. It requests that all exhibitors and officials attending shows, be allowed to travel at a rate not exceeding a fare and a quarter for the double journey, and draws the attention of the Railway Clearing House Committee to the following points:—

(1) That some railway companies already allow these concessions to exhibitors residing within a certain radius from the showground, and that others grant the privilege only from certain of their principal stations, and that, in consequence, exhibitors living in country districts are placed at a disadvantage by having to travel at ordinary rates.

(2) That many railway companies grant no concessions at all, except by certain trains which run in the early part of the afternoon, thus conferring no benefit whatever upon exhibitors.

(3) That exhibitors are compelled to consider the cost of attending shows, and, if they were enabled to travel at reduced fares, many would attend to see their stock judged, and the influence and prestige of exhibitions would be enlarged.

(4) That with regard to the issue of special tickets, the greatest care would be taken to prevent any misuse of these privileges, and the various secretaries would pledge themselves to adopt any reasonable means which may be suggested by the railway companies to secure the successful carrying out of the scheme.

The committee of the federation hope that every secretary who considers the interests of his society, exhibitors, and show officials generally, will recognise the importance of the concessions asked for, and will endeavour to obtain as many signatures as possible to the petition. United action is absolutely necessary, and as the Kennel Club will, it is anticipated, present to the Railway Clearing House their petition at the same time, the interests of all classes of exhibitors may be said to have been considered.

The federation rely especially for assistance from the Royal, and County Societies, but trust every district Society and Fanciers' club in England and Wales will send its quota of signatures, and thus show its sympathy with a movement the objects of which, if obtained, would benefit not only exhibitors themselves, but the shows at which they exhibit.

Mr. M. Birtwistle, 8, Garden Street, Ramsbottom, Secretary of the Federation, requests us to ask any secretary who has not received a copy to communicate with him, and also to express his thanks to all those societies who have (although the petitions were only dispatched a few days ago) already written expressing their appreciation of our efforts, and best wishes for a successful issue.

British Dairy Farmers' Association.

A meeting of the Council of the British Dairy Farmers' Association was held at 12, Hanover Square, London, W., on Wednesday, Mr. S. P. Page in the chair, when twenty-nine new members were elected.

Upon the recommendation of the Finance and General Purposes Committee cheques to a total of £273 13s. 6d. were passed for payment, and it was reported that in the five weeks ended Sept. 1 288 cwt. of fresh milk were imported into the United Kingdom, being the first consignment received since March 1. In the same year the imports of cream amounted to 347 cwt., against 483 in the corresponding weeks of last year; of preserved milk 572 against 422 cwt.; and of condensed milk 78,191 against 81,870 cwt.

The council had before them a statement of entries for the forthcoming dairy show, the most gratifying feature in which was that this year there is an increase in the cattle entries, totalling 210 compared with 182 last year. In the other departments the entries are very satisfactory, while in the milkers' contests the competitors number 119, of whom the great majority are women and girls. Owing to the large number of competitors in the buttermaking classes the council decided to subdivide the classes, and to offer extra prizes. It was also resolved to form a special class (No. 101) for cows of any breed or cross, to be used for the milkers' contests during the show. If desired these cows can be offered for sale by auction on the last day. There is no entry fee, and the prizes offered are £10, £5, £3, and £2.

On the recommendation of the examiner of candidates for the society's diploma and certificates, the following awards were agreed to:—Diploma to Mr. Victor L. Yates and Mr. J. W. Taylor; teacher's certificate to Miss Iris L. Bull; butter and cheddar cheese making certificate to Mr. Wilfrid Sadler, Miss Annie Wrote Leighton, Mr. George Ferry, Miss Ethel Morris, Mr. A. Gordon McKenzie, and Mr. C. Fenton; cheddar cheese making certificate to Miss Nellie Yeld; butter making certificate to Mr. A. G. Walker.

Notes of the Week.

An important deputation of Lincolnshire tenant farmers waited on Lord Carrington on Wednesday.

It was an interesting episode, and served a useful purpose.

It afforded the Minister of Agriculture an opportunity to expound the views of the Government on two subjects which are agitating the agricultural mind—

The Land Tenure Bill and the home-bred *versus* foreign bred meat for the Army.

The Minister's statement with regard to the first subject was quite satisfactory to the deputation.

The Government recognise the urgency of the Land Tenure Bill and will do their best to pass it without changes weakening its efficiency during the Autumn Session.

On his position towards the Army meat question the Minister cannot be congratulated.

It appears to be his opinion that even if the War Office contracted for home-bred beef they would be supplied with foreign-bred meat.

Does not such a statement come dangerously near to suggesting fraudulent dealing against the meat-contractors.

Things are coming to a pretty pass in this country when Government contractors cannot be relied on to execute their contracts in an honourable manner.

One would like to hear what the contractors have to say on the subject. They would certainly repudiate such an insinuation.

After a summer which will be long remembered for its long spell of sunshine and drought, rain has at length fallen over the greater part of the country.

"Better late than never" may be said. If it had fallen a month ago, its beneficent action would have been much greater.

But still we must welcome it as a boon and a blessing to thirsty crops and thirsty stock. It brought relief to many an anxious farmer.

And in its train has come the first whiff of real autumn, reminding us that the year is on the wane.

The trees are beginning to assume the variety of tints which produce such a charming effect.

Another sign of the time of the year is the harvest festivals, which seem to be taking the place of the old-fashioned harvest homes.

The harvest home on the farm was associated with good cheer and good fellowship between the farmer and his men.

All rejoiced together on the home-bringing of the last sheaf of golden grain, but times are changed. The rural districts have lost much of the old jollification.

Church harvest festivals are universal, and serve as a useful reminder that there is another side to Nature besides the purely material.

And they constitute a channel through which much charity should flow. The flowers and fruits with which the churches are decorated for the occasion are distributed among the poor and the hospitals.

The money collected is devoted to some charitable purpose. We hope many collections will be allocated to the funds of the Royal Agricultural Benevolent Institution.

Surely it is the most appropriate recipient for harvest festival collections.

Agricultural politics are quiet—members of Parliament are holiday-making and farmers are harvesting.

During the coming long evenings, many of us might discuss with advantage the requirements of agriculture from a political standpoint.

"If you wish for peace, prepare for war," is an old and true saying.

Similarly, if we want changes in the laws relating to agriculture, we must prepare for the political campaign.

We must marshal our voting forces, and make our views known with no uncertain voice, both as to what is wanted and what we should protest against.

Medical men are lifting their voices against the practice of rapid motoring.

It is a craze which involves blindness to the beauties of Nature, and develops a selfish want of consideration for the convenience of others.

Sir James Crichton Brown says that the confirmed motorist becomes sluggish in intellect and excitable in temper.

And worse still, that it tends towards homicidal mania.

It certainly does sometimes excite homicidal feelings in the mind of the pedestrian whose safety is ignored by the motorist.

Visitors from the town to the country are apt to have hazy notions about trespassing.

Elated with the pleasant feeling of freedom from town life, they wander at their own sweet will just where they like.

Occasionally they catch a tarter. Three visitors from Yarmouth, found by a farmer in his turnip field trying the flavour of a succulent root, were surprised at the stern demeanour of the farmer.

He offered them the choice of a prosecution for trespass, or a subscription to the Yarmouth hospital.

The institution benefited to the extent of a guinea, and for the future the young men may be trusted to restrain their love of similar ventures.

In a certain district of Germany foot-and-mouth disease has broken out in a severe form, and the Government have prohibited dances and balls in the neighbourhood.

People are wondering what can be the connection between the two.

The German gypsies are still with us. They are hustled about from one part of the country to another.

Finally, their presence near Eccleshall created such a panic that the police raided the gypsy camp and arrested seventy of them.

The difficult problem is what to do with them. They should not have been allowed to enter the country.

And should be re-exported to Germany at their own cost, or, in case of necessity, at the country's expense.

Three horses drawing a reaping machine on the Ash Tree Farm, near Ebechester, county Durham, fell down a disused pit shaft that had been timbered and covered with soil. The machine had been over it once safely. Fortunately the pole of the machine snapped, or the machine and the man in charge might have followed the horses, which were killed.

A strong feeling has been expressed by many interested in dairy farming that the time has arrived when some recognition should be made of the valuable services so long and so ungrudgingly rendered to that industry, especially in its relation to education, by Mr. George Gibbons, of Tunley. It is proposed that this recognition should take the shape of a personal presentation, and a committee, of which Sir C. T. Dyke Acland, Bart., is chairman, has been formed to carry this desire into effect. Subscriptions will be received by the hon. treasurer, Mr. T. Cumberland, Birmingham and District Counties Bank, Newport, Mon.

The prospectus of the Agricultural Department of the University College of North Wales, Bangor, for the session 1906-7, shows that the college is continuing its good work of agricultural education in all its branches. The session consists of three terms—autumn term, spring term and summer term, and the terms for 1906-7 have been fixed as follows:—Autumn term, Tuesday, October 2, to Wednesday, December 19; spring term, Tuesday, January 8, to Wednesday, March 27; summer term, Thursday, April 18, to Saturday, June 29. Students will be registered on Tuesday, October 2, from 10 a.m. to 1 p.m., and from 4 to 6 p.m.; and on Tuesday, January 8, 1907, and Thursday, April 18, 1907, from 10 a.m. to 1 p.m. Further details can be had on application to the secretary of the college.

THE FARMERS' DIARY.

TUESDAY, SEPTEMBER 25.—Great Grass Cattle Show at Haverfordwest, Hay, Easingwold, and Burch. Chester Cheese Fair—Horse Fairs at Cambridge, Market Rasen, Abergavenny, Bungay, Marsden, Chesterfield, Chertsey, Spalding, Stourbridge, Pickering, and Howden. Sheep Fairs at Spalding, Pickering and Melton Mowbray.

WEDNESDAY, SEPTEMBER 26.—Thornton's Sale of Shorthorns at Lifford—Richardson's Sale of Shorthorns at Holbeach—Winsleydale Sheep Breeders' Sale at Northallerton—Lord Chichester's Sale of Southdowns at Falmer—Eve's Sale of Shire Horses at Holwell, Beds.

THURSDAY, SEPTEMBER 27.—Great Sale of Aberdeen-Angus Cattle at Birmingham—Sale of Lincoln Red Shorthorns at Oundle—Sale of Herefords at Glenusk—Sale of Devon Cattle at Harwell Junction near Wilton—Wicham's Sale of Shire Horses at St. Brevard Fair—Ashbourne Shire Horse Society's Show.

FRIDAY, SEPTEMBER 28.—Salter's Great Agricultural Sale at Holt, Norfolk—Great Sale of Romney Marsh Sheep at Ashford, Kent—Thornton's Sale of Sheep at Chipping Norton—Vidler's Sale of Milk Cows at Northiam, Sussex—Sexton's Horse Sale at Peterborough—Stoford Fair—Lichfield Horse Sale.

SATURDAY, SEPTEMBER 29.—Marazion Agriculture Fair—Wincanton Agricultural Fair—The Minor Fairs held on this, Michaelmas Day, are too numerous to detail, but many of them are mixed, and considerable business in live stock and produce.

MONDAY, OCTOBER 1.—Horse Sale at Rickmansworth—Great Sale of Store Sheep at Preston—Entries to be sent in for the East Berkshire Horse Show.

TUESDAY, OCTOBER 2.—Entries for the Maiting Bailey Competition should be sent in by this date. Sexton's Sale of Shire Horses, Derby—Thornton's Sale of Shorthorns at Carlisle—Lloyd's Horse Sale at Wrexham—Great Agricultural Sale at Salisbury—Moreton-in-the-Marsh Horse Show.

The Holbeach (Lincolnshire) September Horse Fair, one of the oldest in the country, will take place on Wednesday, when the supply was smaller of all sorts of animals than usual. Foals made £6 to £16 each. Good cart horses ranged as high as ever, and were in demand, £70 to £80 being realised for really good animals. Mares and foals were not, as a class, in good condition.

NOTE.—The figures for the current year are approximate only.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

IT is a healthy sign that exception is being taken in many places to the extravagant action in Harness Horses and Hackneys which was at one time so fashionable, and which is yet so fashion able in certain circles. I would not be misunderstood. By extravagant action I do not mean high action, but that forced action which knocks a horse completely off his balance. If a careful inspection is made of any ordinary class of single-harness horses from a place where their action can be fairly seen and judged—not from the grandstand, for a sideways show is of no use at all—how few will be seen to go straight. They bend their knees up to their curb chains very nearly, but they throw their fore feet about in ungainly fashion, and put them down anywhere. This is, to a very great extent, the result of over-training. The idea is to get a horse to step higher and higher and still higher, without any thought either to his balance or his rate of progress. Then, when a horse is sent round a ring at anything like a pace, he is all abroad, his hind legs are away from him, and one could wheel a burrow between his hoofs.

THE great thing that is wanted in a harness horse is balance. This was necessary in the old days, when the only way of getting about in many parts of the country was by driving. A horse that is not nicely balanced is working against himself, as it were, and expends as much energy in going five miles as should take him ten. And in the present day, when the high-priced harness horse is a luxury kept only for show—by which I do not mean the showyard—balance is equally essential. Without balance there can be no style, and the stylish horse, level in appearance, with true and nicely-balanced action, is the one that commands most money.

IT is an old saying that no Englishman would admit that he had never driven a gig, this probably being a survival of the times when horses were the only means of locomotion. The onlooker at our agricultural shows during the last two or three years must have been impressed with the fact that a great many Englishmen—and dare I say it? some English ladies—drive very badly. One would naturally expect to see in a showing finished coachmanship, but with a very few notorious exceptions we do not. Men sit back and drive in a "pull-devil-pull-baker" style, and with a total disregard to the "handling" of a horse's mouth, which is anything but pleasant to behold, and there is no getting away from the fact that a great number of horses are driven very much about the pace with the effect that we see the shafts bending and the horses reeking in a way which was unknown a few years ago.

I PUT all this down to the training. A horse is excited, and then strapped up tight with a big bit in his mouth, which he dare not face properly, and then he is supposed to go. Some weeks ago I went to see some Hackneys, and one after another was turned loose in the yard. And when they settled how they did "go"—stepping up and stepping out in much better style than when they were strapped and bitted up. I think the Hackney men themselves are to blame for much of the criticism which has fallen on the Hackney, and if they were to cultivate a more natural style of action than prevails at present, there is reason to believe that the breed would be more appreciated.

IS trotting a natural pace for the horse? I question it very much. And my reason is that whenever a Hackney whose recognised pace is the trot is turned out loose he takes the earliest opportunity of breaking into a gallop, notwithstanding the fact that he can get over the ground much quicker in a trot. This by the way however. What I should like to see is more style and balance in the Harness classes, and, if not asking too much, a little more artistic driving.

SOME Hackney exhibitors are obdurate in sticking to the cruel practice of "figging" their horses for show purposes, yet it is very

seldom that one hears of a prosecution at the hands of the Society for the Prevention of Cruelty to Animals on this score. I take leave to think that more than one Hackney that was shown at the Crossgates show a short time ago was "figged," yet the inspector for the Society for the Prevention of Cruelty to Animals passed by on the other side, and selected Mr. Wellburn for a prosecution on the ground of cruelty in riding a lame horse in the jumping competition.

THE horse in question was the General. I know him well, and ever since I have known him he has had a callous fetlock joint. This naturally interferes with the liberty of his action, and he would not be a pleasant ride on the road, but to all intents and purposes he is practically sound. The inspector had great stress on the horse being bandaged. When the ground is hard, and when there is any doubt about a horse's sinews, a sensible man always bandages his horse with cotton wool bandages, on the principle that it is easier to prevent a strain of the back sinews than to cure one. There being a sensible bench of magistrates to hear the case it was dismissed, and very properly so. Incidentally it was stated that the General, who has been a winner at the Royal and the Yorkshire on several occasions, has won £1,000 in prizes during the last six years. Men as a rule don't run a risk with a value horse like that.

IT was stated in evidence that the horse was very lame, and that it was his pluck that made him jump so well the first turn round. Which is

look at as the General's, which is the point I want to emphasise.

THE Seaham Harbour Stud Company had a rare sale on Wednesday, and a record price for a year. The Seaham sale was made. This was a chevron fill, for which Mr. Marshall, of Stranraer, gave 110 guineas. I believe the previous record was for a bay filly by Casterlogh, for which the late Mr. R. P. Petch, senior, gave 100 guineas. The sixty horses sold made £2,313, or a fraction over £38 10s. each.

THE LOOKER-ON.

The Burstwick Hackneys.

Very poor prices were realised for the Hackneys belonging to Mr. D. R. Sowerby, Burstwick Stud Farm, Hull, sold by auction on Thursday. The foundation mare of the stud was Bounce, who was never beaten as a three-year-old, and finished up a wonderful showyard career by winning a first prize as brood mare at the Lincolnshire Show when fourteen years of age. The highest priced brood mare proved to be Bouncing Girl, by Champion Gaymeyer—Bounce, who was purchased by Mr. R. Lucas, Peterborough, at 25 guineas, her filly foal by Nonesuch going to the same gentleman at 18 guineas. Three of the four stallions were sold. Ship, by Gentleman John—Bouncing Girl, and Gentleman George, by Langton Performer—Bounce, were both purchased by Mr. Bruce, London, the destination of both animals being South America. Nonesuch, by Gentleman John—Meg Merriles, made 51 guineas, to Mr. Gaskill, Stormile. The six

simple nonsense. I have ridden some of the boldest and biggest jumpers that ever crossed a country, and I have invariably found that if a horse was suffering pain anywhere, he either jumped short or refused. If a saddle even pinches a horse, he will not jump freely in the hunting field, let alone in the show-ring, and the chances are that he will not jump at all.

SOME seasons ago I rode a horse with callous forelegs. He had belonged to a well-known hard-riding man, who thought he had broken him down, and sold him to a large farmer and horse-dealer. The horse was turned off for a time, was then found capable of doing slow work, and the shepherd rode him round the farm twice a day to see the sheep, &c. This went on for a couple of years, and then the horse came into my hands for a season. He was an old horse and had lost a bit of his pace, and he was not a very pleasant hack, but he could go the nearest way. There was never any necessity to pull out of the direct road to look for gate or gap if he could put his nose in the place in front of him, and he could jump a gate, and did with me more than once, as easily as a two-foot rail. If it was a case of water—12 ft. or 2 ft. was all the same to him. Now it may be allowed for the sake of argument that a resolute horseman with a pair of sharp spurs and moderately good hands can force a horse over a fence whether he will or not—it is not my opinion, but that is no matter. But a man can scarcely do that with a broken stirrup-leather in his hand, and I rode this horse in a sharp half-hour with one stirrup, during which time he jumped big timber and big water. And his legs were quite as bad to

saddle and harness horses averaged £30. Mr. Hulton, Westram, Kent, gave 53 guineas for the gelding Miracle, by Ship, and Mr. T. Troop, Cottenham, 51 guineas for Flashlight, by Topper. The ten geldings averaged £28 17s. 6d.

Good Prices for Hackneys at Crewe.

Some good prices for pedigree Hackneys were obtained at Messrs. Frank Lloyd and Son's sale at Cheshire Repository, Crewe, on Thursday. Mr. W. Foster's (Mel-Valley stud) six show ponies commenced the sale. Mr. Edley Catch of the Season, chestnut mare, five years old, under 13 hands, was sold for 230 guineas to Mr. Alexander Gimmell, Ayr; Mel Valley Treasurer, bay gelding, five year old, 13 hands 2 in., 100 guineas, to Mr. Forbes, Middlesbrough; Mel Valley Gold Piece, brown gelding, five years old, 13 hands 3 in., 130 guineas, to Mr. Whitaker, Edwinstrey; and Mel Valley Sneezer, bay gelding, five years old, 13 hands 3 in., 100 guineas, to Mr. Van de Poel, Brussels. The average for the six worked out at no less than £129 13s. Fyde Zebra, chestnut mare, 15 hands 2 in. was bought for 135 guineas by M. Van de Poel, Brussels; Sycamore, chestnut mare, 14 hands 2 in., 210 guineas, by Mr. Mills, London; and Fyde Forester, five years old, 13 hands 2 in., 160 guineas, by Mr. Edmunds, New York, the whole of Mr. Sykes' stud being sold at prices averaging £34 each. Sunny Jim, bay pony, four years old, 13 hands 1 in., was sold to Mr. Foster for 131 guineas; Tissington Promise, five years old, 13 hands 2 in., 160 guineas, to Mr. A. Watson, New York; Wigginton York, chestnut gelding, seven years old, 14 hands 2 in., a winner of 250

prices, 250 guineas, to Mr. Douglas Grand, New York; and Wigginton Gavotte, 195 guineas, and Hunter gelding, Tennis Top, five years old, 16 hands, 120 guineas, to Mr. A. Carr, Brompton. The Hon. Mrs. Ward sent a pair of bays, Amphray and Prince of Naples, which were withdrawn at 340 guineas.

The Seaham Harbour Stud Sale.

The annual sale of pedigree Clydesdale horses, Hackneys, and Hackney ponies, store cattle, &c., the property of the Seaham Harbour Stud, Ltd. (formerly the Londonderry Stud), took place on Wednesday near Dawdon Dene. The stock, which was offered without reserve, comprised sixty head of store cattle and fifty-eight horses, made up as follows:—Clydesdales—ten foals, nine colts, three two-year-old fillies, one three-year-old, and sixteen brood mares; four Hackney and Hackney pony colts and filly foals; saddle and harness—three mares, three three-year-old fillies, three geldings, and one Shetland pony. The sustained excellence of the Stud's produce is exemplified by the number of prizes gained by their animals at agricultural shows throughout the country, and this is in no small degree due to sound judgment and an extensive knowledge of the characteristics of Clydesdales possessed by the managing director, Mr. Robert Brydon, who has for so many years been associated with the Seaham Stud. It has always been the aim of the Stud to handle only the best stock, and in their premier stallion, Silver Cup (11,184) by Baron's Pride—Balmiedie Vesta, they have undoubtedly one of the best Clydesdale stallions living. At the recent Durham County Show ten first prizes were awarded to his produce, some of which were included in the sale.

Mr. E. A. Crow, of the firm of Messrs. A. T. and E. A. Crow, Sunderland, was the auctioneer, and he made a start with the cattle, which were all in fine thriving state, most of them so forward in condition that they can be finished for the Christmas markets. The sixty head were quickly disposed of at fairly satisfactory prices. The animals ranged from £8 7s. 6d. to £17 per head, the latter price being paid by Mr. Mitchell, Driffield, Yorks, for a Shorthorn and Polled Angus bullock. The total sum realised for the cattle was £738 10s., an average of £12 6s. 2d. per head.

The filly foals were the first of the Clydesdales to be brought under the hammer, and one of the number realised the highest price ever paid at the Seaham sale for a filly foal—namely, 110 guineas. After a spirited competition Mr. M. Marshall, of Stranraer, paid this sum for Rosalind, a five months old chestnut by Silver Cup, out of Royal Rose. The same purchaser also paid 60 guineas for another filly, Quail, of the same age. Five of the fillies were purchased by Mr. Best, of Pateley Bridge, Yorks, who altogether secured twenty-two out of the total number of horses sold. The ten filly foals realised £452 11s., an average of £45 5s. per head. The colt foals, nine in number, were next submitted, and realised £463 11s. 6d., an average of £51 10s. Prices ranged from 14½ guineas to 86 guineas, the latter figure being paid by Mr. Best for Homestake, a six months old bay, which has won a first prize on every occasion he has been exhibited. Mr. Best also paid 80 guineas for the colt foal Baronial, which won first at the Northumberland Show at Newcastle, the only time exhibited. The two-year-old fillies brought even prices, the three lots fetching £120 4s. 6d., an average of £40 18s.

The brood mares were a magnificent lot of animals, and Mr. Best paid 105 guineas for Royal Rose, the foal Rosalind's mother. Thus the pair realised 215 guineas, and represented the highest price paid at the sale. Royal Rose is in foal to Silver Cup, and has won several first prizes. Another beautiful mare, Geranium, winner of a long list of prizes, brought 69 guineas, this sum being paid by Mr. McDowell, of Glenluce. Altogether the sixteen mares realised a total of £883 1s., or an average of £55 3s. per head. Nine of these animals went to Mr. Best, and four to Mr. Marshall.

The Hackney ponies followed, and the four lots realised £21 10s. 6d., or an average of £5 7s. The harness mares were a smart-looking lot, and the eight animals brought £169 12s. 6d., an average of £21 4s. Prices ranged from 9½ guineas to 26½ guineas, this figure being paid by Mr. Wade, Hawthorn, near Seaham, for Seaham Lady Fern. The three-year-old fillies were sold next, and fetched £63, the three lots averaging £21. The harness geldings and a Shetland pony concluded the sale, which was considered a highly successful one, the total amount realised being £3,052 4s. 6d.

The annual sheep fair at Ilkley took place on Wednesday, when the number of sheep on offer was much larger than usual, but trade was only slow. Half-bred ewes made 12s. to 50s., long ewes 25s. to 35s., Scotch ewes up to 25s., half-bred lambs 25s. to 30s., and cross-bred up to 35s. per head.

Notes and Jottings.

A GENERAL though not excessively heavy rainfall has been most welcome after the long summer, which came to a climax some three weeks ago, and the prospects of the sheep keeper are brighter. The weather had, however, got a severe hold on the root crop, and in many places it will never fully recover. Still there will not be the great failure that at one time threatened, and not since deemed probable in some districts. It is not surprising, considering how severely the root crop was hit, that prices for stores have not been maintained; and it is quite possible that the shortened crop will cause many to hurry out their sheep during the early winter, and possibly make the mutton trade a little slower during that period, though it would be made better for those who can keep them until spring.

MUCH depends upon the weather during the next few weeks how the catch crops will be established before winter, and they will have a

able to keep clearly ahead, but undoubtedly we have advantages that will give us first call for some time to come, although the sheep stock in other countries is gradually grading up. The most pleasant features of Messrs. Wright's sale are that it indicates what a strong desire there is on the part of breeders in other countries to get our sheep; and also that perseverance over a long time gets its reward.

A VERY instructive lesson will be learned by watching how Messrs. Wright will set to work to get together a new flock, for presumably such capable flock-masters will not leave their old love altogether, though they have jilted her this once. Others who are working up their flocks might do worse than follow on the lines they adopt. The soil of Nocton is unchanged, and one could look confidently to seeing a powerful flock there before long. There are many flocks which have been influenced by the Nocton blood, and with help from these the type of sheep could soon be brought closely to that of the sheep which have left. But it would be regrettable if many of our old established flocks were to be taken away.

THE Romney Marsh sheep which is making such a strong bid for recognition among the Longwools, and is fortunate in having a very keen lot of men steering its interests, holds its annual sale and show under the auspices of its Breed Association at Ashford on the 28th inst., when over 500 rams will face the hammer. Prizes at this show are given for sheep in the wool, and as Argentine buyers are still busy filling in their commissions, they will doubtless appreciate the conditions. The

at a little over £6,000,000. Great Britain was then the great woolen market of the world, but the figures seem very insignificant in comparison with those of to-day. Few probably recognise the length to which woollen threads can be spun. In ordinary Norwich spinning 1 lb. of wool may be extended 13,440 yards, and in superfine spinning to 39,200 yards, in which case a 7 lb. fleece would produce a thread 155 miles in length. Sir John Banks reared a sheep from which 1 lb. of wool was spun reaching 95½ miles.

SALES OF THE WEEK.

Alford.

At Alford Ram and Sheep Fair held on Wednesday there was a good supply, but purchasers were not numerous. Messrs. J. W. Farrow and Sons, of Strabally, secured the prize in the class provided for the Alford Bull Fair Committee for Lincoln Long wool rams, and in the class for ewes Mr. John Wells, of Withern, was placed first, and Mr. W. R. Mountain, of Bilshy, second. Rams made up to 11½ guineas, gimmers to 65s., ewes to 60s., and lambs to 41s. 6d. per head.

Beaminster.

Beaminster Fair, a very popular one in Dorset, was held in beautifully fine weather on Wednesday, when full average supplies of sheep were penned, the total being nearly 5,000. The sheep, on the whole, formed a very excellent lot, both horns and Downs, and the rain which has fallen since the drought broke helped sales materially all round. Consequently trade on the whole was better than had been expected; but prices did not come up to those of last year. Horn couples made 54s.; horn ewes, up to 59s.; horn chivler lambs to 37s.; wether lambs to 37s. 6d.; Down ewes sold up to 46s. 6d.; Down wethers to 37s. 6d.; and Down wether lambs to 38s. 6d. A fair clearance resulted.

Border Union Agricultural Society.

An entry of nearly 2,300 was secured by the Border Union Agricultural Society for their annual ram show and sale at Kelso. Some high prices were paid. Mr. Cameron, Westside, Brechin, gave £200 for a Border Leicester ram shown by Mr. Templeton, Sandyknowe, whose lot of twenty-six brought an average price of £34 4s. Mr. Hume, Barrellwell, sold a score of Leicester rams at an average price of £21 19s., the highest being £70. For one of a lot of twenty-six which realised an average price of £22 15s., Messrs. Smith, Galalaw, got £75. Mr. Mark, Sunnyside, sold fifteen at an average price of £21 3s. 4d., the highest being £60. Lord Polwarth sold thirty at an average price of £21 3s. 4d., his highest being £53.

Caistor.

Upwards of two thousand sheep were forward at Caistor Ram Fair on the 15th inst., and some good prices were realised. The top price for rams (25 guineas) was secured by Mr. Spilman, of Broughton, Mr. Holt, of Broughton, being the purchaser, and Mr. Jos. Spilman, Clixby, was second with 20 guineas. Other lots sold at prices averaging from 4½ guineas to 9½ guineas. Lambs realised from 34s. to 42s.; ewes, 45s. to 55s.; and drapes, 30s. to 40s.

Driffield.

Little Driffield September Fair was largely patronised by farmers and sheep breeders, and a good trade was experienced for the 330 pedigree rams submitted for sale. The rams were from the flocks of some of the best breeders of Leicester, Lincoln, and Oxford Downs. A large contingent of gimmer shearlings and lambs were also on sale, the latter numbering between 3,000 and 4,000. There was only a slow trade at from 36s. to 42s. per head. The following were the ram sales:—

Messrs. Hornby and Wilberfoss submitted twenty Oxford Down ram lambs from Mr. Wilson, Speeton, all of which changed hands at an average of just over £5 each. Mr. J. A. Coulson's (Watton Abbey) Oxford Down ram lambs realised up to £5 7s. 6d., and Mr. H. L. Brooksbank's (Walcot) up to £7. The Leicesters from Mr. W. D. Megginson's (Towthorpe Manor) made up to £12 1s. 6d., and Mr. J. J. Stamper's (Highfield, Nunnington) Leicester shearlings to 11½ guineas. Mr. Thomas Crompton, Westfield, Nafferton, sent thirty from his Lincoln flock (formerly known as Louthorpe flock), and were all disposed of at an average of nearly £11 per head. Mr. F. Dugdale, Nafferton Fold, made his debut as a ram breeder, and sent nineteen Lincoln shearlings, which made the good average of over £9 16s. per head, the highest price being 23 guineas.

At Messrs. Sugden and Pearce-Brown's ring, Mr. Robert Fisher, of Leconfield, offered fifteen of his Lincoln shearlings, for one of which 40½ guineas was paid. Mr. T. Champion's Lincoln made up to 9 guineas, and Mr. Jackson's (Eton) up to 14 guineas.

Messrs. G. W. Clark and Sons sold twenty-three ewes from the Eastburn flock of Leicesters of Mr. E. F. Jordan, the lot making an average of just under £10 per head. The first submitted made the top figure, £18 18s.

Messrs. Cranwick and Cranwick sold ten

LEICESTER SHEARLING RAM.

Winner of many First Prizes in 1905 as a Lamb, and in 1906 as a Shearling. The property of Messrs. J. E. and C. H. SIMPSON, Hunmanby, Yorks.

definite effect on the supply of food in spring. The dry weather has made a late seeding, and in many districts it is difficult to see if the clover and young grasses will stand, or if there are any to stand.

RAM sales are coming to an end, and for some breeds it has been an exceptional season. The Lincoln Longwools have had a quiet time; nor is it the rams alone that have done well, for a large number of ewes have changed hands. The season seemed likely to be noted for the sale of Mr. Dudding's sheep at £1,450, but Messrs. Wright have done a remarkable thing by the sale of their whole flock at a price which shows how keen to buy and how well able to buy are the Argentine flockowners. It is a loss to the country when one of its oldest and best flocks is taken away, but just as from time to time our best racehorses go because of an exceptionally good bid, it is only natural that an exceptional bid should break down whatever sentimental attractions even a flock may possess to its owner.

THERE is one thing that the foreigner cannot buy, and that is that combination of soil, climate, and herbage that has helped to build up the British flocks, which no other country can produce and maintain in a like manner. It would be a mistake to think that the conditions of British farmers are so much better than those of farmers in other countries, that the matter can be dealt with lightly. We want all our advantages to be

Kent sheep has done well in recent years, and will have to be considered in the future, for it has established a reputation from which it is not likely to fall away. There is a very considerable extent of land carrying indifferent sheep which could be profitably utilised by the Kentish, and which is suitable to produce the breed as well as on the land on which it is carried. With wool at a good price it should be more extended in its adoption, for excellent as the Lincoln is in its own county and northwards, somehow the Lincoln as a purebred does not do its best when it comes further south. Here is the Romney's chance. When one thinks how well the two marsh land breeds, the Lincoln and the Kentish, are doing, one cannot but regret that the other British marsh sheep—even if it is Irish—the Roscommon, should not have shared equally in the improvement. In origin, soil, climate, and herbage the Roscommon had every chance, except that it lacked the men to bring it along. It is being improved, but has yet a considerable leeway to make up.

IN view of the enormous quantities of wool imported from Australia and the Argentine at the present time, we give a few figures showing the position of the wool trade in 1930. At that time Germany supplied us with 23,000,000 lb., Russia about 8,000,000 lb., Australasia a little over 12,000,000 lb., the River Plate only 236,750 lb. out of a total importation of 57,000,000 lb. The exports of manufactured woollen goods were valued

pedigree rams, the property of Mr. John Cranswick, Field House, Humnanby, which realised an average of £8 18s. apiece. The highest price was £17 10s. Ten Leicester rams, the property of Messrs. J. E. and C. H. Simpson, Elmwood House, Humnanby, made an average of £9 6s. 1d. each. The highest price was £21. Mr. T. Spink, Highfield House, Humnanby, sold ten Lincoln rams at an average of £9 4s. each, and his near neighbour, Mr. G. Lowish, had to go up to £21 for the pick of the lot. Mr. Joseph Cranswick, Howe Farm, Humnanby, sent up a score of his Lincoln rams. The first ten realised the nice average of £6 14s. each, and the second ten made an average of £9 7s. apiece. The highest price reached was £9 15s.

Hawick.

The Hawick annual ram sale was held in Messrs. Andrew Oliver & Son's auction mart on Wednesday in splendid weather. The numbers forward consisted of 637 Cheviot rams, being 89 more than last year; 248 Leicester and Oxford rams, an increase of 63; and 20 black-faced rams. This being the principal market in Scotland for Cheviot rams, there was a very large attendance of flockmasters. There was a splendid demand for good sheep, and in several cases there was a big rise in the averages, but in some others they were not so good. The highest price of the day was got for a Hindhope sheep, by Mr. Anderson, Edrick Shaws, paid £100, while from the same lot Mr. Elliot, Upper Hindhope, bought one at £88. This consignment of 30 averaged £23 18s. 8d., an advance on last year of £5 19s. 1d. Mr. Elliot, Upper Hindhope, got £60 for one of his 23, and the average for his lot was £13 7s.; whilst 28 from Mowhaugh averaged £18 19s. 4d., top price £62. Several other Cheviots were sold at prices ranging from £30 to £40, but the top price for Oxfords was £9 5s. and for Leicesters £12.

Lincoln.

The annual September Ram Fair at Lincoln, was held in the Cattle Market on the 14th inst., and attracted a large number of dealers and breeders. The supply was large, comprising both long-wool rams and breeding sheep, and prices compared very well with those made last year. Many of the best animals were purchased for exportation. Mr. J. E. Walter sold by auction twelve Lincoln shearing rams belonging to Mr. Henry Paddison, of Branton, at 8 guineas to 17½ guineas apiece. The latter was the top price of the fair. Seven shearing rams, the property of the Sheffield Coal Company, realised up to 15 guineas, the lot going for exportation. Mr. Bayles, of Welton Cliff, forwarded eight shearings, which made 8 guineas to 16 guineas each. Six of the Marchmonts, the Hill rams bred by the trustees of the late Mr. J. Hurdman made up to 12 guineas apiece. Mr. Cartwright, of Dunston Pillar, sent twelve shearing rams, which realised up to 17 guineas each. Mr. Walter also sold under the hammer about 1,000 breeding sheep, the highest prices obtained being 50s. Messrs. T. B. Richardson and Son sold eight Lincoln shearing rams from the flock of Messrs. R. and R. Hilton, of Wellington, at 8 guineas to 14 guineas. Mr. J. Brocklebank, of Bassingham, sent seventeen Lincoln shearing rams, which averaged £9 8s. 6d., the highest price being 16½ guineas, whilst sixteen Lincoln shearing rams the property of Mr. J. Pears, The Mere, realised 5 guineas to 16 guineas each. Others made up to 10 guineas.

Partney.

Partney Sheep Fair took place on Tuesday when the supply—about 8,000—was the smallest for many a year. The rams, as usual, were the chief feature, and for these good prices were obtained. Some very good shearings were offered, and one sent by Mr. W. Taylor Sharpe, of Baumber Park, realised 32 guineas, the top price of the fair. It was secured by Mr. Barkley, of Calverthorpe. It was a fine specimen of the Lincolnshire Long-wool. There were twenty in the lot offered, and these averaged £10 19s. 8d. The shearing rams that averaged the highest price were the Huttoft Grange rams, the property of Messrs. J. T. and A. W. Needham, who got £13 9s. 11d. per head for twenty-four, the highest price being 20 guineas, given by Captain W. Hoff, of Grethly Hall, for a fine upstanding sheep. There were several consignments of Hampshire Down ram lambs, which made up to 9 guineas each.

Perth Ram Society.

At the sale of Blackfaced rams and ram lambs in connection with the Perth Ram Society, prices all over were good. Messrs. M'Dougall, Chaggan, sold seventeen at an average price of £19 5s., and Messrs. Cadzow, Bordon, twenty-four at an average price of £12 2s., the highest price in each case was £40. Colonel Lowry, Doraville, had an average of £11 12s. for each of a lot of six, his highest price being £50. Mr. Matthew Hamilton, Woodfoots, sold thirteen at an average of £14 8s., his highest price being £41. Mr. Howatson, Glenbuck, sold ten at an average price of £21 10s., and for one of them he got £50. The highest price for a lamb was £22, which was got by Mr. Grieve, Ladybank, for one of a lot of sixty, the average price of which was £2 10s.

Scunthorpe.

Scunthorpe September ram fair, held on Tuesday, was well patronised, and rams met a ready sale at prices up to 14 guineas; in fact, every animal was found a purchaser. There was also a brisk trade for breeding sheep, which were forward in good numbers. Gimmers made 40s. to 65s., and ewes from 44s. to 55s. each. Fat ewes made up to 63d., and wethers, which were scarce and dear, 9d. per lb.

Teesdale.

At the special autumnal lamb sales held at the Barnard Castle and Teesdale Farmers' Mart on Wednesday the prices realised were the best within recollection of the oldest flockmasters attending the sales. There were 820 half-bred lambs, and not a single "shot" lamb was sold under 20s., whilst the best half-bred gimmer lambs went up to 44s. a head. Others reached 40s. apiece, and the general run was from 20s. to 30s. each.

The Loughcrew Shropshires.

The annual sale of Shropshire sheep belonging to Mr. W. Lenox Naper, the Home Farm, Loughcrew, was conducted by Messrs. Alfred Mansfield and Co., of Shrewsbury, who brought under the hammer a choice lot of animals which met a good steady sale followed with no sensational prices. Coughtnaught Ranger, the first prize three-shear ram at Dublin, was sold to Mr. Wilson-Slater for 10 guineas; while the second prize shearing ram at Dublin went to the well-known breeder, Mr. A. S. Berry, of England. Captain Everard gave 15 and 9½ guineas; Mr. Skelly 9, 7½, and 6½ guineas; Mr. Armstrong 8 guineas; the general average for twenty-seven all sold being £8 7s. 9d. Forty shearing ewes were sold from 57s. to 47s., and 518, the young of the breeding ewes, were in great demand and sold up to 61s., and made the grand average of 56s.

The Aghavoe Shropshires.

Notwithstanding Mr. R. F. H. White's sustained successes at this year's Royal Dublin Show, he was not as well supported at his sale by his contemporary breeders and farmers as the merit of the flock warranted. Mr. White was, however, supported by one prominent English breeder and Mr. Jeffreys, of Uruguay, South America, and though several of the famous sheep failed to find buyers the "top" lots sold well. Mr. Jeffreys (South America) took the Royal Dublin first prize shearing ram at 41 guineas, after keen competition between the Marquis of Ormonde's representative, Mr. T. Jucke's, of Wellington, Salop, and Mr. Jeffreys. No. 3, another good-looking son of Ulster Counsellor (11018), went to Lord Ormonde at 21 guineas, while No. 4 (fourth prize of the Dublin Show) after spirited bidding, was bought by Mr. Jucke at 35 guineas. Other good rams made 10 and 9 guineas, while the general average was £11 11s. 7d. The sheep as a whole were greatly admired, and so far as regards character, wool, and skins, were generally considered the best Mr. White has ever exposed. The ewes and lambs sold at good commercial prices, and for the forty Aberdeen-Angus cross-bred cattle the demand was very good, the largest buyer being the Marquis of Ormonde.

York.

The second extra ewe fair, held during the autumn at York, took place on Thursday, when fully 7,000 north-country ewes were on offer, but they met with a very slow trade indeed. The best made up to 54s., and others 48s. to 32s. each. A few south-country ewes were shown, and made from 35s. to 45s.; north-country lambs, 35s. to 40s.; Masham lambs, 22s. to 28s.; Holderness lambs, up to 40s. Very bad show of twice-crossed lambs, which made 35s. to 42s. A few north-country gimmers were on offer, and made 50s. to 56s.

Northampton.

A large supply of sheep and attendance of buyers and a brisk trade were the features of Northampton Ram Fair, held on Wednesday. As last year, Messrs. Peirce and Thorpe obtained the highest price, selling one half-bred ram, Mr. E. James, Irchester Farm, Wellinborough, at £2. Oxford Down ram lamb for 27 guineas, to Mr. F. Campbell, Cuthorpe Towers, Rugby. Last year's corresponding figure was 17 guineas. The top price last year for shearings was 20 guineas, but this year only 16 guineas, which was paid by Mr. J. S. Smith, Quinton, for an Oxford Down shearing belonging to Mr. J. M. Eadey, Thorpe Malsor, Kettering. Sheep varied much in price. The ewes went as high as 55s., lambs, 40s., and ewes 50s.

Messrs. Laxton and Holiday, Biester, sold for Mr. George Adair, Royal Prize Farm, Wadley, Farringdon, twenty Oxford Down ram lambs, which made an average of £2 17s. 2d. Lord Penryn gave 7½ guineas and 6 guineas for a couple of the best of these. The Hon. R. Hardinge, South Lawn, Burford, sent ten Oxford Down ram lambs, the average selling price of which was £4 6s. 4d. Mr. William Riven, Quinton, gave 5½ guineas for one, and Mr. Syder, of Fakenham, gave 5 guineas for another. Mr. Henry Akers, of Black Bourton, sent twenty ram lambs, which made an average of

£8 8s. 6d., the best price being 10 guineas, which was obtained three times by Mr. J. G. Willows, of Rushton, Mr. T. S. Agutter, Thrapston, Mr. J. Groom, Oundle, Mr. John Gurn, Burford, penned thirty-six lambs, which made an average of £3 4s. 4d., top price 5 guineas. Mr. E. H. Heygate, Nobottle, purchased one for 5 guineas, Mr. J. Cross, Braunston, another for 3½ guineas.

Messrs. Peirce and Thorpe had very large consignments from well-known flocks to dispose of, and as mentioned above, got the highest prices of the fair. Their sales included three shearing rams and sixty-three ram lambs from the well-known Oxford Down flock belonging to Mr. R. W. Hobbs, Kilmescott, and these sold well, one shearing reaching 11½ guineas, and another 10 guineas, whilst the lambs made from 5 guineas to 10½ guineas, the average being £6 15s. Better figures were obtained for Mr. G. E. James' Oxford Down ram lambs, for in addition to the 27-guinea animal, 18 guineas, 15 guineas, 14½ guineas, and 12 guineas were secured, the average per head working out at £8 14s. 3d. Mr. J. M. Eadey, Thorpe Malsor, sent forty Oxford Down ram lambs, which made up to 13 guineas, and an average of 78 guineas, whilst thirty-seven Oxford Down shearings from the flock of Mr. George Roberts, Stone Manor House, Weedon, made an average per head of £8 15s. 1d., the top prices being 16 guineas, 15 guineas, 13 guineas, and 12 guineas. Other lots were sold by various auctioneers at prices up to 12 guineas.

Lewes.

The annual sheep fair at Lewes took place on Friday in beautiful weather, and was largely attended; the supply of sheep—14,000—was larger than last year, and the quality of the famous Southdown breed was fully maintained, both sheep and lambs being hardy and healthy if not quite so fleshy as in some years, but it cannot be said that trade was brisk. Ewes sold fairly well, but, in comparison with previous fairs at Lewes, there was a difference of shillings to the advantage of the purchaser in the average prices. Ewes of the better class made from £2 to 47s., wetter types as much as 48s., lambs from 22s. to £2, cull lambs about 14s., and ram lambs from 5 guineas to 6 guineas.

After the business of the sheep fair a large number of flockmasters assembled to further consider the question of holding one central fair in the county town, and of dealing with a proposal to establish an auction sale in connection with Lindfield Fair. The chairman, Mr. W. F. Ingram, explained that it was impossible to prevent an auctioneer holding a sale on the same day as Lindfield Fair, and, after other gentlemen had spoken in favour of the "open" fair, Mr. Harry Willett, J.P., brought forward a proposition, which was carried, that a sub-committee should be appointed to consider how far the Lord of the Manor had rights over Lindfield Common, and what were the rights and feeling of the Lindfield Parish Council in connection therewith. This motion, he explained, was with a view to ascertaining if it were possible to control the fair in regard to the question of permitting an auction sale. A formal motion on the part of Mr. E. J. Gorrington to test the feeling of the meeting was carried in favour of the continuance of Lindfield Fair, and a further proposition on similar lines showed that the committee were of the opinion that the Yeovil Stock Fair should be carried on upon the lines at present in vogue.

Howden September Horse Fair.

Howden September Horse Fair, held on Wednesday, was only poorly attended, and only 100 to 120 animals were brought to the fair. Some were of very indifferent order, while the majority of those on parade were chiefly of the ride and drive class, though there was a display of carting horses which had been reared in the district. Trade was very dull and very few animals were sold.

Death of a Secretary.

The death took place on Thursday of Mr. Edwin Henry Oakley, Fairleigh, Kingston, who for the past fourteen years had acted as secretary to the Yeovil and District Agricultural Society, and for many years as secretary to the Yeovil Fat Stock Society. Although he had been unwell for the past six months suffering from an internal trouble, the news of his death came somewhat unexpectedly. He leaves a widow and a grown-up family of five daughters and two sons, with whom much sympathy is felt.

Graziers and breeders of live stock generally will be interested in the sale of well known property in the neighbourhood of Northampton known as Preston Deanery extending to nearly 1,000 acres, which is to come under the hammer on October 22, the auctioneers being Nicholas Denyer and Co., of Pall Mall, London. There are nearly 650 acres of grass, including some of the finest fattening pastures in the Midlands. The farmhouses and buildings are in excellent repair, and the latter include some capital buildings for breeding purposes. One of the tenants is Mr. D. Beddies, a well-known Midland grazier.

DIRECTORY OF BRITISH PEDIGREE
STOCK OWNERS.

PIGS—continued.

LARGE WHITES—(continued).

OWTRAM, HERBERT H., Newland Herd
Pedigree Large White Yorkshires, winners many prizes, Champion Cup and Medal; Boars, Gilts, in-pig Sows for sale.—**FARM BAILEY,** Newland Hall, Bay Horse Station, Lancaster

THE NEWNHAM HALL HERD of Large and Middle White Yorkshire Pigs is one of the largest and oldest herds of pure-bred pigs in the United Kingdom. Prices moderate. Inspection invited.—**NEVILLE J. HINE,** Newnham Hall, Baldock, Herts.

THE WATFORD HERD of Large White Yorkshire Pedigree Pigs of the choicest breeding. 150 to choose from. Send for Illustrated Catalogue. Grand young breeding stock always on sale.—**Apply, R. AYKE,** Bushey Lodge Farm, Watford, Herts. (17 miles from London).

WALTON HERD of Pedigree PIGS, owned by Sir Gilbert Greenall, Bart. Walton Hall, Warrington. Large and Middle White Yorkshires, unsurpassed for purity of breed, size and general excellence, as prove by the numerous Championship and Class Prizes won at all the leading shows. A choice selection of Boars and Sows for sale; stock carefully shipped. For particulars apply to the Manager, J. HALLAS, Hilder Walton, Warrington.

MIDDLE WHITES.

DEVHIRST, A., Ryecroft Farm, Dudley Hill, Bradford, Pedigree Large and Middle White Pigs also a few Berkshires of the choicest breeding. The following prizes have been won in 1902 by pigs bred by myself: 2 champion prizes for the best pig in the show, 30 firsts, 25 seconds, and 6 thirds, with numerous reserves and V.H.C. Send 2 stamps for Illustrated Book.

PEDIGREE MIDDLE WHITES.—Choice breeding quality, early maturity. Station: Bingham, G.N.R.—**HENRY SMITH, jun.,** Cropwell-Butler, Nottingham.

LARGE BLACKS.

CORNWOOD HERD of High Class Pedigree Large Black Pigs.—Breeder and winner of numerous Prizes and Cup; Royal Bath and West, and County Shows. Boars and Sows always on sale.—**JOHN H. GLOVER,** Cornwood, Devon.

PEDIGREE LARGE BLACKS of Choicest Strains, young Boars and Sows For Sale; prices moderate.—**H. J. CLARKE,** Norbury House, Newport, Shropshire.

STROUD HERD Pedigree Large Black Pigs.—Noted for length and depth; five 1st and 2nd Prizes at Bath and West of England Show, 1906; young Boars and Sows (sired by Borstal Masterpiece, 1st and Champion Royal Show) at very reasonable prices.—**WM. TOWNSEND,** The Manse, Stroud, Glos.

SUSSEX.

SUSSEX PIGS, LARGE BLACK. Pure bred Sows and of finest quality, with very strong bone and fine hair. Not to be equalled for prime meat.—**FRANCIS N. HOBGEN,** Manor House, Appledram, Chichester.

BERKSHIRES.

BEVAN, C., Maple Hurham, Reading.—Pedigree Berkshire Pigs, pure-bred Boars and Gilts, of all ages, and at moderate prices.

CORY, CLIFFORD J., M.P., LLANTARNAM ABBEY, MONMOUTHSHIRE.—Pedigree Boars and Gilts.

CRIBB, ARTHUR LEWIS, Well End Lodge, Shenley, Barnet, Breeder of PEDIGREE BERKSHIRE PIGS. Young stock from noted strains, and eligible for Herd Book, for sale at moderate prices.

TAMWORTHS.

THE Melton Constable celebrated Herd of Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cups Smithfield, Severn and others recently exported for Continental and Colonial herds. Apply R. OWEN GODDARD, Estate Office, Melton Constable, Norfolk.

TIBBOTSON, R., can spare 20 or 30 young Tamworth Boars and Gilts by his prize Boars "Knowle Bouncer," "Joey," and "Leydais." Price 2 guineas and upwards.—**The Hawthorns, Knowle, Warwickshire.**

Horse Sale at York.—Messrs. Walker and Sons held a sale of hunters, harness horses, etc., at their repository, York, on Thursday, and although they had only a small catalogue of about fifty horses, containing nothing much of importance, trade was very good, particularly for the harness classes. St. Bride, a brougham horse, five years, realised 70 guineas, and others made up to 45 guineas.

Notes and Jottings.

THE shortness of pastures and the bite that the autumn winds have already begun to inflict upon cattle have made them all hang after the yards and sheds much more persistently and much earlier than usual. This is especially the case with cows in milk and with the calves of the present year, particularly that portion of the latter that were born rather late in spring. There is no possibility of keeping up the milk supply in the case of the cows and growth in the case of the calves without liberal hand feeding with food of some kind or other, and much of this feed is better given in the sheds or yards, which causes the animals to be more on the look out morning and night for the time when this much-needed food is given to them.

SUCH seasons as the present, which is only one of many during the past decade, raise in one's mind the possibility of better things where mixed farming is the rule, rather than on the all grass farms which have always been the rule in the leading dairying districts. This system of all grass for dairying arose many years ago—far back in the last century, when cheese-making was the one great function of the dairying cow. This system of farming gave an opportunity for the cattle to be left in the fields entirely during the dead of winter, a practice that was very general at the time mentioned, say, fifty years ago. The change of dairying from that of making cheese to that of milk selling necessitates a totally different system of catering for the cattle, milk having to be forwarded to our towns and cities as much in winter as summer.

THIS brings us to the consideration of breaking up some permanent pastures. On many grazing farms where milk-selling is practised there are some fields comparatively newly laid down, and others completely worn out, that would be far more profitable under the plough. The advantages of a portion at least of arable land where dairying is being carried on all the year through are very many and great. The supply of roots for the winter and spring, and, indeed, for the summer through, is a very valuable point. Then there are other green crops that can be grown, either as permanent crops (such as lucerne and sainfoin) or as catch crops, such as rye and vetches, trifolium, and Italian rye grass, also peas and oats. All these things are, in a season like the one we are passing through, of immense value.

THEN the dairying and the mixed farming work well together in another respect, namely, the manuring of the land. A good dairy of cattle well fed the year round yield a very good income, and for pretty nearly six months of the year are in the sheds at least during the night, when they make a vast quantity of manure, and this of first-rate quality. Manure from dairy cattle, it is known, is not quite as enriching to the soil as that made from fattening cattle, but all the same it is a great fertiliser, and being made upon the premises, it does not run the out-of-pocket expenses up so fast. Then from the tillage land, in addition to the green crops, there are the corn crops of oats, wheat, and also beans and peas, as well as barley, when the latter misses the malster.

ANOTHER very strong point, too, in favour of mixed farms for dairying is the labour question. Where all is grass a number of hands are required to do the milking, and therefore can at the same time, or rather at times between the morning and evening milking, be very profitably employed on the tillage land. A certain number of horses, too, are necessary on the all-grass farm for cutting and securing the hay, as well as for other purposes that crop up continually upon every farm. As to the question of the use of home-grown corn, it is probably the cheapest food obtainable for dairy cattle at the present time, and probably the best kind of home-grown corn to use is wheat, ground all one way—that is, not dressed; this is precisely the same as mixing bran and meal together, and is altogether an excellent food.

FROM the above points it will be seen that the arable question is well worth considering, and as well as helping to make farms produce more food for the people, it would also help a little in

keeping more people in the rural districts by finding them regular employment and enabling them to earn a little better wage. In Ireland there has been a desire on the part of many farmers for several years past to break up some of the inferior new and worn out old pastures, so as to provide roots and straw as well as corn for the (in their case) purpose of helping them to finish off their half-mended summer-grazed cattle, and making them realise a much higher price. It is quite likely that in England we shall ere long see a greater demand for a little tillage than there has been for some time past.

YET another reason may be given as an inducement to try or in favour of tillage as a portion of the farm, and that is the rearing up of young stock. A few roots and a little straw, and if a pound of linseed cake per head per day be added, you have a food that will make heifer calves grow on so rapidly as to be well fit for the dairy a year earlier than under the all-grass system, and with steer calves a diet that will ripen them into a much higher price in a given time than where grass only is obtainable with cutting quarters and a little hay. All these many items make up a very strong argument in favour of the mixed farm. One point, too, has not been yet mentioned—namely, that the quality of the milk will be improved by the help of a little green food in the sheds. Mangels are not a very enriching article if given to excess.

THE higher price that is now being realised for milk will no doubt help very much in stirring up producers to better feeding and management of their dairy cattle, and will also probably have the effect of inducing more farmers to commence dairying in its milk-selling form, for though the new milked cow is very dear and the food not by any means cheap yet, an extra twopenny per gallon, or nearly so, has a marvellous effect upon the thoughtful farmer. The same cause will also probably have the effect of making dairy men who breed their own cattle turn their attention more to the pail than to the animal itself. A word of caution may be necessary here—namely, "don't forget the cow," appearance goes further in selling any article than does any other point, the appearance of the cow is very important.

THE sale of South Devon cattle in Devonshire attracted a good company, and prices displayed very much activity and brisk demand for those cattle, and though the highest price in the sale was but 67½ guineas, a very low figure compared with the excessively high prices that have been and are being paid for Shorthorns. Yet, it must be remembered, that but a very brief period since the sale of a herd of South Devons would not have attracted anything like the attention given to the sale noticed, which is probably due in a great measure to the good account one or two specimens of the breed have given in the London Dairy Show and at other places during the last two or three years. A good dual purpose class of beast, and with a maximum allowance of points obtained, the South Devon has risen immensely in public favour with the dairy farmer.

THE reading of the reports in the beef markets is not a very satisfactory matter at the present time, and quite as remarkable is its unsatisfactory. It is remarkable for low prices with a short supply of the article so far as home markets and supplies are concerned, and it is very unsatisfactory because very few of the fat cattle that are being sold at the present time are leaving anything in the way of profit behind them. The whole matter at the present time is hanging upon the enormous foreign supply of live cattle and dead meat. It is little less than appalling to British feeders to read the totals of live stock and dead meat shipped into Britain and other places during the week. The one great point for feeders at home to bear in mind is to keep up the quality and to raise the class of cattle likeliest to be in demand at the season they intend to have their stock ready.

THERE is no wisdom in having very big bullocks of over 100 stones ready just when the weather is likely to be the hottest—that is, during the midsummer months. This class of cattle always command more attention during the cold weather and at Christmas time on account of such being in demand and at generally. What, surely, too, though at the beginning of the summer, often proves a good time for selling heavy and well-ripened bullocks. Big joints are often wanted at this time for clubs and parties at village inns, restaurants, and other places. Very small joints are no use upon these occasions, and the little beast is usually more in demand when the greater part of our population are at their own homes and therefore only needing small joints for their respective households.

THE American Stato Fairs appear to be going with quite their usual amount of success. (Continued on page 340).

MILK RECORDS.

OFFICIAL TESTS under the auspices of the HIGHLAND & AGRICULTURAL SOCIETY of SCOTLAND

These, the most extensive official Milk Record Tests carried out in this country, are doing capital work in showing the best methods of profitable milk production. We have always contended that **A GOOD COW** and **A GOOD CAKE** are necessary for securing the best results, and our opinion, founded on practical experience from many tests made at our experimental farm, is daily receiving ample corroboration from dairy farmers among our numerous customers.

THE GOOD COW & THE GOOD CAKE.

The tests above-mentioned made at the farms, under ordinary conditions, extended over 34 weeks, and 12 herds were entered. The first place was secured by our esteemed customer, Mr. A. M. Baird, Garclaugh, New Cumnock, Ayrshire, with the following record:—30 cows averaged 909½ gallons per cow; butter fat 3·94% (during August 4-32%). One cow yielded 1,267 gallons, and ten cows averaged over 1,000 gallons.

Our Customer writes:—"I am highly pleased with the result of your Meals and Cakes; in the H. & A.S. Milk Record List we came out at the top of the list, one cow giving 1,267 gallons of milk in 34 weeks, and ten cows over 1,000 gallons of milk in the same period; these were fed on Silcock's Cake and Meal."

Many of our Customers have won 1st Prizes for Milk Yield and Butter Tests at various shows, including the Royal this year. If you are to secure the best results, you must use the best Cake as well as the best Cow. The combination pays.

SILCOCKS' DAIRY CAKE & MEAL are carefully compounded, well-balanced foods, which will improve the quality and quantity of the milk yield, maintain the condition of the cow, and produce the highest results at the lowest cost. Others have found it profitable to use these foods; we simply ask you to give them a trial, they are sold at a price to meet the economical production of milk.

For further particulars apply to Local Agent, or to—

Messrs. R. SILCOCK & SONS, Stanley Hall, Union St., LIVERPOOL.

The BRITISH OIL & CAKE MILLS, Ltd.

Offices—Cleveland Street, HULL.

Manufacturers of:—

"B.O.C.M." PURE LINSEED CAKE

"B.O.C.M." PURE COTTONSEED CAKE

"B.O.C.M." COMPOUND FEED CAKE

"B.O.C.M." COMPOUND FEEDING MEALS

Pure Linseed and Refined Cottonseed oil.

The brands of the British Oil and Cake Mills, Ltd., are a guarantee of the purity and high quality of their different products.

The old brands of the Company, viz.: "E. R.," "Stephens," and "W. H. & W.," are still available to any customers who prefer them.

Sold by Cake Merchants and Dealers.

People attend them in large numbers, and attend, it appears from what one sees and hears of them, for the purpose of learning something, and not with the bewildering, meaningless manner that stands out so conspicuously on the countenances of many of our own visitors to shows, who stroll through the place simply as a means of killing time, and without any better object in view. Shows are excellent places for educating all interested in stock breeding, and should be attended at least occasionally by even the greatest expert and the greyest-headed man. We are never too old to learn, and there is always an opportunity to learn something at a cattle show.

Sale of Lord Amherst's Red Polled Cattle, &c.

The celebrated prize-winning herd of Red Polls, belonging to the Right Hon. Lord Amherst, was sold by auction on Tuesday, September 18, Messrs. John Thornton and Co. being the auctioneers. There was a large and distinguished company, and the trade for these well-bred East Anglian cattle was better than has been experienced for some time. The older cows sold especially well, prices ranging up to 33 guineas. Lord (or Hon. Alwyn) Fellowes, Sir W. Corbet, Sir Thomas Gouch, Messrs. Arkle, Hewett, and Micklefield being the principal purchasers.

The younger cows, as well as some of the heifers, also reached good prices. Mr. W. E. Balston, of Potter's Barn, taking seven of the best, among them Didlington Davy 17th, first prize winner at the Bath and West this year, at 85 guineas; Sautania 6th, the second prize cow at Derby, at 65 guineas; and Plumbe, a three-year-old, at 38 guineas. Other good purchasers were Lord Cranworth, Messrs. Brown and Son, E. G. Pretymann, and Garrett Taylor. The yearling heifers were rather poor, and only realised fair prices. There was a good trade for the bulls, Mr. Balston securing the fine old stock bull, Robin, bred by the Exors. of Mr. P. K. Blafeld, at 51 guineas; Sir W. Corbet taking Dax, the first prize yearling bull at Derby, at 28 guineas, as well as Davyson 363rd, the third prize winner at Norfolk this year, for 46 guineas. Good purchases were also made by Lord Radnor and Mr. Micklefield.

The ninety-one cows and heifers averaged £19 18s., the eleven bulls £29 18s. 4d., and the entire herd of 102 head averaged £20 5s. 3d., a total of £2,066.

The Southdown sheep made up to 60s each for the ewes, and 40s each for the ewe lambs, Lord Exeter, Messrs. Arkle, E. G. Pretymann, and F. J. Montagu being the chief buyers.

The Large Whites sold up to £5 5s., Mr. Adcock and Mr. Casey being the chief supporters.

Sale of Mr. C. Calder's Aberdeen-Angus.

On Thursday Messrs. Macdonald, Fraser, and Co. brought under the hammer at Woodhill Farm, near Throckley, a number of Aberdeen-Angus cattle, and also Leicester and Oxford Down lambs, the property of Mr. C. Calder. The weather was not altogether favourable, but the attendance was regarded as satisfactory. After luncheon had been served the sale commenced with the pedigree animals. Seven cows realised £137 0s. 6d., or an average of £19 11s. 6d. each. Three two-year-old heifers were next offered, and brought £57 15s., which represented £19 5s. apiece on the average. The amount yielded by seven one-year-old heifers reached £102 18s., equal to £14 14s. each. The prices obtained for the heifer calves worked out at an average of 69 9s. 6d. being sold for £36 11s.

The bull, Perfection of Sands, bred by Mr. Laurence Johnson, of Sands, and which in 1904 carried off second prize at Edinburgh, first at Alnwick, and third at Chester-le-Street, and in 1895 was awarded third at Glasgow, second at South Shields, third at North Berwick, and first and champion gold medal at the Great Yorkshire Show at Hull, was withdrawn at 33 guineas, but was afterwards purchased at 50 guineas, the reserve price, by Mr. Albert Pulling, who represented Mr. Bridges, of Surrey. The remaining lot of pure breeds were eight bull calves, which yielded £84, or an average of £10 10s. each. This brought the total for the thirty-two Aberdeen-Angus cattle up to £491 17s. 6d. Of other classes of cattle there were over seventy put up for sale. Heifers made up to £15 10s., and bullocks up to £14 10s. Leicester ram lambs fetched up to £3 15s., and Oxford Down ram lambs up to £4 10s.

Mr. T. H. Bainbridge's Aberdeen-Angus.

Mr. T. H. Bainbridge's well-known E-shott Hall Aberdeen-Angus herd having outgrown its accommodation, close on fifty of the animals were on Wednesday disposed by auction at Eshott Hall, Northumberland, in the presence of a large company of buyers, but the prices were not so high as might have been expected, seeing the high class quality of the stock offered. Mr. Bainbridge has spared neither expense or trouble to get the best blood, and that he has done so is proved by his successes at our chief shows. During the five years,

1900 to 1904, Eshott representatives have been present at only six shows—the Royal, the Highland, the Great Yorkshire, and three county shows—and have won ten championships and thirty-three first prizes, the former including five championships at the Royal, Highland, and Great Yorkshire shows.

The animals offered on Wednesday were a choice lot of some of the best blood, and some of the buyers undoubtedly got bargains. The top price was 60 guineas, which sum Mr. Ferguson, Kinnochtry, paid for Electrine, a beautiful cow calving in January, 1902, by Breckan. One of the yearling heifers, Eulalie of Eshott, ran up to 59 guineas, and was then knocked down to Mr. Miller for South America, whilst Erma, a nice-looking cow by Bayard of Addington Park, fell to Mr. Wythe Hill for 55 guineas, but no other animal topped the half-century; the other prices ranging from 12 guineas for a bull calf to 48 guineas for the yearling heifer Melba of Eshott, who was purchased by Mr. Miller. The average per head for the thirty-nine animals sold was £29 9s. 7d., the average of the various sections being as follows:—Eighteen cows £32 4s. 7d., three two-year-old heifers £32 18s., eight yearling heifers £33 5s. 6d., eight heifer calves £19 19s., one bull calf £12 12s., one bull £32 11s.

The Holbeach Lincolnshire Red Shorthorns.

A choice selection from the registered herd of Lincolnshire Shorthorn cattle belonging to Mr. J. S. Patchett, of Cherry Farm, Holbeach, was sold by auction at Holbeach on Thursday afternoon in the presence of a large company of breeders. Sixty-five head of cattle were disposed of, and the total realised was 1,122½ guineas, or an average, including calves, of 17 guineas. The top price was 31 guineas, paid by Mr. T. C. Young, of Alford, for Cherry Ruby, the next best being given by Mr. C. Laming, of Holbeach St. John's, who gave 30 guineas for a heifer calf.

The Birtley Aberdeen-Angus.

The Birtley herd of Aberdeen-Angus cattle, the property of the executors of the late Charles Perkins and Partners, was dispersed by auction on Tuesday at The Springs Farm, Birtley, the auctioneers being Messrs. Macdonald, Fraser, and Co., Ltd., Perth. Sixty-two animals were brought under the hammer—namely, twenty-one cows, ten two-year-old heifers, five one-year-old heifers, nine heifer calves, sixteen bull calves, and two stock bulls. Among these were eleven Pride of Aberdeen, three Trojan Erics, nine Patience of Corskies, and six Isas; also representatives of the following families—Jits, Queen Mothers, Rubies, Ruth of Tillyfours, Marthas, Witch of Endors, Nannies, and others. The majority of the cows were in calf to the stock bull, Pundit of Preston, the winner of the championship at the Highland Show in 1904, and many other valuable prizes. The greatest possible care had been taken in the selection of stock bulls for use in this herd, and each had left good stock.

The attendance of buyers at the sale was not very large, but a representative company gathered round the ring. A few of the older cows went at moderate prices, but after that the company warmed up, and, with the exception of a few of the bull calves, the figures obtained were beyond expectation. The top price of the sale was 58 guineas, paid by Mr. Swan, Rockcliff, Darlington, for the big-sized, handsome Pride cow Prejudice of Selaby, which was out of a fine Prince Iliad dam. The prettiest cow in the group, however, was the last one on the list, the prize-winning Irene of Birtley, by Prince of Benton. For her Mr. Beaumont, M.P., went to 50 guineas. In two-year-olds the lead was taken by 43 guineas, paid by Mr. Birtley, a beautifully marked Pride, her buyer being Mr. Bean. A thick-set, justly-proportioned, robust-looking heifer calf made the leading price among the young things, her money to Mr. James Calder of Ardgargie being 35 guineas. The champion Pundit was shown in fresh, active form, and although a seven-year-old, he should prove cheap at 44 guineas. Mr. Swan was the purchaser. The total amount obtained for the sixty-two lots was £1,371 6s., or an average per head of yearling, £22 2s. 6d.

The Cotterstock Lincolnshire Red Shorthorns.

On Wednesday Messrs. Dickinson, Regall and Daly brought under the hammer just over eighty animals from the well-known herd of Lincolnshire Red Shorthorns belonging to Mr. Everett King, at Church Farm, Cotterstock. Being a sale of surplus stock and having been hurried on, besides which the very dry weather had seriously affected the condition of the stock, which was not even in useful store condition, there were by no means got up for sale. There was a steady downpour of rain the whole of the time, and there being but a small attendance, prices ruled low. The pick of the cows, Wainfleet Maud 2nd, went at 37 guineas to Mr. Moore, Nottingham, her calf

by Viking going to Mr. Stokes, Warrington, at 15½ guineas. Messrs. Fletcher and Andrews, Uppingham, gave 23½ guineas for an in-calf cow by Totthly Tom, and Mr. Moore gave 17½ guineas for an in-calf heifer by Scampton Blood Red, and he also gave 30 guineas and 23 guineas for the yearling heifers, Northboro' Lady and Northboro' Ruby. The total sum realised for the eighty-two lots, which included twenty-nine calves, was £556 7s. 9d.

Sale of Mr. W. D. Cruddas's Shorthorns.

The herd of pure-bred Shorthorn cattle, the property of Mr. W. D. Cruddas, was disposed of by auction on Thursday, at Haughton Mains, by Messrs. Thornton and Co. With fine weather there was a large number of the principal breeders in the north present. This select herd was commenced in 1879 by the purchase of two cows, Lady Mary and Stairia Oxford, at Sir Walter Trevelyan's sale at Wallington, and since he commenced to breed Shorthorns Mr. Cruddas has met with great success, representatives of his collection figuring at most of the shows in the north. The animals were in excellent condition, and the sale was a most satisfactory one.

Some animals belonging to Mr. J. Robson were included in the catalogue, and it was one of these which made the top figure of the sale—namely, 105 guineas, this sum being given by Mr. Teasdale Hutchinson for Flower Girl 41st, by White Heather, a beautiful roan calving in November, 1903. The next best figure was 70 guineas, and this was also paid by Mr. Teasdale Hutchinson, the animal being Haughton Duchess 2nd, sire Rival 2nd, and bred by Mr. Cruddas. Waterloo Cherry, another roan by the sire just mentioned, and calving in February, 1904, fetched 67 guineas from Mr. Cross, Bristol; Mr. F. M. Laing, Corbridge, gave 65 guineas for Rose Madeline 8th, and Waterloo Cherry 7th by Smart Beau fell to the Rev. C. H. Brocklebank, Essex, for 61 guineas. Other cows and heifers made up to 43 guineas, the average working out at £23 10s. 7d. per head. Mr. W. H. Trotter, North Acomb, paid the top price for bulls, namely, 40 guineas for Mr. Robson's Jester by White Heather, whilst the others made from 8 guineas to 30 guineas, with an average per head of £21 15s. 9d. Altogether thirty-seven females and six bulls were sold, and the average price for the lot was £31 17s 10d. each.

PIGS.

Sale at Walton Hall.

On Thursday a choice draft of Large and Middle White pigs belonging to Sir Gilbert Greenall, Bart., was brought under the hammer at Walton Hall, Warrington, by Mr. W. Bainbridge, and with a large attendance of breeders good prices were made, the animals, it goes without saying, being of the high quality for which the Walton Hall herd is noted. The lot numbered on short of 15 guineas and realised the satisfactory average of £6 15s. 4d. per head. Mr. A. White gave 16 guineas for a Large White sow by Peterboro' Sam 2nd; Sir R. Brooke secured Walton Lady Alice 13th at 15 guineas; whilst the other chief prices for Large Whites were 13 guineas (thrice), 12½ guineas, 12 guineas, and 11½ guineas. Middle Whites made up to 12½ guineas, at which sum Walton Rose 13th was knocked down to Mr. Paget; whilst at 13 guineas less Lord Delancure bought a gilt by Walton Dainty, and Mr. Ayne got Walton Round Hill. Weavers sold up to 14 guineas each.

Some Kerry cattle from Lady Greenall's herd were also offered, and met with a good demand at prices up to 14 guineas.

Nantwich Cheese Fair.—Pitch about 60 tons. Prices, finest, 65s. to 70s.; medium, 60s. to 63s.; lower grades, down to 55s.

Masham Fair.—At this important north country fair held last week the supply of stock was not so large as usual. A fair demand was experienced for dairy cows, which fetched from £18 to £21 10s. per head; secondary cows from £15 to £17 10s.; while calving heifers were quoted from £11 to £14 10s. per head. The demand for grazing stock of all kinds was a very great one, and business was slow. Yearling bullocks and heifers were quoted from £6 10s. to £7 10s. per head; two-year-olds from £8 to £9 10s.; while three-year-olds, forward in condition, sold from £10 to £12 10s. per head. Half-bred Masham lambs sold slowly at from 24s. to 30s. per head; twice-crossed shires 35s. to 40s.; and half-bred gimmers and ewes from 36s. to 50s. apiece. Pure-bred Wensleydale shearing lambs were again quoted from £5 to £12, and pure-bred gimmers up to 70s. per head.

KENT OR ROMNEY MARSH SHEEPBREEDERS ASSOCIATION TENTH ANNUAL SHOW AND SALE OF REGISTERED KENT OR ROMNEY MARSH RAMS, under the management of the above Association, will be held on FRIDAY, SEPTEMBER 28th, 1906, in the CATTLE MARKET, ASHFORD, KENT.
N.B.—Pleasing and Judging commences at 9 a.m., and the Auction at 11 a.m. sharp.

The entries, which number 592 Rams, have been made by the breeders whose names are given below:—The Right Hon. Lord Harris (15), Messrs. P. H. G. Powell Cotton (10), Captain Somerset Webb (5), Messrs. A. Amos (35), J. P. Barnes (12), G. Buley (20), F. de B. Collard (20), G. Farmer (20), C. File (40), J. File (10), T. File (38), Arthur Finn (10), L. H. and W. Finn (10), G. M. Goodson (14), E. Hambrook (10), S. Kingsnorth (20), J. D. Moxted (10), W. Millen (40), F. Neame (50), J. B. Palmer (10), H. Ridgen (65), G. C. Swindells (28), J. E. Quested (23), H. Walters (6), T. Wotton (13).

N.B.—The judging will commence at 9 a.m., and the Auction at 11 a.m. sharp on Friday, September 28th, 1906.

Refreshments will be obtained on the Sale ground as usual.

Catalogues and all information in respect to the Show and Sale, as well as the Breed as a whole, to be obtained from the Secretary, W. W. CHAPMAN, Room 4, Mowbray House, Norfolk Street, Strand, London, W.C. Telegrams and Cables: Sheepcote, London.

TWO GRAZERS AND PEDIGREE STOCK BREEDERS—Valuable Estate of 975 acres known as Preston Deanery on the main L. & N. W. Rly., within 4 miles of Northampton (75 minutes of London and 60 minutes of Birmingham) FOR SALE.

The land is entirely pure drainage, and includes about 650 acres of grass, much of it the finest in the Midlands more than fattening a bullock, to the acre while the arable is rich, producing heavy crops. There is a small family residence and three very superior farm houses and sets of buildings, though on the home farm being admirably adapted for stock rearing; the whole in splendid order.

This property will be offered by Auction on October 22. If desired two-thirds of the purchase-money can remain on mortgage at a low rate of interest. For particulars apply to the Auctioneers, Messrs. Dwyer & Co., 43, Pall Mall, London, S.W.

AUCTION SALES.

BALMER FARM, FALMER, SUSSEX.

About 2½ mile from Falmer Station, on the L.B. & S.C. Rly., and equidistant 4 miles from Lewes and Brighton.

Seasonable Topics.

Michaelmas. HOW quickly the seasons roll away. Looking backwards, it hardly seems a year since last Michaelmas, but sure enough it is, and at the moment of writing September is again making its exit. Customs vary, according to the character of the agriculture in different districts, as to the time of taking and giving up farms. In some parts Michaelmas is the time for making changes, and auctioneers find themselves busy in disposing of the stock-in-trade of those who are giving up farming. It is good to be giving up, and enjoying the rest of one's life in quiet retirement, if the farming has paid, and one has ample to retire on; but how different in the case of those who are giving up to save something worse, and because they can farm no longer. It may be the fault of the farmer, or it may be his misfortune, but in either case we can afford to sympathise with a man who, perhaps in the autumn of his years, finds himself obliged to leave a place that he has known as home for a long time, break off his business connections, and begin another life in some humble sphere. Yet there are such cases, and we meet with them at this Michaelmas time.

Giving Notice. IN some districts Michaelmas is the season when notices are given and taken with a view to the making of changes next Lady Day. "I shall give you notice." What an every day expression this is in agricultural circles, but how carefully the threat wants weighing up before it is put into effect. There are times, of course, when there should be no hesitation about it, and we have known men who have threatened to give notice time after time, but they could not bring themselves to do it, and have kept on hoping that things would improve, until at last no other course remained open to them and the inevitable happened, with the result that needs no explanation. Sometimes, however, it is better to bear the ills we have, than to seek and suffer those we know not of, and it is unwise to give notice in moments of pique or with the object of effecting a certain purpose. We have a case before us now of a farmer who gave notice to his landlord, never thinking for a moment that the latter would accept it, but he did, and the man has had reason since to regret his hasty action. There are many exceptions to the old adage that a rolling stone gathers no moss, because changes are good at times, but we have never known anyone to make much money who is always flitting from farm to farm and in a perpetual state of notice-giving.

Contracts. ONE can learn a good deal about the conditions of the country even from the windows of a railway carriage, and one day last week we

observed changes and contrasts in the course of a long ride from the West of England to the North Midlands. All through the west—Somerset, Gloucester, and Worcester—the same conditions prevailed. Acres and acres of stubble pointed to the early completion of harvest, but on the grazing lands a patch of green was a rare exception. Nothing but brown, brown, brown, with never a green blade of grass, and scarcely a morsel of food for the cattle, which wandered aimlessly about the fields. On the arable lands the cabages presented that blue green appearance which indicates want of moisture, and yellow leaves hung limp and withered from the half-developed mangels. In time the train bore us away from this through smoky Birmingham and the black country on to North Staffordshire and Derbyshire, where arable fields are the exception, and the rich milk-producing pastures are watered by the Trent and the Dove. In these parts farmers are grumbling about the dry weather, but in comparison they have little cause to, for we could not help remark on the comparative greenness of the grass and the quantity of keep towards what we had seen fifty miles away. In the first place the North Midland farmer has had more rain than his neighbour further south, and secondly, his pastures are cool and possess moisture-holding capacities, which have stood him in good stead during this exceptionally dry season.

Milk Contracts. WE chatted the other day with a farmer who was anxiously wishing that September 29 would come, and we could quite understand it when he informed us that he had a contract to supply his milk at a fraction over 5d. per gallon, and for some weeks now he had the doubtful satisfaction of knowing that the dealer was re-selling it at considerably over 1s. per gallon. The man wasn't grumbling; he had made his contract, and was prepared to stand by it, but he would hardly have been human if he had not wished for the time to run out so that he could make another bargain and get some of the pickings out of the high price of milk. He argued that things might have been the other way about, which is quite true, but this season he has not done so well as some of his neighbours, who are members of a dairy association, and all along have been getting the advantage of the unlooked-for rise in milk. Some unsuspecting householders are hugging themselves, that with the advent of the autumn and the prospects of more rain, the milk trade will fall back to its normal condition, but prices are up now, Michaelmas contracts are being signed for the next six months, and farmers who have had to be satisfied with the dealers getting the plunder up to now will naturally be making a bid for a share of it. Some time ago there was a talk of a revival in the cheese trade,

but the milk famine has knocked all that on the head, and English cheese is a commodity quite outside the reach of the man in the street.

Michaelmas Fairs. "MEN may come and men may go, but fairs go on for ever," and though some of their glory has departed, still, goose fairs, onion fairs, mops, and fairs which bear no specific name, are household words and institutions amongst us. Looking at the matter of Michaelmas fairs from a business point of view, the outlook is not very promising. There are farmers anxious to sell stock because they have no keep, and they are equally reluctant and afraid to buy store cattle for the simple reason that they have nothing to feed them on. With a host of would-be sellers and very few buyers, it is not surprising that autumn fair business is inclined to be slack and uncertain this season. Of course, since periodical markets and stock sales have become so general throughout the country, the importance of fairs from a business point of view, has to some extent declined, but the pleasure side seems to lose little of its vigour, though we may note many changes. It is the travelling showman who keeps up the fun of the fair, but he is a different fellow to his forefather who catered for our grandparents. It is true that he lives in a van, for no self-respecting showman would live anywhere else, but he is a man of capital, and moves his paraphernalia about by means of a highly decorated traction engine. Instead of the old merry-go-round worked by a skinny pony he brings motor cars into the fair ground propelled by steam and lit up by electricity. Indeed, the showman of the present time is a thoroughly up-to-date individual, and one wonders with the amount of capital he has in his business how he makes it pay. But apparently he does, and by keeping well abreast of the times in the provision of amusement for the country lad and his sweetheart, we may leave it to him to see that the Michaelmas pleasure fair does not become a thing of the past.

Maize as a Forage Crop. WE venture to bear out what a correspondent in our last issue wrote about the value of maize as a forage crop, particularly in a dry season like this. Quite recently we saw a piece of maize, perhaps not quite so good as that depicted in the photograph given last week, as its culture was largely experimental, but the grower has every reason to be thankful that he tried it. We had opportunities of testifying for ourselves how the milking cows appreciated it, for they never left a particle of leaf or stalk, and there could be no question as to their enjoying it. We hardly know how maize would compare with cabbage as food for the production of milk, but

generally speaking cabbage is not good this year, while in many cases it is a failure through the drought, and those who have grown maize find in it an excellent food substitute. The crop is very accommodating in the way of growth, but as our correspondent remarks, rooks play havoc with it, and we have observed that it must be protected in a seed stage from other birds as well. On the whole, however, we look upon maize as being a highly useful green forage crop.

Harvest Home.

ONE day last week we stood in a big old-fashioned barn, having huge rough beams, thick walls, and a pair of large double doors. But the barn in question was not as it is on ordinary occasions, for some attempts had been made at decoration with tinted foliage, red berries, flowers, and festoons of the fluffy wild clematis or old man's beard. Down the centre of the barn ran a long table, and round it sat a number of men and women—perhaps fifty of them—with bronzed, contented looking faces, and appetites in accord-

ance with their healthy appearance. The occasion was harvest-home, and two neighbouring farmers had joined hands in the provision of the feast. It was a pleasure to see the men eat and quaff the nut-brown ale and cider; and when the tables were cleared they leaned back and sent up clouds of tobacco smoke that were qualified to make the black beams of the old barn blacker still. There was music, too, and the wagoners, shepherds, and harvestmen rolled out old country songs, and everyone joined in the choruses with such vigour that the ancient barn rang again. But the supreme moment came when the table was removed and the village fiddler struck up with a well-known polka. At first there were few dancers, and everyone seemed shy, but as they got into the swing of it, one couple and then another got up, and before the fiddler was tired and stopped old men were on their legs and stout, buxom women seizing each other round the waist danced till want of breath would let them dance no more. They were a jolly party, and we venture to think that no single member will quickly forget the harvest home.

Agricultural Politics.

BY A LOBBYIST.

Felicitations to Lord Carrington.

I pray that the Earl Carrington will permit me to add my felicitations upon the distinctive honour bestowed upon him by His Majesty. With this the agricultural interest will, I am persuaded, heartily associate itself. No more receptive and sympathetic man than the new Knight of the Garter has presided over the Board of Agriculture. I have heard Lord Carrington described as "a great seigneur and a great democrat." However tense his democratic sympathies may be, they have never a turgid or blatant expression. Tenacity of sentiment is, with his lordship, associated with a bearing singularly courtly and conciliatory. On the other hand, his courtliness never persuades him to a concealment of his view or a subordination of his faith. It is something that we have in a Radical Minister—a man whose personal predilections are as distinctly rural and who has so deep a personal friendliness towards all associated with the land. Some may not appreciate the views he embodied in the remarkable report of the Welsh Land Commission; some may mistakenly believe that his small-holdings' enthusiasm means the inevitable effacement of the farmer; but all who are brought into contact with his lordship must have comprehended that his views are the offspring of a fervid anxiety to redeem the country side, to revive agriculture as an industry and an interest, and to rescue the villages from menacing desuetude. Earl Carrington's optimistic faith in his own purpose is admirably fragrant in these days of pessimists who sedulously refuse to see that the forbidding cloud may have a silver lining. Again, felicitations, my lord, upon the great honour which the King has done his old friend.

Will the Socialists Capture It?

Now, a word of warning to Mr. Winfrey, M.P., and Mr. George Nicholls, M.P. Whether the revival of the trades union sentiment among the rural labourers—and this, of course, is the object of their new agricultural organisation—is desirable or undesirable need not for the moment be argued. The point of view will naturally depend upon political sympathies. My warning is suggested by my knowledge of the methods of the Socialist leaders who now boss trades unionism and trades unionist societies. These leaders are adepts in the art of the cuckoo. Already they have bidden the men who have grown grey in the service of town labour, the men whose breasts bear the scars of many a fight, betake themselves off unless they will toe the Socialist line and espouse to the honour of Mr. Keir Hardie. Men like Thomas Burt, Henry Broadhurst, Charles Fenwick, W. Randall Cremer, and John Wilson—men who have secured the esteem of every section of the House of Commons by their honourable life and tempered manner—are told that they are obsolete, out of date, and excruciating, and that they must relinquish, willy-nilly, the distinction their labours have won. They must say that Keir Hardie is the only possible Mentor, and the Countess of Warwick as the only seraph, and do the behests of our

or the other with unflinching fidelity and unquestioning readiness. They must must swear by the Petes, the Bens, and the Harrys who have fung themselves at the head of the labour army or for ever be put down. Well, then, Messieurs Nicholls and Winfrey, how long, if you succeed in your purpose, ere these men will seek to wrest this instrument from you, and order you yourselves out for political decapitation?

An Example from the Towns.

This is the danger—that this organisation may mean the advent of the Socialistic propagandists and tub-thumpers. You will say that such an irruption on the villages would work its own doom, that these fellows are out of harmony with the rural atmosphere. Well, so it was said when these men first made their appearance in organised urban labour; and now they have captured the camp to the very last duce. They not only demand the tune, but they demand that every man shall dance to it or never dance more. Of course, they themselves a few years ago sought to tickle the ears of the rural groundlings by their fantastic phraseology and picturesque shibboleths, by uncouthly mouthing the catch-words "proletariat," "solidarity," and the like; but when they found they fell on barren human soil they incontinently renounced the task. However, their very defeat will only be, as an encouragement to them to oust the Nicholls and the Winfreys. They would, indeed, declare that a rural trades union organised on moderate lines and which did not eternally excoriate the landlord and declare the farmer to be an usurper is an anomaly, and forthwith would reach out an avacious hand for the spoils of the campaign in which they had had neither part nor lot. It may be argued that the rural labourers would no more want them in that day than they wanted them in the day of the previous agitation. Well, this would not rebuke them a bit; their avarice would only take a deepened hue.

Will the Rural Atmosphere Suit Them

After all, however, the onlooker may derive some consolation from this prospect. This would the quicker bring the whole business to ruin. The Socialists themselves, too, would after awhile tire of the rural atmosphere. You see there is no linelight in the village, no publicity, no tickling of vanity; and if these gentlemen have not their vanity tickled they will allow "poor down-trodden humanity" to go on being poor and down-trodden, and they will refuse to recite a single quotation from Shelley, or seek to provoke the stones to vengeful mutiny. Now, Messieurs Winfrey and Nicholls, beware of the men who will pay no more heed to your work beyond thanking you for having given them an opportunity of ousting you.

Whom does Mr. Winfrey Represent?

However, there is one point upon which I think we have some right to ask for information. Whom does Mr. R. Winfrey, M.P., represent in this matter? Let it not be forgotten that he is both the private secretary

and the confidant of Lord Carrington—nay, that he is his lordship's selected instrument in connection with the Minister's small-holdings enthusiasm. How far, then, in this matter does he represent the Earl? Is it to be understood that he has a dual personality—that, as private secretary to Lord Carrington in his capacity of Minister for Agriculture, he may be supposed to represent the Board of Agriculture; but that, in his other capacity as propagandist, he represents only himself? For my part, I do not see how he can in either capacity divest himself of the influence of the other capacity. To what extent will the labourers to whom he appeals remember that he is Lord Carrington's political and Parliamentary ally, and attach to his appeal and action the inspiration of his lordship? I repeat that I think we have a right to an answer to these questions.

Will the Earl Consent to this Amendment?

Earl Carrington's declaration that the Land Tenure Bill is more particularly designed with a view to dealing, not with the generality of estates, but with estates which have fallen into Chancery or are owned by a lunatic, or are in the hands of mortgagees, is to have a sequel which, I ween his lordship never anticipated. This sequel will be an amendment in the House of Lords limiting the application of the measure to estates of this character. Of course, it is easy to anticipate the reply to such a proposal—namely, that this would simply give a new lease of life to the ungenerous landlord, who is not insane or in the hands of moneylenders, or to the landlord who is, unfortunately, often compelled to be exacting and unsympathetic by reason of family charges on his estate. All the same, the proposal is not without a certain specious guile and astuteness. As a fact, the Bill is to be met by guile and astuteness rather than by blunt, remorseless antagonism. I believe that Lord Lansdowne himself now rejects the idea of an intention on his part to have the Bill thrown out without consideration.

Why this Delay?

Surely, the delay in appointing to the vacant Railway Commissionership is unconscionable? Why does Mr. Lloyd George hesitate? Is it that he fears that the man acceptable to the traders would not be acceptable to the agricultural interest? He has among the candidates a man who should be acceptable to both, and who, as a Secretary to the Local Government Board, revealed a most practical mind and a most admirable sagacity.

The death is announced of Mr. H. Denis de Vitre, Charlton House, Wantage, one of the oldest Shorthorn breeders of the present day, he having kept a herd throughout the forty-four years during which he had lived at Wantage. He was always an enthusiastic supporter of the Bampton Roses, Blanches, and Madelines, which made Towney famous. During all the years that he was breeding cattle, Mr. de Vitre kept in close touch with Shorthorn doings, and his knowledge of the history of the breed was quite remarkable.

For the convenience of exhibitors at the Dairy Show at the Royal Agricultural Hall, Islington, on the 9th to 12th inst., the London and North Western Railway Company have made arrangements for through vans for the conveyance of exhibits to be run to London on Monday, October 8, from several stations on their line, and also for the return of the traffic in through vans at the close of the show. All information can be obtained of Mr. Robert Turner, Superintendent of the Line, Euston Station, London.

An Estate Sale.—That portion of the Todington Manor Estate, belonging to Mrs. Warren Vernon, and comprising some 1,624 acres on the south-east side of the road leading from Todington to Harlington Station, and beyond, on which there are nine valuable farms, with eight houses and nine farmsteads, was brought under the hammer at Bedford on September 21st. A bid of £20,000 for the lot was offered at first, but this being below the reserve the estate was then offered in various lots. The reserve was again in many cases not reached, but we are informed that several offers were received immediately after the sale, and there is every reason to believe that a number of the lots will change hands very shortly. The sales effected by auction consisted of two lots—viz., the Common Farm, 112a. 1r. 34p., with farmhouse, buildings, two cottages, &c., let to Mr. George Ward at £95, knocked down to Mr. Baisley on behalf of the tenants at £2,500, and a small lot of 2r. 2p. of garden land in Harlington parish, abutting on the road to Sharpenhoe, rent £1 10s. Three bids brought it to £50, at which it was sold to Mr. C. Smith.

Fertilisers and Feeding Stuffs.

CAKES and other FEEDING STUFFS.

THE extensive use of concentrated feeding cakes and meals forms at the present time a regular part of economic farming.

These materials supplement the fodder crops grown on the farm, enable farmers to keep more stock, and indirectly to raise larger crops by increasing the bulk and quality of the supply of farmyard manure.

During the coming winter, in consequence of the poor crop of hay, artificial feeding stuffs will be much more in demand than usual; their judicious use will prove an absolute necessity as well as a great advantage to many farmers.

Concentrated foods rich in albuminoids and oil supply just the constituents which are deficient in the ordinary bulky farm crops. By their use the farmer gains the important advantage of being in a position to bring his stock to maturity more quickly. As has been remarked by a well-known expert, "if two animals are put up to fatten side by side, one on low diet and one on high, so that one fattens in three months and the other in four, the former will have lived a month longer, and will have consumed during the time a large proportion of food for mere maintenance, which portion is wasted."

THE VALUATION OF FEEDING STUFFS.

(Written expressly for this paper by an eminent authority.)

Farmers often appear to be at a loss as to how to determine which of two cakes or meals of different composition and price is the better; yet this is not difficult to determine.

The nutritive constituents in a feeding stuff are of three kinds—(1) the carbohydrates, such as starch, sugar, and digestible cellulose; (2) the oil or fat, and (3) the albuminoids or nitrogenous constituents. If each of these had the same money value, then by adding the percentages together and dividing the price per ton by this figure we should obtain the value of 1 per cent. of each constituent. This would be termed the "unit" value. The problem, however, of finding the unit value is slightly more difficult, because the three nutrient constituents are not equal either in feeding properties or price.

Opinions differ as to what is the relative value of these three constituents. Taking 1 per cent. of carbohydrates as unity, the value of 1 per cent. of oil or fat is from 2 to 2½ times as great. The albuminoids have a special value, because they contain and furnish nitrogen to the animal body, which neither fat nor carbohydrates can supply. Moreover, the albuminoids can replace fat and carbohydrates when these constituents are deficient. Hence all authorities agree in placing the value of the unit of albuminoids as high as that of the unit of fat—i.e., 2½ times as high as the unit of carbohydrates, while some place it still higher—namely, at 3 times the value of a unit of carbohydrates.

We thus have two standards in which the relative merits of the three constituents are placed, as follows:—

	A	B
	Continental Standard.	English Standard.
1 per cent. carbohydrates =	1 unit	1 unit
1 per cent. oil or fat =	2	2½ "
1 per cent. albuminoids =	2½	3 "

Probably the relative unit values depend mainly on the purpose for which the food is required.

Let us consider some concrete examples. Two compound cakes recently analysed gave the following results:—

Cake I. cost £7 5s. per ton.

Analysis.	Feeding unit, Standard A.
Carbohydrates 43.4 x 1 =	43.4
Oil 9.2 x 2 =	18.4
Albuminoids 18.8 x 2½ =	56.4

Total feeding units 118.2

divided by cost, £7 5s., makes unit cost 1s. 2d.

If we assume that these cakes were bought for fattening purposes, it will be well to compare them by Standard B. The results, then, are as follows:—

Cake I. cost £7 5s. per ton.

Analysis.	Feeding unit, Standard B.
Carbohydrates 43.4 x 1 =	43.4
Oil 9.2 x 2½ =	23.0
Albuminoids 18.8 x 2½ =	47

Total feeding units 113.4

divided by £7 5s. makes unit cost 1s. 3d.

Cake II. cost £7 7s. 6d. per ton.

Analysis.	Feeding units, Standard B.
Carbohydrates 41.6 x 1 =	41.6
Oil 5.8 x 2½ =	14.5
Albuminoids 16.1 x 2½ =	41

Total feeding units 107.1

divided by £7 7s. 6d. makes unit cost 1s. 5½d.

Thus the buyer paid over 20s. per ton too much for it.

Cake II. cost £7 7s. 6d. per ton.

Analysis.	Feeding units, Standard A.
Carbohydrates 44.6 x 1 =	44.6
Oil 5.8 x 2 =	11.6
Albuminoids 16.4 x 3 =	49.2

Total feeding units 105.4

divided by cost, £7 7s. 6d., makes unit cost 1s. 5d.

It will be seen that the purchaser of cake II. was paying a very high unit price for his cake.

At the present market prices 1s. 2d. is about a fair unit price; now had cake II. been sold at this unit value its price would have been 105.4 units at 1s. 2d. per unit = £6 2s. 11d. per ton. Thus the purchaser was charged £1 4s. 7d. per ton more than the cake was worth.

Dozens of similar cases come before agricultural analysts every year.

This system of comparing the merits of feeding stuffs by nutritive units is absolutely accurate where the two substances to be compared are similar, such as two linseed cakes or two cotton cakes, but it is not so applicable to a comparison of different feeding stuffs, such as a linseed cake with a cotton cake.

It must also be assumed that the substances are free from impurities, as these would materially reduce the value of any feeding stuff.

Compound Cakes and Meals.

The great demand for this class of goods must be assumed to be evidence that they are found advantageous in farming practice, and that good results are obtained from their use, otherwise their consumption would have gradually diminished instead of increasing year after year.

If we consider the subject impartially, this development is what might be expected; many of the manufacturers have acquired great knowledge of the requirements of animal feeding from long experience combined with special study. Some of them have undertaken expensive experiments with the object of ascertaining the results to be obtained from different mixtures of food constituents, and their factories are equipped with the best machinery for cleaning and properly compounding the materials. As the Board of Agriculture says on this subject in their Leaflet No. 74, "the sweet taste and pleasant aroma which accompany compound feeding cakes, and the high degree of relish with which they are consumed by cattle, largely account for their popularity among farmers. Many experienced feeders use large quantities of such cakes with the best results, but they should be bought with more caution than is necessary in the case of pure cakes."

This caution is rendered desirable by the well-known fact that there are some makers who do not scruple to incorporate in their cakes inferior materials, and to make an unfair profit by selling their inferior goods at prices above their real value.

Therefore, while farmers can use with economy and advantage the better brands of compound cakes, calf meals, milk substitutes, &c., they must be careful to deal only with reliable people, and should check the price by the table of unit values which we regularly publish for their guidance.

Fertiliser and Feeding Stuffs Act, 1906.

The Fertiliser and Feeding Stuffs Act, which comes into force on January 1, 1907, introduces the new obligation on the part of the seller that in the case of any article artificially prepared he must state the respective percentage (if any) of oil and albuminoids contained in the article; this will enable the buyer to calculate the relative value of parcels of the same kind of cake or other cattle food offered to him, an important point in view of the fact that the qualities differ widely, as shown in the analyses of linseed cake published in another paragraph. The exact wording of the clauses in the Act on this subject is as follows:—

Every person who sells for use as food for cattle

or poultry any article which has been artificially prepared shall give to the purchaser an invoice stating the name of the article, and whether it has been prepared from one substance or seed or from more than one substance or seed, and in the case of any article artificially prepared otherwise than by being mixed, broken, ground or chopped, what are the respective percentages (if any) of oil and albuminoids contained in the article, and the invoice shall have effect as a warranty by the seller as to the facts so stated, except that as respects percentages the invoice shall have effect as a warranty only that the actual percentages do not differ from those stated in the invoice beyond the prescribed limits of error.

Where any article sold for use as food for cattle or poultry is sold under a name or description implying that it is prepared from any particular substance or from any two or more particular substances, or is the product of any particular seed or of any two or more particular seeds, and without indication that it is mixed or compounded with any other substance or seed, there shall be implied a warranty by the seller that it is pure—that is to say, is prepared from that substance or those substances only, or is a product of that seed or those seeds only.

On the sale of any article for use as food for cattle or poultry there shall be implied a warranty by the seller that the article is suitable to be used as such.

Any statement by the seller of the percentages of the chemical and other ingredients contained in any article sold for use as a fertiliser of the soil, or of the nutritive and other ingredients contained in any article sold for use as food for cattle or poultry, made after the commencement of this Act in an invoice of such article, or in any circular or advertisement descriptive of such article, shall have effect as a warranty by the seller.

Where an article sold for use as a fertiliser of the soil or as food for cattle or poultry consists of two or more ingredients which have been mixed at the request of the purchaser, it shall be a sufficient compliance with the provisions of this section with respect to percentages if the invoice contains a statement of percentages with respect to the several ingredients before mixture, and a statement that they have been mixed at the request of the purchaser.

The Principal Purchased Foods.

Linseed cake is prepared from flax seed after part of the oil has been extracted. It is with justice the most popular of all cakes, being suitable for all kinds and classes of stock. It should always be bought as pure linseed cake, and the buyer should see that the word "pure" is stated on the invoice. The quality even of pure linseed cakes is subject to considerable variation, and therefore the percentage of albuminoids, oil, and carbohydrates should be guaranteed; and if the buyer has several offers he might ascertain their relative commercial value by calculating the respective cost of the feeding units in them. Here are three analyses of pure linseed cakes, showing that the range of quality is wide:—

	A	B	C
Moisture	11.32	12.41	9.17
Oil	14.36	10.05	7.29
Albuminoids	27.42	28.53	34.08
Carbohydrates	32.59	34.13	39.37
Fibre	8.10	8.50	7.58
Mineral matter	6.21	6.41	5.60

Total feeding units 137 130½ 139

Decorticated Cotton Cake is a cheap and useful food of a very rich character. It contains about:

9 to 10 per cent. of oil,
42 to 45 per cent. of albuminoids,
20 to 25 per cent. of carbohydrates,
and when purchasing, a guarantee of analysis should be obtained as well as a guarantee of purity. It should be fed in combination with a food rich in carbohydrates.

Uncorticated Cotton Cake should contain about:

5 to 6 per cent. of oil,
23 to 24 per cent. of albuminoids,
30 to 35 per cent. of carbohydrates,
and should be bought and used with care. Together with the usual guarantee of purity and valuable constituents, the buyer should have a guarantee of maximum fibre, which should not exceed 20 per cent. It has astringent properties, and is therefore useful in preventing scour in stock fed on young spring grass.

Cotton Seed Meal is a highly nitrogenous feed,

manufactured from the deoiled seed. In America it has been extensively fed to cows for the past twenty years, and is considered as a most economical source of albuminoids. Experience shows that when fresh and in good condition it can be safely fed, in combination with less concentrated food, to all kinds of stock. A cow should not receive more than 2 to 4 lb. a day, with bran or other farinaceous food. It varies much in quality, so buyers should be careful when getting a parcel. Here are four analyses, illustrating the different qualities:—

Albuminoids.	Oil.	Carbohydrates.
A 39.0	9.78	20.8
B 35.0	8.4	13.9
C 28.5	7.8	16.8
D 17.3	5.6	16.5

Rape cake is highly nutritious, but it is necessary to exercise great care when using it for feeding purposes, on account of the frequent presence of mustard seed with it. When good it can be advantageously employed. It contains about:

7.7 per cent. oil,
30 per cent. albuminoids,
18 per cent. carbohydrates.

Dried Brewers' Grains possess a relatively high feeding value; they are nourishing and digestible, and are eaten readily by cattle and sheep. In *Leaflet 74* of the Board of Agriculture it is stated that "a very exhaustive series of practical feeding experiments both with cattle and sheep have been conducted in this country with dried grains, and almost without exception they have proved more economical than any other concentrated food." According to Mr. Sibson's analysis dried grains should contain about:

5 to 6 per cent. of oil,
15 to 19 per cent. albuminoids,
45 to 50 per cent. carbohydrates.

Cereals—Oats, barley, rye, maize, &c., are well known. They are classed as carbohydrates or starchy foods, containing in round figures:—

2 to 5 per cent. of oil,
10 " " albuminoids,
70 " " carbohydrates.

There are various other food substances, more or less useful. The analyses will be found included in the following list published by the Board of Agriculture:—

Digestible Constituents in the Commoner Feeding Stuff. (Chiefly Wolff's figures.)			
Feeding stuffs.	Albuminoids.*	Fats.	Carbohydrates.
	p.c.	p.c.	p.c.
Decorticated cotton cake	35.9	10.0	18.7
Decorticated cotton cake	18.0	5.9	17.7
Linseed cake	21.7	9.6	29.8
Cocoanut cake	20.0	10.0	40.0
Linseed	20.1	25.2	18.9
Beans	22.0	1.4	50.0
Peas	20.1	1.4	53.0
Dried grains	14.9	6.4	33.9
Wet (fresh) grains	3.9	1.3	9.9
Bran (wheat) coarse	10.6	2.4	44.4
Wheat	11.7	1.2	64.3
Oats	8.0	4.3	44.7
Barley	7.7	2.3	57.6
Rice meal	7.0	10.0	43.0
Maize	8.0	4.0	48.6
Malt dust (comings)	18.5	1.1	48.5
Hay (average meadow)	5.4	1.0	40.7
" " clover	7.0	1.2	38.1
Oat straw	1.4	7.0	40.1
Barley straw	1.4	6.0	40.4
Bean straw	5.0	5.0	35.1
Pea straw	3.2	5.0	33.4
Locust bean meal	2.7	1.1	74.2
Potatoes	2.1	2.2	21.8
Swedes	1.3	1.1	10.6
Turnips	1.1	1.1	6.1
Mangolds	1.1	1.0	10.0
Tricale (molasses)	11.8	—	59.9
New milk	3.2	3.6	5.0
Buttermilk	4.0	1.1	4.1
Separated milk	3.9	4.0	4.5
Whey	8.0	1.1	4.9

A Few Remarks on the Valuable Ingredients of Cakes and Other Foods.

The nutritious ingredients of cakes and feeding stuffs are composed of the albuminoids, fats or oil, and carbohydrates, and it is the percentage and condition of these ingredients which constitute the feeding commercial value of all foods.

The *Albuminoids* are nitrogenous compounds forming the material out of which the true flesh, lean meat, and muscle are developed. They are absolutely necessary in the food in order to make good the continual waste of the body, and enable it to make growth. The albuminoids, like the nitrogen in fertilisers, are the most expensive portion of foods, and have to be first considered when buying concentrated cakes and other feeding material.

The *Fat and Oil* are heat producers, and stimulate the formation of fat in the animal.

The *Carbohydrates* consist chiefly of starch, sugar, and mucilage, yielding heat and energy, and also producing fat. They are not nearly so potent for these purposes as fat or oil, which are considered to have two and a half times the value of carbohydrates. The fodders such as hay, straw, roots, &c., contain large quantities of carbohydrates, but are poor in albuminoids, and therefore it is chiefly for the latter that artificial foods are bought.

Fibre and Mineral Matter.—The analyses of foods usually also show these constituents, but they may be left out of account.

Feeding Units.

A calculation based on the total feeding units of a food affords an easy method of ascertaining the relative commercial and intrinsic value of a cake or meal. It is arrived at by adding together the albuminoids, carbohydrate, and oil in the manner explained fully in the article "Valuation of Feeding Stuff," and dividing the total by the cost of the cake, the result being the cost per unit.

But it must be distinctly borne in mind that while this method is useful in comparing the relative commercial value of cakes or meal of the same kind, it is not applicable to different kinds. It would be as fair to give an equal unit value to the ammonia in a fertiliser derived from a cheap source, such as shoddy, to ammonia obtained from a high origin, such as Peruvian guano or nitrate of soda, as to apportion a uniform value to feeding units in different kinds of food.

To compare the value of one feeding stuff with another of a different character by analysis would be quite misleading, as the value of a cake depends on the origin of the ingredients, and condition, flavour, and palatability all come into consideration, although not shown in the analysis. One food cannot replace another merely because the unit value of the constituents costs less money, and it would be a very "penny wise and pound foolish" policy to attempt to do so.

Rough Tests of Quality.

The only means of ascertaining the exact quality of any kind of artificial feeding stuff is by having it submitted to analysis and microscopic examination, but there are certain methods by which a farmer can get a rough idea on the subject. The Board of Agriculture suggests the following method of forming a rough estimate of the purity and quality of linseed cake:—

1. By inspection with the aid of a pocket magnifying glass and a penknife he can detect the presence of substances other than linseed when these are of fair size. As a rule, however, they are so much broken up as to be difficult of identification. The smooth, shining, dark, generally

* Some of these foods also contain amides, but as these are comparatively unimportant, they are included in the albuminoids.

† This figure is got by the usual method of converting nitrogen into terms of albuminoids, but it is very much above the true figure for the digestible albuminoids in treacle.

more or less triangular-shaped seeds of Polygonum can often be seen. The round, dark-brown husks of rape seed are familiar. The seeds of corn cockle are dark brown and very rough on the surface. Corn spurry is a black seed with an almost smooth surface, and surrounded by a delicate disc. Pieces of straw can sometimes be detected, and sacking from the bags in which the cakes are pressed.

2. The presence of too much sand may be suspected if the cake feels gritty when small pieces are crushed between the teeth. The flavour should be pleasing and not pungent or bitter.

3. A jelly may be made by mixing one part by weight of the cake with six parts of boiling water. The jelly should have a mild taste and should not be bitter or rancid. If the jelly be covered up and warmed gently for some time the presence of mustard may be detected by the smell. Cakes resulting from the chemical process of oil extraction will not always form such a jelly. They are usually very poor in oil.

The Albuminoid Ratio.

The term "albuminoid ratio" is intended to express in a convenient form the proportion which the albuminoid or nitrogenous constituents should bear to the carbohydrates or non-nitrogenous constituents in the composition of foods. The basis of the calculation to arrive at the ratio of any food is the addition of the carbohydrates and fat or oil (the fat or oil multiplied by 2½ to bring it to the same unit value as the carbohydrates), and the total arrived at divided by the albuminoids. Thus taking a food analysis 10 oil, 35 carbohydrates, and 29 albuminoids, it calculates out as follows:

Carbohydrates	35
Oil, 10 × 2½	25
	60
divide by 20 albuminoids	3

so the ratio is 1 to 3

The proper ratio will, of course, vary with different kinds of animals as well as with the special object aimed at in the feed. Mr. R. Warrington, who was an eminent authority on the subject, suggested the following albuminoid ratios as suitable for various animals:—

Young animals on milk	1	3-4
Rapidly growing animals	1	5-7
Maintenance of oxen at rest	1	14
Maintenance of sheep at rest	1	12
Fattening oxen	1	9-10
Do. sheep	1	8-9
Do. pigs	1	7
Horses working on maize will do with	1	9
Horses in severe exertion	1	4-5
Milking cows	1	6-8
General average	1	10

These albuminoid ratios may be accepted as a general approximate guide in the economy and practice of feeding, but as the Board of Agriculture remarks, "the experimental work of our great agricultural societies has shown that even albuminoid ratios may vary greatly with the same results, though this is true chiefly from the point of view of live-weight increase rather than from the point of view of profit and loss. They may be modified to some extent by further investigation, and are to be regarded more as a general guide than for slavish imitation."

As illustrating the need for fresh research and observation in this matter reference may be made to the experience of the Paris Cab Company, who, as the result of many practical trials, have come to the conclusion that the proportion of carbohydrates for a working horse can be increased without prejudice to the efficiency of the animal, and with the result of effecting a great economy. While hitherto it has been considered that the ratio for a hard-worked horse should be 1 to 4 or 5, they have found that it can be safely modified to 1 to 8, 1 to 12, and even 1 to 22 when a

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Cakes and other Feeding Stuff.—In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids	2 8	3 0
Oil or fat	2 8	3 0
Carbohydrates	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids	22.1 × 2½	= 55.2
Oil	5.2 × 2½	= 13.0
Carbohydrates	33.2 × 1	= 33.2

Total feeding units 101.4

The price of the cake being 25 7s. 6d., the cost per feeding unit was just about 1s.

Some Familiar Faces in the Feeding Stuff's World.

Mr. A. T. Jones,

liberal supply of sugar (molasses) is added to the food. (See report in our issue of July 9.)

Further information in the same import was afforded by the evidence of Mr. J. Milne, in experiments in feeding cattle, handed in to the Departmental Committee on the Fertilisers and Feeding Stuffs Act.

The object of the experiment was to ascertain the relative fattening value of the various simple articles, such as oats, maize, linseed, cotton cake, &c., the feed-
Important Experiment. The relative value of linseed cake compared with a variety of other mixed foods having the same percentage of oil and albumen, and the most profitable albuminoid ratio.

As regards the most profitable albumen ratio, an experiment was conducted on three farms. Twelve cattle were selected, divided into three equal lots, and fed for sixteen weeks. Lot 1 received ground linseed cake all the time, having a ratio of 1 to 2. Lot 2 received lye fodders, gradually reducing the albumen until a ratio of 1 to 15 was reached. Lot 3 began with the lower proportion, and ended with the higher proportion of albumen. At the end, the results on the other farms did not differ materially, and all went to show that the proportion of albumen in the lye fodder does not control the increase in weight to any great extent. In another experiment the conclusions drawn up by Dr. Aitken and Mr. J. Milne were as follows (Highland Society's "Transactions," 1893).—"It is evidently of far greater importance that a feeder should select his cattle from a knowledge of their thriving tendency than that he should select his fodder so as to produce nutrient ratios of 1 to 4, 5, 6, or 7, as the case may be. . . . The mixture of maize, locust bean meal, and linseed meal had a nutrient ratio of about 1 to 9, the linseed cake had a nutrient ratio of about 1 to 2, and there was little difference in the results attained, when lots 1 and 2 had 4 lb. per head, given them daily. The daily increase in live weight was very satisfactory, and it is interesting to notice that the live-weight increase of all the lots was almost exactly in proportion to the amount of dry matter consumed."

It was found by experiment that no advantage was found by feeding with a large quantity of oil, as if over half a pound is used daily the surplus was found in the dung. This would be equal to the quantity contained in 5 lb. of cake containing 10 per cent. of oil.

In an experiment on fifty cattle in 1896, ten in each lot, there was no practical difference between ratios of 1 to 3, 1 to 4, 1 to 4.5, 1 to 7.4, and 1 to 10; and in another experiment in 1897 on fifty

cattle, ten in each lot, there were no differences, except such as might be expected from individual constitutions, between ratios of 1 to 5.5, 1 to 6.3, 1 to 8.7, 1 to 10.8, and 1 to 11.7.

In experiments made by Kuhh, of Mochern (a German feeding expert), the greatest amounts of fat were produced by rations having the most widely nutritive ratios—viz., 1 of albumen to 4.5 of carbohydrates, and 1 to 20.9, the food in the one case being made up largely of gluten, and in the other of starch.

Much depends upon the quality of the farm fodder, which varies greatly, but if this is of good quality, the precise proportion of albumen in the lye fodder is not of such importance in feeding value to the farmer, as the late Dr. Emil Wolff and others have tried to show, and the ratio need not be adhered to with mathematical accuracy, since the increase in live weight depends more upon the quantity of dry matter digested. A material quality of food is that it is palatable and digestible. The proportion of albumen would affect the value of the excrements, but recent experiments made by Dr. Voelcker and Mr. Hall have shown that about one-half of the nitrogen in food is not recovered in the manure, so that feeding of stock may not always be the cheaper method of manuring land.

Winter Fattening of Sheep.

(West of Scotland Agricultural College.)

1. A limited quantity of roots has a high value in sheep feeding.
2. Hay or other fibrous food must be given with roots to regulate digestion.
3. Linseed cake alone to supply concentrated food is too laxative to succeed in a root diet. Linseed cake is specially unsuited for animals requiring short keep.
4. Linseed cake and oats, half and half, are too low in flesh-formers and render the albuminoid ratio of root diet too wide.
5. Decorticated cotton cake and maize in equal proportions is free from the faults of the other food mixtures.
6. The maize in that mixture, however, could probably be exchanged for oats in many cases with advantage.
7. A steady increase of food during fattening is required to ensure progress.

Our Portraits.

Owing to pressure on our space we have been compelled to hold over some other portraits of well-known men in the feeding stuffs trade, and these we hope to give in a subsequent issue.

Manure Value of Cattle Foods.

The quality of the manure produced by cakes and other feeding stuffs fed to stock depends on the percentage of the albuminoids in the feeding stuffs. The richer the food is in this constituent the richer will be the manure produced by the stock, as it is the nitrogen contained in the albuminoids which is returned in the dung as nitrogen or ammonia. Tables are published showing, for the purpose of compensation, the estimated value of the residues derived from feeding different kinds of feeding stuffs to stock.

Treacle or Molasses.

The nourishing quality of molasses has long been recognised. As the Board of Agriculture remark, it can often be very profitably employed, having high feeding value and being much relished by cattle. The use of untreated molasses has, however, the drawback of a tendency to produce "looseness" in the animal, so that it can only be fed in small quantities. To remove this disadvantage, the molasses is treated by special processes, and the improved product placed on the market under various names.

Types of Linseed Cakes.

(From Wyke College Report.)

The following analyses represent cakes of different makes:

The Influence of Food on Milk.

The influence of food.—Few questions have attracted more attention from students of milk production than this one. The most extensive series of experiments are probably those carried out at Copenhagen; but the problem has also been attacked here in America, and in Germany. Liebig's theory that the fat of the body and of milk arose from the digested protein, and the old idea that milk was a direct secretion of the blood, long suggested the possibility of changing the percentage of fat in milk by suitable feeding. It has not, however, been found possible to do this. The Copenhagen experiments lasted for ten years, and over 2,000 cows in all were under investigation; cereals were compared with roots, with oil cake, and with bran; cereals and cake were tested against roots, and roots were given in addition to certain basal rations, but no marked change in the percentage of fat could be

obtained. Some of their later experiments have indeed indicated that a more homogeneous diet may produce a slightly higher percentage of fat than a starchy one, but the differences, even if they exist at all, are only slight. The change in composition observed when animals go out to grass in spring may very likely be due to a large number of causes, and not simply to the change in food.

The quantity of milk is influenced by the food. If the ration is insufficient, the animal may lose weight, but will continue to produce milk, the preservation of the race being always more important than that of the individual. With increasing ration, the quantity of milk produced increases, till finally a limit is reached, dependent on the udder capacity and other features of the animal. The fat and the other solid matter both increase simultaneously, and little, if any, change in the percentage of either can be observed. But the nature of the fat changes, and for butter or cheese-making purposes fat has a marked influence.

The improvement of milk.—From the above considerations, it is evident that no simple scheme can be adopted for raising the percentage of fat in milk from a given herd. An improvement can sometimes be effected by making the intervals of milking more uniform, but usually these are regulated by train departures and cannot be altered. The only reliable method is to introduce some rich milkers, and to eliminate those found to give poor milk.

Thus on going through the herd systematically, one farmer found a cow yielding only 1.7 per cent. of fat, another found one giving only about 2 per cent. of fat; these were fattened off and sold to the butcher, and in their place rich milkers giving over 5 per cent. of fat were introduced, with the result that the mixed milk from the whole herd rose from 2.7 per cent. of fat to 3.2 per cent. where, of course, it was well over the standard and no longer a source of any anxiety.—*Wye College Report.*

Extracts from Reports of Feeding Experiments.

(From Wye College Report.)

Fattening Bullocks.—The reason for cake feeding or for the use of any concentrated food stuffs is, of course, the shortening of the feeding period and the turning over more rapidly of the farmer's capital. The quantity of these expensive foods used must depend on the character of the rest of the food, the age and individuality of the animal, and the skill of the feeder.

The most satisfactory system seems to be to feed younger beasts eighteen to twenty-one months old, commencing with a small amount of concentrated foods and to gradually force them, so that early ripeness is secured and the feeding period made as short as possible. The breed of beast most suitable for this early forcing, this manufacture of baby beef, seems from these trials to be the Devon rather than the Hereford, the latter breed taking more time to finish into a marketable beast.

Report on Milk Investigations.

(Yorkshire Council for Agricultural Education.)

1. A substitution of decorticated cotton cake for maize meal given to cows while at pasture day and night has very little effect on either the quantity of milk produced or on its content of fat and solids not fat.

2. Other conditions being equal, the morning milk is probably as a rule of slightly better quality when the stall food is given all at the morning milking than when only half is given in the morning and the rest at the evening milking.

3. The individuality of each cow and its condition during the period of the experiment are important factors in determining the magnitude, and, to a lesser extent, the "direction," of any changes.

4. Bearing in mind the limitations imposed by

conclusions (1) and (3), cows receiving decorticated cotton cake to supplement pastures may be expected to give milk of better quality than cows receiving the same weight of maize meal.

5. The effects of changes in the nature of the food and the mode of feeding are most pronounced immediately after the change, but rapidly diminish in intensity.

Relation of Food Consumed to Live Weight Increase.

(Rothamsted Experiments, A. D. Hall.)

Taking the ordinary foods available on the farm, Lawes and Gilbert found that oxen, sheep, and pigs differed greatly in their powers of consuming food and in the rate at which their live weights would increase. During the whole fattening period oxen will consume per 1,000 lb. of live weight 120 to 150 lb. of dry food per week (e.g., in the experiments 25 lb. cake, 60 lb. clover hay, and 350 lb. swedes, and should produce about 10 lb. live weight increase per week. Sheep per 1,000 lb. live weight will consume in the same time about 150 to 160 lb. of dry food (41 lb. cake, 32 lb. clover hay, and 70 lb. swedes for a production of 17 lb. increase per week. The same live weight of pigs consuming 250 to 290 lb. of dry food (30 lb. barley meal) will produce 50 to 60 lb. increase.

These estimates, drawn up from a very large number of trials carried out in the ordinary way of farming have been generally verified by the later exact work of the Germ. in experimenters if allowances be made for the superior fattening qualities of English stock. Probably at the present day both the estimates of the amount of the amount of food required per diem and the rate of increase should be raised, because of the improvements that have been effected in the breeds of our sheep and cattle. The modern farm animal is a more efficient meat-producing machine than it was fifty years ago, capable of dealing with more food and of growing more rapidly to maturity.

SHOWS OF THE WEEK.

Frome.

The Frome District Agricultural Society's show has won for itself a wide reputation for its dairy products, notably the cheese of the Somerset make, and for many years now it has held the premier position as an exhibition of Cheddar cheese, and Wednesday's show maintained the reputation well. Side by side with the competitive classes of the society for the English article of staple food—for a few yards only separate—is held the annual Cheddar cheese fair, at which of late years the pitch has never been less than 200 tons. The result is that there is a display of this world renowned make which is interesting to a degree, especially to visitors from big centres. The connection between this great annual sale and the show is strengthened by the society offering substantial prizes for the best lot pitched by a farmer, dairyman, or factory, the lot to be not less than half-hundredweight for each cow in the dairy, or for every cow from which milk is taken to produce the exhibit. The first prize went to a well-known and highly successful maker of Cheddar cheese, Mr. T. C. Candy, Woolcombe Farm, Cattistock, Dorset, who also won the champion prize at the exhibition. The general quality of the cheese pitched at the fair was excellent, and for top qualities quotations ruled from 80s. to 82s. per cwt., sales being effected at still higher prices by Mr. T. C. Candy and other well-known prize dairy farmers. The average prices ran between 65s. and 72s. per cwt.

The weather was all that could be desired for the show, and it is satisfactory to note that the exhibition not only held its own in all departments, but that the entries constituted a record, with a total of 820, which passed the previous high-water mark of 796. The cheese classes were as mentioned, the feature of the show, but they did not entirely overwhelm the other sections, for there were highly creditable displays of both light and heavy horses, whilst cattle were a good lot, as also were both sheep and pigs, though sheep might have been more numerous.

Altrincham.

The Altrincham Agricultural Society's Show is one of the largest one-day shows held in this country, and it certainly grows in popularity, for each year since 1895 has witnessed an appreciable increase in the entries of live stock and produce. For instance, in 1895 these entries were 2,767, in 1900 they had increased to 4,118, in 1904 they were over 1,000 more. Last year the total was the record one of 5,449, but even this was eclipsed on Wednesday last, the total then being 5,496. Such a number of entries speaks volumes for the estimation in which the show is held, and it is no doubt due to the variety of classes provided. These include cattle, horses, both heavy and light and turnouts, sheep, pigs, goats, roots, grain, and other agricultural and horticultural produce, dogs, poultry, pigeons, rabbits, cats, caviars, implements, &c. With such a wide range, the show is naturally a most attractive one, and on Wednesday, the weather being most favourable, the showyard—a very capacious one—was at times tolerably packed.

Cattle and horses were, perhaps, the feature of the show, and, as regards the former, there was a marked improvement in the quality. Some of the best breeders in the country sent exhibits, and in no case had the judges to award a prize to an animal which was not worthy of a place in a strong class. Mr. G. Harrison, of Darlington, and Mr. F. Atkinson, of Bury, took the best prizes. There were very many excellent dairy cattle, but there was little to stand against Mr. S. S. Rainhill's exhibits, whilst Captain L. G. Gisborne and Mr. T. F. Egerton were very successful in the competitions for Channel Islands cattle, of which there was a very good show.

The Hackneys, as usual, made the best display in the horse section. The five-guinea cup offered by Sir Lees Knowles for the best gelding or filly went to Messrs. Carr and Co.'s Boqual Sunrise, whilst the Hackney Horse Society's medal for the best Hackney or pony mare was awarded to Mr. A. L. Goodson's Polly Ailsa, who also took the first prize in the class for brood mares for road purposes with foal at foot. Hunters were not so good as they might have been. Mr. R. Needham's Merryglens was awarded the Hunters Improvement Society's medal. In a district in which Earl Egerton of Tatton and Mr. James Gould, of Lymm, reside, one naturally expects to find some good shire horses. The show was not disappointing in this respect. Both Lord Egerton and Mr. Gould sent a number of animals, and they were the principal prize-winners; in fact, Mr. Gould secured ten firsts and four second prizes. The classes for sheep were very small, there being but twenty entries. Six hundred and sixty-three dogs were benched, and no fewer than 1,953 pigeons were judged, whilst of farm and dairy produce

there was a big display, and although showing some signs of having suffered from the weather, compared favourably on the whole with recent years.

Ashbourne.

The 26th annual show of the Ashbourne Shire Horse Society was held at Ashbourne on Thursday under the most favourable conditions. Entries were fifty in excess of last year, and the muster of Shire horses fully maintained, both in numbers and quality, the high reputation of this exhibition. His Majesty the King, who was at one time president of the society, still shows his interest in the affair by sending exhibits, and last week he had forward a colt foal in the open class, namely, Blondel, a brown foal of nice appearance, but wanting a little in substance, and the judges only thought it worthy of a highly commended card. The first prize was given to one of Mr. Frank Farnsworth's foals, which was such a finely-built specimen that it also secured the challenge cup for the best foal on the ground. Tatton Morning Star, the second colt, was reserve for the cup. Eighteen entries, covering a wide area, were received in the open class for filly foals, where Mr. James Gould's Lymm Starlight was placed first, and one of Mr. W. T. Everard's fillies second after a close competition. The honours of the show fell perhaps to the mare Rolleston Fuchsia, exhibited by Mr. Homer Towgood, of Little Shelford, Cambridge. To her went the first prize in the open class for mares foaled before 1902 and with a foal at foot, and the Wainwright gold challenge

show is famous for its roots, and the mangold and kohlrabi were again well up to the usual standard. Swedes were not particularly good. Much interest was as usual taken in the driving and jumping competitions, but the latter was hardly so good as generally in consequence of the hard ground.

Northallerton.

The show of the Northallerton Agricultural Society is amongst the last of the season in Yorkshire, but is none the less interesting and popular as the thirty ninth show proved, for although the weather was not of the best, there was a very large attendance. Entries, too, were good in quality and quantity, the number being 1,122, or only about half-a-dozen less than last year. Compared with some former displays, the agricultural horse classes were not so good as usual, but included some fine animals. Mr. Thomas Barton's young stock proved invincible; besides three first prizes, he carried off the Shire Horse Society's medal for Sandcliffe Flower, a brown three-year-old filly of full quality. The Coaching Horses were of merit, and the winners of admirable type. Much the same may be said of the Riding classes, especially the Hackneys under six years and the ladies' Hacks. Hunters, however, were the outstanding feature, as was only to be expected in a district so keenly interested in hunting. The cattle included a nice lot of pure-bred Short-horns, and in every instance representatives of the Gairford herd were found at the very front. The district classes were quite as well filled, and the character on the whole good. Sheep were not quite so strongly represented as perhaps they might have been, though Wensleydales were well in evidence, whilst pigs made but a small show.

South Brent.

Started eleven years ago with the object of encouraging the breed of Dartmoor ponies, the association, which has since become the South Brent and District Dartmoor and Polo Pony, Horse, Sauter, Cream, and Honey Society, has not only succeeded beyond expectations in its original purpose, but has established for itself a place amongst the important shows of Devon. At their exhibition on September 21 the entries reached the record total of 159, of which 134 were in the animal classes. The latter were exceedingly well filled, and the quality of Dartmoor and polo ponies and Hunters were of such a high standard generally that the judges had in some cases no little difficulty in coming to decisions.

SHOW SECRETARIES.

MR. T. C. HARDING.
Frome Agricultural Society.

cup for the best mare or filly in the show. Sir P. A. Muntz, M.P., won the first prize for three-year-old fillies with the beautiful grey filly Dunsmore Quality, a well-known prize winner, and the second prize was won by Mr. R. Deaville, of Shottle, Belper, with Queen Mary, a chestnut filly of not quite the size for the chief place in an open class, but an easy winner in the corresponding class for local fillies. Lord Egerton's Tatton May Queen was second in the two-year-old fillies. This animal has been shown a good deal this summer, and was not, perhaps, in the best of condition, and she was beaten by Bardon Marion, belonging to Mr. W. T. Everard, of Bardon Hall, Leicester, and a filly which shows every promise of making a valuable brood mare. As a whole, the local classes, except in the case of the foals, were not so well supported as the society could wish, but there were a dozen entries for local mares with foals, and some remarkable animals were shown.

Gransden.

The Gransden Agricultural Society's proverbial good luck in the matter of weather did not desert it on Tuesday, for the day was a delightful one, and the show passed off most successfully. The number of visitors was very large, and the show a great success financially. There was a little falling off in the entries, but this was explained as being due partly to the dry season, so many animals not being in condition, and again, the standard at Gransden is now so high that people feel it no use sending any except really good animals. In the cart horse classes some good animals were shown, and it may be mentioned there was very keen competition in the class for nag foals. Cattle were somewhat short in numbers, but some capital sheep were exhibited. Gransden

Good Prices for Coach Horses.—The team with which Mr. T. Hooper Deacon ran the Swindon-Savernake coach during the summer was sold by auction at Swindon on Monday, and fetched some capital prices. The best figure for a single horse was 200 guineas paid for Chemist, Bachelor realised 160 guineas, Confidence 155 guineas, and Brown Bread, a winner at the recent Bath Show, 145 guineas. The best pairs were Treador and Aerobol, which were sold for 210 guineas; Luxury and Spring Bank for 200 guineas, and Warrior and The Clown for 150 guineas. The average price per head worked out at £88 6s 6d.

At a meeting of the North Cotswold Farmers' Association at Chipping Campden on Wednesday, a discussion took place on the change from "home fed" to "home killed" in the army contracts for meat, during which there was severe criticism of the attitude of Lord Carrington, which the chairman described as unworthy of a Minister of Agriculture and inconsistent with his views on the question of the adulteration of butter. The Leicestershire Chamber of Agriculture had asked the Secretary of State for War to receive a deputation on the subject, and invited the association to send a delegate. Mr. U. C. Stanley was appointed a delegate. A resolution was adopted expressing the opinion that the change would be very detrimental to the interests of agriculture, and claiming that farmers should be put on an equal footing with British manufacturers, the conditions for all army contracts being "British-made goods."

Imported Adulterated Butter.—Jacob Frederick Van Ralte, provision merchant, of St. Mark's Road, Dalston, attended before the Lord Mayor at the Mansion House police court on Thursday to answer 13 summonses charging him with having imported into the United Kingdom 218 packages of adulterated butter, the same not being conspicuously marked, as required by the Food and Drugs Act. Defendant said that he had acted merely as an agent in the transaction, and was in no way to blame. The Lord Mayor said no doubt it was a hard case, but they had to administer the law as they found it. The importation of adulterated butter into this country in such circumstances was a serious offence. He should impose a penalty of 10s. on each of the summonses and allow 3 guineas costs, £11 15s. in all. The court allowed defendant 14 days in which to pay the money.

SHOW GOSSIP. Weather, Crops and Stock.

At a meeting held in Rushden, the following resolution was carried unanimously:—"That in the opinion of this meeting it is desirable that an invitation be given to the Northamptonshire Agricultural Society to hold their annual show at Rushden in 1917, and that the Rushden Urban District Council be requested to convene a town's meeting in support of this resolution." It was mentioned in the course of the meeting that eight years ago the show was held at Rushden, and proved to be a grand success. At that time the people of Rushden took up the matter heart and soul, and the weather proving very favourable, the show was so great a success that the Agricultural Society wished to visit Rushden again in 1907. Some discussion took place on the financial aspect of the question, and it was stated that about £200 would have to be raised. It was, however, pointed out that the sum of £28 in hand, left over from the show of 1898, had now increased to about £31, and this would form the nucleus of a guarantee fund, whilst it was considered that little difficulty would be experienced in raising the required amount.

The Royal Cornwall Agricultural Association has now decided on its site for the next year's show. From five available sites, three were offered to them to select from. The local committee strongly recommended fields at Addington, extending over sixteen acres, close to the town, and possessing an ample water supply, as well as having the advantage of being level and embracing a good view of the Caradon Hills and the moorlands to the north. The other sites were at Tremate, on the St. Cler Road, and at Cartuther Barton, on the Plymouth Road, and the latter was much favoured by the selection committee of the association, as it was contained in one large field, with no intervening heaves, but as there was a strong feeling on the part of the townspeople that the showground should be as close to the town as possible, the committee determined upon the Addington site, and their selection gives general satisfaction locally. The fields include the grounds of the Liskeard Football Club, whose grand stand may, therefore, prove a convenient adjunct.

At Dumfries Horse Fair on Tuesday considerably over 250 horses were offered. There was a large attendance of farmers and dealers, and for horses of the better stamp a good selling trade prevailed. The top figure was £77. Other important purchases averaged about £55 each. A large trade was done in horses of a secondary class, prices for which averaged from £30 to £40.

In the course of a recent speech, the Earl of Plymouth said he had the strongest sympathy with the cry which was being raised of "Back to the land." It was the greatest misfortune that large areas in this country should be uncultivated, and not cultivated to advantage. We had the case of France thrown in our teeth, but he wished to point out that the question could not be determined by the ideal of what we wished to see. We had to deal with economic facts, and in England we rightly insisted on having our food as cheap as possible, whilst in other respects the conditions of the two countries could not be compared.

The Midland Railway Company announce that exhibits for the forthcoming dairy show at the Royal Agricultural Hall will be conveyed to St. Pancras in through vans from Edinburgh, Glasgow, Carlisle, Leeds, Bradford, Sheffield, Manchester, Liverpool, Nottingham, Blackburn, Leicester, &c., whilst consignments from branch lines and intermediate stations will be placed in the through vans at the various junctions, thus ensuring direct transit. Rates for the conveyance of the exhibits can be obtained at the various stations on the line. Arrangements will be made for the return of the traffic at the close of the show in through vans. Any information required may be had on application to Mr. W. P. Snow, S.E. Pancras Station, London.

An Agricultural Labourers' Union.—At a conference of agricultural labourers representing Lincolnshire, Norfolk, Hunts, Cambs., and Suffolk held in July last at North Walsham, it decided to form a union, the objects of which were to secure proper representation upon local bodies, and, where desirable, to assist in providing small holdings, and improved housing accommodation, to shield members from injustice, encourage inter-communication with unions in this and other countries, and to endeavour to improve the social and moral conditions of its members. Branches of the union have already been formed, and members enrolled, and it is quite anticipated after harvest to carry on an active campaign and enrol 5,000 members in the county of Norfolk alone. But it is considered that to satisfactorily establish the union a sum of at least £500 will be required, and an appeal is now being made for subscriptions and donations. These will be received and acknowledged by the secretary of the union, Mr. R. Winfrey, M.P., Sutton House, Peterborough.

Exclusive Reports.

East Suffolk. WHAT a time it has been for the harvest! Everything is now stacked and thatched in splendid condition, seed clover included. A little threshing has been done, and I should say corn on good heavy land will, on the whole, yield above the average. Beans and peas are exceptionally good. In this district it has been an extraordinarily dry summer, the average rainfall for the last five months only comes to an inch a month. It will very soon be a serious matter now to find food and water for the stock. The muck will soon be all carted on the stubbles, but ploughing them is almost an impossibility. It is not often that we have heavy land farmers wish for rain in the autumn.

Lincolnshire (Mid). I THINK we Lincoln Heath farmers may congratulate ourselves and truthfully say we have had a very favourable season. Mainly an arable district, also in many places not blessed with too much soil, and with a limestone subsoil, we are very susceptible to spells of dry weather; but although three weeks or a month later in getting our spring corn in than last year, thanks to welcome rains in the nick of time the barleys have never been really stopped, and have finished a good crop; I should certainly say above the average of the last five years. Wheats, having grabbed a good deal in the winter, are, on the whole, a light crop. Turnips, a most important crop in this neighbourhood, went in under very favourable conditions, and are a full plant and look uncommonly well; in fact, there is every appearance of a big supply of winter keep. Harvest operations, thanks to a fine fortnight, are nearly completed on the high land, but large tracts of corn are still to be cleared in the fen country. Plenty of new corn on the market at Lincoln, but prices are ruinous and with a downward tendency. Wheat, 27s. to 28s.; oats, 17s. to 19s.; peas, 40s. to 45s.

Berkshire. AS far as this county is concerned the summer of 1906 will be chiefly remembered for the deficiency of the rainfall. With the exception of heavy rain on two days during the last week in June, amounting to over 2½ in., no quantity of rain has fallen since March. Consequently all crops, especially on gravelly soils, have suffered more or less from drought. Wheat is not a bulky crop, but will probably yield well from the straw, and the quality is excellent. Barley was much improved by the June rains, and is a full average crop, but in many cases it ripened prematurely, so that the grain will be thin and small. Oats, especially the Winters, which are rather extensively grown in this neighbourhood, are generally good. The corn stood up, enabling the binders to work to the best advantage, and with a continuance of splendid weather, harvest was completed more rapidly than I can remember and at a great saving in expense, and, as last year, almost everything had been secured before the end of August.

Aberdeen-shire. IN the earlier portions of the county cutting has been finished and commencement has been made in securing the crop in the stackyard. In later localities cutting is, perhaps, only half done, and the self-binders are busy at work. Crops, generally, are short in

straw, and stackyards will be under an average in bulk. This is a matter of great regret in a county where stock keeping engages so much attention. Turnips are doing remarkably well and give every indication of being a good crop. As in the past two seasons there is every prospect at present that there will be a plentiful supply for sheep during the approaching winter and spring. A good supply of roots is a matter of vital importance to the flockmaster, especially if they are to be had at as low a price as has been the case during the past two seasons. Flockmasters are having their innings at present, and the fleecy flocks are booming. How long this state of matters may continue no one can tell, but certainly at present there is no appearance of the boom going off.

North Lincolnshire. THIS strange but true how the weather has varied this summer in even a few short miles. I live on the oolitic limestone myself, and about eight miles from the junction of the Trent and Humber, equidistant from each. How often do we see thunder storms coming, when in a moment they seem to divide, half going up the Trent and half up the Humber, thus missing us; consequently my turnips are dried up, leaves all brown, and a poor crop. On the contrary, I this week went only twenty miles, as far as the North Chalk Hills, I found there things looked verdant, the best crop of turnips for many years, and, quite a bite on the seeds. Our potatoes have been in the same position—dried up, and now, when they should be ripening, a new growth has started, so some tubers will never ripen, and others have their skins fast now. This will spoil the quality. The buyers are coming round, and are eager, but at low figures; we are inclined not to sell, expecting short crops and higher prices. Edwards are ripe and fit to lift, as for Eldorados, Stars, &c., they are conspicuous by their absence. Milk never was so scarce, and winter foods are dear, so a little should be asked extra per gallon when selling. I have done very little threshing, but neighbours report poor yields of wheat, very good of beans. Alas! I and others did not sell our wool, and now buyers never appear. Trade, however, is good, so we hope for better things.—NORTH LINDSY.

The Board of Agriculture and Crop Prospects.

The Board of Agriculture has issued a second report, dated September 24, on the crop prospects of England, Scotland, and Wales, and in this state that further reports from the Crop Estimators of the Board tend to confirm the expectations formed in August as to the prospects of all the principal crops with the exception of roots and potatoes. The corn harvest is for the most part over, and the exceptionally favourable weather has generally enabled the crops to be quickly secured in excellent condition. On the other hand, the prolonged drought has had a detrimental effect upon potatoes and roots, and upon the second growths of grass in nearly all divisions of England.

Wheat, which was represented in August as being probably 5 per cent. over average, has declined to the extent of about one-half per cent., but a yield exceeding the average is still expected in each division of Great Britain. Barley seems to have improved by about 1 per cent., and is also represented as being over average in every division. In oats no general alteration is indicated, and the crop is described as above the average everywhere except in the northern division of England and the east of Scotland.

The depreciation in the potato crop, occasioned mainly by lack of rain, is put at about 2 per cent., the yield now indicated being slightly below the average. While manolds do not appear to have been much affected, turnips and swedes suffered from the lack of rain to an extent which is put generally at about 4 per cent.

The position as regards fruit and hops does not seem to have been appreciably changed since the August report. Hops are still reported as the most deficient crop of the year, but the quality is said to be exceptionally good in most cases.

Summarising the reports and again representing an average crop by 100, the prospects of probable yields for Great Britain as a whole may now be represented by the following percentages: Wheat, 105; barley, 104; oats, 102; potatoes, 99; roots, 101.

The Locking of Milk Cans.—Owing to so many complaints in the police court, when milk adulteration cases were being investigated, that the cans had been tampered with, the Health Committee of the Sheffield Corporation requested the Town Clerk to write to the railway companies, asking whether they had any objection to the cans being locked during transit to Sheffield. Replies have been received from all the companies, stating that they had no objection, provided that each can had its "tare" conspicuously stamped thereon outside.

RATS

EXTERMINATED BY DANYZ VIRUS

DISCOVERED AND PREPARED BY
DR. DANYZ, OF THE PASTEUR INSTITUTE, PARIS.

When affected by the Virus the Vermin leave their usual haunts and die in the open. The remedy is harmless to other animals and human beings and may be used everywhere with absolute safety.

SPECIAL TERMS FOR LARGE AREAS.

CORRESPONDENCE.

The Threshing of Barley.

SIR,—I should like to draw the serious attention of those interested in agriculture to the importance of the careful threshing of barley, more especially after this last harvest, which has been a very dry one, and consequently the corn is more liable to be split and chipped at the ends.

These very bad defects cannot, in my opinion, be too much impressed upon both growers and thrashers, because brewers and maltsters will generally refuse to purchase a badly chipped sample, and even if only moderately damaged it makes shillings difference in the value.

Now, from a competitive point of view, such as are held at the Agricultural Hall and in many provincial towns between October and Christmas, but thrashing is almost, if not quite, fatal, because no matter how good in quality the barley may be, the judges only too well know the serious results that may come from such grain when it is germinated, and they generally pass them over altogether.

As the harvest of this year looks like producing some of the finest barleys that have been grown in this country for many years past, I should hope that we may see British grown corn stand higher than that of any other country when it comes to the show bench.—Yours faithfully,

FRANK FLINN,

Chairman, Barley Judges,

Brewers', Maltsters', &c., Exhibition.
Bishop's Stortford, September 24, 1906.

The Butter Tests and Milking Trials at Tring Show.

SIR,—I am loth to trouble you with another letter on the above subject, but in your last issue the gentleman writing under the name of "Notes and Jottings" in referring to these trials again imputes want of care and incapacity not only to me as judge, but also to the staff who assisted me at Tring.

To criticise the records of some of the animals that were sent in for the competition is perfectly legitimate, but to make that a ground for suggesting that the work is carelessly done goes, I think, beyond the limits of fair criticism.

I feel satisfied that "Notes and Jottings" has never seen the trials being carried out at Tring, or he would not have written as he has done.

The prizes in the four classes at Tring amount in value to £240, and from the commencement these trials have been treated as one of the special features of the show. As judge at the first trial and every subsequent year up to this last one, I can state that as far as the society is concerned no care or expense has been wanting to ensure the success of the trials, and I have had a free hand in selecting assistants and everything necessary to carry out the work.

In his last letter my anonymous critic writes, "nothing is said about the butter milk," while further on he mentions "the varying thermometers." The impossibility of cooling all the creams down to the same temperature, and of allowing sufficient time to cool the churns down between each churning, basing all his criticisms on his own experience as a judge at churning competitions.

I propose to deal with each point *seriatim* :—
(a) At all butter test trials I conduct I keep every lot of buttermilk to see if any cream is present. Should any appear, a second churning takes place, and any butter obtained is added to its respective lot.

There were three such cases at the last Tring Show. This practice is so well known to those who have followed the butter test trials that I do not think it necessary to mention it in my reports.

The non-chromability of some milks is a very difficult question, and is not entirely accounted for by the variations of temperature in churning.

(b) There is no hurry in carrying out a butter test trial, although, of course, it is the duty of the judge to see that no time is wasted.

The work at Tring usually commences at 5.30 a.m., and is completed about 1 p.m.

(c) The thermometers used are not the ordinary small instruments, but what are known as the R.A.S.E. first prize thermometers. They are guaranteed as tested by the vendors, but they are always tested by me before being used to see that there is no variation, and any incorrect ones are discarded.

(d) Eight dairymaids assisted me at Tring this year. Six out of these eight hold or have held appointments as dairy instructresses to their respective county councils. The remaining two are in good places as dairymaids, and have both won first and champion prizes at such shows as the Royal Agricultural Society, the Bath and West of England Society, and the London Dairy Show.

One of the duties of the dairymaids is to see that the creams and churns are cooled down to the temperatures arranged by me. They carry

out my orders under my supervision, and I am in a position to state that each lot of cream was cooled down to 52 deg. Fahr., and the churns to a still lower temperature.

To compare dairy experts as the dairymaids at Tring are with competitors in a churning competition is, I think, unfair to the former.

With regard to the average butter ratio quoted in my last letter of all the Jerseys tested in England from 1886 to 1905, the figures will be found on page 510 of the English Jersey Cattle Society's Herd Book for 1905, Vol. 17. The ratio 19.45 only applies to public tests.

While quite in accord with "Notes and Jottings," that it is a most important matter to try and improve the quality of milk, I gave those figures for his consideration, as, in my opinion, to disqualify a Jersey cow with a ratio of 20.00 lb. would be rather too close considering the average of 19.45 lb.

Perhaps, however, Notes and Jottings may have some good reasons for his suggestions, in which case I would ask him to say :—

(1) If 20.00 lb. is fixed as the disqualifying ratio for a Jersey cow what should be the disqualifying ratio for the following breeds, all of which have been occasionally tested by me: Shorthorns, Lincoln Red Shorthorns, Longhorns, South Devons, Red Polled, Ayrshires, Guernseys, Keries, or Dexters?

(2) How could prizes be intelligently awarded in an open butter test competition where such disqualifying conditions exist?—Yours faithfully,
ERNEST MATTHEWS.

Little Sharedeles, Amersham, Sept. 22, 1906.

Motorists and the Roads.

SIR,—Public roads, as the name implies, are maintained to be used by the public as a means of travelling from one place to another, and no class of the community should be allowed to make use of them to the injury of others.

If, as your correspondent "Roadster" says, motorists have come to stay, they must be compelled to conform to the laws which control other modes of travelling.

For instance, a few years ago I was summoned to appear before the magistrates, charged with furious driving. No doubt I was "making haste," but the pony I was driving was only 12 hands high, and could not possibly travel faster than ten miles an hour, whilst motors can legally proceed at double that pace. If it be an infringement of the law and dangerous to drive a horse and gig at twelve or fifteen miles an hour, it is equally wrong to drive a motor at that speed.

Motorists must be made to pay for all the damage they do, whether it be covering a person's clothes or other property with dust, frightening a farmer's team of horses with their load into a ditch, or running into a cow, sheep, dog, or other creature that is travelling, but not straying, on the road; and any person's death caused through being run into by a motor should not be considered an accident but manslaughter, if the motor in fault be proceeding at more than ten miles an hour at the time.

As motors increase in number most stringent laws will be necessary to keep the road fit for any person to travel on.—Yours,
A. J. R.

Derby, Sept. 26, 1906.

The Value of Cabbage: An Interesting Suggestion.

SIR,—In the issue of the 24th ult. is a paragraph on the value of the cabbage as a feeding crop, especially for the production of milk—and I would add, sheep, poultry, &c. for it is wholesome, nutritious, succulent, and economical—and deserves more consideration than it receives. It has, however, great enemies in caterpillars of various descriptions, especially the white variety, which in some seasons are a perfect scourge, and I may mention 1898 in particular, when travelling through Essex and Suffolk, I did not see a single good sample, nothing but utterly bare stumps, even to the Brussels sprouts. The only remedy advocated is the spraying with Paris green and similar objectionable poisons to kill the caterpillars.

For years I have, in addition to hand-picking, adopted the plan of attacking the cause of the caterpillars—the butterflies. The idea may by some be ridiculed, but is certainly worthy of universal adoption. Each female lays about 500 eggs, and when my children were young I offered them a penny a score for all dead butterflies, and made butterfly-bats for them of a few twigs tied together in a very spry form. But I soon had to alter my terms to a penny for fifty butterflies (they would lay some 2,500 eggs to turn into caterpillars), and it provided the youngsters with good pocket-money and healthful exercise, whilst greatly benefiting all cabbage-growers in the district.

If each parish or district throughout the country

started butterfly clubs on the principle of sparrow clubs, offering a reward for all butterflies killed, which should be instantly burnt, not only children, but adults out of work and others, would find it pay much better than idleness, and would enjoy healthful and exhilarating exercise. It would give many a meal to a necessitous family, whilst immensely benefiting all gardens, market gardeners, farmers, &c. My butterfly hat I make about 2 to 3 ft. long, and always keep it handy, often knocking down six or seven without a miss.

I cannot conclude without a tribute of admiration to my old friend the MARK LANE EXPRESS: its get-up and usefulness is a great credit. My father always thought a deal of it, and I have known it do forty years, and wish it every success.—Yours, &c.,
OBSERVER.

Essex, September 26, 1906.

Sunflowers as a Farm Crop.

SIR,—A practical farmer has advised me to grow sunflowers, and I would like your opinion of the best way for harvesting and marketing.

September 25, 1906.

W. S.
[I do not know whether the practical farmer who advised you to grow sunflowers also indicated a way in which they could be utilised to profit when cultivated, but so far as I know its capabilities in this direction have not been generally discovered. Possibly there is fibre in the stem, fodder in the leaves, and oil may be obtained from the seeds, but as yet the chief use of the latter is as food for fattening poultry, and most people who grow sunflowers for this purpose do not market them, but utilise them on the premises. Sunflowers are gross feeding plants and take a good deal out of the soil, and for growing them on a large scale, the best method is to make the ground rich with manure and dibble the seed in about an inch deep at the beginning of May. To harvest the crop the heads should be allowed to hang till they are thoroughly ripe, and if used for poultry the best way is to hang up the heads and let the birds pick out the seeds without otherwise touching them. If the seeds are wanted for other purposes it is not difficult, though it is a somewhat slow process to extract them from the heads when the latter are ripe. Before commencing to grow sunflowers as a farm crop, however, one ought to feel fairly sure that there is a market for the seeds, and probably the best place to dispose of them would be in districts where the fattening of poultry for market is an industry. Personally, I think it is an open question whether sunflowers would return as good a profit on a farm as some other crops, but you can only prove this by experiment.—RUSTICS.]

The Doom of the Hop Growing Industry.

SIR,—Please allow me a little space to call attention to the present deplorable condition of the hop trade and to the most serious outlook in regard to the future.

Beyond all question, hop growing as a profitable industry is dead beyond recall. The hop crop of 1905, in spite of the fact that stocks were at about the lowest ebb ever known, must have resulted in a loss to English growers of something approaching a million of money. But growers were told they were succeeding in "keeping the foreigner out." It was an expensive way of keeping him out, and even then it did not succeed, as the table of imports will show. The fact is that the foreigner always does, and always will, dump his surplus here, irrespective of what the price may be. Thus the foreign grower has two markets, and the English grower has (part only of) one market.

Last year the English growth was sufficient for about thirteen months' English consumption, and this year, owing largely to the low prices obtained last year, the English yield was about 10 per cent. of four months' consumption. Thus in the two years we have only produced, at the outside, eighteen months' supply. In face of the fact that there was no reserve of stock twelve months ago, these two years combined clearly ought to be years of exceptional profit to growers. If such years do not yield a substantial profit, the losses when the position is less favourable to growers must, in future, be appalling in the extreme. But what will be the result of these two years?

A profit on the two years out of the question, and what is more, even a profit on this year's crop (the smallest since the height of 1882, when hops sold freely up to £30 per cwt.) seems extremely unlikely. The average cost to the grower of the 1906 crop must be about £10 per cwt., and although plenty of hops are on offer at from £5 to £7 per cwt., there are practically no buyers. Therefore, on two exceptionally favourable years for profit making, such is the state of the trade that on both years growers as a body must endure heavy losses.

Is there a remedy? Yes, there is one, and I only wish that it is to cut the loss by grubbing the plantations and giving the job up absolutely and entirely, thus leaving brewers in the hands of the foreigner. It will be of no avail to grow a few

acres. Already 25,000 acres have been grubbed with no tangible result on prices. The whole lot must go, not necessarily all at once, but certainly half the acreage should come out this year if the growers' position is to be substantially improved, and then the remainder could go gradually until it is all swept away.

The position of the English hop growing industry is absolutely hopeless, and grubbing, grubbing, grubbing is the only real and effectual remedy. "Keeping out the foreigner" is expensive sport, and benefits no one but the brewer, who can look on and laugh.

Having relinquished hop growing, I can now sign myself as an
Ex-Grower.
September 26, 1906.

The State of Trade.

A walk through the Borough, and a talk with the traders, reveal a condition of affairs that is almost unprecedented. Merchants tell me that their travellers are sending no orders, as they find that consumers are absolutely refusing to buy, and in most cases will not even look at samples. In reply to my query whether a substantial reduction in prices would be likely to induce business, I am told that as the main feature of the season is the weight of stocks in hand, it is thought that any present concessions would be almost useless.

On the other hand, I hear from factors that their clients are as yet generally very firm in their demands, and that such bids as they have been able to submit are usually refused. This suspense, which nearly resembles actual death, is still the rule. We are all hoping for a better time, and looking forward to the possibility of a vague future in which the body corporate may be restored to life. But how rigorous has been our experience that "to-morrow is a satire on to-day, and shows its weakness?" My hopes are with our disappointed planters, but I cannot shut my eyes to certain facts which overshadow the brightest hopes, and make me fear that the future will be as disappointing as the present.

The Consumption of Hops

is evidently declining, if we have any confidence in the information derived from the official returns. From these we find that the figures have been steadily falling year by year since 1902, when the quantity of hops used by brewers was first recorded, with the result that we learn that the consumption in 1904-5 was 90,754 cwt. less than 1901-2. This gives us the large proportion of 14 per cent. When we inquire for an explanation of this change, we find it in the fact of the reduced production of beer to the extent of no less than 3,000,000 of barrels, and also in the further fact that the hops used per barrel have been lowered from 2.55 lb. to 1.84 lb., representing 10 per cent.

There seems no reason to doubt that the "wave of sobriety" frequently referred to is a real thing, as not only is the total output of beer diminished, but the consumption per head of the population has fallen since 1900 from 32 gallons to 28 gallons. This is confirmed by the figures referring to spirits, which are diminished to the extent of 24 per cent. All this speaks in plain language to producers of beer materials, and especially should be noted by hop growers, who have no other possible outlet for their produce than the breweries.

Therefore, as I desire to be honest, I cannot discover much encouragement in the probability of

Higher Prices

being realised this season. One of our leading merchant firms says in their circular this week, "although prices remain nominally firm, the tendency is towards lower values." It is impossible to question this statement, which is supported by daily experience. The brewers are well able to hold off buying, and unless they are induced to operate by lower offers, the trade must remain *in statu quo*. What we want is demand; this does not exist, and until it is aroused our growers must be prepared to wait.

In the meantime, there are indications appearing here and there that holders are disposed to give way, as I hear that quotations as low as £5 10s have been made without finding buyers. It is most unfortunate that in such an expensive year, and with such a very moderate yield, planters should not be able to see any chance of remuneration, and I fear we shall get the results in further extensive

"grubbing," which means a lowering of the position of this branch of our agriculture in the estimation of the hop-growing world.

The Crop.

I am confirmed in my opinion, frequently expressed, that we have harvested about 300,000 cwt., by the evidence that is now coming forward.

The editor of our well informed contemporary, the *Kentish Observer*, to whose columns the trade refers and generally relies upon, says in this week's issue, "we feel warranted in estimating the quantity of hops actually picked at between 284,000 and 285,000 cwt., and it is quite possible that the official estimate when issued will put the yield at somewhere about 300,000."

There is satisfaction in the knowledge that although at this figure the crop is below the average, the quality is exceptionally good. The samples that have been examined are full of condition and generally of most attractive colour. A marked feature of the season is the small proportion of seeds in the cones. The weight is thereby diminished, but the additional brewing quality confirms the wisdom of the Bavarians, who banish the male plants from their gardens, and thus secure the supply of lupulin desired by all German brewers, for their light, delicate beers, which alone are appreciated by the German public.

This fact of the superior quality of the present crop is the most promising element in the prospects of our future market, and will, I sincerely trust, have an influence in inducing our consumers to look more favourably upon the growths when the time of action arrives.

The Death of Mr. William Gridley.

This week has spread some gloom through the Borough. It was a veteran in the trade, having been engaged in it for a period far beyond the average. He was called to his well-earned rest at the ripe age of eighty-eight, and leaves behind him the reputation of a honest merchant, whose work was well done. The sympathy and respect of his comrades in business were expressed by universal signs of mourning on Thursday last, the day of his funeral, and by the presence of many of them at the graveside of their valued friend.

America.

My latest news is contained in the following extracts from letters recently received:—

CALIFORNIA.—"We are deep in hop harvest. Have had trouble in getting pickers, there is a greater demand for labour here than I ever knew. It looks as if the scarcity of labour may prevent all of the hops being picked in some places. The estimates are being steadily reduced:—

California is lowered from 90,000 bales to 70,000
Oregon " " " 140,000 " " 100,000
Washington " " " 70,000 " " 60,000
New York " " " 65,000 " " 50,000

The totals 280,000 bales, and it is doubtful if we shall reach 300,000 bales in the U.S.A. this season. Our consumptive demand will reach 250,000 bales, leaving a balance of 50,000 bales of '06 hops for export. It looks as if your country will require 150,000 bales to keep up your reserves. If you require even 100,000 you will have to pay 20 cents and upwards. I hear that English growers will have to get £12 per cwt. to make anything, and sincerely hope they may get it. It is said here that one-half to two-thirds of the Pacific Coast crop has been contracted to dealers at 9 to 11½ cents. That represents a big loss to our growers.

OREGON.—"A look through the hop fields in this State at the end of August caused me to lower my previous estimate of the crop. We had no rain during the month and the sun was very hot, and I consider that Oregon cannot yield more than 95,000 bales. Only the top arms are bearing, but the quality will be good, as the sun will have full chance to perfect the development. Some contracts have been written at 10 to 12 cents, but recently 20 cents have been agreed for. Little actual buying is being done, and there is a general lull in demand. I am of opinion that hops will sell at less after harvest than at present."

WASHINGTON.—"The dry weather continues in Oregon and Washington, and crop estimates are therefore lower. We consider that the United States will produce approximately the same weight of hops as last year. The market is easier in all sections, and while growers are still exceedingly firm in their views and have not lowered their demands, there is little inquiry, and dealers seem a little more anxious to sell than formerly." I have since received a cable message from my Washington correspondents, saying that their market is quiet but steady, and that picking is being interfered with by excessive rains.

A subsequent letter to hand from same friends says:—"Harvesting is now in progress in all Coast States, and we see no reason to change our estimate of about 300,000 bales for the United States. Owing to the more favourable reports which are being received from England and the Continent, our market is quieter, and we think that to-day 17 to 18 cents would be a fair quotation. American brewers are as yet very reluctant buyers, claiming, as do the English brewers, that they are heavily

stocked. We look for more activity, however, as soon as the crops are harvested."

NEW YORK STATE.—Reports from Otsego indicate a decrease in the yield of about one-fourth from last year. The quality is fine generally, the cones being well grown out. A few sales are reported at from 20 to 26 cents to growers, but dealers are very shy at such prices; and on the other hand, growers appear to be somewhat independent. News of a corresponding character comes from the Waterville and the Cobleskill districts.

The Continent.

The following details of Continental crops are furnished to me by the German Hopgrowers' Association, Nuremberg:—

Bavaria.

SPALT.—The hops are excellent. Yesterday and to-day we have had a little rain, which has freshened up everything. The first sales were made last Saturday and Monday, and several firms have bought at 130s. to 135s.

SCHNAITTACH.—The picking will soon be finished. We shall have on an average one-third crop. Sales have been made in the last few days at 90s. to 100s. The demand for dry hops is very good.

BORRA.—The yield is, as far as quality is concerned, better than was expected, but from estimates we have, only one-third crop against that of last year. There have not been many sales, as the growers do not wish to sell at the prices offered—viz., 70s. to 80s.

NEUSTADT (AISCHE).—Only 300 bales of our crop have been weighed on the public scales, and 80s. to 85s. have been paid.

WEINZACH.—The picking is now finished here. The hops ripened very quickly, and on account of the want of pickers they will suffer as far as colour is concerned. There are many buyers, and about 2,000 bales have been weighed. According to quality, up to 100s., and in one case 120s., have been paid.

Wurtemberg.

ROTTENBURG.—The good weather has quickly ripened the hops, so that picking is now all over. From what we can see already, the hops are sound and well developed and rich in lupulin, and we are not exaggerating when we say that the quality is better than last year. During the drying process the colour is coming out well.

RENNINGEN.—We have now completed hop-picking; early hops have yielded a fine product, but the out-turn did not come up to estimate, which is also the case with late hops.

STUTTGART.—To-day's market was not of much importance. The supply was quickly sold, and realised 70s. to 90s.

BOEHLINGEN.—The hop crop here is much smaller than that of 1905, and one-third is estimated. With regard to quality, this year's crop is quite as good as last year's. No sales have been made yet.

Baden.

HAGNAU.—The picking of the hops is finished here. There has been no important change in prices, which have been on an average 75s. To-day there was an upward tendency, and 80s. were paid. More than two-thirds have been sold. The favourable weather was taken advantage of to pack the hops sold, and about 400 bales have been sent to the public scales.

Prussia.

NETTMISCHSEL.—The hop harvest has now finished. We estimate from 10,000 to 15,000 cwt.; quality excellent; colour not so good. Business has developed in the last few days; there are some foreign buyers on spot. First sales have been concluded at 80s. to 100s. The growers hold back.

Bohemia.

SAAZ.—Our harvest can generally be termed finished, and only some large growers will be busy till beginning of the coming week. The tropical heat of the last few days will not do any good to the hops. The growers are being paid 120s. to 170s. (first cost), and for choice goods a little more is allowed. On spot there is not much doing.

We may estimate our crop at from 55,000 to 60,000 cwt. With regard to colour and quality the crop is good. Values ruled during last week at 165s. to 190s.

Lord Auckland's Farm Stock.—In consequence of having disposed of the Glenvenhurst estate, the whole of Lord Auckland's farm stock at Garston's Farm, Bolney, Sussex, was sold by auction last week by Messrs. Drawbridge and Ansell, and the sale—a two-day event—proved successful, being very largely attended by buyers. The live stock included Shire horses, a small herd of Jersey cows and heifers, and other horned stock, and a small flock of pure-bred Southdown sheep and lambs. The Shire horses made up to 75 guineas, the other chief figures being 68 guineas, 67 guineas, 58 guineas, 50 guineas, 48 guineas, and 36 guineas; the Jersey cattle sold up to £15, whilst the price for sheep and lambs ranged from 27s. 6d. to 55s.

WE MAKE GUNS

Midland Notes.

We sell to the user with only one small profit.
We sell for cash direct to the user.
We buy the finest materials to be obtained.
We pay cash for all materials.
We employ some of the finest workmen in the Gun Trade.
We use finest machinery for machine operations.

RESULT.

We sell for £25 Guns of a quality for which sportsmen have previously paid from £50 to £80.

We sell thoroughly reliable Guns.

We get the finest shooting it is possible for guns to make.

Our "Field" Hammerless Ejector Gun—A perfect Ejector Gun of the finest quality, £25. If made with the best single trigger mechanism ever invented, £30. A perfect pair of these Guns, beautifully matched, £50. A perfect pair of Single Trigger Guns, £80.

"The Gun of the Future," as an Ejector, £15. "The Gun of the Future," without Ejector, £10. A sound and reliable gun, well made, and perfectly balanced, which will give entire satisfaction.

Pattern 8662, £6.—A sound and reliable hard shooting and hard wearing hammerless gun. Better than many sold at double the price.

Pattern 8668, £4.—A sound and reliable hard shooting and hard wearing hammer gun. Better than many sold at double the price.

PRICE STREET, BIRMINGHAM.

THERE are some rather surprising crop estimates in the latest Board of Agriculture broad-sheet. One had expected to find the poor hay and root yields of the parched east and south of England counterbalanced, to some extent, by heavier crops in the moister northern and western counties; but after such a season one never expected to find English roots as a whole reckoned in the returns as 104 per cent. of a full crop. Certainly that estimate is far from representing the state of affairs in the Midlands, where 80 per cent. would have been nearer the mark until the September rain came, and that was not enough to make the improvement one would have liked to see. Even now, Oxford, Warwick, Nottingham, and Northampton will be poorly off for roots, especially turnips, which are small, and have been a little troubled by mildew. Things are more cheerful in Staffordshire; but then when we go to Staffordshire we reach the fringe of the districts to which the season has been moderately kind.

WE are enjoying typical September weather—yesterday sharp frost and the first thick fog of the season, to day a mild but beautiful reflection of the splendours of the summer. What we are not getting, and what we still need badly is more rain. The drier years we have had were not enough to replenish the springs and wells for more than a short time; in various districts water has even now to be carted long distances for stock, and the heavier soils need a thorough soaking to bring them in to even a moderately workable condition.

IN the circumstances the question of wheat sowing is more than usually difficult. There is no chance, apparently, of sowing in mud as our old saws direct, and the problem is complicated by the extraordinary hardness of the subsoil, which seems as solid as a rock, and would probably prove impervious to heavy rainfall even if it should come. Wheat thrives on a moderately stiff bottom, but this is too solid for anything, and probably many who would now be usually thinking about drilling wheat will prefer to wait the effects of a winter's frost rather than entrust anything to ground in so intractable a condition.

THERE is much disappointment and some grumbling at the prices now being paid for the new season's corn. Certainly the averages are low, and the farmer who comes to sell wheat or oats is apt this season to find that even high quality does not help him so much as it should, since good grain in the best of condition is the rule rather than the exception. There is room for doubt, however, as to the barley; apparently the ripening in this case was very generally too rapid and sudden, with the result that "steely" and irregularly shrunken grain is rather common. Growers complain also of irregular ripening, which made it hard to know when to cut the crop, and leaves them now with grain of two colours. There will be very little barley this season of merely feeding quality, but it looks as if the really fine samples for which maltsters are ready to give long prices will be scarcer than was anticipated when the crop was harvested.

WE are apparently to see an unusually keen fight over hop values. Growers in the Midlands who have contrived at great expense to raise anything like a crop are not in the least disposed to part with it in a year of scarcity at prices representing less than the cost of cultivation. There will be forced sales, no doubt, for ready money will be needed, and at the best of times the dealer can generally manage to outlast the grower at the waiting game. But the almost entire absence of sales at the rates offering on Worcester fair day is a significant sign of the times.

MEANWHILE the Midland growers have two points in their favour. In the first place, they hold a crop the level and remarkably high quality of which was quite surprising to visitors from Kent and London who came to the recent fair; in the second, they are gradually breaking down the old prejudice against Worcester and Hereford hops. In all the points the brewer values the hops of the two counties was at least equal to any other, and since the local Hop Growers' Association got to work and circulated the results of its analyses and other tests that fact has gradually come to be recognised even by outsiders who would once have scorned the idea of anything comparing with Kent's.

September 27, 1906.

An outbreak of pink-eye has occurred amongst Manchester shufflers. Draught horses are the principal sufferers, and railway companies and carriers are experiencing inconvenience in consequence. In one stable, where forty horses are kept, fifteen have been attacked, and by other owners there have been many losses.

Northern Notes.

TWO farm fires in Yorkshire this week have tended to accentuate the belief that carelessness is allowed to a great extent on threshing days, and the two outbreaks in question may be undoubtedly attributed to a preventable cause. Men are careful to a certain point, then comes a moment of forgetfulness on the part of fireman or labourer. The engine may be left a few minutes, and then the mischief is done. "Trains" of straw are allowed to connect the fire-box with the stacks, and as this year the produce is dry as tinder, once alight it is next to impossible, without extraordinary means at hand, to arrest the progress of a stackyard conflagration. Labourers should be instructed to keep clear of any heaps of straw the spaces intervening between the engine and the stacks, as there is no doubt fires originate as the result of sparks falling on the loose straw. Much valuable material is thus lost to the farmer in the form of manure.

THE great gathering of agriculturalists representing the North-Eastern Farmer's Federation, which is to be held at Newcastle on October 13, will have a red in pickle for the President of the Board of Agriculture, who has kindly promised to attend the conference. A great display of feeling is already apparent in the North relative to the alleged arbitrary action of the Board in respect of the Sheep Scab Order. There can be no doubt the North Yorkshire farmers have good grounds for complaint, if any one has, because there has not been a case of scab reported in the Riding since July 1. The farmers do not complain of the compulsory dipping, as it is a necessary precaution. What they do complain of is that when they drive their sheep to a fair or market with a certificate that they had been dipped, the sheep are not allowed to be removed again without further certificates being obtained for every batch of sheep removed. The North Riding County Council has done its best to support the farmers in their objections, but the Board has remained adamant in its determination not to budge from the terms of the order. Not only has there been no sheep scab, but the Riding has also been entirely free from any outbreak of swine fever for three months. This is a very clean record.

IN the East Riding the Board has successfully grappled with a series of outbreaks extending over a period of more than six months. The disease was spread primarily through the inadvertence of a dealer at Bridlington sending a herd of swine to Driffield Cattle Market. These pigs were sold before the nature of the ailment was discovered, and they carried infection far and near. The dealer was, strange to say, never prosecuted. His action, in marketing ailing pigs, has caused more loss and inconvenience to Yorkshire farmers and dealers than any previous act of carelessness or of wilful exposure that we can recall. It is calculated that fully 8,000 pigs have lost a market. The centre of distribution at Driffield has been closed since March, notwithstanding that above half the district was clear of disease for more than half that period. The pigs that would have come to this market have been sent at greater risk and expense to more distant places, where their owners were often obliged to sell at prices they would refuse but for the greater cost, trouble, and risk of getting their swine home again. The local member of Parliament (Mr. Luke White) recently used his influence with the Board of Agriculture, and with the desired result, viz., the issuing of a modified order, which again throws open the market this week. The harshness of the regulations may be judged by a statement made to me by a dealer, who said he had to come nearly ten miles to the district superintendent of police to enable him to move a pig to a neighbour on the other side of the street.

BREEDING sheep in the North have never been dearer than at present. A farmer, with the accumulated dignity which seventy summers confer, corroborates this statement. He was a seller this week at an auction mart, and his Leicester grimmer shearlings averaged 60s. per head, the highest price per head being 70s. Other sellers had also very satisfactory experience of a dear market, their spare sheep (some of which were culls) reaching averages of over £3 per head. These were for long-wools. It is extraordinary that so many farmers are patronising the short-wooled breed of tups for use in their flocks, when wool is making a high price. They probably consider that a black-faced ram lamb gets early-maturing stock when lamb sells at 1s. and is 2d. per lb., but the majority are pinning their faith to the prospect of a double profit, on wool and mutton. Leicester rams get produce which fattens quickly. Store lambs continue very dear, and are making as high as 2 guineas per head and over.

September 28, 1906.

POULTRY.

The Dull Season.

Those who handle chickens for market are now well into their annual season of dullness: 2s. 6d. to 3s. 6d. is about the most that fattened birds of average good quality and preparation are worth in the London markets, and the farmers and cottagers who rear them must perforce be content with the miserable price of 1s. 8d. or 1s. 9d. each for chickens nearly double the size of those for which 3s. 6d. was paid in April and May.

This dullness in the poultry department of farm production is coincident with a very busy period in other branches of the farmer's work; the harvest follows the haying with scarcely a pause, and the fullness of work in this and other directions leaves little time or inclination for the serious consideration of what are (at any rate just now) in so many cases regarded as "unconsidered trifles." Even the large rearers of East Sussex, who specialise in chicken production, give them far less than their usual thought and attention during the dull season. The result of this almost unavoidable relaxation of poultry management, when the other work is most exacting, is that the rearer's profit must be—if he will but realise it—almost nil, if not worse. Probably one reason why this is not noticed at the time is because the higgler still continues to pay fairly large sums when he calls each fortnight, the largely increased number of birds in comparison with the early season swelling the total so far that the over-busy farmer does not pause to seriously consider that he is now giving two birds for what was then the price of one; and not only is he doubling the number of birds for the same price, but giving an average of probably at least three times the weight so much larger must be more.

The higgler begins to be more markedly critical of size in chickens when the haying commences, he also having hay to make on his own holding, and very often some grain to harvest as well; he can therefore, as the London returns are dropping, afford to temporarily reduce his output and gather in his other profits. Consequently upon two or three visits to the rearers at that period he rejects more than a usual number of the lean fowls put up for his selection by the farmer; these rejected birds are run out again for another fortnight or so at the rearer's expense, making more size without more profit.

The young and succeeding birds are growing and developing rapidly under the more favourable climatic conditions, and hatching is continued wholesale. In this way the higgler gets matters in advance as regards size for the succeeding few months, and to that extent the rearer gets behind for the same period. It thus happens that in the dull season well-grown chickens may be seen in their hundreds and thousands, upon the fields and along the roadsides, in East Sussex and the other South-Eastern rearing districts; the

It is very common to hear the expressed opinion that chickens sold at 2s. 6d. pay better than those realising 3s. 6d., and there is some reason for the statement. The birds sold at the latter price are reared at the most difficult rearing period, whilst those making half-a-crown are produced when the weather is on the mend and the conditions more favourable, the season being a more natural one for the young; on the other hand, the supply and demand are sufficiently equalised to make it possible to clear them young, and before they have had time to make their cost of production disproportionate to the return.

There is also another opinion, referring more to the 1s. 9d. than the 2s. 6d. chicken, the expression of which frequently finds its place in poultry text books, in the guise of a dogmatic statement, viz., that the cost of rearing in summer is less than in winter. Backed by specious arguments—such as the abundance of natural food in the fields, the reduced risk of loss by disease and adverse weather, etc.—this statement appears, on the face of it, to be fairly convincing; but, although it is generally accepted without question, is it really so certain that it is not fallacious and misleading in regard to commercial poultry keeping and the marketing side of the question?

If we accept the farmer's estimate of 1s. per chicken as the actual out-of-pocket cost of rearing an early bird of higgler's size, it certainly looks as though a later-hatched one should not cost so much in hand food; but the bottom is knocked out of this plausible theory when we remember that the early bird is eagerly sought after when he is very many weeks younger, and has consequently consumed so much less meal, than that which is grudgingly bought at the lowest price in the dull season.

I do not think that, in the circumstances, the cost of rearing in summer is appreciably lower than in winter, and I am not so sure that in many cases it is not perceptibly more; if so, taking into account all the inevitable exclusive and actual cost of food, does it really pay to rear for the dull season—that is, does the rearing pay the rearer?

BIBBY'S - - "CREAM - - EQUIVALENT" MEAL - - -

FOR

CALF-REARING.

Our Agents are continually hearing some such remarks as: "I want you to send me two more bags of that 'Cream Equivalent' Meal. It is fine stuff, and I should like you to see my weanling calves; they are a splendid lot—a perfect show."

We like to hear talk like this, and do not wish for a better advertisement of this Meal than these "Cream Equivalent" reared calves are all over the country.

It is quite easy to prepare. It swells out into a fine creamy substance, the calves are fond of it, and there is no scour.

When the calves begin to eat, we recommend a little dry feeding—a mixture of "Bibby" Cake, Oats and Bran is particularly suitable, the former being at once nutritious and digestible; and calves so reared are always one of the sights of the farm, and make fine well-grown heifers with nice loose skins and plenty of good hair.

One cwt., costing 15/-, carriage paid, is enough for two calves. It costs about 1/3 more to rear a calf on "Cream Equivalent" than on the cheaper calf foods, while the difference in value of the grown animal is most marked, both as to condition, health, and growth.

It is the most soluble Calf Meal on the market, and can be made up simply by soaking the meal in cold water for six or seven hours, if this suits the feeder's convenience better than by making up with boiling water in the ordinary way.

If you are interested in this subject, write for our new circular, "How to Rear Calves for the Dairy." It will be sent free of post to any address on receipt of postcard.

SOLE MANUFACTURERS:

Notes of the Week.

Congratulations to Earl Carrington—upon whom the King has conferred the honour of a knighthood of the Most Noble Order of the Garter.

This may be regarded as a mark of the King's continued interest in matters agricultural.

It is announced that early next month there will be an agricultural conference at Newcastle-on-Tyne, and that the Minister of Agriculture will be present.

This will afford Lord Carrington another opportunity of explaining his views on the various questions which at present are agitating agricultural circles.

We hope he will be able to make a more satisfactory announcement with regard to the army meat contracts.

Mr. Hildane has recently returned from Germany, where he was present at important army manoeuvres. He may have ascertained that the

German Government, when obtaining supplies for the Army, support the home agricultural industry.

It is the truly patriotic plan, and in the long run much the best for the country.

At the same conference at Newcastle the subject of rural education is to be discussed.

No question involves more important issues. If the curriculum is arranged so as to provide practical knowledge of the rudiments of country pursuits, much good will result.

The difficulty is to get teachers who possess the necessary knowledge, and who can be provided with the opportunity of imparting it.

As far as possible gardens should be attached to the schools, and the power of observation in the pupils should be stimulated.

It is curious to hear that the mysterious steamer *Xenaz*, fitted out to explore a treasure island with

a supposed diamond mine, intended to land an expedition on one of the guano islands on the south-west coast of Africa.

There are several small islands forming a group from which the well-known Ichaboe guano is shipped.

For years the guano has been annually collected, and during the breeding season the birds are carefully protected from disturbance.

About four to five thousand tons of fresh, rich guano are taken off them every year.

It forms a source of regular revenue to the Cape Government, and the guano is in demand as a most valuable fertiliser.

The Journal of the Board of Agriculture is a publication which should be regularly read by farmers.

The September issue is particularly interesting. It contains an instructive article on "Dodder," and much other useful information.

According to all reports, the apple crop is most abundant, and the fruit is in sound condition.

"EDUCATION'S HARVEST."

(SIR CARNE RASCH'S SPEECH AT THE AGRICULTURAL SHOW AT BUNGAY.)

Under such circumstances, one would have thought that this abundance would be reflected by low retail prices for the fruit.

But this is not the case. It is reported that the value of apples is so low that they are not worth the cost of picking or are being given to the pigs, but the retail city price always remains about the same.

It is said that the high retail price is due to what is called the "Covent Garden ring," whose interest lies in maintaining a regular standard of price.

Just as it is reported that the Billingsgate ring would destroy a boat load of fish rather than let the market be glutted and prices forced down.

The "ring" theory is probably somewhat far fetched. The real reason is more likely the lack of cheap means of distribution to the consumer.

There is a good market in London and other cities for any quantity of cheap, fresh fruit if it could be brought to the consumer.

This is where co-operation should step in. Co-operative shops, established by farmers for the direct sale of fruit and fresh market produce at popular prices, would be a great boon, and probably a great success.

It has been suggested that if costermongers, dressed in a neat uniform and supplied with a nice-looking barrow-load of fresh fruit and vegetables, were sent round, a large business might be done.

Such a system would help to open up a direct connection between grower and consumer, and save the burdensome middle charges.

The harvest in cereals this year in Hungary has beaten all records. The output of wheat is 5,260,000 tons. No one should be hungry in Hungary.

An Essex Ploughing Match.

There was a great gathering of ploughmen from Mid-Essex at Witham on Thursday, when seventy ploughs competing at the same time was witnessed. It was claimed that the matches were the largest of their kind that have been held in East Anglia for many years. Several of the ploughmen were over seventy years of age, one being in his eightieth year. It was remarked that there was not a single boy ploughman entered in the classes for those under eighteen, although substantial prizes were offered. Ploughmen employed by Lord Rayleigh, who farms several thousand acres in Essex, carried off all the principal prizes.

BROKEN-DOWN FARMER (to his son and heir): "If all the money wasted on your Education had been spent on artificial manure for the land I should not be ruined, and you would have something to start life on. Now we farmers are stony broke, and you, my boy, will have to compete with German Labour and Alien Competition, which is cheaper and better than you can supply, and you ain't fit for the Army or the Navy neither."

Copyright.]

[By Permission of "The People," drawn by HARRY FURNISS.

[The Farmers' Diary will be found on the previous page.]

Notes and Jottings.

FOR some months ewes will have to be kept economically, or the lambs will have cost too much by the time they are born; at the same time it is a mistake to let the ewes get too low in condition, as by so doing there is great probability of losses before or at lambing time. Because it is not advisable to have the ewes too fat, it is no reason why they should be allowed to get too poor. Yet there are many who do not draw a proper distinction between these extremes and choose the middle path. We have seen so many instances where a bad lambing time has followed semi-starvation that it is certain that others must have witnessed it too; yet these failures seem to have little influence on the management of some people. In a year like this when autumn keep is very short in many districts ewes will be liable to meet with short rations; and as the winter supply is likely to be scanty, it would be a great mistake to let the ewes fall away too much in condition, as there is not the likelihood of it being convenient to put them on exceptionally liberal diet when the unborn lambs are making a specially heavy tax on their mothers.

IT will be by no means easy to find ewe food, as the young ewes are very small, and the stubbles will give little help, consequently there will be little scavenging for the sheep to perform. It will be necessary to give dry food early this year, and though it will add to the expense, it will prove most profitable in the long run.

TO those who live in arable districts and who have a little grass land, it is very amusing to read, as one so often does, that it is impossible to get a good crop of lambs if roots form the main food of ewes during the time the ewes are in lamb. There are many farms, and, for that matter, districts, where ewes practically never go on grass land in the autumn, for the simple reason that there is none available for them; yet as good falls of lambs are obtained in these as in those more favourable situated in respect to grass. It is certainly more easy to manage a flock where there is grass available and lambs can be produced at smaller cost from grass land, but getting a good fall, in accordance with the aptitude of a particular breed, is mainly a matter of good management. We know districts where good crops of lambs are obtained even, in the latter autumn and winter, the bulky food consists chiefly of turnips and swedes, corrected by hay or even less nutritious chaff; but it is wiser to provide rape or cabbages, and it is practically no more expensive to do so. There is nothing really injurious in roots provided they are matured, the only fault with them is that they do not constitute a whole food, and the constituents lacking must be supplied.

HAY is somewhat expensive for ewes, and on a mixed farm it is frequently easy to get a chopped mixture at small expense which answers well. We have on many occasions made a ewe mixture by chopping out straw, clover haulm from which seed has been taken, coverings from barley containing a fair amount of green stuff such as seedling clover, and adding the clover seed cob, and the dressed chaff from wheat. If this is put into a barn and well trodden by a horse as it is being filled in, so that it becomes thoroughly consolidated, it will swart a little, especially if a little salt is from time to time thrown in during the filling up, and become a sort of silage, very tempting in smell and taste, which ewes will readily eat. There is an exceptionally big breadth of clover seed this autumn which can be turned into good sheep food if chaffed, but which is of little value if merely put before sheep in heaps for them to "muzzle" for the sweet pieces. It is food of this sort that helps the breeder who has little grass land to help him, for by its means he makes his turnip diet a satisfactory one. As the farmer puts more tax on the dam a little extra help, as supplied by malt combings on cotton cake, may be given.

THE season for applying base slag is here, and it is advantageous to get it on in good time, as then the small clover patches get a start before winter, and are ready to take full advantage of the manure when the growing period comes round again. Those who are thinking of putting it on pastures being grazed by sheep need have no fear of the sheep suffering even though the manure is

applied whilst they are in the field. We carried out a series of trials to see what injury was done to the sheep, and there was not the slightest trace of hurt, although exceptionally heavy dressings were applied, and in one case a sheep was actually dosed with it. White clover is one of the most feeding foods given to sheep, and it should be encouraged at all times in pastures. All pastures can be made to carry a heavy percentage of white clover, provided suitable manure is supplied, whether it take the form of superphosphate, basic slag, potash, or lime, according to the deficiencies of the soil. Nothing adds to the sheep-carrying powers of a pasture so much as does the increase of clover.

THE long prices paid for Lincoln Longwool sheep during the present season may suggest that they are without equivalent. Of course, those bought to be sold again in the Argentine will go for much greater sums than have been given here, added to which will be the difference in money value between a gold and silver exchange. Apart from these considerations, the Merino holds the record amongst sheep. The Merino never made strong headway in England, mainly because it is unable to withstand the severity of our coldest winters. Yet in the first half of last century some large flocks were carried in this country, a Mr. Bennett, a Wiltshire member of Parliament, at one time kept as many as 7,000 from stock imported from Spain; but the breed never made headway in the country. Others have got stock from Saxony, and though this was harder, and generally in a more improved condition, this went the way of the

SALES OF THE WEEK.

Kent or Romney Marsh Sheep Breeders' Association Show and Sale.

Ten years have elapsed since this annual show and sale was first started, and without question its importance and popularity increases every year. That this should be the case is not a matter of surprise, because at no other show or sale of the breed can so many representative selections of the principal flocks be seen and compared with so little trouble and with, what is of still more importance to the foreign or colonial buyer, so little expenditure of time. This year's entry represented twenty-five flocks, the largest number that has ever been represented at this sale, and the number of rams entered was 502, as against 367 last year.

The opening event was the competition for the challenge cups and prizes. The Laurence Hardy Challenge Cup, that has been competed for for nine years, has at last found its home, for Mr. D. E. Quesled, who won it last year, again repeats his success, and thus finally secures the trophy. The same breeder was second in the competition with another remarkably good yearling ram. The competition in the class for the best woolled ram was thoroughly interesting, but the award that gave Mr. J. E. Quesled precedence in this class, though only by the narrowest of margins over Mr. C. File's fine exhibit, was generally approved of. The class for sheep other than yearlings brought out a really good lot. Mr. F. Neame took Lord Harris' Challenge Cup with a grand four shear ram, his

SIR R. P. COOPER'S SHROPSHIRE SHEARLING RAM.
Winner of First Prize at the Bath and West Show this year.

Spanish stock. Given a warm climate, the Merino is a great sheep, and the long prices paid for sheep of British breeds is a high compliment to them when the suitability of the Merino to countries like Australia and the Argentine is taken into consideration.

Robertsbridge Fair.

Over 30,000 sheep and lambs were on offer at Robertsbridge Fair on Tuesday, and with a large attendance and good bidding nearly every lot was disposed of. The highest figure for Southdown lambs was 34s. 6d., and for rams £3. Numerous Kent and half-bred as well as Southdown ewes were sold at satisfactory prices.

Louth Ram Fair.

A large number of rams were on offer at Louth Ram Fair, and some good prices were realised, the best being 20 guineas, which was given for one of Mr. W. A. Ewbank's Covenham rams, sold by auction by Messrs. E. A. Young and Son, others from the same flock making 17 guineas and 14 guineas. Mr. L. W. Stephenson's South Thoresby rams averaged £6 9s. 3d., the best price being 14½ guineas. Messrs. Dickinson, Rizzal, and Davy disposed of nine, the property of Mr. E. H. Cartwright, of Kedlington, 16 guineas, 14½ guineas, and 12 guineas being paid for the best. Thirty-four rams from the Baumber flock of Mr. W. Taylor-Sharp were sold, the top prices being 12½ guineas and 13 guineas. Other rams sold by these auctioneers made up to 13 guineas. There was a large good of breeding sheep, ewes realising up to 68s. 6d. per head, gimmers to 38s., and shearling ewes up to 65s.

two-shear ram, making a bold bid for first honours, but to be content with second place.

The publication of a fixed time for the sale of each consignment was an innovation that worked remarkably well. The result of the sale is eminently satisfactory to the breeders, because, never before so far as can be ascertained, have there been two rams sold for 120 and 75 guineas at any sale of the breed. These two prices were the top ones, but two others made 50 guineas, and quite a number went around 30 guineas. The average of the sale works out at £12 5s. 8d. for 170 rams sold. The best average of the sale last year when 347 averaged £11 18s., was Mr. J. E. Quesled's. This year the same breeder takes this proud position, but with an average of much larger amount, namely £20 18s. for twenty-two rams. The top figure in the sale record of this breed is now 120 guineas, at which price Messrs. Denny, of Boro Place, Chiddingstone, took the second prize ram in the cup competition, and the winner of the special prize for best woolled ram. This is a notable price, and one that only a limited number of rams ever make. Mr. C. File gave 50 guineas for the first prize ram and cup winner, a fine ram of excellent type this is, and a noted winner of prizes, including second at the Royal, Royal Counties, and East Kent shows this year. The he old ram went to Mr. A. Amos at 25 guineas; Mr. F. Baker gave 25 and 17 guineas for a pair; Earl of Guildford paid 20 guineas and 13 guineas for two others, Mr. Brook paid 18 guineas, and Mr. Arthur Finn 17 guineas. The range of price in this lot was 120 to 6 guineas.

Mr. F. Neame's lot were sold last in the sale, but they secured the second highest average of the day. Mr. Aicherson's agent, after a contest with Mr. W. W. Chapman, got the top-priced ram of this lot at 40 guineas; the first-named buyer was purchaser of a very choice lot of rams, six in number, all for South America, one at 38 guineas, one at 26 guineas, and others at 21 guineas, 20½ guineas, 20 guineas, and 19 guineas. Mr. R. H. Green got some of the best, one at 36 guineas, and two at 33½ guineas; these were run and c in the Champion Cup competition. Another buyer paid 30 and 15 guineas. Mr. F. Baker 25 guineas, and Mr. Lister Kaye 27 guineas; from this price they ranged down to 8 guineas; the whole fifty rams offered and sold realised an average of £18 17s. 2d.

The third place in the average list was occupied by Mr. Arthur Finn. Ten rams were sent from Westbroke, an average of this year's fine lot of sheep. The top-priced ram went at 50 guineas to Mr. McGaw for Montevideo, whose agent was also successful in getting another one at 30 guineas; the former was one of the best auction prices ever made by this flock, and, seeing it was paid for a choice ram, it was well deserved. Mr. G. H. Green gave 20 guineas, and the remainder ranged down to 6 guineas, with an average of £16 13s. 10d. for ten.

Mr. Charles File met with one of the most satisfactory demands he has ever had at his sale. Mr. Arthur Finn, of Westbroke, took one of his rams at 38 guineas, the best price of this lot, but a ram of sterling merit and quality was one that Messrs. J. Thornton and Co secured, the run for the special wool prize, the figure here was 35 guineas. One went to Mr. Hawkrige at 20 guineas, a neat and well-known ram. Mr. W. W. Chapman took some six or seven—22½ and 16 guineas twice, were the best prices. Mr. Chittenden gave 24 guineas, and Lord Verulam 18½ guineas, the remainder ranging down to 8½ guineas, with an average of £16 10s. 4d. for the thirty-nine offered and sold.

For any consignment of rams that numbered sixty-five, all of which were sold to realise a range of prices that only had one below double figures is a distinct indication of a good lot of rams and a real good demand. This was the good fortune of Mr. H. Ridgden at this year's sale. Mr. W. W. Chapman gave the top price for a particularly nice yearling ram for South America, 39 guineas. Several other rams were in request, for amongst the prices realised were 35 and 21½ guineas to Mr. R. H. Green for Mr. G. C. Swindell's; 30 guineas to Earl Verulam; 35 guineas to Mr. L. Hardy, M.P., president of the society; and the same figure to another Messrs. J. Thornton and Co.; 20 guineas for two to Messrs. Brown and Kelsey; and 15 guineas to the Earl of Guildford. The average for the lot was £14 19s. 10d.

Mr. J. B. Palmer's consignment found buyers for all that fine ram, he in the cup competition, netting 22 guineas to Mr. S. King; another went to Mr. Willett at 16 guineas; and the remainder ranged to 9 guineas, making the average of £12 16s. 2d.

Mr. A. Amos was hardly so well represented as in former years; his range of price was wide, 75 guineas for that grand ram third in the cup competition was the top figure. Messrs. J. Miller and J. E. Quesled were the contestants, and the former got the ram for Mr. Gunther for the Hawkhurst flock; Mr. Quesled subsequently took another at 32 guineas; and the remainder sold at from 14½ guineas to 5½ guineas, with an average of £11 9s. 2d.

Numerous other lots were sold at prices ranging up to 23 guineas.

Mr. Cartwright's Lincoln Longwools.

Mr. George Cartwright, of Ragnall Hall, who has a reputation of fifty years' standing as a breeder of sheep and cattle, is quitting Ragnall Hall, and Mr. J. S. King, of the Lincoln Longwool sheep, head, horns, &c. Eight shearing rams were sold at prices ranging from 4½ guineas to 8 guineas, the latter figure being paid by Mr. Fox, of Sibthorp. A Lincoln Longwool two-shear ram, for which Mr. Cartwright refused 20 guineas last year, went to Mr. Abraham, of Hawk, for 6 guineas, and Mrs. Greenfield, Little Carlton, paid 6½ guineas for a Hampshire; 24½ Lincoln Longwool ewes made up to 6½s. each, the lowest figure 50s.; forty-eight Lincoln Longwool ewes found purchasers at 22s. 6d. down to 14s. Lincoln Longwool wethers were in brisk demand, the prices varying from 48s. 6d. up to 64s. Cross-bred lambs made up to 48s. 6d., the lambs 48s., and the lambs 48s. 6d. Satisfactory prices were obtained for the other farm stock.

Ayr Ram Society.

The annual sale of Black-faced rams and ram lambs and show and sale of Border Leicester rams and 1 ram lambs, under the auspices of the Ayr Ram Society, took place on Wednesday, and there was a very large attendance of buyers. The Black-faced shearlings attracted most attention from buyers, and some very good prices were got early in the sale. The Brownestale lot, thirteen in

number, were put up fourth lot, and the sheep to which the championship was awarded the previous day, one of the third prize pen of five, brought £58, which sum was given by Mr. G. Willison, Parisholm, Douglas, Lanarkshire. Others made up to £22. The first prize sheep in the Black-faced ram (two shear and upwards) class, the property of Colonel Blair, went to Mr. Kerr, Nesby, Islay, at £14 10s., but the second prize animal made £27, and the third £27 10s. The sensation of the sale was, however, reached when the Border flock was exposed. The first of the first prize pen of five brought £86, which is the highest price given for a Black-faced ram in Ayr for a number of years. The ram was bought by Mr. Hamilton, Woolfords. The five averaged £32, and the general average was the highest of the sale. Border Leicesters met with a ready market at prices which brought the general average considerably above that of last year. The first prize animal brought the satisfactory price of £24 10s., which contrasts with £13 10s., the highest last year. The animal became the property in the ring of Mr. Coats, East Kilbride. It was bred by Mr. James Dunlop, Midland, by whom it was exposed, and was first prize sheep in the shearing class.

York.

Messrs. T. Walker & Sons' annual sale of breeding sheep at York took place on Thursday. The principal attraction of the catalogue was the pure-bred Oxford Down rams and Oxford Down ram lambs from Messrs. H. and G. Overman, Weasenham, Norfolk. The demand for all classes of rams was not so good as had been anticipated, considering the high prices of other classes of sheep, and several very choice animals changed hands at comparatively low figures. Ten Oxford Down shearing rams from Messrs. Overman's ranged from 4 to 11 guineas each, and seven Oxford Down ram lambs, from the same source, realised 5 guineas each. Ten choice pure-bred Wensleydale ram lambs, from Mr. W. J. Green, Childerby Gates, met with fair competition, prices ranging up to £5 7s. 6d. each. The Hampshire shearing rams were a very useful lot, and met with a fair demand at prices ranging up to £5 per head. Leicester ram lambs were not quite sufficiently finished for breeding purposes, and were consequently disposed of at low rates.

Dorchester.

Dorchester Poundbury Fair, held on Thursday, proved an exceptionally full one both as regards attendance and supply, the prolonged spell of dry weather we have had leaving no alternative but for many masters to sell. As a consequence, quite 14,000 were penned for disposal, these being absorbed by sales held by Messrs. Ensor and Son and by Messrs. Duke and Son, and, as proof of the actual demand prevailing, scarce a pen of any note remaining over unsold. This result is all the more satisfactory seeing that a very bad trade had been anticipated, but, happily, these prognostications were not realised, as the sheep, despite the unfavourable conditions under which the fair was held, sold very well indeed and better than had been expected, though last year's rates were not reached by more than 3s. a head, which is less than many had anticipated. A general run for horn ewes was from 52s. to 56s. for the best (Mr. Tucker, St. Andrews, reaching the highest figure); secondary drafts, 42s. to 50s.; horn couples, 55s. to 63s. (Mr. A. O. Symes); chilver lambs, 32s. to 40s.; wether lambs, 24s. to 31s.; Down ewes, 38s. to 47s.; Down chilver lambs, 31s. to 36s.; Down wether lambs, 24s. 6d. to 37s. 6d. A flock of horn ewes, belonging to Mr. Masters, Upcenne, was dispersed by Messrs. Ensor, and made from 42s. to 63s. apiece.

In the prize fair Mr. W. Tucker, St. Andrews, won Messrs. Ensor's 4 guinea cup for the best 100 horn ewes in the fair, the second prize of 2 guineas going to Mr. C. Hawkins, Waddon. For the best five ewes by Mr. F. Samways, Chilcombe, secured Messrs. Ensor's 3 guinea prize, Mr. W. E. Riggs, Chelfrome, being second.

Lazonby.

The three days' sale of rams held by Mr. J. Kidd at his Lazonby Auction Mart attracted a large attendance of dealers and breeders, and there was an excellent show, about 221 rams of a very good quality being catalogued. Shearlings were about £1 and lambs 15s. dearer than last year. Prizes were offered for shearlings and lambs. In the former class Mrs. Wilson, Glasbury, took both first and second prizes, the sheep making £8 and £7 respectively. In the lambs, Messrs. Todd, High Bank Hill, took first prize (£5), and Mr. T. H. Hall, Brackenbank, was second.

The Earl of Chichester's Southdowns.

The old-established flock of pure-bred Southdown sheep belonging to the Earl of Chichester, at Balmer Farm, Falmer, Sussex, was sold by auction on Wednesday by Messrs. W. F. Ingram and Son, in consequence of the farm having been let. The flock, which was of first class quality, comprised 117 full mouth, 140 six-tooth, 123 four-tooth, 115 two-tooth ewes, 120 stock ewe lambs, 3 rams, and 2 ram lambs. There was a good attendance of buyers, and satisfactory prices were the order of the day. Full-mouth ewes made

from 31s. to 38s. in lots of ten; lots of five six-tooth ewes fetched from 37s. to 57s. per head; four-tooth ewes, 46s. to 61s.; two-tooth ewes, 42s. to 51s.; ewe lambs, 24s. to 35s.; and ram lambs from 1½ guineas to 3 guineas, whilst the Rev. F. S. Selator bought a full-mouth ram bred by the Duke of Richmond and Gordon for 6½ guineas; while Mr. R. Pratt and Mr. Hillman paid 3 guineas and 2 guineas respectively for full-mouth rams, also bred by the Duke of Richmond.

Wensleydale Sheep Breeders' Association.

The seventeenth annual show and sale of the Wensleydale Long-Wool Sheep Breeders' Association and Flock Book Society took place at Northallerton on Wednesday, when the show was one of all round excellence, the shearlings and huts being particularly good. There were no fewer than 300 entries in the breeders' selling classes. The silver cup offered by Mr. S. H. Rowlandson, the president, was won by Mr. J. W. Greenst, Holme-on-Swale, Thirsk, with a splendid pen of five shearing rams, Mr. E. Horsemann, Richmond, being a good second, whilst the President's pen was placed third.

There was a very large company of buyers and the sale proved a good one throughout. One of Mr. Greenst's rams was sold for £21, and the ram lambs of Mrs. Holmes and Mr. T. B. Earle, second and third respectively in the ram lamb class, realised £9 each. The shearing ewes with which Mr. Horsemann won first prize changed hands at £10 each, and the second prize winners of Mr. Trotter made up to £7 5s. each. Mr. Hargrave's first prize aged ram was sold for £10. Mr. Bentham King, Helmsley, sold half a dozen rams at an average of £11 each. Mr. Greenst's five fetched £64 10s.; and Col. T. Anson's lot close upon £10 each. Mr. Rowlandson's first went for £11 15s., and Mr. E. K. Cessaby's entry sold for £61, or nearly 49 a head; £8 was given for a ram lamb bred by Mr. F. E. C. Dobson, whilst £11 was obtained for Mr. Horsemann's best lamb, a ewe from the same flock also going for £10.

Sale of the Breadalbane Highland Cattle.

The well-known herd of pure-bred Highland cattle belonging to the Marquis of Breadalbane, K.G., was sold at Styx, near Taymouth Castle, on Thursday in the presence of a large company. The cattle, which numbered forty-five, were submitted in excellent condition and bloom, and included many favourite animals, which have again and again gained special showyard distinction. Several are related with the old strains of Mysie and Phroiseaigs of the second Marquis of Breadalbane, whose famous herd was disposed of at Taymouth in 1802. Bidding was somewhat slack to start with, but became brisker as the sale proceeded, and better prices were obtained. The top price of the sale was 61 guineas for Mysie VIII. of Taymouth, bought by Mr. Thomson, of Skye. The three bulls, Calum Buidhe III. of Atholl, Nigel Riabhach of Airthrey, and Captain of Taymouth, were withdrawn. Thirteen cows and calves averaged £31 3s. 6d.; two three-yearling heifers, £21 5s. 3d.; six two-year-old heifers, £19 5s.; five one-year-old heifers, £14 3s. 6d.; and seven bullocks, £10 11s. 6d. The total of the sale was £708 4s. 6d., or an average per head of £15 14s. 9d.

Barnstaple Fair, one of the oldest of such institutions in the kingdom, was opened on Wednesday with the usual time-honoured ceremonies. The ancient Guildhall was crowded long before the appointed time for the assembly of the mayor and corporation for the toast and ale function. Nearly 3,000 sheep and about 400 cattle were penned in the cattle and sheep fair, but the sale was generally slow. Prices averaged, for steers, two-year-olds, from £11 to £14; for yearlings, £8 to £9. The sheep were in a number of cases poor lots. Horn ewes made from 34s. to 42s.; Nutt ewes, 37s. to 43s. In the horse fair, also, sales were not brisk. Cart horses fetched anything from £20 to £30.

Birmingham Onion Fair, which opened on Thursday in Birmingham, now scarcely justifies the name of fair. Time was when it was an event of great commercial importance, but after the introduction of railways and the establishment of local markets and cattle sales it ceased to be of much utility. In the old days tons of onions were to be seen on sale in the Bull Ring. But all that has now changed. One night have passed down the historic market last week without noticing a single reeve of onions. As a matter of fact, the total supply in the open street consisted of a single barrow of the vegetable. The trade is now done at the Smithfield market. Here many bags and reeves of onions are to be daily seen at this time of the year. Last week's prices were from 5s. to 7s. per dozen reeves, English onions 4s. 6d. to 6s. per cwt., Dutch onions from 3s. 9d. to 4s. 6d. per bag, and Valencia 6s. to 7s. per case. Horses were small in numbers and by no means great in quality, there being in fact an absence of really good-class animals.

Notes and Jottings.

"He doth nothing but talk of his horse."
—Merchant of Venice."

MR. GEORGE LASCELLES, of Sun Hill, near Thirsk, than whom there is no man better qualified to talk about horse-breeding, has given it as his opinion that if anyone was to commence breeding the Thoroughbred on scientific lines and without an eye to racing, in a very few generations the Thoroughbred would be nearly strong and would develop nearly as much bone as the Cleveland Bay or Yorkshire Coach horse. I think there is very little doubt that Mr. Lascelles is right. Those of us who remember the kind of horses Sir Charles Strickland and Sir George Cholmley used to breed; who remember those great horses the Viking—who was bought by the Portuguese Government—and Cedric do not need to be told the possibilities there are in breeding the Thoroughbred horse, and it seems a pity that some of our wealthy landowners do not make the attempt. That it would pay, when the fictitious value of a horse that can win races is taken into consideration, it would be absurd to say. No horse for ordinary purposes can be expected to bring more than from 200 to 500 guineas, and it is only exceptional ones that will bring that amount. And if horses were systematically bred on the lines indicated, there would be fewer exceptional ones, and consequently prices would be lower. As racehorses, it is needless to say, that many of these thoroughbreds would be worth as many thousands as they are worth hundreds for other purposes.

BUT this seems to me no reason why the attempt should not be made, and I think there is not the least doubt that a stud on the lines of those I have mentioned would pay its expenses and leave a little profit, if care was taken in making the original purchases. The mares should not be difficult to get. It is a fact known to the writer that one gentleman who rides certainly over 14 stone rarely rides anything else than Thoroughbreds, which he buys as yearlings at an initial cost of something under 25 guineas, which is his maximum. Many is the good horse he has bought for less than 20 guineas, and it is seldom that he does not get a horse well up to his weight. He has occasionally, of course, bought a filly, and more than one of these occur to the memory as the model of 14-stone Hunter mares.

IT would be much better to buy the mares intended as a foundation for a stud of this sort as yearlings. To begin with, there is the question of cost. If good sound mares were bought, the price would be a serious consideration, and it should be unnecessary to point out that to breed from broken-down breeds would mean disaster. The best way to get a stud of thoroughbred mares for breeding hunters and riding horses would be to buy yearlings, break them, and hunt them for a season or two, and commence breeding from them at six or seven years old. They would then be treated naturally from the days of their purchase, and the extra growth they would get from their generous treatment up to the time of sale would do them no harm, but good. After that plenty of liberty and a little corn twice a day would be all they would require till it was necessary to break them in.

OCCASIONALLY a two-year-old that was too slow for racing might be bought, but, personally I should prefer a mare that had never been trained to breed from. To get the right sort of two-year-old at a low price we require an exceptional judgment, for horses change very much in appearance when they are turned out of training, and as this special knowledge is, perhaps, rarer than would be generally supposed, the purchase of two-year-old fillies is likely to end in disappointment.

THE question of suitable sires is one that naturally presents itself, and one unfortunate circumstance connected with modern Thoroughbred breeding is the excessive fees which are charged for the best stallions. Of course, it is impossible to help this; the commercial connection has a great deal to do with it, and, of course, the amount of money which a "fashionably" bred yearling

will bring at the sales has a great deal to do with it. The price of a stallion is entirely a question of supply and demand. Still, with a little care suitable sires might be found at not a very excessive fee. One thing, however, with respect to stallions fees should be altered. The King's Premium horses all have a special fee for half-bred mares, but they charge a big price for Thoroughbred mares, and other horses that travel the country have also the same rules. I have referred to this on a previous occasion, and there is now really no reason why it should be continued. A hundred years or so ago, when a horse was naturally restricted to the mares in his immediate neighbourhood, and when the very best horses—horses such as Hambleton covered half-bred mares—there was every reason for the two fees; but now it is difficult to see why these should exist, and they certainly have an effect in preventing men from trying to breed Thoroughbred Hunters. If a few Thoroughbred studs were started on the lines I have indicated, the difficulty about sires would obviously soon cease.

AS throwing some light on the way in which the best horses of the day were at the service of farmers in the long ago, I may refer to the early breeding of Yorkshire Coach horses. When the demand came for the lighter and faster carriage horse, breeders had recourse to Thoroughbreds. And amongst the Thoroughbred horses that were

Mr F. HARGREAVES' GUERNSEY COW, MERTON BEAUTY OF THE VILLAGE, Champion Guernsey Cow or Heifer at the Royal Show, Derby.

at the service of Coach horse breeders were horses of Mr. Garforth's famous strain, the strain that produced Marcia, the mare over whom song writers enthused as "the good grey mare," and whose "counterfeit presentment" hangs over the door of many a village inn in the county of many acres. Such horses as these would be entirely out of the reach of any but breeders of high-class thoroughbred stock for racing purposes in these times.

IT is an interesting fact, and one which is incomprehensible to a man who knows how insistently breeders of Coach horses have for the last thirty or forty years stuck to the bay colour for sires and broodmares, and how frequently they insist upon describing an obviously brown horse as a dark bay, that in the early days of crossing Cleveland Bays with Thoroughbreds with the object of breeding Yorkshire Coach horses grey horses were frequently used. This Marcia strain, for example, were groys for nearly a hundred years. And for a considerable period there seems to have been no prejudice against breeding from a grey stallion, for down to the middle of the nineteenth century grey sires were frequently used, and even at the Yorkshire Agricultural Society's shows grey mares frequently were shown, and occasionally won as coaching brood mares. Perhaps the last grey horse that was extensively used was Duncan Grey, whose name frequently figures in the Yorkshire Coach Horse Stud Book. With this fact before us it certainly does seem curious how the bay colour prevails in the Yorkshire Coach horse, and it would seem to favour the argument that there was considerably more thoroughbred blood in the old Cleveland Bays or Chapmans than is generally admitted. The whole question of colour is an interesting one, and one on which pages might be written.

THE LOOKER-ON.

Notes and Jottings.

THE unbroken drought, which has latterly been accompanied by frosty nights severe enough to have given ice of considerable thickness, and followed by scorching sun in the day time, has played sad havoc with the root crops, especially swedes and turnips, and caused farmers to corn plain locally of winter keep prospects. The blow to the swede crop is the heavier to bear as these roots gave promise a few weeks back of being more productive than for several years past, and now that over an immense area of the country they are white with mildew, their foliage drooping, and all increase of the bulks at an end, it is a terrible

disappointment. Further, it is a well-known fact that swedes, after passing through this great check in growth and health, lose a large proportion of their nutritive properties.

ALTOGETHER the stock-breeders' prospects for a winter have assumed a very serious aspect, so much so as to affect the price and demand even for milking cattle, which are in thousands of cases an absolute necessity for dairy farmers to purchase, as too many of the milk contracts entered into are so absolutely binding that the dairyman has no means of extricating himself, and to keep up the supply will, with numbers of people, entail a very heavy loss. On the majority of farms it means a terrible long winter, at least so far as the commencement is concerned, for thousands of cattle that in a good average season would have taken good care of themselves up to the middle of November will require to be put upon winter rations early in October, and most of the foods to be purchased are at a high level of prices.

REFERRING to my recent notes as a return to more tillage farming, or rather to more mixed farming and a little relaxing of the all-pasture rage, I notice that admirable farmers' paper, the *Farmers' Gazette* (Dublin), gives an opinion from that very practical and far-seeing member of the Irish Cattle Breeders' Association, Mr. W. Field, which favours a greater amount of tillage, a return to ploughing and cultivating instead of so extensively increasing the permanent pasture, are as being well nigh imperative for the welfare of Irish stock farmers and breeders. Better bred and better cared for cattle follow in the wake of the mixed husbandry system there is no doubt whatever, and in the face of excessive competition our cattle must be kept up to the mark from every point of view if foreigners are to continue buying our pedigree

animals, and if we are to furnish them with such cattle as may be bred for them the best beef stock that can be produced. Purely bred cattle quickly degenerate unless their growth and condition is maintained from time to time, and this can be best done upon the mixed farm.

THE question of the dairy or milking Shorthorn that has engaged so much attention of late receives a little discouragement from the American side, where at one of the recent great fairs or shows where very valuable prizes were offered for the best milking Shorthorn under certain easy conditions, there was little or no competition, which rather points to the fact that on the other side the Atlantic the beef Shorthorn is still considered the most valuable and therefore most worthy of attention.

THERE is, however, another probable construction that may be taken as the cause of the lack of competitors, namely, that dairy cattle have been much more carefully bred in America in past years than in this country. Butter tests or yields and also milk yields were made the subject of breeding for and giving prizes to dairy breeds of cattle far more exclusively than in this country up to very recently, and it is known by many who have seen the herds that have been bred upon milk and butter lines exclusively for many years without paying attention to breed, points that the results have not been so eminently satisfactory as was anticipated.

FOR a certain period all appeared to have gone well, the animals maintained the characteristics of their breed, and the yields of milk and butter to have been materially increased, but after a few generations of this one-sided breeding, character disappeared to a large extent, and there was no compensating increase of milk or butter, so that a return has had to be made to the "breeding for appearance" side of the question. At the show referred to, however, the prizes were to be awarded upon a scale of points, which gave one-half for appearance, or, as it is sometimes styled, personal merit, the other half for the milk yield. This would appear to be the proper method of making awards, so as to encourage the breeding of the real dual-purpose animal.

SO far as can be seen by photographs and learned from those who have seen them, there are few breeds, if any, of dairy cattle in the Western Continent that have maintained their characteristics, and even improved upon them, so far as appearances are concerned, as the black and white Holstein Friesians. Many of these cattle have become very symmetrical and much neater generally than we used to see them when our ports were open to them, and according to the records published at the various colleges and dairy tests at the fairs, the quality of their milk as regards butter fats has rather improved.

THE number of sales of pedigree cattle that have taken place recently, and others that are advertised to take place shortly, appears to be quite unusually large. In some instances the cause of such dispersions is due to owners having left their farms, in others, probably, it is owing to the owners of the cattle being tempted to sell on account of the very high prices prevailing generally, especially for Shorthorns. At several sales held recently, however, prices have scarcely been as good as they were a few months ago for these leading breeds. It may be said, perhaps, that this is due to the fact that the herds recently sold have not been quite of so much note in the world of shows, though equally well bred, and this makes a great difference. Then the approach of winter is not altogether as favorable a time for the exporter, and as matters in the way of food are concerned at the present time is not altogether appetising to home breeders. In two or three instances where milk has played a more important part than beef, such as one or two particular sales of Red Polls and South Downs, prices have been better than earlier in the season.

AS regards one of the causes mentioned in the above note as being accountable for some sales of pedigree stock being held—namely, the fact of the landlord having left his home farm—is rather important as affecting the country in general. Such a proceeding points pertinently to an improved condition in farming, such landlords not having been able to let their farms whilst the depression was so keen. On the other hand, the fact of a good home farm being let and a pedigree herd of cattle dispersed may have a bad effect upon the future of our pedigree cattle; a good herd may be entirely lost by such a farm falling into the hands of a small owner who cares not for pedigree cattle, and in the past twenty-five years pedigree cattle breeding landlords have been the mainstay of our herds, and the cause of their becoming so much coveted the world over, which has brought great wealth into our country. We cannot afford to lose one good herd.

Galloway Cattle for Patagonia.—Messrs. Alfred Mansell and Co., live stock exporters, Shrewsbury, recently shipped per ss. *Sorata*, from the Port of Liverpool to the Patagonian Land and Estate Company, a number of high class Galloways, including the prize bull War Cry, from Mr. John Wilson, of Tundergarth Mains. This bull was first at the Royal and Highland Shows, and has won numerous other prizes. Mr. Wilson also supplies the four-year-old stock bull Woodland Prince, the yearling bull Mountain Chief, the two-year-old heifer Tidy 8th, and the yearling heifer Queen Steiner. They also shipped to the order of Messrs. Hamilton and Saunders, Punta Arenas, Patagonia, a Galloway bull from Sir R. W. Buchanan-Jardine, Bart., of Castlemilk, and another from Mr. Andrew Montgomery, Nether Hall, Castle Douglas, whilst Mr. James Wilson, of Tundergarth Mains, supplied the yearling heifers Lizzie 6 h and Clara 9th.

If you want a really good Compound Cake, write to CALTHROP BROS., Ltd., 56, Naylor Street, Liverpool, or see one of their agents. They make the best Cakes of the sorts on the market.—[ADVT.]

AMONGST the many changes that have taken place in the customs of our country during the past fifty or sixty years in connection with our cattle, none have perhaps been more radical than those of fairs and markets and the methods of selling. As far back as the middle of the last century the means of selling open to farmers were largely in the periodical fairs that took place, perhaps, the first Monday or Tuesday in each alternate month in remote country districts, and the selling at these places was up to that date mainly by private dealing, and the fairs usually took place very early in the morning, often by four or five o'clock even in the winter when the selling had to be done by what was then in these remote places—"by candle light."

AT the present time these fairs have, to the extent of 90 per cent. or more, been abandoned, and the business transacted by auctioneers, and at in very many places a much later hour in the day, many not commencing until mid-day is past. Now the question of selling privately or by auction is one that the public appear to have settled, especially in the places indicated, entirely in favour of the auctioneer. The time of holding such sales, however, is worthy of some little consideration. It has always been considered by many farmers and others that our sales are many of them held rather late in the day, more particularly during the winter season when darkness comes on so early.

THERE are several reasons in favour of holding these auctions earlier in the day as there are also in favour of the late ones, but at the present time the most important matter to interfere with the late sale is the wretched motor-car. It is absolutely unsafe to have cattle on the public road after dark with these destructive cars and cars carelessly driven on the roads, and it is well worth the consideration of both buyers and sellers, as well as the auctioneer, whether it would not be more prudent to commence a four or five hours, sale at 10 a.m. and finish at 2 or 3 p.m., than to commence at 10 o'clock and finish at 5 p.m. By the former course animals would all arrive at their destination much earlier and with less danger to both themselves and the public, whilst buyer and seller would also reach their homes in more reasonable time.

Aberdeen-Angus Show and Sale at Birmingham.

The English Aberdeen-Angus Cattle Association held a show and sale of pure-bred Aberdeen-Angus cattle in Bingley Hall, Birmingham, on Thursday, this being their first autumn sale in this city, and the principal object in promoting it was to give facilities to breeders to dispose of their surplus stock of females, instead of being obliged to organise sales at home. In that respect the show was fairly satisfactory, and it is intended, if sufficient encouragement is given to the English Association, to make the event an annual one. The number of entries were forty, but no doubt it would have been much larger had it not been for the fact that many breeders have recently disposed of their herds at sales held in different parts of the country. Trade, too, for Aberdeen-Angus cattle is not brisk just now, and this affected business on the present occasion. The attendance of buyers was not particularly large, and as the demand was quiet prices were low. A few very choice animals of good pedigree were led into the ring, but apart from the prize winners there was nothing of conspicuous merit.

The first class was for cows calved before December 1, 1903, and the winner was Corskie 4th of Wyley, a cow that has won many prizes. She was bred by the late Mr. L. A. Macpherson, and was shown by Mrs. Macpherson, Wryley Grove, Pelsall. She is one of the best specimens of the breed, in spite of her age (ten years), but although the bidding for her was keen at the outset it did not last long enough, and the reserve figure not being reached, she was not sold. Mrs. Macpherson also secured the second and third prizes with two six-year-old cows, Pamela of Wryley and Keenie, which were sold to Mr. G. Drummond, Penshurst, Kent, for 19 guineas and 20 guineas respectively. The heifers calved on or after December 1, 1903, and before December 1, 1904, were useful lot, and here Mr. G. Drummond took the first award with Polly 2nd of Swaylands, sold to Mr. E. G. Wheeler, who is forming a herd of Black-poll cattle at Claverdon. The next honour was gained by Mr. J. H. Bridges, Horley, Surrey, with Abstract, for whom he got 17½ guineas from Mr. T. F. Johnson, Glenfield, Leicester, but the highest price of the sale was secured by the third prize taker, Pride of Aberdeen 26th, the property of Mr. George Drummond. In appearance she was by no means so attractive as the first and second winners, but she possessed the best pedigree, and this was what the buyers were looking at. There was some brisk bidding for this representation of the Pride of Aberdeens, and she was knocked down to Mrs. Macpherson, of Pelsall, at 32 guineas.

A few smart heifers, calved on or after December 1, 1904, and before December 1, 1905, were

shown. The two principal awards were secured by Mr. J. H. Bridges with Madge of Langshott 3rd and Edith of Langshott, and the animals were sold to Mr. T. F. Johnson and Mr. Macpherson at 25 guineas and 26 guineas respectively. The second winner did not show so well as her herd companion, but her breeding was more fashionable, and for that reason she made more money. There was no demand for the bulls, the top price being 20 guineas given by Mr. Ragg, of Rugby, to Mr. D. Hendry, Bury St. Edmunds, for Gay Monarch of Shimpling, nearly two years old.

Mr. H. S. Tinsley's Lincolnshire Red Shorthorns.

Another sale of Lincolnshire Red Shorthorns took place on Wednesday, the stock offered on this occasion being a splendid lot from Mr. H. S. Tinsley's herd at Hurn Hall, Holbeach, which was founded about twenty-five years ago, and is descended from the celebrated herd of the late Mr. Oliver, of Eresby, which had been carefully bred to type and colour for over 100 years. Taken altogether, the animals were a weighty lot of cattle with considerable good looks, and certainly worthy of better prices than they realised. The top figure was 36 guineas for the cow, Ladybird 2nd, purchased by Mr. Atkinson, Weston, whilst Mr. Ashton, Godmanchester, gave 31 guineas for the bull Bingham Lodge Benniworth, but these were the only prices over 30 guineas, the general range being from 21 guineas to 28 guineas. Altogether eighty-six lots were disposed of, and they realised a total of £1,433 10s. 3d. Forty-two cows, heifers and calves averaged £15 1s. 9d. per head; twenty-two cows and heifers £22 5s.; ten two-year-old heifers £12 10s. 11d.; ten yearling heifers £13 7s. 9d.; and the two bulls £25 9s. 3d.

The Late Miss Standish's Jerseys and Ponies.

The choice herd of Jersey cattle, bred by the late Miss Standish at Marwell Manor, Eastleigh, Hants, was sold by auction on Tuesday last by Messrs. Thornton and Co., and resulted in an all round average of £90 14s. for forty-two head. There was a large company present. Mrs. Graham, winner of eight certificates of merit, was purchased by Mr. H. P. Warren, of Northumberland, at 46 guineas, as well as Abby Queen, a four-year-old cow from a butter test winner at the same price. Mr. Murray Smith also secured two of the best cows—viz., Zarinia at 33 guineas, and Guinea Maid at 30 guineas. Among other purchasers were Sir J. Watson, Messrs. Eyre Matcham, Mr. Bonham Carter, who gave 30 guineas for Fabia 2nd, Mr. J. W. Baxendale, and Mr. H. J. Wood. The yearling bull Li tleton went to Mr. Warren at 26 guineas.

The show of polo ponies, which were sold by Messrs. Tatnall and Co., for good competition, and good prices resulted. Included in the catalogue was the stallion Kentigern, now in his eighteenth year, but still clean of limb. In his day he did well on the flat, winning the Welbeck Stakes at Nottingham two years in succession, and running fourth in the Lincoln Handicap. He has sired some useful stock, and was a bargain at 16 guineas, his purchaser being Dr. Prentice. Another stallion, Rupert, a big winner in the ring, changed hands at 40 guineas, but Riding Star went to the bid of Mr. Phillips at 25 guineas. The pick of the lots were the brood mares, of which one which was sold averaging £28 1s. 6d. by Mr. John Barker paying the top price, 75 guineas, for Silver Star, a winner at the Royal Show, Derby; while Mr. O. T. Price paid 21 guineas for her good foal by Rupert. Mr. Cooke paid 40 guineas for The Pheasant, another brood mare of quality; and of the remainder the best were Mona, sold to Mr. J. R. Wright for 20 guineas, and Winnie, for which Mr. W. Whiteley, a Devon breeder, went to the same price. The three-year-olds were a small but good group. Mr. Marsh paid 30 guineas for Vatelnoo, a bay gelding, a good pony, and a daughter of the same good pony, Rosette, was secured by Mr. Horace Trimmer at 33 guineas. She was the best of the two-year-olds.

The Capton Devons.

The sale of close on seventy head from Mr. H. Bowerman's well-known herd of Devon cattle, at Capton Farm, Williton, naturally attracted a large company of breeders, for it presented an opportunity of buying some splendid specimens of Devons, sold only because the herd had overgrown its accommodation. Cows and heifers, as well as the bulls, were offered in first class condition, and met with a ready sale at an average per head of £34 10s. Capton Polly, a capital cow, was taken by E. W. B. Portman at 51 guineas, Capton Girl and Capton Buttermaid realised 40 guineas each from Mr. Morgan, Whimple, Exeter, and Mr. C. Morris, St. Albans; whilst Mr. J. Perkins, Tavistock, had to bid 35 guineas before he could secure Capton Bull calf. A number of the other cows and heifers went at prices well over 25 guineas, whilst this sum was topped by six of the dozen bulls offered. Capton Plough Boy

**A
Practical
Experiment**

SILCOCKS' FATTENING CAKE & DECORTICATED COTTON CAKE

TEN BULLOCKS (2½ yrs. old),

The Property of
R. BROWNE CLAYTON, Esq., J.P.,
Browne Hill, Carlow.

Weighed November 9th, 1905.

No. 1.—Total weight, 5 bullocks	cwts.	qrs.	lbs.
No. 2.—Do. do.	49	3	16
	49	2	11

Weighed January 20th, 1906.

No. 1.—Total weight	cwts.	qrs.	lbs.
No. 2.—Do.	56	0	24
	53	3	12

Lot No. 1 was fed and finished on **SILCOCKS' FATTENING CAKE**, costing £7 2s. 6d. per ton delivered free in Carlow.

Lot No. 2 was fed and finished on Decorticated Cotton Cake, costing £8 per ton delivered free in Carlow.

Both cakes were fed in equal portions daily.

The result of this practical experiment will speak for itself, and only illustrates one of the numerous experiments made by our customers and by ourselves at our experimental farm with all kinds of foods, proving the superiority and economy of **SILCOCKS' FATTENING CAKE**—which we claim to be the most profitable cake a feeder can use for rapid and economic fattening.

WE RESPECTFULLY SOLICIT A TRIAL FROM THOSE WHO HAVE NOT YET USED IT, AND ARE CONFIDENT THEY WILL CONFIRM OUR CLAIM.

FOR SUMMER FEEDING, SILCOCKS' FATTENING CAKE IS UNSURPASSED.

Apply to Local Agent, or to

R. SILCOCK & SONS, Stanley Hall, Union Street, LIVERPOOL.

ROBSON'S FEED CAKE.

Great care is exercised in selecting the ingredients to make this Cake specially adapted for all classes of Stock.

EVERY FARMER SHOULD TRY IT.

Manufactured by the

BRITISH OIL & CAKE MILLS, Ltd., HULL.

Sold by Cake Merchants and Dealers.

realised 37 guineas, Mr. G. Skinner, Combe Florey being the purchaser; Capton Johnny and Capton Sunny Jim fell respectively to the Hon. R. C. Trollope and Mr. Alford, Barnstable, at 30 guineas each; whilst the others made from 174 guineas to 28 guineas. A number of Devon steers were also offered and sold well at prices ranging up to 22 guineas.

Sale of Stock in Surrey.

Drafts from the pedigree stock on Sir Walpole Greenwell's Surrey farms were brought under the hammer at Chilmead, Nutfield, on Monday, and with a large attendance of buyers some good prices were realised. Cross-bred Kerry cows with calves averaged £13, Mr. Thrale, Crodon, paying 40 guineas for the Shorthorns Stonetown Spire and Master Wedlock. Cross-bred steers of 1 up to £16 a pair, and several pens of Berkshire sows averaged up to £3 and 45 each. The chief lots in the sale were the pedigree Shire mares, and for these Mr. Price and Mr. Young, of Croydon, were the leading purchasers. The first named paid 65s. for Hawthorn, and Mr. Young went to 55 guineas for Prince Regent and to 25 guineas for Nailstone Blend. Several pens of Southdown sheep and lambs from the Marden Park flock averaged 12 guineas, Mr. Bennison, of Upper Gatton, paying the top price, £2 10s., for each ewe in a pen of five shearlings.

Mr. Mowbray's Lincolnshire Red Shorthorns.

On Monday Messrs. Dickinson, Riggs and Day brought under the hammer at Gosberton, near Spalding, the well-known herd of Lincolnshire Red Shorthorns belonging to Mr. R. Mowbray, who has met with success in the showyard. There was a good attendance of farmers and breeders, and although no big prices were realised, the sale was considered a fairly satisfactory one, eighty three animals being fairly satisfactory one, an average, including calves, of about 13½ guineas. The top price of the sale was 30 guineas, given by Mr. Atkinson, of Weston, Spalding, for a red heifer, twelve months old. Messrs. Lumby and Son, of Donington, paid 27 guineas for a two-year old red heifer; and Mr. F. Scorer, of Stenigot, Louth, gave 23½ guineas for a red cow, five years old. Fifty cows, heifers, and calves made 67½ guineas, or an average of 13½ guineas; sixteen two-year old heifers made 22½ guineas, or an average of 14 guineas; fifteen yearling heifers realised 180½ guineas, or an average of 12 guineas each; and bulls averaged 16 guineas.

Sale of Lilford Hall Shorthorns.

The major portion of Lord Lilford's pure-bred herd of Shorthorns was disposed of by auction on Wednesday at Lilford Hall, Oundle, by Messrs. J. Thornton and Co. The herd was originally started in 1885 with purchases from Earl Spencer's lord at Althorp. Seven years ago a successful sale was held, after which the herd was again revived, and it included several animals of the Kingscote Honey tribe obtained at Sandringham, as well as several from the Duchess Sarah tribe obtained from Althorp. Of late years Scotch strains have been successfully introduced. The herd looked in excellent breeding condition.

There was a large attendance of buyers from all over the country, and business was brisk. The top price of the sale was 200 guineas, paid for Crystal Princess, a superb animal, and champion of the Hun Ingdonshire Show. The purchaser was Mr. Henry Dudding, of Ribby Grove, who also paid the second highest price of the sale when he purchased Duchess of Barrington 92nd, which took second prize as one of a pair of heifers at Northamptonshire show in 1904, for 130 guineas.

There was, however, a big drop to the next best figure for cows and heifers—viz., 65 guineas, given by Mr. H. Reynolds for Lady Beattie 12th, but the remainder sold at prices well above 20 guineas, and the average for the thirty-three cows and heifers was the satisfactory one of £46. The bulls sold fairly well, ten averaging £25 7s. 2d, but this would have been a very different figure had not the bull-calf Crystal Superior fetched 77 guineas (Mr. P. Rodocanachi) for the other prices did not rise higher than 33 guineas. The total amount realised by the sale was £1,772 8s., or an average per head of £14 4s. 4d.

The Glanusk Herefords.

The late Lord Glanusk's well-known and established herd of Herefords was dispersed by auction at Glanusk Park Farm on Thursday. The herd was founded by the late Lord Glanusk (then Sir Joseph Bailey) in 1833, and, as a reference to the pedigrees proved that the soundest judgment was at all times exercised in the selection of the sires, and periodically females were procured from the most eminent breeders of the day. All except the choicest strains of blood was excluded. The sale attracted a very large company of breeders, but prices were somewhat poor, the best for the cows being 32 guineas (twice), 31 guineas, and 27 guineas. It fell to the credit of a yearly heifer—Syracuse—to make the top price of the sale, and this was 52 guineas, at which figure she was knocked down to Mr. Rowlands. Other yearling heifers made 33 guineas, 28 guineas 37 guineas, and down to 15 guineas, while the bulls made up to 40 guineas, Mr. H. Dent paying this sum for Macbeth, the bull at the head of the herd. The others fetched from 10 guineas to 25 guineas.

Sale of Shorthorns at Chipping Norton.

A collective sale of Shorthorns was conducted by Messrs. Thornton and Co. on Friday at Chipping Norton Junction. A large company was present, and for the best animals highly satisfactory prices were obtained, though for some of the more indifferent lots the biddings were slow and protracted. Among the animals were a number from the celebrated herd belonging to His Majesty the King, Windsor, whilst others were contributed by Lord Moreton, Mr. Albert Brassey, Mr. G. H. Simpson Hayward, Mr. J. Wakefield, and other breeders in the locality. The first lot was Lady Charfield 35th from the Sarsden herd, and made 22 guineas to Mr. R. Stratton. Fortuna 4th, a fine red cow, also of Lord Moreton's, made 51 guineas to Mr. Fitzherbert, and her sister, Fortuna 5th, 60 guineas to Mr. Casares; a heifer calf running with the last named cow realised 28 guineas to the same buyer. Fortuna 8th, of similar blood, made 62 guineas to Lord Sherborne. Lord Moreton's Coral Beauty 2nd was taken by Mr. Geo. Taylor at 39 guineas.

Of the animals from Windsor, Proud Duchess, of the Scotch Missie family, realised the highest price—viz., 60 guineas to Mr. C. Tindall. Katie went to Lord Reesals, 25 guineas, and the same bidder took Lady Ardmore 4th, 45 guineas. Mr. E. H. Bailey gave 38 guineas for Daisy, and 27 guineas for Picotee. Mr. Albert Brassey sent half a dozen milky looking red cows, which sold well. Mr. Scott Murray paid 24 guineas for Duchess of Kennet 10th, 40 guineas for Bohemian Dearly 19th, and 33 guineas for Maud 17th. A charming roan heifer calf of Mr. Walter Scott's was bought by Mr. T. Garne at 33 guineas, and another by Mr. E. Bishop at 40 guineas.

There were a number of useful bulls, but no high prices were reached, the demand for abroad having slackened at this season. The top price was 37 guineas given by Mr. Turner for Mr. W.

M. Scott's Woodborn Monarch. Fifty-two head averaged £23 6s. 9d., and the total of the sale was £1,478 18s. 6d.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Abbeyfeale Fair, co. Limerick, on Monday, there was a large supply composed chiefly of 2nd class cattle, which met a fair demand, and nearly all sold. Springers plentiful and selling well. A very small supply of lambs. Milk a good demand. Prices:—Calves, 2nd class, £3 to £4 2s. 6d.; 3rd class, £2 5s. to £2 15s.; yearlings, 2nd class, £6 10s. to £6 12s. 6d.; 3rd class, £3 to £5; two years old, 1st class, £11 2s. 6d. to £13; 2nd class, £8 to £10; 3rd class, £5 5s. to £7; three years old, 3rd class, £7 10s. to £10; springers, 1st class, £16 to £17 15s.; 2nd class, £12 to £15 10s.; 3rd class, £7 10s. to £10 10s. Lambs, 1st class, £14; 2nd class, £1 7s. to £1 10s. Young pigs, eight to ten years old were in good demand at from 24s. to 28s. each.

Elphin Fair, co. Roscommon, was held on Monday, when well-bred, conditioned cattle suitable for Scotland sold well, and a fair clearance was effected. Prices:—Calves, 1st class, £5 to £5 5s.; 2nd class, £4 to £4 5s.; yearlings, 1st class, £8 to £9 10s.; 2nd class, £6 5s. to £7; two years old, 1st class, £11 to £12 10s.; 2nd class, £8 10s. to £10 10s.; three years old, 2nd class, £11 10s. to £13; springers, 1st class, £18 to £20; 2nd class, £14 5s. to £16. Lambs, 1st class, £1 17s. to £2; 2nd class, £1 9s. to £1 13s.; over twelve and under twenty-four months old, 1st class, £2 10s. to £2 15s.; 2nd class, £2 6s. Young pigs, eight to ten weeks old, 18s. to 22s. each.

At Millford Fair, co. Donegal, on Monday, a good demand was experienced for cattle in condition, but these animals were hard to sell. Prices:—Calves, 2nd class, £2 10s. to £2 17s. 8d.; 3rd class, £1 17s. 6d. to £2; yearlings, 2nd class, £3 2s. 6d. to £6 17s. 6d.; 3rd class, £3 to £3 12s. 6d.; two years old, 2nd class, £7 12s. 6d. to £10 10s.; 3rd class, £4 10s. to £6 15s.; three years old, 3rd class, £7 10s. to £7 15s.; springers, 2nd class, £11 15s. to £13; 3rd class, £9 10s. Lambs, 2nd class, £1 4s. to £1 12s. 6d.; 3rd class, 9s. to 12s. 6d.; over twelve and under twenty-four months old, 2nd class, £2 18s. to £2 7s.; 3rd class, 18s. to £1 1s.; two years old and upwards, 2nd class, £2 3s.; 3rd class, £1 5s. Young pigs, eight to ten weeks old, averaged about 17s. 6d.

Oughterard Fair (co. Galway) took place on Wednesday, when there was a larger supply of cattle than usual, and the demand was active, more especially for good animals in moderate condition, a good clearance being effected at prices in advance of recent fairs. Sheep fair was composed chiefly of horny animals; brisk demand and almost all sold. Prices:—Calves, 3rd class, £1 17s. 6d. to £3; yearlings, 3rd class, £3 12s. 6d. to £4 10s.; two years old, 2nd class, £8 12s. 6d. to £10; 3rd class, £6 7s. 6d. to £6 12s. 6d.; three years old, 3rd class, £7 10s. to £9 15s.; springers, 3rd class, £7 15s. to £9. Lambs, 2nd class, £1 5s. to £1 10s.; over twelve and under twenty-four months old, 2nd class, £1 18s.; 3rd class, £1 4s. 6d. to £1 5s.; two years old and over, 2nd class, £2; 3rd class, 18s. 6d. to £1 10s.

The 20-guinea cup presented by H.M. the King for the best root crops generally in the Royal South Bucks Agricultural Association has this year been won by Messrs. Kinross and Lindsay, of Datchet, whose crops include mangels grown from seed supplied by Messrs. Webb and Sons.

TENDER.

TENDERS are invited for an exclusive licence from the Secretary of State for the Colonies to occupy the Ashmore Islands lying off the coast of Western Australia in latitude 12° 14' S., longitude 123° 6' E., and to remove guano and other fertilising substances therefrom. Tenders should be on the basis of a fixed royalty per ton of guano removed, the sum payable in any one year not to be less than a fixed amount whatever the quantity of guano removed during that year.

The term of years for which a licence is desired should also be stated. Further information may be obtained at the Colonial Office, Downing Street, S.W.

The Secretary of State for the Colonies does not bind himself to accept the highest or any tender.

Tenders should be delivered in sealed envelopes, inscribed "Tenders for Ashmore Islands," at the office of the Crown Agents for the Colonies, Whitehall Gardens, London, S.W., before 12 o'clock noon on Wednesday, October 31.

No particular form of tender is required.

Game and Root Crops.

IN a season like this it is a rare pleasure to walk through a good piece of roots, but we had that privilege the other day, and though the field was small it contained some of the best mangels we have seen this year. Unfortunately, however, there was one thing which told against them, for a large number of the best roots were gnawed and pecked at the sides, and we made a right guess in conjecturing that this was the work of game. Indeed, as we walked through we put out two or three hares, and several pheasants took wing and made for the adjoining covert. In referring to this instance we have nothing to say against the reasonable pursuit of sport on part of landlords, but we could not help expressing sympathy with the farmer over his mutilated roots. Every one knows that mangels damaged in this way will not keep, and when a large percentage of the roots are mutilated it is a serious matter, particularly in a season when every mangel is valuable. We could not help thinking that the advice from the landlord to put out the game, but not shoot anything, was poor compensation.

Hiring Fairs.

ON the first day of October we walked through a certain town where once upon a time farmers and Michaelmas fair for the purpose of hiring. It is true that there were more people about than usual, and some of them had a piece of whipcord in their button-holes, indicating the fact that they were carters available for service, but for the most part the fellows hanging about the pavement might have been farm hands or anything else, and we saw very little hiring done. One old fellow who had never missed a fair for fifty years and did not intend to miss one as long as he lived, according to his own statement, stood at the corner of the street, entertaining a number of open-mouthed listeners with a description of the glories of the fair in its palmy days, and he finished up with "but there things ain't wot they used to be." In this we can bear the old fellow out, particularly where hiring fairs are concerned, for masters adopt other ways of engaging servants now, and though the above institutions still hang on, they appear to be gradually wearing themselves away to the end.

Burning Stubble.

PASSING through corn-growing districts at this time of the year it is no uncommon sight to observe smoke ascending from smouldering fires on every side, and the misty air of autumn evenings is laden with the aroma from the above. The smoke from town chimneys and factory flues is unpleasant and often poisonous,

but the smell of that which arises from the burning stubble on the rubbish fire in the wayside cottage gardens has an aroma of its own which is pleasant to the nostrils. The farmer's main object in burning stubble and refuse which have been unrooted since the corn was harvested is to dispose of it, but in the ashes that remain, particularly where the fire is a smoulder rather than a burn, there is an element of potash which, when turned into the ground, becomes a plant food. How often may one observe, in a field of green corn, patches here and there where the growth is taller and greener than elsewhere. The difference in appearance may often be explained by the fact that these patches mark the spots where couch or rubbish fires were, and the effect is seen on the crop which follows.

Root Competitions.

THE time is approaching when judges will be visiting farms to inspect the crops of roots which are entered in the competition for prizes offered by various societies. Whether their task will be made lighter or heavier by the scanty character of root crops generally this year, remains to be seen, but we do not anticipate that they will be burdened with so many entries, because there is a reluctance on the part of many farmers to enter anything in competition that is not up to the mark. Generally speaking, however, there are good roots to be found when the judging day comes round, and the very fact of there being a competition is in a measure responsible for this. We take it that competitions are good, because when there is a prize to be won or some honour to be gained, a farmer, or any other man for the matter of that, puts forth a greater effort than he would probably do otherwise. Does he gain by it? Of course he does, for whether he wins a prize or not he reaps an advantage in the heavier weight of produce he secures from the ground by extra cultivation.

The Pig Trade.

IT is a curious thing about pig-keeping that those people who are engaged in it follow each other like a flock of sheep. When prices are low and pork abundant the game is not considered to be worth the candle, and it is dropped wholesale, and then when things veer round and pork is up there is a general rush for pig-keeping. It is said that the man who makes money out of pigs is he who goes in strongly for them when everyone else is giving up, and there is probably a good deal of logic in it. It is quite likely that the present boom in pork is in a measure due to the meat scandals in Chicago, which has undoubtedly had an effect on the bacon trade, but there are other things besides which

have bearing on the scarcity of pigs. In the days when milk was kept at home for the purpose of cheese and butter-making, pigs were more or less essential, but now every drop of milk goes from so many places as soon as it can be cooled, and there is no by-product for the pigs. Just how long the present high prices will stand remains to be seen, but it must be remembered that before we can breed pigs we must have sows, and the country is by no means glutted with the latter.

Is the Rain Too Late?

FOR weeks and weeks past farmers have been waiting, hoping, and longing for rain, which has come at last. As we write a gentle downpour is falling on the parched earth, and thoughtful housewives are congratulating themselves on having tubs filled and soft water to wash with. Doubtless, farmers are thankful that the spell of drought is broken, particularly those members of the fraternity who have been spending time and money of late in carting water for the cattle, but some are saying that so far as crops are concerned the rain has come too late. When one looks at the miles of burnt-up pastures it seems doubtful whether there can be much grass on them this season, and even in the event of this, will there not be a danger of stock being scoured by it? As for roots, well, mangels and swedes have had a severe check, but these crops can do a lot of growing in October, when conditions are favourable, and though gross weight per acre will probably be light, they will benefit to some extent by the welcome downfall. Nevertheless, the farmer, though thankful for the change, cannot help dwelling on what would have been had the rain come a month ago.

In Cider-land.

IN the orchards in the west of England now one sees waggon drawn up under the apple trees, and the red-checked fruit as it falls from the branches is picked up and deposited in the conveyance till the waggon is filled, and then the latter is drawn away to the mill where the juice is abstracted from the fruit for making into cider. The harvest of the cider fruit is early this year, as the dry weather has brought along the apples quickly, and many of them have ripened prematurely and fallen before their time. Good cider is certainly a very wholesome and palatable liquor, but the fact remains that one needs hardening and educating to drink some of the liquor that is made and consumed on west country farms. Perhaps this is why the man in the street prefers beer to cider, for though he can get good, bad, and indifferent beer, it does not vary to the extent of cider, and lack of uniformity is certainly a reason why the latter

beverage is not more largely consumed outside the counties where it is made. Elder, however, is the beverage in the west, and during the next few weeks the grinding of fruit and filling of hogs-heads will be a routine task on many a farm.

Potato Disease.

ACCORDING to a generally accepted theory, it is in a wet season that we should expect potato disease, and in a summer of drought and sunshine we might reasonably anticipate being quite free from it. But the dreaded blight cares nothing for theories, for it seems to come when it likes, and this season, strange though the fact may sound, there is a good deal of potato disease about. By this we do not mean to say that attacks are anything like as bad as they have been in times past or might have been had the rainfall been greater; but disease there is, even amongst varieties which are supposed to possess powers for resisting it, and the situation is not easily explained. We have dug a number of varieties of late, some of which were free from taint, but others were affected, and quite the worst in our case is British Queen. In many respects this is a fine potato, as it is a heavy cropper and its cooking qualities are unquestioned, but it shows quite a marked prevalence for disease and cannot be recommended. It was in August when we first observed indications of the blight

when we had a few thunderstorms and gloomy, close weather, and probably it was these conditions that started the trouble.

Autumn Tints.

WE can all afford to be a little sentimental at times, and even those who have seen the picture on many an occasion before, can hardly survey a wooded landscape clothed in all the beautiful colours of autumn without being moved to admiration. There are delicate shades which no artist could convey to canvas, and in the hundred hues and tints there is nothing that clashes or offends the eye. It would seem as if nature, knowing the end to be near, had summoned forth all her energies to make the dying days of the leaves the most beautiful. And with it all there is a touch of sadness. We have enjoyed the glories of this beautiful Indian summer, and hoped that it might last just a day or two longer, but with the knowledge that the end might come at any moment, and in the close of nature's summer we may find a parallel in human life, as well as lessons for us to learn. Nature fights manfully to the last; she passes out with a flourish of trumpets, so to speak, but when the tinted leaves at length rustle mournfully to the ground, it is with the satisfaction of life's work well done. Could human nature wish for a better end?

English and Scottish Land Reform.

It is quite possible that certain of these land reform enthusiasts will seek to take a short cut towards securing the legal alterations they desire. Why, I have heard it asked, should not an amendment be proposed extending certain proposals of the Scottish Small Landowners Bill to England? Well, there is a very good reason why this should not be done. The Scottish agrarian system and tenure differ gravely from the English system and tenure. As a fact, you would require not one amendment but a score of amendments, and each would open out a new opportunity of criticism for the vigilant and alert-eyed antagonists of this Scottish Bill. The words, "and this enactment shall apply to England," would afford a splendid occasion for renewed assault, whilst in the House of Lords the measure will inevitably be declared to be such a hotch-potch as to only deserve incontinent rejection. If English legislation is to be effective that legislation must be independent of the proposals applying to Scotland. The main principle could be reflected, but their application must be distinctive, and in each instance be in harmony with the national characteristics and national economy. Ministers, indeed, revealed prescience in not attempting to apply one uniform system to the whole island. There is not an economist of distinction or a land reformer of reputation who has not always recognised that land legislation for England and Scotland must be distinct, and, apart from the acceptance of cardinal principles, independent.

Agricultural Politics.

BY A LOBBYIST.

Mr. Collings and the Radicals.

Mr. Jesse Collings should be a proud man this day. A review of the trend of Liberal opinion shows a growing sympathy with the proposals of his Purchase of Land Bill. Indeed, I would go so far as to assert that, if a canvass of the party were made, it would be found that a majority of the Liberal M.P.'s are in favour of it. Of course, very many of these politicians would prefer the substitution of a rigid and emphatic "shall" for the variable and vacillating "may." All the same, however, Mr. Jesse Collings' general desire that the creation of farmer-proprietors and small-holder-proprietors should be undertaken by the nation and that the nation's resources and the nation's funds should be utilised in the effort, has a general acceptance. Frankly, I think those friends of Mr. Collings—I need not specify them—who desire to represent this matter as a Unionist ambition, are unwise. As a fact, it might well be kept apart from partisan designs and partisan programmes. It is an economic question which has no more to do with the conventional party shibboleths than it has to do with a Bach fugue. We are all land reformers now—all united in the desire to retain the people on the land, to rescue the soil from unnecessary fallowness, and to avert the blighting menace which hangs over the countryside. Mr. F. A. Channing may be said to be the chief exponent of what for the moment I will call "Radical land-reform"; but many of Mr. Channing's own proposals have their echo in Mr. Collings' Bill. As a fact, it would be quite possible to amalgamate the two measures without destroying the cardinal proposals of either. Both politicians—representative men in their respective parties—subscribe to the idea of the nation's resources being utilised in the matter. Both subscribe to the idea of having farmer-proprietors as well as small-holder-proprietors.

County Councils and Small Holdings.

Perhaps, before we see the Government adopting a bold Purchase of Land Bill, we shall see a Small Holdings Act Amendment Bill introduced. There is no doubt that there is a growing dissatisfaction with the ineffectiveness of the Act of 1892. Whether that ineffectiveness is due to the inherent character of the measure or to the antagonism of the county councils—which, by the way, are really the final authority with the measure of 1892, as with the Allotments Amendment Act of 1890 and with the Parish Councils Act—need not for the moment be debated. There are critics who aver that the failure of all three measures is really due to a spirit of carping suspicion and jealousy; but these critics need not receive the distinction of a rebuking and refuting argument. It is undeniable, however, that, though fourteen years have passed since the Act of 1892 came into force, only eight county councils have acquired land

under its provisions; that land is of so small an area as to mean that the Act has only brought into this special cultivation forty acres in each of the fourteen years of its existence, and has only placed on the land twenty small holders in each twelve months. It is undeniable, too, that many of these authorities have declared that it has not been found practicable to put the Act into operation. Well, the Government is, I know, being pressed to make the Act practicable, and to permit of no possible excuse on the part of any authority for neglect. This definite declaration on the part of so reliant an authority as Professor James Long has, I also know, been dragged into the duty of emphasising this appeal. "Last year," quoths the Professor, "432,000 acres of farm lands were bare-fallow—i.e., uncropped, and although the figures do not exist—as they ought to do—possibly we have five times this area in the hands of owners and tenants which is practically allowed to remain waste, abandoned to Nature, and growing delightful crops of thistles and docks, daisies and buttercups, knapweed and pimpernel, and other species of plants interesting to the botanist but heart-breaking to the sound agriculturist."

A Safeguard against Contumacy.

Of course, in any future Parliamentary discussion of this matter, we shall have a considerable importance associated with the question as to what authority should be vested with the power of carrying the new Act into operation. Should it be the county council, the district council, or the parish council? (You see, although I have said that the attacks made upon the county councils need not be discussed, I have been compelled to indirectly recur to the matter.) I perceive that one Radical newspaper-disputant has pronounced strongly against the county councils, because, forsooth—list to this, ye county councillors—"it fulfils the part of the House of Lords in rural districts." By this resounding sentence is meant that the county councils are opposed to the principle of small holdings. Well, if I remember aright—unfortunately I have not the measure by me as I write—Mr. Channing's Bill would provide entirely for the matter. Should any of the local administrative bodies fail in its duty, this measure would enable twenty ratepayers to, by formal petition, set the Board of Agriculture itself at work. I do not contend that this provision is necessary—this, indeed, would be an admission that these attacks on the county councils are justified; but, at all events, it would be a sufficient safeguard against contumacy. It would be an adequate protection against any possible class prejudice, against any possible malicious desire to thwart the appeasement of that land-hunger which, it is averred (is this the case?), is the most striking of our village life.

Proposal by Lord Carrington's Lieutenant.

As I write, my attention has been called to a proposal by Mr. R. Winfrey, M.P., in reference to the method to be pursued in extending our English system of small holdings. Mr. Winfrey—who is an authority on this matter, inasmuch as he is responsible in a great degree for the remarkable network of small holdings which exists in South Lincolnshire—may be said to be endowed with a double-dosed suspicion of the local bodies. He would apparently trust none of them—he evidently believes that all and each would be possessed by so dense a prejudice that they would gloat over every opportunity of thwarting the intention of the Legislature. He would, in his own phrase, "make Parliament itself the propelling force." Of course, Mr. Winfrey does not mean that Parliament itself should decide whether the request of half a dozen villagers for small holdings ought to be conceded. "A new public department must," says he, "be set up, or a new branch of the Board of Agriculture be created, and Commissioners appointed with knowledge, tact, and determination to see this great work (that is, the solution of the small holding and housing problems) accomplished during the next twenty years, Commissioners directly responsible to Parliament, and the nation must find the money and the credit to accomplish the work." It will be interesting, at all events, to see how far this suggestion coincides with the proposal of the Small Holdings Commission. Mr. Winfrey, however, did not speak without some authority behind him. He, as the private secretary of the Minister for Agriculture, would hardly have made so piquant a suggestion without having first secured the approval for it of Earl Carrington. Is his lordship, however, moved by the same apparently ineradicable distrust of the local authorities as is his standard-bearer? Does he believe that many farmers only go on to these local bodies with the express anxiety to frustrate the intention of Parliament?

PUBLICATION RECEIVED.

A small but interesting pamphlet, printed for private circulation, has come to hand from Messrs. J. MacLehose & Sons. It is entitled "The Adulteration of Butter," and the object of the writer, Mr. Allan Barns Graham, jun., is to prove to Sir Edward Strachey, Bart., and his Committee that public health demands (1) an end to the milk-blended butter trade, (2) the upholding of the 16 per cent. water limit, and (3) the total prohibition of boracic acid in butter.

Oil in Sheep Dips.—In a letter to Mr. F. D. Acland, the Board of Agriculture state "that the pouring of a small quantity of oil on the surface of a dip bath, previously made up and mixed in the proportions approved by the Board for sheep scab, is not a process which would be open to objection."

THE DAIRYMAN'S WEEK.

The Dairy Show—8157 Entries—Prize Money £2400 Butter and Milk Tests—The Milking Contests.

Never before has the interest in this annual event—one of London's established institutions—been so keen and widespread. No exhibition held in the Metropolis appeals more strongly alike to Londoners and to those whose homes lie among more peaceful scenes. To the latter, now so largely represented at Islington, the Dairy Show is an occasion looked forward to with eager anticipation, whether their speciality be cattle for the special purposes of the dairy, goats, poultry, cheese, cream, honey, butter and butter-making, milk and milking, or any of the multiplicity of interests that are this week exemplified at the Agricultural Hall.

Everyone connected with the great dairy industry is catered for, and herein lies one of the secrets of success, on which the Marquis of Winchester (this year's president) and his colleagues on the council of the British Dairy Farmers' Association are heartily to be congratulated.

Altogether 8,157 entries are catalogued in the 533 classes provided, the prize money amounting to over £2,400, besides a number of valuable cups. The competitions are so large, indeed, as to necessitate the employment of seventy-six judges to determine the merits of the rival exhibits and competitors. Then there are numerous stands, occupying a considerable area, with an immense assemblage of articles of a non-competitive character so far as prizes are concerned.

The primary interest centres, of course, in the cattle classes, wherein 240 head are accommodated, an advance of fifty-eight compared with last year. The chief dairy breeds are represented—Short-horns, Jerseys, Guernseys, Red Polls, Ayrshires, South Devons, Keries, Dexters, and other pure or crossed breeds—three distinct sets of prizes being provided for all of these.

One series will be awarded on the first day of the show by inspection—i.e., as the result of ex-

ternal appearance and consideration of the apparent milk-yielding powers and other points.

The second and more valuable set of prizes depend upon the facts ascertained by actual trial, extending over two days, of the quantity and quality of milk produced, certain allowances being made for the time that has elapsed since last calving.

The third and last series of premiums for cattle are in connection with what are known as "butter tests," the precise butter-yielding capacity of each animal being thereby determined. It is by such means, amongst others, that the Association is doing commendable work in carrying out its principal object, namely, encouraging the breeding and rearing of stock for the special purpose of the dairy.

In addition, a number of extra prizes are offered, so that it is possible for a single cow to win £10 by inspection, £15 by milking trial, £10 in the butter test, a 5-guinea champion cup offered by the Lord Mayor and Corporation of London, the Barham challenge cup value £50, and the Spencer challenge cup value 50 guineas, with a further £8 8s. if the owner of the animal happens to be a tenant farmer.

It might have been anticipated that the recent scarcity of milk and the high prices ruling for cheese would have caused a material diminution in the bulk of the latter article staged. Yet as regards the principal British varieties this is not so, a fact which may be attributed to the anxiety of farmers to carry off honours at Islington.

Altogether 255 lots, from a ton downwards, are pitched. A revival in the Lancashire cheese trade is responsible for the provision of a special class for that variety, and thanks to the co-operation of the Royal Lancashire Agricultural Society and the

Preston Cheese Show Association, it has attracted as many as eighteen entries.

The competition amongst makers of Cheddar cheese in the south-west of Scotland and in Somerset is as keen as ever, and the classes for Stilton, Wensleydale, and Cheshire cheese are also well filled. There is, however, a notable falling off in the exhibits of double Gloucester, single Gloucester, and Leicester cheese.

Samples of butter have been collected from the best dairies in the United Kingdom, as well as from several of our colonies, the latter including New South Wales, Victoria, and New Zealand. With these exceptions, all the produce in the show is of British and Irish origin. In order to test the keeping quality of the exhibits, many of them were required to be delivered four days before the show opened. Ireland contributes largely to this section.

There are several extremely ornamental designs in butter, and attractive displays of cream, honey, and of bread mixed with skim milk instead of water, the object of the latter being to encourage the utilisation of skimmed or separated milk in this direction. Notwithstanding the spell of dry weather, a great collection of mungolds, swedes, and other roots, &c., used in cattle feeding is on view.

In consequence of the number of entries for the various butter-making contests several of the classes have been sub-divided and additional prizes offered. These competitions will be in progress each morning, afternoon, and evening of the show (ending on Friday next), and involve 199 different "churnings," not counting those dairy-maids who, by virtue of winnings on the earlier days, will be entitled to enter for the Champion Contest and the coveted Lord Mayor's Cup, the latter being accompanied by a £5 money prize.

One of the most noteworthy features of this year's Dairy Show remains to be mentioned—viz., the wonderfully spirited contests among milkers, to the number of 121, of whom seventy-five are women, eight girls, twenty-eight men, and ten boys, all animated by the desire to show their skill in the humble but necessary art of milking the cow.

The fact that so many women are coming to

SHORTHORN HEIFER, PROUD DUCHESS,

Winner of First Prize at the Royal Show, Derby. Born February 13, 1903; sire, Beauty's Pride; dam, Rolleston Duchess; bred by and the property of Sir Oswald Mosley, Bart., Rolleston Hall, Burton-on-Trent.

London from Scotland, Wales, and twenty-five English counties as far apart as Northumberland and Cornwall in order to demonstrate proficiency in their calling as milkers is in itself remarkable. They compete for prizes (mainly contributed by Lord Northbourne) ranging from £15 downwards, and certificates will be given to each competitor who is, in the opinion of the judges, an expert milker. In awarding the prizes the judges are instructed to give points, according to a fixed scale, for the manner of approaching the animal and style of work, cleanliness, and clean stripping. The milkers' contests will take place on the afternoons of Tuesday, Wednesday and Thursday, at half-past seven on the mornings of Wednesday and Thursday, and at seven o'clock on Friday morning.

Other attractions include the band of the Irish Guards, demonstrations in trussing and preparing poultry for market, the making and baking of milk scones, and an infinite variety of exhibits connected with the dairy and the poultry industries. The dimensions of the show are, in point of fact, only limited by the present capacity of the Agricultural Hall.

The list of over 2,000 exhibitors comprises the names of the Duke and Duchess of Devonshire, Duchess of Abercorn, Duchess of Newcastle, Earl Cadogan, Earl of Mount Edgumbe, Earl of Plymouth, Earl of Radnor, Countess of Craven, Countess de la Warr, Countess of Leitrim, Marquis of Winchester, Lord Carew, Lord Middleton, Lord Rothschild, Lord Wenlock, Viscount Enfield, Lady Evelyn Cotterell, Lady Greenall, Lady de Rothschild, Lady Stanley, Lady Smyth, Lady Wantage, Baroness Burdett-Coutts, Sir Samuel Boulton, Sir Walter Corbett, Sir Charles Seely, Sir Mark J. Stewart, Right Hon. A. E. Fellowes, Admiral the Hon. T. S. Brand, Hon. Mrs. Murray Smith, Major-General Fitzhugh, Colonel Sandbach, Captain Lionel Gishorne, Captain H. M. Heathcote, Captain St. John Hornby, Captain Smith-Neill, Dr. H. Corner, Dr. Herbert Watney, &c.

Importing Butter from Siberia.

In view of the large quantity of butter consigned from the Siberian stations for export, the Minister of Ways and Communication has ordered the constitution of a special committee at Omsk for the distribution of refrigerated waggons amongst the most important exporting firms that send butter from those parts.

At Omsk a council is being called of the representatives of the butter trading firms and of the railways to give detailed instructions to the committee charged with the distribution. It is reported from Barnaul that the foreign exporters in the steppe district are very much alarmed at the difficulties in the way of exporting butter from Siberia, and the Altaisk Dairy Company has concluded a loan with the Siberian Railway of £500 for the purpose of building a cold store in Barnaul.

They fear, however, says *Le Cold Storage*, that when they have their cold store others will be built in other parts, and according to the statutes of the Altaisk Society it must accept butter to be stored from the town station of the Siberian Railway in the cold store at 25 per cent less than for other dairymen. An agitation is on foot for a cold store also at the Novo-Nikolievsk Station of the Siberian Railway.

OUR DAIRY BREEDS OF CATTLE— CHEESE MAKING—BUTTER MAKING— MILK SELLING—FEEDING.

By the time these lines appear in print the great annual show of the British Dairy Farmers' Association will be in evidence at the Agricultural Hall, London, when all interested in dairying will have the opportunity of seeing what the dairy pretensions of several of our breeds of cattle are, especially as regards their merits for milk and butter-producing. I say several of our breeds of cattle, which would, perhaps, be more correct if some were substituted for the several as the main breeds represented there are the Shorthorn and Jersey, the latter followed by the sister Channel Island breed from Guernsey. It gives considerable cause for regret that two or three other very important dual-purpose breeds are usually so scantily represented that a fair estimate of their capabilities cannot be obtained.

Dual-Purpose Cattle.

In the latter category the Ayrshire, South Devon, and Welsh, and perhaps the Kerry may be added as being amongst the number. Then, in addition to the cattle that produce the milk for manipulation into butter, and for consumption by the public in its pure state, there will be demonstrations of separating the cream from the new milk mechanically, also churning and making up the butter. Cheese-making, which is one becoming more extensively patronised, I believe, is not included in the dairy demonstrations at Islington; but the other processes of separating, churning, cooling milk, and butter-making, in addition to the cattle that are shown, cause the exhibition altogether to be one of the most instructive of the year to the dairy farmer, and more particularly to the amateur dairy farmer.

It is rather unfortunate, or at least it would be much more instructive to the public, if the cattle that are being tested for milk and butter production were all fed alike, or what would perhaps be still more instructive, if the kind of foods used and the quantities consumed by the various breeds and individuals were made public. Such an innovation would be of immense benefit to everyone interested, not only as regards increasing our knowledge of the cost of feeding each particular breed on the average, but as assisting very much in teaching which kinds of food and manner of feeding are proving most successful. However, so far this latter addition to the programme of the show has not as yet been introduced, so that visitors must be content with seeing and learning what is open to them.

Cheese Making.

Cheese-making in the earlier days of the last century—indeed, up to the middle of the century, and for some years after that—was one of the leading dairy industries of this country, and held sway as being also the most profitable until, roughly speaking, the seventies of last century came in, at which time the importation of American cheese became so extensive as to flood the markets of this country and reduce prices to a level that prohibited a profit being made upon its production except under very favourable circumstances. It is a very true old adage that when things get to the worst they usually begin to improve, and so it has been with cheese-making. The very dark days of this industry closed just in advance of the close of the century, and gradually became brighter until, at the present time, cheese-making has again become successful.

Numbers of farmers have during the past few years commenced cheese-making; some on account of the price having become remunerative, others on account of the very low price obtaining for butter; and yet others on account of the worry and expense of sending new milk away by train every day of the year, and for about half the year only, obtaining what may truthfully be termed a starvation price. Some few farmers who were cheese makers in their younger days, stuck to the bridge that had carried them safely over the trying seasons with which we were visited between 1879 and 1900, and these farmers to-day are probably in a better position than most of their brethren. At the present time this industry has a great deal to recommend it, and those dairymen who are pursuing it are making as good or better profits than any other farmers.

For cheese-making purposes the Shorthorn and the Ayrshire breeds are most used and considered the most profitable, though in the palmy days of the old Longhorn that breed was found to be capable of producing a greater weight of cheese per acre than the Shorthorn, and the product was always of a superior quality. Amongst the reasons that commend cheese-making to the notice of dairy farmers at the present time are—first, the greater ease with which its manufacture can be carried out, owing to improvements in cheese-making materials or the apparatus that econo-

mises labour to an almost incredible extent. Then there is also the very important economies of labour and other expense in not having to provide horses and carts as well as utensils to convey the milk to the station, and also the cost of carriage of that article are saved.

Further, another very welcome and important economical matter comes in in the fact that during the three dead months of winter little or no cheese is made; the cows and their owners and assistants are resting, and the pocket that has to be so heavily taxed for the production of milk and butter at that season is also at rest, the products of the farm being sufficient to carry the dairy through their holiday season. Once more a better price is obtained for cheese than for many years past, and another great, very great, addition to the profitable side of the balance-sheet is the great number of pigs that can be kept upon a cheese-making farm, and latterly, indeed for a long time past, pigs have, as the old saying has it, literally been sold, and with the severe sanitary restrictions now prevailing as to the keeping of pigs, the high prices are likely to continue for a long time to come.

Butter Making.

We will next take a glance at the butter-making industry. This industry has suffered to an almost incredible extent by the immense importations of butter from practically every quarter of the globe. Europe generally, Arabia, Canada, our colonies of Australia and New Zealand, and latterly the Argentine, are all flooding our markets, and several of these countries some people will tell us, are supplying us with a superior article to the home-made product. This latter statement I, for one, however, do not in the least support. Where English or British butter is made from the right breeds of cattle, properly fed and cared for, and their milk properly manipulated, with a strict observance of cleanliness, there is none of the imported article that is fit to bring into comparison.

It has been pretty well proved, both privately and in public, that the Channel Island breeds of cattle are the most profitable in butter production, these yielding both quantity and quality superior to any other breed. The drawback to the more extended employment of these breeds of cattle, however, lies in their utter orthlessness for any other purpose, which consequently leaves a heavy bill for wear and tear of the animals themselves. A very good way of making the best of things in this respect has been adopted by some farmers, which lies in the mixing of about 20 per cent. of Channel Island cattle with the dairies of Shorthorns, Ayrshires, and other breeds giving milk of a less rich description.

Butter-making has also one or two valuable side products in the way of the separated milk which makes a good bulk food either for the rearing of calves or for pig keeping. The best foods for butter production have been proved on the whole to be during the summer grass, and if anything else is sowed the addition of a little linseed or decorticated cottonseed cake.

In winter the best sweet hay *ad lib.*, a good feed of pulped carrots or parsnips, which adds to the colours as well as the quantity of the butter produced, linseed cake or a little decorticated cottonseed cake and maize meal whichever is found most convenient and economical, and with any or all of these feeds a pound of molasses per day dissolved in boiling water and poured over them, completes an admirable bill of fare, suiting the animals as well as their produce. Where due care is exercised as stated above, in the feeding and care of the cattle and their milk and cream as well as in the breeds of cattle used, there is still a reasonable profit obtainable from butter-making. The British public, too, are becoming better educated now in the matter of taste, and are becoming more keen everyday in their demand for pure butter, as against butterine and other substitutes that have so long been usurping the place of the pure article.

Milk Selling.

The last dairy industry to be alluded to is that of milk-selling, a business that has of late years assumed most extensive dimensions throughout Great Britain. The increase of population on the one hand, with also a greater use of milk as a food, coupled with the difficulty of importing the pure new article, are each items in favour of a continued and further increasing demand for milk. The prohibition of town dairies, too, in so many places has thrown the general milk supply of the country almost entirely upon the hands of farmers.

This branch of the dairy industry has proved very successful in the hands of some farmers, whilst with others it has been equally as unsuccess-

DAIRY TOPICS.

ful. It is a business that demands a keen business man at its head, requires continual watchfulness, keen judgment as to the selection of the animals, such judgment to be begotten of great and long experience both in the selection of the animals, as stated above, and also in their management and the superintendence of the labour required in milking, as well as cooling the milk properly, and being punctual in its delivery to the railway station.

When all this is done to the best of a clever man's ability, there still remains as a set-off the intense worry in keeping up contracts, the difficulties of keeping the milk safe from adulteration in other hands, and also the fact that, so far as the farm is concerned, there are no by-products to add to the total bulk when all the milk is sent away.

The best breeds of cattle for the milk seller have proved themselves to be upon good land the Shorthorn, upon medium land the Ayrshire, whilst where a higher price can be obtained on account of its richness, the Channel Island breeds also do well, and one or two others, as the South Devon, Welsh, and Kerry, and, where they can be obtained, Dutch cattle also.

The best foods for the milk seller to use for his cattle have been found to be grass during summer, supplemented when necessary by green food, such as vetches, rye, lucerne, or other green food; in autumn, thousand-headed kale and cattle cabbage, and during the winter season, hay and straw chopped, with a liberal ration of pulped mangels or turnips, and also brewers' grains where they can be obtained. To these bulky foods, concentrated articles such as linseed cake in moderate quantity, decorticated cottonseed cake, or any home-grown corn ground into meal. Molasses are also a great aid, and assist in giving richness and colour to the milk, counteracting in a measure the poorness that usually accompanies a too liberal diet of mangels.

Preservatives in Milk.

The Local Government Board for Scotland has issued a circular directing the attention of the local authorities to the subject of the addition of preservatives to milk, in which they suggest that the local authorities should cause samples of milk to be taken with a view to ascertaining the presence of substances commonly in use as preservatives—for example, formalin and boron preservatives.

Vendors of milk, it is pointed out, may attempt to evade a prosecution by making a declaration that the milk contains some added preservative, and the Board would suggest the desirability of sampling in such cases.

Where preservatives are reported in milk thus sold, the question will arise whether, in view of the nature and quantity of the preservatives added, it can be considered that the article has been rendered injurious to health, or that the purchaser has been prejudiced to an extent which would justify the institution of proceedings under Section 3 or Section 6 of the Sale of Food and Drugs Act, 1875, notwithstanding the declaration made at the time of the purchase.

In this connection the board are advised that, as regards formalin and boron preservatives, the presence in milk of formalin to an amount that is ascertained by examination within three days of collecting the sample to exceed one part in 40,000 (one part of formic aldehyde in 100,000) raises a strong presumption that the article has been rendered injurious to health, and that the purchaser has been prejudiced in the above sense.

Similar presumption is raised when boron preservatives are present in milk to an amount exceeding fifty-seven parts of boric acid per 100,000, or forty grains of boric acid per gallon. In concluding, the circular states that it appears desirable that the addition of preservatives to skimmed milk, separated milk, and condensed milk should be watched and controlled on similar lines.

Cheese Prizes at the Bath and West Show.

At a recent meeting of the Dairy Committee of the above-named society the prize list for the Newport (Mon.) Meeting, to be held on June 5, 6, 7, 8, and 10 next was considered, and it was resolved to recommend to the society's council that separate classes be included for three Cheddar cheeses not less than 56 lb. each, made in 1906; three Cheddar cheeses not over 36 lb. each, made in 1906; three Cheddar cheeses not less than 36 lb. each, made in 1906 by a student who has received instruction in any County Council Cheese School or in the Western Counties Cheese School; three single Gloucester or Wiltshire cheeses, made in 1907; eight loaf or other truckle cheeses, made in 1906; three Caerphilly cheeses made in 1907; and three cream or other soft cheeses.

The summer that is past, whilst it was highly favourable for corn, was not so beneficial for dairying, for it gave us a rather severe spell of drought which, while it lasted, burnt up pastures to such an extent as to very greatly affect the milk supply, and the result has been higher prices for this most necessary commodity in many parts of the country. In fact, the situation is still one that is receiving earnest attention, and, seeing that there has been little, if any, improvement of late in feeding prospects, farmers are agitating for higher prices. As one of our Dorset correspondents remarks, pastures are particularly barren and bare, and the prospects for autumn and winter feeding are disheartening. Hay and chaff will shortly be required, and this means a long, expensive winter.

To come nearer home, we may quote a Central Bucks farmer, who informs us that milk is dried up, cake is very dear, and dairymen's prospects are bad. Other quotations might be given, but they would be on similar lines to those above, so that townspeople, who of late have been paying a little more for their milk and are looking forward to a reduction, will be disappointed.

So serious has been the situation, with the scorching sun to contend with almost daily, that

The drought has not only been felt in England, but also in practically every country from which our butter comes, and as a result higher prices are predicted for yet another of the chief commodities of the Englishman's table.

One of the greatest changes of the past thirty-one years consists in the vast swellings up in butter and cheese making have experienced owing to the dominating, all-pervading requirements of the direct-supply milk-trade. This is a revolutionary change which has taken place apart from dairy show influences.

Still those farmers who send the whole of their milk away by rail, can find in comprehensive articles exhibited the improved utensils necessary to their calling, and especially the refrigerators, which should always be used to abstract the animal heat when, after being drawn from the udder, the milk has immediately to be sent off. If this were generally done and scrupulous cleanliness observed in preventing dirt either from the hands of the milkers or from the udders of the cows from affecting the lactical fluid, it would keep much better and be brought into consumption in a perfectly healthy state.

GUERNSEY COW, EXPRESS.

Winner of First Prize at the Bath and West Society's Show this year. Born March 23, 1895. sire Rydale 4th, dam Lively of the Foullett; bred by Mr. W. Robin, St. Peter's Port, Guernsey; the property of Mr. E. A. Hambro, Hayes Place, Kent.

it will take weeks to rectify the mischief even now, and, as the season is so far advanced, the outlook for autumn keep is none too encouraging, in spite of the splendid rain, for not only is there little if any grass, but the roots have been at a complete standstill, and in some cases completely withered away for want of moisture, many of the roots being now little bigger than they were at the end of June or beginning of July, scarcely any perceptible growth having been made in the interval.

The inquiry for milch beasts continues good for the best, but this is forced on buyers simply to enable them to keep up their milk supplies, which they are only able to do by augmenting their dairies, and even then they find a difficulty in doing so, owing to the greatly diminished supplies dairies are yielding. In these cases the dairy farmer, as well as well as the town milk purveyor, have to pay up to £22 apiece for good animals specially adapted to meet the pressing needs of the dairyman, ranging down to £16 or £17 for useful milchers of a more ordinary stamp. Distinctly plain cows, though in some demand, do not market at all well, it being the best, and best only, that are in request. Some are back as low as £10 or £12 apiece, but these sell very indifferently.

The scarcity of milk has naturally affected the manufacture of butter and cheese, and this year quality rather than quantity has been the rule.

Cheshire Farmers and the Price of Milk.

Cheshire dairy farmers, of whom there are roundly 2,000 in number, consign their milk to the large towns under contract, which is made twice a year, for a winter and summer supply. The summer contracts are now running out, and in view of the contracts for winter and the altered conditions of trade, Mr. James Sadler, secretary to the Cheshire Milk Producers' Association, has addressed the following official circular to his members, which include practically all the large dairy farmers in the county:—

It has been thought desirable to remind members that milk for sale is likely to be both scarce and dear in the coming winter. The principal causes of this scarcity may be summed up as follows:—(1) Hot dry weather in August and September; (2) high price of Cheshire cheese; (3) larger consumption of milk. Nearly the whole of the Midland and Southern counties are burnt up, and there is very poor prospect of winter keep. Result—London and Birmingham buyers will have to come north for their supplies of winter milk. During the last month panic prices have been paid, varying from 10d. to 2s. per imperial gallon; milk is being delivered now at 1s. per gallon. The payment of these high figures has temporarily filled the market, but the scarcity is not past—the conditions remain—for while the heat is gone, its abiding effect is manifest. Retailers have in many cases put up their prices. No milk should be sold this coming winter at less than 10d. per gallon.

CORRESPONDENCE.

The Highways Question.

SIR,—The society which "Roadster" refers to in his timely letter ought to exist, if it does not. Is he perhaps thinking of the Roads Improvement Association, which aims at securing wider and better highways and enjoys the support of such bodies as the Automobile Club and C.T.C.? Locally we have a county league for the protection of the public against fast motor driving and its inevitable concomitants in the way of blinding dust and the like, and other counties which have not done so already might do worse than follow our example, for no amount of public opinion can be effective unless organised and focussed to a point. Now certainly is the time for getting to work, since presently we shall have a new Motors Bill, and before it comes to be drafted the views of country people ought to be very plainly and definitely made known.

Sooner or later we shall probably see a great deal of highway improvement and re-organisation. In recent years road traffic has grown enormously in volume, and probably doubled in average speed, so that the roads which barely sufficed for our ancestors in the stage-coach and post-chaise days are no longer anything like adequate to our needs. But it is necessary to guard ourselves if we are to avoid an altogether unjust share of the cost of these inevitable improvements being placed upon our shoulders. A system under which the rich county boroughs are cut off from the county and actually barred from contributing towards the cost of county roads—of which their citizens are often the chief users—is plainly an absurdity. The doctrine of national roads laid down by the Royal Commission on Local Taxation was accepted also by the Departmental Committee on Highways appointed a year or two ago by the Local Government Board; and it is that ideal which agriculturists and country people generally should strive to realise.

In the meantime, there is the pressing question of dust to reckon with. May we not hope to see the Chambers of Agriculture bestirring themselves this way during the winter?—Yours faithfully,
September 29, 1906. WARWICK.

Insect and Fungoid Pests.

SIR,—In his reference to the brown-rot fungus in apples, which no doubt is spreading, your correspondent, "Sevenside," observes that it is little permanent use for one grower to wash his trees and burn affected fruit while his neighbours' orchards on either side remain uncared for to spread the infection. It is too true, and the remark may be applied to every other pest that affects fruit trees. The amount of general carelessness which exists over this kind of thing is simply deplorable, and if co-operation is needed in anything it is in the fighting of common insect foes.

Go where you will in the West of England this season and you hear complaints about the bushels and bushels of grub-eaten apples that have fallen prematurely ripe to the ground. In fact, I never remember a season when the codlin moth caterpillar has done more damage, and what concerted action is taken to stop it? Practically none. Now and then one sees a grower who has planted a young orchard endeavouring by means of washing and spraying to keep his trees clean; but what chance has he when over the fence there is an older orchard that is a perfect nursery of American blight and every other pest that apple life is heir to? As a matter of fact, those who would make an attempt to keep down these common pests are discouraged from doing so by those who are careless and unconcerned.

A few far-seeing people realise what the effects of the pear midge will one day be in the orchards of Herefordshire, but their voices are like that of one crying in the wilderness so far as any concerted action is concerned. When we read of the amount of money that is annually spent in America on the spraying and washing of fruit trees to destroy insect pests, the sum seems enormous, but the outlay is essential and justified, and the result of it is those enormous cargoes of fine fruit that come into this country and drive the scrubby home-grown apples out of the market.

It is pleasant to be able to point to an instance in which the effects of co-operation in this matter are plainly to be seen even in England. In that well-known fruit-growing district in the Evesham Valley, growers naturally suffer through the ravages of various insect pests, notably the caterpillar of the winter months. In travelling through the Evesham district in winter one hardly sees a fruit tree without a grease band round it, and by this simple remedy millions of insects are caught every season. It is true that some of the growers injure their trees by putting the grease on the bark instead of on proper paper bands, but, with here and there an exception, everyone realises the importance of grease-banding, and one shudders to think what would be the

result if this method of combined action were stopped.

Some people scoff at the idea of grease-bands, but the Evesham fruit grower is as wide awake as most people, and you may depend upon it that he would not spend money on the work if there was nothing in it. It would be a good plan if similar combined efforts were tried in other districts. WEST COUNTRYMAN.

September 29, 1906.

Foreign and Colonial Competition.

SIR,—It seems to me your Aberdeenshire correspondent "J. B." shows that he does not keep himself well informed when he declares farmers do not defend their rights or let their demands be made known and expressed in sufficiently loud terms, otherwise "J. B." would have known that a powerful association, which has the support of arable farmers, the Aberdeen County Council, and the representatives of many millions of British consumers, has been working and agitating for years, and last session of Parliament supported a Bill for the repeal of legislation that more than any other crushes agriculture by making cattle fattening unprofitable.

It is our legislators, and not the farmers, who are to blame, for the Premier and half the Cabinet, and in fact the whole of the Liberal Party, if we judge from their action in 1896, are pledged to the repeal of the embargo upon the importation of Canadian store cattle, which, if given effect to, would bring the price of home-bred stores down to the same price as the imported Canadian stores, which would allow the fattening of cattle to leave a fair return, and by providing a profitable market for roots and forage for the holdings, give arable farming a new lease of life.

But instead of this our legislators have introduced a Land Tenure Bill for England that under the specious name of freedom of cropping legalises bad farming, and in Scotland a Small Holdings Act that will prevent any landlord creating small holdings, as it makes the tenants of all small holdings eligible under the Bill dual proprietors, while the former landlords are made only rent receivers. The Act will also dislocate the present system of land tenure in Scotland, as the Act gives the Commissioners power, against which there is to be no appeal, to break tenants' leases with their landlords by taking their best land for the creation of small holdings. The Bill also provides large sums for the payment of the Commissioners, who are to be empowered to put in force the old law of hypothec, whereby in the event of the failure of one of their landlords, they will have a prior claim on his estate before landlord or other creditors.

"J. B." may rest assured the British people will never allow any restrictions to be placed upon the importation of dead meat and fat cattle that are calculated to decrease the quality and number. All that farmers can expect, and have a right to get, is free raw material to compete with the foreign and colonial importations of the finished article. But instead of this, both the English and Scotch Bills referred to propose to establish dual ownership and small holdings, a system that is opposed to economic law, and has proved a dismal failure in Ireland.—I am, &c., P. L. G.

Edinburgh, September 27, 1906.

Forestry and Municipal Trading in Zurich.

SIR,—Referring to my letter in your issue of September 3, will you allow me to state that I have been induced to follow up this subject in consequence of a note recently addressed to me by a member of the London "Central Unemployed Body" (Mr. John Davidson), from whose communication I infer that there is a likelihood of the Woods and Forests Department being approached on the question of the possible utilisation of forestry for the employment of rural labour. In order to obtain some expert views I recently sent to Mr. Ralph Pearson, Deputy Commissioner of Forests in India (son of the well-known authority on this subject, Colonel Pearson), some extracts from *Stadtforstmeister*, Herr U. Meister, the Zürich Chief Ranger's recent work on the communal forests there. It is a matter of common knowledge that Zürich is a model town for this as for other municipal enterprises.

The extraordinary long period during which the Zürich municipal woodlands have been subjected to a forestry system, worked methodically and carried on with some *esprit de suite*, says this Zürich expert, "imparts to their history in the circumstances an importance which—far surpassing the bounds of mere local interest—is of a nature to supply most valuable contributions to the history of forestry in general."

In addition to the ordinary sylvicultural operations, the Zürich Municipal Forest Administration has also introduced, as regards the principal part of their woodlands, the system of selling the wood

after previously working it up and converting it into a form ready for use. "Hence," the writer proceeds, "they are carrying on to-day a saw-mill for preparing timber for building purposes; sawed wood (planks, boards, &c.) and finished wood for general uses; and, side by side therewith, a plant for the impregnation of wood (i.e., creosoting it) on the Boucherie system, in order to improve suitable qualities of wood by impregnation for structural purposes; a mechanical wood-turning plant for transforming the existing large stock of wood from broad-leaved trees—especially ash wood—into tool-handles, in which form it will be found to have a readier sale; further, the manufacture of wood pulp; and lastly, a mechanical wood splitting plant for cutting up the billets (or small logs) into firewood, which, in a legally prescribed regulation form called *Reif-Wellen*, finds a direct sale to customers in Zürich and its neighbourhood, and is delivered direct to their house or yard."

This system of "intensive" highly developed utilisation and the working-up of the raw material naturally necessitates a larger staff and a more complicated organisation than is the case in ordinary forestry.

Of course it must be fully recognised that not only public opinion, but the different conditions prevailing in this country would prevent the ready adoption of such an elaborate system of municipal trading here; and it must also be admitted that at Zürich the question of usufructuary, exercised conjointly with proprietary rights, which presents apparently insurmountable difficulties both in the New Forest and, as regards mining privileges, in the Forest of Dean also, has been settled long ago. But in the Alice Holt Forest none of those obstacles exist, and on this area and similar Crown lands I venture to think some practical steps might be taken. There is no doubt that we are centuries behind the Continent in this matter.

In an extremely interesting comment on some translations of mine from Herr Ulrich Meister's work, which sent me Mr. Ralph Pearson, he admirably sums up the duty of the State on this subject in the following sentences:—

"The slow progress that forestry makes in the United Kingdom is not so much due to the fact that waste lands are not available, but to the fact that the public has no example to follow, as is the case of Zürich and many other Continental places. In other words, the English public is not educated to forestry. To educate the nation to forestry must be a slow business. As has been experienced in India, it can be helped by teaching to a certain extent; but no real progress will be made until real 'live,' well-managed woods are there to teach and accustom the public to forests (in their proper sense). The duty to form such woods is clearly the duty of the State."

In this last sentence Mr. Pearson trenchantly points the way! This is the practical step which should engage the attention of all those who are interested in the question of scientific forestry, and are at the same time hoping to find in this direction a contribution—even though it be in a humble way—towards the pressing problem of "Back to the land"—Yours faithfully,

CHARLES HANCOCK, B.L.
(of Scottish Arboricultural Society).

Reform Club, S.W.,

September 28, 1906.

P.S.—By way of enforcing and emphasising one of the points touched on above, allow me to cite from a work that has reached me since yesterday—one by M. Ch. Broilliard, perhaps one of the most highly-respected and able authorities in France. Speaking at p. 627 of "*Le Traitement des Bois en France*" on "Usufructuary Drawbacks" (*Dangers de l'Usufruit*), he says epigrammatically:—"Si l'indivision tend à conserver les forêts, l'usufruit en amène la dégradation." This I would freely render as follows:—"If joint ownership (i.e., Crown and commoners, or Crown and miners, as the case may be) be a good thing, as it largely is, for preservation purposes (from century to century), an overdose of the usufructuary concomitant is apt to bring about in a forest degradation and abuse!" C. H.

Feeding Milking Cows.

SIR,—I should very much like to know what feed for cows in milk would be most profitable—grains are dear. I have plenty of good oat straw, hay, and roots. I should be pleased to have an idea of what proportions of any mixture would make good rations and produce a good flow of milk.—ANON.

* * In the first place it may be well to point out that there are almost as many methods of feeding dairy cows as there are days in the year, and different dairy farmers have their own ideas as to which are the best rations for the production of a steady flow of milk. It is difficult, and indeed undesirable, to lay down hard-and-fast rules, because much depends on local conditions, and the diet of cows should never be monotonous. Changes of food during the winter are advantageous, but they should be effected gradually.

Many farmers look upon grains as essential, and the fact that there has lately been a run on this material owing to the shortage of grass is responsible for the high price. You can, however, form a good ration with the material you have at hand, and I give the proportions of a daily mixture as an example, but it is, of course, open to variation or change:—42 lb. of swedes, 19 lb. of hay, 14 lb. oat straw, and 4 lb. crushed oats. If milk is short you would probably find about 3 lb. decorticated cotton-cake increase the yield, and by way of a change you could give 3 lb. of malt combs per day and 3 or 4 lb. of chat potatoes, if you have them, instead of so many swedes or mangel. Malt combs make a useful change, as they give flavour to the food and act as an appetiser, making the cows more anxious to feed and increasing the yield of milk. I think the above will give you a good general idea as to the mode of feeding with the material you have at hand or can obtain; but if you would like to go into the matter more thoroughly for yourself, you would get a good deal of useful information on the subject by getting Leaflet No. 79, on rations for farm stock, published free by the Board of Agriculture. RUSTERS.

Samples of Feeding Stuffs.

SIR,—Will you kindly inform me whether the enclosed sample is genuine "Maize (Gluten Meal)," also, what percentage of albuminoids, carbohydrates, and fat it contains. I have had no experience of its feeding value, and I am anxious to know whether it is worth the money charged for it, and in what proportion I can use it so as to get a properly balanced food; hence my desire for the percentage of albuminoids, &c.—Yours truly, WATCHFUL.

[The sample sent seems to be genuine quality. The analysis of maize gluten meal is approximately:—

Oil	8½ per cent.
Albuminoids	23½ "
Carbohydrates	53 "

and the present price, according to the quotations for "Feeding Stuffs" in this Journal (see market supplement), is £5 10s. per ton, so that the cost of the feeding unit is about 10d., which shows that it is a cheap material.

Our correspondent does not say for what purpose he intends to use it, but if for milking cows he might try, as a beginning, mixing 2 to 4 lb. per ratio with the ordinary food, and increase the proportion gradually, if it yields good results.]

SIR,—Having read in your Journal that you will analyse feeding stuffs for farmers, I have sent under separate cover a sample of barley-meal. Would you be kind enough to let me know what it really is, as I bought it for barley-meal?—Yours truly, J. A.

[The sample appears to represent a fairly good barley-meal, but it would require a detailed analysis to ascertain if it is absolutely pure. We must point out to our correspondent that we only undertake to analyse samples for our regular subscribers in cases where there is good reason to suspect an attempt to defraud, which we do not gather to be the case in the present instance.]

Education and Manure.

SIR,—The sketch in the MARK LANE EXPRESS last week by Mr. Harry Furniss is remarkably well executed, and very superior to some cartoons, which prompt the idea that the artist must have selected his material for the work from a Berlin wool shop.

But with all due deference to the clever draught-man, the British farmer will not compete with his German or other foreign rival by a less amount of education.

At the general election in January last a great deal of nonsense was talked and silly pictures displayed as to the big loaf and the little loaf. The reason of the cheap price of bread is that steam communication brings to the sea coast abroad as much grain in a few hours as in the so-called "dark days" mules could carry on their backs or oxen drag in a lumbering wagon in many months.

We should all be pleased to see agriculture prosper, more manure may be requisite, so by all means apply it, and philosophy for the desideratum.—Yours truly, FIELDER.

October 5, 1906.

A Correction.

SIR,—In your last issue two mistakes in words (probably from misreading my writing, which I know is very bad) occur in my letter under the heading of Tring Butter Tests and Milking Trials.

1. Non-chromability should read non-churnability.

2. Average is not, I think, my mistake.—Yours faithfully, ERNEST MATTHEWS.

Little Shardeloes, Amersham,

October 4, 1906.

Damage by Hailstorms.

SIR,—May I appeal to you to open a subscription list on behalf of those who have so terribly suffered from the recent hailstorm in the devastation of their crops, which came so suddenly upon us at a time when everything looked prosperous and just ready to harvest. The damage done by this hailstorm in Huntingdonshire alone has been under-estimated by valuation to be £15,000. On medium-sized farms the loss is from £300 to £800; to small holders in many cases it has destroyed practically their all, and they have nothing after the present harvesting wages and rent is paid on which to live on and farm the land for the next year.

The fund has been generously responded to locally, and something like £1,500 has been contributed, but being a small county, and practically dependent upon agriculture—which, as you are aware, has not been for several years past in a flourishing condition—we are not in a position to help ourselves to be of much benefit in the calamity which has fallen upon us. I should be trespassing too much upon your valuable space to enlarge upon the loss of the various crops on which we are dependent by going into details, but I should like to say that from threshing of what was, previous to the hailstorm, a crop of wheat of five quarters to the acre, and the same of barley and larger yield of oats, one quarter to the acre has been the result, and other crops have been equally damaged in comparison.

Being a heavy sufferer myself, I speak from facts in appealing to you and your numerous

SHOW SECRETARIES.

MR. T. H. VAUGHAN MORRIS,
Kington Horse Show.

readers' sympathy. It is an axiom amongst agriculturists of their generous and patriotic nature to help those who, through no fault of their own, have experienced heavy loss, and I feel it needs no words of mine to dilate upon the subject to help them to realise the conditions in which we are unfortunately placed.

Being one of your old subscribers, a member of the Hunts Chamber of Agriculture, and a collector for the Hailstorm Relief Fund for relief of farmers and allotment holders, contributions will be thankfully received and officially acknowledged by me, or through our hon. secretary, Mr. Gerald Hunnybun, Huntingdon, or either of the banks in the county, and I trust my appeal will not be in vain towards such a worthy object.—Yours, &c., B. TOMPKINS.

Woolley Manor, Huntingdon.

Whitchurch Cheese Fair.

At Whitchurch Cheese Fair on Wednesday there was a pitch of 52 tons of good quality, and with an urgent inquiry every lot was sold. The following were the prices:—Best, 70s. to 75s. per cwt.; medium, 65s. to 69s. Nothing was lower than 60s. At the corresponding fair last year prices ranged from 63s. down to 50s. per cwt.

SHOW GOSSIP.

At a meeting of the Lincoln City Council in committee on the 28th ult. it was unanimously decided to invite the King to visit the show of the Royal Agricultural Society at Lincoln next year, and to ask His Majesty to open the new Grammar School in Wragby Road during his stay in the city.

The winter show of the Royal Dublin Society is to be held on Wednesday and Thursday, December 12 and 13, and, as in the case of their other shows, the society has arranged a liberal prize schedule. This provides eight classes for infed cattle, four for artificially or outfed, one for infed, artificially sheltered or outfed cow of any age, and four classes for Kerry, Dexter, and small cattle infed, outfed, or artificially sheltered. In each of the classes mentioned the prizes will be—first £5, second £3, and third £1. There are seven classes for sheep with prizes of £2, £1 and 10s., and sections for dairy produce, honey, and farm produce grown in Ireland, whilst there are also special county prizes for malting barley ranging in value up to £20. Entries close Thursday, November 1, at single fee, and the following Saturday at double fees.

The Council of the Tunbridge Wells and South Eastern Counties Agricultural Society have decided to hold next year's show on July 25 and 26.

The Lincolnshire Red Shorthorn Association have resolved to award £213 in prizes for Red Shorthorn cattle at the Royal Agricultural Society's Show at Lincoln next year, and as the Royal Society offer £78 the total for Lincolnshire Red Shorthorns will be the respectable one of £291. There will be twelve classes, and in each the awards will be first prize £10, second £6, third £4, whilst in all except the class for bulls calved in 1903 there will be a fourth prize of £3. In addition there will be a champion prize of £10 for the best bull and a similar prize for the best cow or heifer.

The Lincoln Longwool Sheep Breeders' Association have also issued a printed form showing definitely the prizes it will offer at the Royal Show for Lincoln Longwool sheep, and from these we see that the total is £122, whilst the Royal Agricultural Society will contribute £72, making the total prizes £194. Prizes will be given for the best two-shear rams, shearing rams, pens of five shearing rams, pens of three ram lambs, pens of three shearing ewes, pens of three ewe lambs, pens of three yearling ewes shown in their wool. In addition, prizes consisting of pieces of plate, value £15 and £10 respectively, will be awarded for a group made up of one exhibit from not less than four classes of Lincoln Longwool sheep exhibited in the above classes. The show being held in the home of Lincolnshire Red Shorthorns and Longwool sheep, there should be an extraordinary good display of both.

The Royal Veterinary College, Edinburgh.

The opening ceremony of the eighty-fourth session of the Royal (Dick) Veterinary College Edinburgh, took place yesterday afternoon. Sir, William Turner, Principal of the University, presided, and sketched the career of the college down to the recent change in its constitution. The Town Council, he said, was now no longer the administrative body. The funds of the college had been transferred to a representative board. The Town Council elected certain members, keeping up the old historical association. The affairs of the college would now be conducted by men who represented the town and the University. This board had a wide and comprehensive basis, and he trusted that in its management the veterinary education in Scotland would greatly thrive, and that the college would retain its place as a veterinary college of high standing.

Mr. John Malcolm, F.R.C.V.S., Birmingham, delivered the opening address of the session. He pleaded for the college obtaining from the State some assistance similar to that given to London and Dublin. As to the prospects of the profession, the idea prevailed in many quarters that the profession had seen its best days, but he pointed out that public appointments, civil and military, showed no signs of decrease, while notwithstanding all they heard the motor had not yet displaced very many horses, whatever it might do in the future. The Board of Agriculture's statistics for 1905 showed the number of agricultural horses in these islands to be greater than at any former time (applause)—and although the partial return for 1906 showed a slight reduction, it excelled any other former return except perhaps that of 1895. It seemed to him that there was not only no justification for depression, but good grounds for regarding the outlook as encouraging.

Midland Notes.

RAIN to-day follows upon thirty-six hours of it—almost continuous and sometimes heavy—on Monday and Tuesday. Now at last enough has fallen to soften the caked and baked heavy lands destined for wheat and other winter crops; but there will be little chance of getting the advantage of a stale furrow this season, for the work will be pushed through as rapidly as possible now that a start can be made with it.

THERE has been not a little difficulty this autumn in cultivating stubbles, but, fortunately, weeds are less plentiful than usual on ordinarily well-cultivated holdings, for even they dried up and withered during the prolonged hot drought. The deep-rooted and hardy couch grass is still a trouble and an eyesore however; it seems as though nothing could kill that. But war has been systematically waged upon the enemy lately either with the tine harrow or by the hand-picking process, which some experienced farmers still speak of, and the aerial and pungent smoke that drifts across the fields bears witness to the work accomplished.

THESE are busy days in the agricultural world, for sales are many, and so are fairs, though one does not hear of any great number of changes in farm tenancies. But, then, in the Midlands we have more Lady Day and Candlemas tenancies. No other date would suit the pastoral holdings in Warwick, Leicester, and Stafford so well, and even arable Nottingham follows the same custom. The Michaelmas tenancies are increasing however. In Worcester and Oxford the autumn quarter has always been usual, and in Warwick, Northampton, and Salop it is a more common time for making a change than it used to be; which makes it the more satisfactory to hear of comparatively few removals.

SO far as hiring is concerned most of our Midland fairs are to all intents and purposes things of the past. Fair or "mop" or "statty" day is still a general holiday, and in these days of cheap railway excursions visitors come to fixtures like those at Birmingham, Burton, Gloucester, and Stratford-on-Avon from far afield; but few are the lads one sees with whipcord or wool in hat or button-hole proclaiming them carters or shepherds in search of new employment. The skilled man of to-day has seldom need to offer himself in open market, and the younger generation seem to think it beneath their dignity to do so.

NEVERTHELESS, the carter, shepherd, or dairyman seeking a new berth, or anxious to re-engage himself to an old master, generally does so at this time of year; and lately one has seen some quaint cartloads of cottage furniture on country roads. Moving is a quick business with the average farm hand, as, indeed, it must be where cottages are so few as they are in most of our villages. Nowadays there is no opportunity for houses to stand vacant long, and in point of fact one usually finds the old tenant moving out and the new one moving in the same day.

PERHAPS with the passing of Michaelmas and Old Michaelmas we may see the markets far corn recovering a little. The coming of Old Michaelmas accounts year by year for much unfortunate haste to rush new wheat off to the market regardless of the state of trade. When many financial obligations fall due at once there is no option for the farmer who sinks all his capital in his business and does not keep a large balance at the bank. Evidently he must sell something, and usually the new corn is the most readily available thing to dispose of.

JUST one expense will be lighter than usual this year. "Michaelmas pig night," when all the extra wages that have accumulated during harvest are paid off is still a great day, but this year the harvest was everywhere so quickly gathered in that the bonuses to men engaged by the day or week will not be large. On the other hand, the regular hands who are paid a fixed bonus for the harvest work, and the migratory hands who contract sometimes to clear a given acreage for a lump sum previously agreed upon, made a good thing of it this year, for they earned their money easily and rapidly.

MILK contracts are being renewed on better terms than dairy farmers have been able to obtain for some time past, and we shall probably soon be hearing grumbles from town consumers, who seem to have supposed, in their ignorance of rural affairs, that the best show of rain would be enough to restore the days of plenty and bring down prices with a rush. It is sincerely to be hoped, for the sake of everybody concerned, that Midland producers will stand fast in their demand for reasonable prices. "Association rates" ought to be the rule with all, whether

society members or not; and owners of dairy herds in Stafford, Warwick, and Leicester are the more strongly placed, since it is practically certain this autumn that buyers will do no better for themselves by going north to Cheshire as so many do. "No milk should be sold this coming winter at less than 10d. per gallon," says the secretary of the Cheshire Milk Producers' Association. Yet it is safe to predict that dairymen nearer home will be accepting less where they are not protected by a strong association.

October 4, 1906.

SHOWS.

Royal South Shows.

The seventy-fourth show and ploughing matches of the Royal South Bucks Agricultural Association, of which the King is the patron, were held on Wednesday near Burnham Beeches, the ground for the ploughing being all the better for the heavy rain the day before. The attendance throughout the day was excellent, and great interest was taken in the matches, which began on ground close to the showyard at 8 a.m., and were not finished until after luncheon. The horse section was also of interest, Mr. A. J. Flowers and Mr. R. C. Gurney, who were the judges, having some especially good groups brought before them, but in each class—including that for the best team which had been worked in the ploughing matches—the first prize went to the exhibit of Messrs. Headington Bros. (Cippenham). Their winning mare also won the silver medal of the Shire Horse Society, her foal being reserved. The King gave a prize of five guineas for the best ploughman in the field, and it was won by John Baldwin, of Burnham Royal. The King's prize—a cup valued at 20 guineas—offered for the best collection of roots, the growth being taken into consideration, was won by Messrs. Kinross and Lindsay (Datchet), with a very weighty collection, the Up-to-Date and Dalmeny Beauty potatoes, and the Drumhead cabbages, which form part of the produce, being especially fine. Mr. Kinross had three times previously in ten years won a royal cup for farming. The most notable award in the labourers' and cottagers' section was that for the longest service in one employ. Henry Joyce, who has been in the service of Mr. G. A. Scott (Langley) for forty-seven years, won the chief prize. Sarah Ware, seventy-four years of age, who had been in domestic service for twenty-two years, and Mary Dean, a widow of sixty-seven, who had brought up six out of her eight children, were also winners of premiums.

Dorchester.

Beautiful autumn weather favoured the sixty-fifth annual show of the Dorchester Agricultural Society, and the gate proved a record one. The classes were well filled, but there was a falling off in the number of horses, which was mainly noticeable amongst the cart horses, but the quality was well up to the average. The silver medal of the Shire Horse Society was taken by Mr. W. J. Chick, of Stratton, with a splendid animal. The light horses were an excellent show. Mr. T. H. Miller, the well-known North Dorset breeder, scored some marked successes. There were some notable entries, though less in numbers than at the previous show, but they exhibited all the characteristics of the type which promise soon to be recognised at the great shows.

In the class for Devon cattle Mr. W. H. Bond, Dorchester, took the first for bulls and the bronze medal for the best exhibit in the section. Mr. A. Hiscock, of Motcombe, secured the premier honour for Shorthorn bull, the silver medal with the same exhibit for the best animal in the cattle classes, and a bronze medal for the best in the Shorthorn classes. The Channel Islands breeds were much stronger than usual at this show, and were a special feature. The competition in Herefords has of late years dwindled down to very small proportions, and in all probability the class will be dropped altogether next year. Mr. A. Hiscock, of Motcombe, showed an animal in the milking classes which yielded 43 lb. of milk. The new class of Dorset Down sheep, opened last year, was represented by some good specimens.

The Scottish Agricultural Conference.

The annual conference of the Scottish Chamber of Agriculture and Associated District Societies with the President of the Board of Agriculture will take place on Wednesday next within the hall of the Highland and Agricultural Society at Edinburgh at eleven o'clock. Mr. J. A. Dewar, M.P., presiding. As in previous years, numerous resolutions will be proposed, and Earl Carrington will reply to the questions raised. The annual dinner of the Chamber will be held later in the day, and Earl Carrington will be the chief guest. The resolutions to be put at the meeting deal with a variety of subjects, including the Land Tenure Bill, the foreign meat question, butter manipulation, law of trespass, motor cars, &c.

Northern Notes.

NORTHERN farmers are looking forward with great interest to meeting Lord Carrington at his conference next week in Newcastle. One of the subjects for discussion, as already noticed in these columns, is the question of land tenure. The farmers of Durham and Northumbria have a better appreciation of this subject than have the farmers of Yorkshire. In the last-named county one really thinks it would be a painful incident to many of the old standards to hear of the relations between landlord and tenant being subjected to any radical change; and as a class it is not for a moment to be expected they would move a finger until great pressure, or at any rate considerable convincing argument, was brought to bear upon them in relation to this most important matter. Lord Carrington's mind is pretty well known. He has already shown that the need for legislative interference between landlord and tenant is absolutely necessary if the latter are to be protected against deprivation of the fruits of their labour.

THE old Acts of Parliament have wholly failed to give any security that an improving tenant shall continuously reap the benefits of his good treatment of the land, or that he shall retain the property right in his improvements the law professes to give him. The farmer has long needed security for his capital and absolute freedom for applying it fully and in the best way to his work. It is surprising the number of sitting tenants on large estates who will submit—out of fear of being turned adrift—to conditions which no other men employing the same capital would ever dream of being subjected to.

WE have known, and know at present, tenants who have succeeded their fathers on large holdings who are begrudged reasonable improvements of their farmsteads, without being themselves contributory to the cost. These farms are generally on estates owned by spendthrift landlords who live above their incomes, and whose estates are encumbered by reason of advances from money-lenders. It is quite time a revolution took place in the law of landlord and tenant, and the Land Tenure Bill, on which the Earl Carrington is almost certain to speak on the 13th, is a measure for which no apology is needed.

AS we travelled along from Yorkshire to Newcastle last week-end women were observed in the fields making hay. This would be the second cutting. Further north we were surprised to hear, not that the weather was favourable for harvesting operations, but that there was any corn still to be gathered in. But it was so. Surely it would be the "tail end" of the harvest. There appears to have been far greater activity in threshing in Yorkshire and Durham than in Northumbria.

THE results of the operation are represented to be 5 per cent. above the average. The threshings in the last-named county, which are never extensive in September, have been mainly inaugurated because of the short supplies of old straw for bedding and thatching.

IN sympathy with other parts of the country, the price of milk has been raised to house-holders in the north. As soon as the pastures began to give way milk was raised to 21. per pint, a 25 per cent. increase. In rural districts 14d. is charged, and this price has ruled for a long time. The competition is very keen in small towns, and as there is no combination amongst the small retailers, any attempt on the part of individual dealers to put on the extra 3d. is quickly followed by a dwindling trade, and the person so fortunate if he gets his custom back after once having tried to impose the extra 3d. on his customers.

IT is really marvellous the number of people who embark, and with apparent success, in the milk trade, on account to the ranks in a small town in Yorkshire is a solicitor, with a herd of about twenty cows. One is afraid the benefit of the rise in the price of milk goes very largely into the pockets of the middleman. This is quite the wrong channel, for the middleman is not the person in any way affected by a good or a bad grazing season and the dainties or otherwise of feeding stuffs. The dry weather does not affect him, and his demand for a more liberal profit ought to be resisted.

THE Cheshire dairy farmers have adopted the right course, and in a circular to the members of the Milk Producers' Association say that milk will be very scarce this winter, and that the Midland and Southern buyers will have to come north for their supplies. Milk is being delivered now at 14. per gallon. The retailers, it says (in Cheshire), have in many cases put up their prices, and it is

WE MAKE GUNS

We sell to the user with only one small profit.
We sell for cash direct to the user.
We buy the finest materials to be obtained.
We pay cash for all materials.
We employ some of the finest workmen in the Gun Trade.
We use finest machinery for machine operations.

RESULT.

We sell for £25 Guns of a quality for which sportsmen have previously paid from £50 to £80.

We sell thoroughly reliable Guns.

We get the finest shooting it is possible for guns to make.

Our "Field" Hammerless Ejector Gun—A perfect Ejector Gun of the finest quality, £25. If made with the best single trigger mechanism ever invented, £30. A perfect pair of these Guns, beautifully matched, £50. A perfect pair of Single Trigger Guns, £60.

"The Gun of the Future," as an Ejector, £15. "The Gun of the Future," without Ejector, £10. A sound and reliable gun, well made, and perfectly balanced, which will give entire satisfaction.

Pattern 8662, £6.—A sound and reliable hard shooting and hard wearing hammerless gun. Better than many sold at double the price.

Pattern 8368, £4.—A sound and reliable hard shooting and hard wearing hammer gun. Better than many sold at double the price.

ESTABLISHED 20 YEARS.

advised that no milk should be sold this coming winter at less than 10d. per gallon.

IN 1891 the Markets and Fairs (Weighing of Cattle) Act was passed, rendering compulsory the provision of weigh-bridges for live stock in the public markets. At the time it was expected the buyer and seller would equally be inclined to change the old method of selling by lump to the only, as it seems, rational method of disposing of anything which has to be resold by weight. But we are in some affairs a stupid people, and the old practice is still adhered to with a tenacity that is worthy of a snail's pace. In twelve years the percentage of cattle sold by live weight has increased by about 11 per cent., the practice at the present time only covering 18 per cent. of the cattle sold in public markets. Weigh-bridges have to be maintained at considerable cost, whether used or not, and in many instances the fees charged do not cover the cost of the oil with which they require to be lubricated.

FOR a long time there has existed a burning desire in the minds of enthusiasts for a curriculum in country schools more adaptable to their children than are the subjects taught in urban schools. The East Riding Education Authorities are fostering an idea of this sort, and the clerk, Mr. John Bickersteth, who, by the way, is the son of the late saintly Bishop Bickersteth, of Ripon, takes a practical interest in nature study, presiding last week at a county society meeting on the subject. Intelligent masters in the village schools give their pupils interesting lessons on plant life and botany which cannot fail to impress the minds of the youngsters under their care with the wonders of the natural world.

October 5, 1906.

Black Scab in Potatoes.

The Board of Agriculture and Fisheries have received information that the disease of black scab of potatoes, which was first observed in this country in the autumn of 1901, has spread among some of the gardens in North Wales during the present season.

They wish to warn all persons interested in potato growing of the dangers that may arise from the neglect of precautions against the further increase of the disease, and to say that a leaflet containing a description of it, with an illustration, and advice as to measures to be taken may be obtained gratis and post free on application to the Secretary, Board of Agriculture and Fisheries, 4, Whitehall Place, London, S.W. Letters so addressed need not be stamped.

Forestry at Cirencester.

During the recent vacation of the Royal Agricultural College, Cirencester, the first of a series of annual excursions was made with some students of the college and the Professor of Forestry (Mr. F. C. McClellan) to the German forests. Amongst those visited were several in the Oberforsterei of Darmstadt, the well-known oak and pine woods at Viernheim, the large coppice in the Odenwald, now under conversion to high forests, and some of the Heidelberg Woods. The excursions are to be varied in successive years.

In addition to these excursions, the students, who have the advantage of Lord Bathurst's large woods as instructional area, almost adjoining the college, are expected before their final examination for the diploma to avail themselves of the opportunities afforded by the respective owners and managers of visiting the Berkeley and Colebourne Woods and the Forest of Dean, and further afield, the Broeklesby Woods, in Lincolnshire, and the catchment areas belonging to the Waterwork Departments of the Birmingham and Liverpool Corporations in Wales, now being planted up. They have thus the opportunity of seeing and studying the systematic management of both private estate woods and other woods in various parts of the country, at home as well as abroad.

Cattle and Sheep from Denmark.—At a public meeting held in Deptford on Thursday, Mr. D. Amos, a member of the Greenwich Borough Council, presiding, the following resolution was adopted:—"That this meeting calls for the removal of the restrictions now applied to the importation at Deptford Market of cattle and sheep from Denmark and the Netherlands, feeling convinced that such removal would benefit the wage-earners and shopkeepers of this and neighbouring boroughs and the consumers of meat throughout the whole metropolis." It was stated by the chairman that Denmark and the Netherlands were clear of the foot-and-mouth disease, and that no case of the disease had ever been traced to the Deptford Cattle Market. The exclusion meant an annual loss in wages alone of £200,000. The President of the Board of Agriculture has it may be mentioned, already been approached in this matter without success.

Weather, Crops and Stock.

Nottingham-shire.

THIS has been an exceptional season, and I fear also a disastrous one. There was a good seedtime, and everything appeared favourable up till the end of May, when dry weather set in and continued till the end of September. Only 13½ inches of rain fell from January 1 to October 1, and three parts of this fell in the first three months of the year. In every other county one heard of good rains, but none came our way with the exception of slight showers at long intervals. The result has been that the hay crop was light, pastures were burnt up, and the root crop a failure, with the exception of mangolds, which are a little over half a crop. Ditches and ponds, and in some cases wells, have been dry for months. Dairy farmers and milk sellers have suffered severely, and their receipts have fallen off considerably, whilst at the same time they have had to buy increasing quantities of feeding stuffs as well as having to commence on their haystacks. The hay and corn harvests were well won, and as regards corn, barley has been a good crop, oats and beans fair, but wheat is not up to average.

Bucks (Central).

OUR graziers say that this season is about the worst they have ever had—grass being dried up, and water in many places very short, the cattle have not got fat, and the price of beef is miserable—3s. 4d. per stone, and some of it less, even heifers that are nice meat and nice weights. The milk has dried up, and cake is very dear, so that the dairyman's prospects are bad. The harvest is turning out about an average one hereabouts, but wheat is not yielding quite so well as anticipated, whilst barley has not been much thrashed. Mutton has been selling fairly well. Wheat is at a very low price; it must be very good to make 28s. per qr. We have been very much dried up, and could scarcely plough, but have had a rare rain, which will do an immense deal of good, enabling ploughing and planting to be done, and freshens up the roots. Swedes are a poor crop, and got very blue, and in some

cases blighty. Mangolds are a fair crop, but not heavy in some places, it having been too dry for them on the stone brash land. This rain will fetch up rye and tares where planted, and improve the young seeds.

Dorset.

THE drought has at length broken up, and we have had a beautiful downpour with all appearance of more to follow. It is most acceptable for the preparing the land for wheat; the autumn sown crops, such as trifolium, rye, winter barley, vetches, and the young grass seeds, were sadly in want of rain. I do not anticipate it can benefit to any great extent the root crop, which must be written down as very indifferent, although I have seen in more favoured localities a few good pieces. Pastures are particularly brown and bare, the prospects for autumn and winter feed are disheartening. Hay and chaff will shortly be required. This means a long, expensive winter. I am giving straw chaff to cattle with a little mixture of corn and cake, and breeding ewes are eating hay twice a day; they have up till now done wonderfully well on short rations. Store sheep have kept up well in price, numbers short. There appears to be a demand for good heifers with calves, as the supply of milk has run short. Young cattle are well high unsaleable. The long haulage of water has been an expensive item. With the high price of feeding stuffs and shortness of roots and grass, I am looking forward to winter with great apprehension, and wonder where rent, labour, and expenses are to come from, unless out of capital.

South Hunts.

YESTERDAY (Tuesday) was indeed a joyful day for the residents on the high lands in this drought-ridden county; for months we have suffered from the scarcity of rain, our roots had suffered and our pastures had long ceased to grow any feed. It is true that the stock thrived tolerably well on the little roast meat which they were enabled with great toil to pick up, but everything was crying about for that

downfall with which we were at last blessed yesterday. The face of the country is quite changed already. Now the horse-ploughs will be started to prepare for winter beans and winter oats, which most probably will this season be more generally sown. The clover lands will hardly be fit for the plough until the present rain has soaked in, or perhaps we may require still more moisture so terribly thirsty had the soil become. We hear that the corn is generally yielding about as expected quite an average crop both on the uplands and the fen lands.

Radnor.

WE have had an exceptionally fine summer this year. It has been a grand harvest of both hay and grain with the best crops that have been for a good many years. The roots were looking well in this neighbourhood until about a fortnight ago, and since then the weather has been rather too dry for them. There seems a good many people complaining about their potatoes not keeping well this year. Sheep have been selling wonderfully this summer, although the ewe trade has not finished as good as it started. Fat lambs and wethers sell readily at a good market price. The trade on cattle in this neighbourhood has been very slow, especially store cattle, but are hoping that after this fine rain which we have had that the cattle trade will improve.

Brough Hill Fair.—Fine weather was associated with this great Westmoreland horse fair on Monday, when the attendance of people on business or pleasure bent constituted a record for recent years. The show of horses was about an average one in point of numbers and included a fair proportion of good class animals suitable for 'bus and general town purposes. The pick of the market were well looked after by dealers, exchanging hands at prices ranging up to £60. The bulk of the farmers' horses, however, were disposed of at from £25 to £40, but among this class business ruled slow. Light horses of all descriptions were numerous represented, but few, if any, very high figures were touched, the general run being from £15 to £35. The sheep penned consisted mostly of Blackfaced and Greyfaced lambs, which were priced respectively at 16s. to 17s. and 33s. to 35s. per head. There was an increased show of young Shorthorn and Highland cattle.

Fertilisers & Feeding Stuffs

POTASH SALTS.

IN a recent issue we treated rather fully the subject of basic slag, and we propose now to handle potash salts, another essential element of plant food, in a similar manner.

In looking through the agricultural literature of the first half of the last century one is struck by the absence of any reference to several fertilising materials, which are now household words in farming circles, so that while we find, in back numbers of farmers' journals, the relative merits of guano, bones, farmyard manure, soot, &c., often discussed, there is no allusion to potash salts in the now well-known forms, although the advantage of applying the small quantities of potash derived from wood ashes and seaweed was recognised and acted on.

It is, therefore, not a matter of wonder that much of the arable land and old pastures became gradually impoverished in available potash and the crops, especially on light land, showed a tendency to deteriorate. Fortunately—or may we say, providentially?—at the time when the deficiency of potash was beginning to be seriously felt, supplies from a source hitherto undreamt of, and sufficient to satisfy all the requirements of agriculture were discovered in the Harz mountains of Germany.

covered in Germany, the potash salts derived from them were first experimented with in that country, but trial parcels were soon shipped over here. In 1881 we find the late Dr. Voelcker in his evidence before the Royal Commission of Agriculture that sat during that year, saying: "Yes, I believe that it (kainit) will be used more largely than it has been; it will be very useful in the reclamation of waste lands, especially peaty land, in conjunction with superphosphate or bones. There is a great future for it." And a few years later the Experiments Committee of the Norfolk Agricultural Society reported:—

"Potash added to super and nitrate gave an additional 3 tons (mangolds), and to the super and sulphate of ammonia 5 tons per acre. From that time forward the use of Stassfurt potash salts has become more and more general, and has entered into the general practice of crop cultivation.

The average consumption of potash salts, calculated as pure potash, in different countries is given as follows per 100 acres:—

Germany	...	...	273 lb.
Belgium	...	...	142 "
Holland	...	...	265 "
Denmark	...	...	103 "
Great Britain	...	...	52 "

indeed, was for long the chief source of potash. Certain plants remove very large quantities from the soil. Of these plants, roots, potatoes, the vine, the tobacco plants, and hops may be mentioned as examples. It is present in large quantities in the grain of cereals, although not to the same proportional extent as phosphoric acid. It is found in the plant's extremities, such as twigs and new leaves, in the greatest abundance.

For potatoes, clover, mangels, beans, and other Leguminæ the dominant fertilising constituent is potash, and care should be taken that it is always present in the soil in ample supply and in readily available forms.

Soils Specially Suitable for Potash Applications.

The soils to which applications of potash have been found to produce the best results are poor, light soils, moor lands, and pasture lands. On the latter, when combined with dressings of phosphate of lime, it exercises a remarkably renovating effect, stimulating into active growth the best kinds of nourishing verdure and checking the development of coarse rank grass and mosses. Its value on chalk lands has been often demonstrated. Heavy clay lands usually contain a sufficient natural supply of potash, but it is often so closely bound up with other minerals, that it is not in an available condition for plant food. On clay soils it is prudent to make experiments on a small scale before incurring any important outlay in the purchase of potash salts. It may be found that it is not necessary to apply extra potash for cereals, while for crops of which potash is the dominant element it is always judicious to give them the benefit of a little extra supply.

Potash salts give the best results when the soil is plentifully supplied with lime, so farmers should see that the soil is not deficient in lime. In recent years farmers have been inclined to neglect the good old practice of liming, to the prejudice of their soils and the crops.

When should Potash be Applied?

Kainit should be applied in the autumn or quite early in winter. This is an important point to be remembered, because otherwise the material does not have the opportunity of producing the best results.

Sulphate of potash and muriate of potash may be applied either in the autumn or spring as most convenient.

Two experiments to test the advantage of early application of kainit were carried out in Ayrshire and Lanarkshire. The Ayrshire experiment was conducted by Mr. Robert Byran, Orchardton, Ochiltree, on a "deep heavy loam." There were two plots, the top dressing for both plots being the same, viz. (per acre):—

5 cwt. kainit.
2 cwt. superphosphate.
1 cwt. sulphate of ammonia.

On one plot, however, the kainit was applied on November 23, while the other plot only received its kainit on March 17. On the latter date the necessary phosphates and ammonia were also given to both plots.

Two crops of grass were subsequently cut and weighed during the season, the results being:—

	Winter-applied Kainit.		Spring-applied Kainit.	
	Tons	Cwts.	Tons	Cwts.
First cut	10	19	7	10½
Aftermath	4	10½	3	12
Total crop (fresh)	15	9½	11	2½

In favour of early application

The difference in favour of early application is somewhat surprising, and equals, approximately, 1½ tons of hay on the two crops. As would be anticipated, the advantage is proportionately less on the aftermath than on the earlier crop. The fact that it is apparent, however, on the second cut, further strengthens the plea for early application on this particular class of land.

There is no danger of the potash being washed out of the soil or carried down beyond the reach of the crops.

When using potash salts, see that the soil is also well supplied with phosphoric acid and lime.

What Form of Potash is Best?

This is a question often asked, but to which it is not possible to give a definite reply, because so many different factors have to be taken into consideration, and particularly the kind of crop and the character of the soil.

For general purposes it may be said that applications of kainit are the most economical and produce satisfactory results, but experience shows that it is not so suitable for potatoes and hops as the more concentrated salts of potash.

Kainit can be especially recommended for light soils, liable to suffer from drought, as the large quantity of salt in it has the effect of attracting moisture, thus preventing the soil from drying off so quickly.

On the other hand, when applied to heavy soils it has a tendency to cake the surface of the land, rendering it impervious to ventilation, thus injuring its physical condition, so that on soils of

PIT HEAD OF POTASH MINE.

The Stassfurt Potash Mines.

The German Potash Industry celebrated its jubilee last February, having been begun in 1856. The mines had been worked long before, but only for common salt, and in that year a stratum of salts, hitherto unknown, but which proved to be potash salts, was reached. At first no importance was attached to the discovery, and little did the miners realise that they were the pioneers of an industry which would benefit the whole world, and develop into one of the most important of the German Empire. We give a couple of illustrations of the work of the mines.

From a return made by the German Agricultural Society, it appears that the use of the potash salts in that country soon became extensive. In 1885 it had reached the quantity of 68,000 tons; ten years later it was 480,000 tons, and in 1905 the quantity had grown to over a million and a quarter tons of the natural potash salts. By its aid, in combination with basic slag and superphosphate, large tracts of light sandy land, hitherto regarded as useless, have been brought under successful cultivation.

The German farmers are so sensible of the advantages which cheap potash gives them, that latterly they have been growing uneasy at the large exports, fearing that the deposits may be exhausted. They petitioned the Government to levy a heavy export duty, but it is satisfactory to note that the German Government are not disposed to hamper the industry by adopting such a measure. The deposits are so extensive that there is no fear of exhaustion.

As was natural, as the potash mines were dis-

covered in Germany, the potash salts derived from them were first experimented with in that country, but trial parcels were soon shipped over here. In 1881 we find the late Dr. Voelcker in his evidence before the Royal Commission of Agriculture that sat during that year, saying: "Yes, I believe that it (kainit) will be used more largely than it has been; it will be very useful in the reclamation of waste lands, especially peaty land, in conjunction with superphosphate or bones. There is a great future for it." And a few years later the Experiments Committee of the Norfolk Agricultural Society reported:—

Is Potash Essential to Plant Life?

A glance at the following analysis of the ash constituents of some of the principal crops shows that this question must be answered in the affirmative:—

A crop of		Contains in its ash lb. per acre.	
		Phosphoric acid.	Potash.
Mangels	roots 22 tons	36.4	228.8
	leaf	16.5	77.9
	Total crop	52.9	306.7
Potatoes 10 tons	...	36	128
Clover hay 2 tons	...	24.9	83.4
Meadow hay 1½ tons	...	12.3	50.9
Turnips roots 17 tons	...	22.4	108.6
leaf	...	10.7	40.2
Total crop	...	33.1	148.8
Oats 45 bushels and straw	...	19.4	46.1
Wheat 30 bushels and straw	...	20.7	35.7
Barley 30 bushels and straw	...	20	34

On this subject Dr. Aikman writes:—"Of all the ash constituents of plants, potash is the most abundant, as it forms on an average about 50 per cent. of the total ash of plants; the ash of plants,

this description preference should be given to sulphate of potash.

The salt in kainit causes it to use up the lime in the soil, therefore it is important to see that there is plenty of lime and also phosphoric acid in the soil in order to get the best results.

Speaking in round terms it may be said—

(1) Use *Kainit* in light sandy soils, chalky soils, heath lands, and peaty soils, for mangolds and other root crops, cereals, clover, and pastures, and apply quite early.

(2) Use *Muriate of Potash* on heavy lands for the same crops. It may be applied in the spring.

(3) Use *Sulphate of Potash* on light and heavy soils for potatoes and hops, and for mixing with other fertilisers.

Different Forms of Potash Salts.

There are numerous forms of Potash Salts raised from the mines, but we need only discuss the kinds in general use in this country. These are kainit, sulphate of potash, muriate of potash, and in Scotland potash manure salts, their respective average detailed analysis being as follows:—

PIT BOTTOM OF POTASH MINE.

	Kainit 23 p.c.	Sul- phate Pot- ash 90 ash 80 p.c.	Muri- ate Pot- ash 80 p.c.	Pot- ash Man- ure Salts 20 p.c.
Sulphate Potash	21.3	90.6	—	2.0
Muriate Potash	2.0	1.6	83.5	31.6
Sulphate Magnesia	14.5	2.7	0.4	10.6
Chloride Magnesia	12.4	1.0	0.3	5.3
Chloride Sodium	34.6	1.2	14.5	40.2
(Common Salt)				
Sulphate Lime	1.7	0.4	—	2.1
Insoluble Matter	0.8	0.3	0.2	4.0
Moisture	12.7	2.2	1.1	4.2
	100.0	100.0	100.0	100.0

equal pure Potash p.c.

just about 13 50 52½ 21
so that

1 cwt. kainit yields about 14½ lb. pure potash,
1 cwt. sulphate of potash yields about 53 lb.
pure potash,

1 cwt. muriate of potash yields about 56 lb. pure
potash,

1 cwt. potash manure salts yields about 23½ lb.
pure potash.

Are Potash Salts often Adulterated?

Potash salts are not, as a rule, subject to adulteration, being delivered as imported, but when obtaining supplies of the concentrated qualities sulphate of potash and muriate of potash, it is prudent to have the percentage of potash checked by analysis, as there are occasionally some inferior grades on the market.

When buying compound manures containing potash, it is desirable to scrutinise carefully the guarantee and see that it is stated, in accordance with the requirements of the "Fertilisers and Feeding Stuffs Act," as pure potash, and not as potash salts, or alkaline salts, or sulphate of potash. The use of these terms is apt to mislead the farmer who may not regard the analysis in a casual way. On this point Mr. Wood, M.A., of Cambridge, writes:—"Potash should always be expressed as pure potash, but to find it so expressed is very exceptional. All the other terms used are ambiguous and misleading, and only serve to give the manure a fictitious value and to prevent the purchaser from putting his own value upon it. Such expressions as potash salts and alkaline salts

are no guarantee whatever, and ought not to be accepted."

Phosphates Useless Without Potash.

Bearing on the above subject, an eminent scientist in discussing the Rothamsted experiments on pasture lands, writes:—

One frequently hears very conflicting remarks regarding the effects of basic slag or of superphosphate of lime when applied to pasture lands. With some, the application of phosphatic manures is most beneficial, resulting in a large increase of clovers among the herbage, and more especially of white clover, while with others no good effects from phosphatic manures are observed.

From the unique experiments conducted at the Rothamsted Agricultural Station on grass land, which were started by the late Sir John B. Lawes in the year 1856, and have been continued up to the present time (1904), thus extending over a period of forty-nine years, it has been fully demonstrated that basic slag and superphosphate are absolutely of no avail if the land is deficient in available potash

experiments which was divided into a number of plots differently manured. It will be sufficient to point out that in this experiment in every case the crop of the first year was a large one, amounting in three cuttings to about 14 tons of fresh green produce, equal to about 3½ tons of clover hay, without the addition of manure of any kind; when sulphate of potash and superphosphate of lime were employed 18 tons of green produce, equal to nearly 5 tons of clover hay per acre were obtained. When, however, to the potash and superphosphate were added sulphate of ammonia, or rape-seed, which manures so largely increase the produce of our cereal crops, the produce of the clover was less than when the potash and superphosphate were used alone. Here is a striking evidence that in the growth of leguminous crops, such as clover, peas, vetches, beans, sainfoin, lucerne, &c., at any rate some of the large amount of nitrogen which these crops contain, and of the large amounts which they frequently leave as nitrogenous residue in the soil for the food of future crops, is due to atmospheric nitrogen brought into combination by the agency of lower organisms which exist within the root nodules, the nitrogen so produced being taken up and utilised by the clover plants. It is further demonstrated that the development of these lower organisms is very greatly dependent upon a full supply of potash in the soil.

It is also shown that the addition of nitrogen to the manure employed for the growth of red clover is not required, while the application of potash and phosphates is indispensable.

Summary of results obtained in Agdell Field, Rothamsted, under a four-course rotation of crops. Produce per acre.

Turnips carted from land:—

	Without Manure.	Superphos- phate and Sulphate Potash.	Com- plete Manure.
Clover hay	13½ cwt.	49½ cwt.	49½ cwt.
Bean corn	13½ bush.	28 bush.	19½ bush.
Wheat grain	27½ bush.	40½ bush.	42½ bush.

Turnips fed on land by sheep:—

	Without Manure.	Superphos- phate and Sulphate Potash.	Com- plete Manure.
Clover hay	14½ cwt.	53½ cwt.	58½ cwt.
Bean corn	16 bush.	18½ bush.	19½ bush.
Wheat grain	25½ bush.	44½ bush.	41½ bush.

These figures show most conclusively how the potash in combination with superphosphate increased the produce of clover and of beans on both sections of these experiments. On the land from which the turnips were removed the potash and superphosphate gave an increase per acre over the unmanured plot of 35½ cwt. of clover hay, 12½ bushels of beans, and 13½ bushels of wheat; while on the portion where the turnips were consumed on the land by sheep the potash and superphosphate gave an increase per acre over the corresponding unmanured plot of 37½ cwt. of clover hay, 12½ bushels of beans, and 17½ bushels of wheat.

The complete manure, supplying both nitrogen and minerals, increased the produce but very little over the potash and superphosphate, without nitrogen, and in some cases the nitrogen supply did harm.

Potash in Compound Fertilisers.

Potash may be described as the Cinderella of the three sisters of fertility—nitrogen, phosphoric acid and potash, because it is almost invariably treated with neglect in the special or compound fertilisers offered by the manufacturers.

The analysis of the ash constituents of plants points distinctly to the necessity of potash, and experiments are continually demonstrating that the best results are obtained by the union of the three fertilising constituents in which potash is liberally represented. The Board of Agriculture evince their appreciation of this fact by recommending in their manual of agricultural experiments the application to the different crops of mixture containing a large percentage of potash, thus:—

Artificial Manures per Acre.

	Nitro- gen.	Phos. acid.	Potash.	Equal to potash
	lbs.	lbs.	lbs.	p. c.
Meadow hay	20	40	20	5
Rye grass and clover hay	30	40	30	5
Swedes and turnips	20	80	40	5
Mangolds	40	80	80	8
Potatoes	40	60	80	11
Wheat	30	40	30	5
Oats	20	30	30	6
Barley	20	40	30	5½
Beans	20	60	60	8

Kainit Spread on Manure in Stables.

It has been found advantageous to occasionally spread a little kainit in stables, cattle yards, and on manure heaps, as the ammonia in the manure is partly fixed by it, and at the same time the quality of the manure is improved by the potash and magnesium in the kainit.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

Keep Your Stock

In sound and healthy condition by using the well-known "Purifax" medicines and preparations. The following special specifics should be stocked by every owner and breeder:—

Volatile Black Drink (for colic, gripes, and spasms in horses and cattle), 19/6 per dozen.

Soothing Linctus (for coughs, sore throat, &c., in horses), 19/6 per dozen jars of ten doses each.

Before Calving Drench and after Calving Drench, 10/6 per dozen.

White Oils (for sprains, splints, spavins, rheumatism, ring-bones, all lamenesses, sore throats, and coughs), 2/- and 2/6 per bottle.

Lambing and Calving Oils, 2/- per bottle.

Semi-Fluid Foot-Rot Cure, 1/3 per bottle.

Carbolic Oil, 1/6 per bottle.

Antipyretic Fever Drink, **Astringent Calves' Cardial**, **Hoof Ointment**, **Mange Lotion**, **Not-drying Fly Oils**, **Lice Wash**, **Harness Oil**, &c., &c.

All the above and every requisite for the stable and stock medicine chest, compounded, manufactured, and sold by the sole proprietor—

ROGER ERRINGTON,
Victoria Mills, Sunderland.

Used and endorsed by leading owners and breeders everywhere.

THE

"BIBBY" CAKE IN THE FORM OF "CAKETTES."

"Send me two tons o' they nobbs same as Mr. Brown is a using," was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism: and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good": it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to.

THE PREMIER POSITION IN THE PUBLIC FAVOUR.

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it:—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

THE DAIRY SHOW.

The advent of Dairy Show week naturally brings uppermost the reflection of the changes in everything connected with the dairy industry during the thirty-one years since the first exhibition of the British Dairy Farmers' Association was held. A mere handful of far-seeing agriculturists and merchants took action at about the same period that the horse societies had birth. The seventies of last century were noteworthy for progressive agricultural movements, and not the least important was the formation of this far-reaching institution, bristling with educational influences, to convert what had been a much-neglected, despised, toilsome employment into one of the most interesting and attractive of rural pursuits, in which ladies of the highest rank, including Princesses of the Royal blood, could find pastime.

That all-powerful magician the cream separator, which also came into existence in the seventies, proved the grand mechanical revolutioniser so far as butter-making was concerned. The two machines which have promoted the world's progress in the arts of agriculture more than anything else during the past half-century are the self-binding reaper and the cream separator.

Only a very few of those who formed the British Dairy Farmers' Association now survive to bear testimony to the progressive but arduous struggles of an institution which may truly be said to have grown from a mere pigny to a giant. At one time it stood in imminent peril of being turned out of the Agricultural Hall, and there was a suggestion which the council took seriously into consideration of moving into the provinces and making the show migratory, but happily soon after the dairymaids' contests in

butter-making and other attractions excited the attention of the London public and the gate money increased.

But for this the show would have collapsed when, owing to foot-and-mouth disease, dairy cows outside the Metropolitan locality were utterly debarred from coming to one of them. But the society tided over this difficulty as well as many others, and since holding summer conferences, so attractive on account of the pleasant excursions connected with them, the membership has immensely increased.

Nor is this the only thing which has made the show more popular with British farmers. Its milking and butter trials have proved highly satisfactory in this respect. Most of the leading agricultural societies, it is true, at their summer shows have milking trials, but they have not the same importance as the annual competition which brings all the heaviest milkers in the kingdom to the Royal Agricultural Hall in the endeavour to win the Lord Mayor's Champion and the Barham and Spencer Challenge Cups.

One of the biggest farm fires which have occurred in East Yorkshire broke out on Monday morning on the premises of Mr. Emmerson, of Pickering Doterill Park, near Filey. The Driffield and Bridlington Fire Brigades arrived on the scene, but were powerless to prevent the spread of the flames until damage estimated at over £5,000 had been done. Thirty-two corn stacks, straw from twelve other stacks, and a hay stack were destroyed. The loss is covered by insurance.

Spanish Farmers and Imported Wheat.—King Alfonso of Spain recently received a deputation of Castilian agriculturists, who represented to his Majesty the evils which threatened to overtake Spanish agriculture unless the Government closed the frontiers to foreign wheat. The harvest, they declared, exceeded the national requirement. The deputation begged the King to use his influence to stop the importation of wheat which had not paid a minimum duty of about eleven pesetas.

Reford October Fair, held on Tuesday, was very largely supplied, there being a good all-round show of cattle and about 6,000 sheep, but horses were so numerous as in some previous years. Details of the sheep sales appear in another column. Bullocks made £12 to £15, two-year-old steers and heifers £10 to £12, yearlings £7 to £9, and milk cows £16 to £18. The best cart-horses made up to £90, the general run in the fair being up to £45, two-year-olds to £40, yearlings £20 to £25, and young foals with the mare up to £15. The quotations in the cheese fair were:—Stiltons, 10d. to 11d.; Cheshires, 7d. to 8d.; Cheddars, 10d.; Gorgonzolas, 8d.; Americans, 4½d. to 6d.; and Trent Sides, 7d. to 8d. per lb.

A tragic incident occurred at a stock fire which broke out in the early hours of the morning at the farm of Mr. Robert Knifton, Chaddesden Moor, near Derby. Mr. Knifton's uncle, a retired farmer, on a visit from Australia, was carrying a couple of buckets of water across the yard, when in the excitement he fell forward and expired. Two stacks of oats valued at £50 were completely destroyed, and, considering the great scarcity of water, it was little short of a miracle that some six or eight other stacks were saved.

Royal Veterinary College.

Earl Carrington, President of the Board of Agriculture, who was accompanied by Sir Thomas Elliott, Secretary of the Department, Major-General Thomson and Major-General Duck, present and past Directors-General of the Army Veterinary Department, presided at the opening of the session of the Royal Veterinary College, Camden Town, on Tuesday.

The introductory lecture was delivered by Professor H. A. Woodruff, who was student and prizeman as recently as 1898. Remarkable on the fact, unique in its history, that the college now received a subsidy of £900 from Government just when mechanical traction was more and more every day displacing horse-power, so much so that it was suggested in some quarters that the college would have to be turned into an engineering institution, he claimed that never was there a time when well equipped and scientific veterinary skill was more needed in the interests of the community.

Recent revelations in connection with the Chicago meat trust showed the necessity in this country for efficient and properly regulated inspection of meat such as prevailed in Germany and Belgium and in a less perfect degree in France, Italy, Austria, and Spain. For this work veterinary surgeons were far better qualified than medical officers of health or inspectors of nuisances, in whose ranks were included for the purposes of meat inspection such men as plumbers, carpenters, bricklayers, florists, builders, surveyors, stonemasons, and tram conductors.

Another direction in which the services of veterinary surgeons were most urgently required was the securing of a pure milk supply by preventing the dissemination of tuberculous and other diseases from contaminated dairies, and a consequent reduction especially in the rate of infantry mortality.

Replying to a vote of thanks proposed by the principal, Earl Carrington said he thought everyone must agree with the lecturer's remarks about meat inspection. The revelations as to the qualifications of the inspectors were somewhat astounding, and he thought might well be brought to the notice of that great body, the London County Council. As he listened to the remarks about the milk supply, he congratulated himself that it was a matter for the Local Government Board and not his department. Everybody would agree, however, that uniform regulations were needed. He was glad that the officers of the Army Veterinary Department had now received the recognition too long denied them. He would remind the students of the Latin quotation which told them that they must always excel and always be very much better than anyone else. That was more easily said than done, they might reply. They were not all Derby horses like old Hamlet, whose skeleton he saw just before he entered that room, and whom he recognised with gratitude and affection, because he once won £1,000 over him. If they were beaten the first time they must try again, and there was no earthly reason why they should not be very well placed in the race for life.

The first of the two hiring mops for Gloucestershire was held on Monday, but there appeared to be but little business in hiring. A few years ago it was usual to see the cross thronged with farm hands, male and female. Last week there were only a few hundred men waiting about, and of these only a very small number sported plaited whips in hat or in buttonhole—indicating that they were carters or general hands waiting to be hired—or had tufts of wool stuck conspicuously in the front of their hats, which proclaimed them shepherds out of work.

HORSES.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

IT is almost too much to hope that secretaries of horse shows and exhibitors will combine to give the public an accurate description of the horses that are shown with correct pedigrees. The way in which entries are made, without even the slightest attempt to identify the horse or to describe him, has been spoken of again and again in the Press, and there is scarcely any improvement in this respect at the general run of shows. What always puzzles me is that small exhibitors do not rise in strong protest against such a manifestly unfair state of things, for they certainly suffer a great deal of injustice. Not very many years ago a horse was entered at a big show as Mr. X. Y. Z., bay horse. A liver chesnut was shown, and won two good prizes. In each of these instances a small exhibitor was second. What really happened was that Mr. X. Y. Z. really intended to show the bay horse, a well-known winner, when he made his entry, but he left himself a loophole. He sold his horse, bought some more, and had not a bay amongst them *good enough to show*, so he showed the chesnut.

that cannot be traced to his dam's side—certainly not a high-class show horse—so why there should be so much mystery about the matter I cannot see.

IT is impossible to deceive the contemporary unless he is willing to be deceived. I was at a show a year or two ago when a horse won in a novice class. There was something "reminiscent" about him, I thought, but said nothing. "What did you think of X's horse?" I was asked. "A very good one," was my reply. "Ever seen him before?" was the next question. "Where should I see him?" I asked. "Look in your catalogue when you get home," said my friend. I walked on and met another man. "That horse of X's won at two years ago," said he. And before I had got to the gate at least half-a-dozen people whom I met had recognised the horse. If there had been an objection it could only have had one ending. Now, I do not mean to say that the owner of that horse entered him with intent to deceive. It is highly probable that he did nothing of the sort. He put half-a-dozen in, some with names and some without, but all without description,

SHIRE FILLY, DUNSMORE FUCHSIA.

Winner of several prizes, including First and Champion at the Royal Show, Derby. She was foaled in 1903, and is by the famous Dunsmore Jameson out of D'Arcy Fuchsia. Her breeder was Mr. G. G. Atterbury, West Haddon, Rugby, but is the property of P. A. Muntz, M.P., Dunsmore, Rugby.

THIS is bad enough, but there is worse than this done. A man in entering his horses, unless he enters them at one of the great London spring shows or at the Royal where he is obliged to be careful, takes so little pains that he very frequently misses part of the pedigree or gives it incorrectly. Now when this is done with intent to deceive, it is punished pretty sharply if found out, but that is only when the owner puts his horse into a class for which he is not eligible by reason of age or some special condition.

IT is a curious thing that so few people can be made to see how valuable a show catalogue may become if it is properly compiled and the proper information given. As they are compiled at present the bulk of them are certainly valueless. It has been my lot during the last few days to go through a lot of old catalogues in order to identify certain horses, and if possible get their correct pedigrees, and a more hopeless task was probably never undertaken. Sometimes the pedigree was given in one way and sometimes in another, as if the only thing that mattered was to get them entered somehow. And these catalogues were of shows of considerable standing and importance. A dealer—he was only a small dealer—once said to me that it would never do for horses to be entered so that they could be identified by the public, because it would injure trade, and I believe that some mistaken notion that if a customer gets to know where a horse comes from, it will make him a shy purchaser, does really exist. Now there is not the slightest doubt that if it is worth a man's while there is scarcely a horse in England

and probably only concerned himself to take his best horses. But if he had been obliged to describe his horse, he would then have known that he was not eligible.

ANOTHER instance of insufficient or careless entry has come to my notice during my researches which is even more unpardonable. A man enters a mare that was very likely to be bred from at several shows. At one place he enters her under one name and at another under another. The pedigree—that is the back pedigree—is sometimes given one way and sometimes another, and sometimes the mare is described as a brown, sometimes as a bay, and sometimes as a chesnut. Now I do not say for a moment that the owner of that mare had the least intention of committing a fraud. I followed the mare the round of the shows, and knew her as well as I knew her owner, and so did hundreds as well as myself. Not only was there nothing to gain by such culpable carelessness, but the owner took care always to explain that she had won here, there, and everywhere. I account for the discrepancy in the descriptions in this way. The first name he had given when making his entry, probably orally, and had forgotten it. Then when entering her again he had given her another. The transposing of the pedigree I attribute to careless proof reading, and the same thing probably accounts for the diversity of colour.

THE instance I refer to is of comparatively recent date, and there has been no difficulty in following the mare, but just imagine the con-

fusion in thirty years' time if she should have been the dam or granddam of some great sire "making history." That pedigrees in show catalogues have been given more correctly since Stud Book days may be admitted, but some of those which appear in the early years of Stud Book activity differ very materially from the Stud Books in show catalogues. Nor is this peculiar to one breed.

BREEDING animals, at any rate, should always be the carefully identified. There is not the least difficulty about it. There are plenty of distinctive names—thousands of them—though one would think, from the way in which the changes are rung in some half-a-hundred or fewer, that names are scarce. A distinctive name should be given to every breeding animal that is good enough to be shown, and his or her pedigree should be given, and this should be insisted upon by all show secretaries. And there is another thing. Show catalogues practically are all profit, so it is not too much to ask that they should be decently printed and the proofs carefully read.

FULL of years and full of honours poor old Pearl Diver died a few weeks ago in his South African home. He was bred by Lord Hastings, and was by Master Kilgus—Thurs Pearls. He was only a little horse—standing 15 hands 1½ in., but he was a rare weight carrier, and his stock inherited his weight-carrying powers. When he went to the stud Sir Walter Gilbey bought him, dirt cheap, at £500, and he was of great service in Essex, where he sired many high-class hunters and polo ponies. He won four Queen's Premiums, and then Sir Walter Gilbey, thinking that a change of blood would be desirable, sold him to Mr. Southey, of Culmstock, South Africa, for £300. To that gentleman the little horse proved to be a mine of wealth, and he quickly worked his way up to the position of the premier racing sire in South Africa. It is a great pity, however, that he was ever allowed to leave England, and that he was not available for the breeders of hunters and other half-bred horses till the end of his days, for he was emphatically the right sort for the purpose. He was cheap enough, too at the price Sir Walter sold him for, and he was quite one of the best Queen's Premium horses we have had.

A CUTTING from a Melbourne newspaper of some fifteen or sixteen years ago is of some interest. It records how a mare by a Cleveland bay horse known as Duke of Cleveland—I wonder how many Cleveland Bays in the colony were known by that name?—won the principal jumping prize at the Sydney Agricultural Society's Show. The Melbourne Leader goes on to say that the mare was a decidedly well bred looking animal, and that, therefore, the dam must have been thoroughbred or nearly so, and it says there is no reason why Cleveland Bays should not sire good Hunters from mares thoroughbred or nearly so.

THE old newspaper cutting called to mind the best jumper I think that I ever saw. This, curiously enough, was a mare by a Cleveland Bay horse from a Thoroughbred mare, if memory serves, the famous Fanny Drape. I forgot the name of her sire, but remember the mare well. She won the jumping prize when the Royal went to Manchester in the late sixties, ridden by the late George Mulcaster, and she jumped a good 6 ft. wall at the same place for a wager of a bottle of champagne. She won all over the country, and I well remember Mr. E. Mulcaster riding her at the Cleveland Show at Middlesbrough. After she had won the pole was placed on the top of the posts and the others taken away. Mr. Mulcaster turned her loose, and ran slowly *under* the pole until the mare cleared it. She was a big, rather plain looking mare, brown in colour, but very like a Cleveland in shape. Mr. Mulcaster rode her in a plain snaffle, and I should think she was anything but a comfortable mount, for she went as hard as she could gallop with her neck—which was rather the wrong way up—stretched straight out. Her end was unlucky, for she overjumped herself and broke her back—a fate which her peculiar style suggested.

ONE of the finest jumpers at a show I ever saw in my life was Mr. Duell's Star, a pure-bred Cleveland Bay. She was a very good looking one, but there was no suspicion of the Thoroughbred about her. Her manners were simply perfect. With a snaffle bridle mouth, she was one of the easiest to handle imaginable, and she could be ridden at her fences at any pace her rider liked. She would begin steadily, and just increase the pace the last two or three strides, and *swish* over the fences in elegant fashion. Later jumps were not made in vogue in her day, but she was a nailer at timber, and was a little annuity to her owners. I forgot how she was bred; perhaps some of my readers can furnish me with the particulars of her pedigree.

THE LOOKER-ON.

The Blagdon Shires.

An unreserved sale of Shire horses from Mr. Clement Keovil's celebrated Blagdon Shire Stud, Billington, Leighton Buzzard, will take place on the premises on Wednesday, November 7. The catalogue of the sale comprises twelve Shire foals, several by Blagdon Benefactor, Lockinge Midnight, Birdsall Menestrel, Dunsmore Jameson, &c.; one, two, and three-year-old fillies; yearling stallions; and also four-year-olds, one by Lockinge Forest King and one by Ercall Wynn; whilst some exceedingly well-bred in-foal mares, which are good workers will also be included. Amongst the above are several promising young animals that have not been exhibited, which are bound to come to the front in the show ring; also Blagdon Princess, the champion mare at Buckingham Show, and the prize-winning foals Pegasus, Armour Plate and Flower of Blagdon, &c. Altogether forty-three Shire horses of the best blood will be brought under the hammer by Messrs. Sexton, Grimwade, and Beck, and a large attendance of breeders may be expected. Billington, it may be mentioned, is three miles from Leighton and Cheddington (L. & N.W.R.), and five miles from Dunstable (G.N.R.) Stations.

Sale of Shetland Ponies.

A sale of pedigreed Shetland ponies, including the ponies owned by Professor Cossart Ewart, Daddington, was conducted by Messrs. John Small and Sons, Limited, at their Armour Plate Bazaar, Edinburgh, on Wednesday. There was a large attendance of the public, and although bidding, as is customary in sales of this kind, was somewhat slow, the prices obtained were fairly satisfactory. Twenty-three ponies belonging to Professor Cossart Ewart were brought under the hammer. Of these five did not fetch the reserve put upon them, and were withdrawn; and the remaining eighteen averaged 11 guineas and a fraction apiece, the highest price being 31 guineas and the lowest 7 guineas. Of the other lots offered the highest price was obtained by the Ladies E. and D. Hope for a dark brown three-year-old stallion sired by Oman; he showed perfect action. Bidding began at 15 guineas and reached 30, the purchaser being Colonel Smythe, Methven Castle. Other prices ranged from 11 guineas down to 5 guineas.

Sale of Clydesdales at Carlisle.

Some good prices were obtained for the Clydesdale horses belonging to Mr. A. Mansell, of Crossrigg, Penrith, brought under the hammer at Carlisle by Messrs. Harrison. The animals included some splendid mares with their offspring, which have taken numerous special and champion prizes at the county and local shows, and there was keen competition for them. The top price was 150 guineas for a yearling in red coat, sire Baron Solway (11,260), purchased by Mr. Mitchell, of Barcheskie, Mr. Renwick, of Corstorphine, purchased Lady Domino, a beautiful four-year-old black mare, for 130 guineas; whilst Mr. Mandell, of Lockerbie, became the owner of Crossrigg Violet, a splendid specimen of the breed of the best brood mares that has been seen at Carlisle, for 90 guineas. Mr. Robertson, Edinburgh, paid 65 guineas for Lady Maggie, foaled 1898; and 52 guineas for Crossrigg Pansy, foaled 1898; and Mr. Mitchell gave 35 guineas for Crossrigg Lilly, foaled 1905.

Sale at Peterborough.

A sale of Shire foals, mares, fillies, stallions, and geldings, at Messrs. Sexton, Grimwade, and Beck's Peterborough Repository, met with conspicuous success. About 140 animals were catalogued, and most of them found purchasers. The sale realised nearly £3,000. Mr. Max Michaelis gave 150 guineas for the first prize filly foal, the top price of the day, and the same purchaser also became the owner of Mr. S. Poles' winning colt, New Cut Harold, for 60 guineas. Brood mares made up to 40 guineas, and foals up to 44 guineas, whilst Mr. W. A. Harrison's yearling colt Cicero Ramber made 53 guineas.

The Braintree Urban Council are considering the abolition of the ancient fairs which are held in the streets of the town in May and October of each year. Both of these fairs were established by Royal Charter, one by King John and the other by Queen Anne. In former years the Braintree fairs were of considerable importance in Essex, but latterly they have degenerated, and the townspeople regard them as a nuisance.

The annual exhibition of malting barley, wheat, and oats, promoted by the Blandford, Milborne St. Andrews, and Wimfrith Farmers' Clubs, will be held this year at the Corn Exchange, Blandford, on Thursday, the 18th inst., when nearly £100 will be offered in prizes. The entries close on Friday next, and late entries on the 18th inst. at 9 a.m. Prize list, entry forms, and further particulars may be obtained of the hon. secretary, Mr. J. E. Torry, Land Agent, South Street, Dorchester.

CATTLE.

Sale of the late Sir Wilfrid Lawson's Herd of Shorthorns.

On Tuesday the herd of Shorthorns bred by the late Sir Wilfrid Lawson, Bart., was dispersed in the presence of a very large and distinguished company numbering close upon a thousand people. The herd was brought out in a capital breeding state, and highly satisfactory prices were realised.

Before the sale Sir Wilfrid Lawson said he should like to say a few words to express his thanks to the large company for coming in such numbers to the sale. The day, he said, was a sad one for him, for his late father had taken such an interest in the herd, and he did not like to think of what Brynton would be without Shorthorns.

The total of the sale was 2,333 guineas, the sixty-eight head averaging £36 19s. 2d. Among these were thirteen cows and heifers from Mr. W. Parkin Moore's celebrated herd at Whitehall.

The older animals made up to 28 guineas, and it was not until Mabel Millicent, lot 7, came into the ring that the half-hundred was reached. She was bought by Mr. W. Thompson, of Moresdale, at 31 guineas. The Rev. Hon. G. W. Palmer gave 53 guineas for lot 9, Brayton Buttery 2nd, and later 42 guineas and 60 guineas for heifers of the same family. Red Poppy, a thick roan cow, went to Mr. Parkin Moore at 50 guineas; and Mr. Heywood Thompson gave 53 guineas for Lady Barclay, a sweet type of cow of the Mysie tribe. Pretoria Millicent was bought by Mr. W. Thompson, of Ellen Grove, at 71 guineas, and her bull calf realised 30 guineas to Mr. H. Riley. Three young cows and heifers were bought by Mr. H. Reynolds for South America, viz., Lady Mary, 55 guineas; Meta Millicent, 60 guineas; and Brayton Buttery 10th, 70 guineas. Brayton Buttery 6th was taken by Mr. J. B. Oswald to Shropshire at 110 guineas, the best price of the afternoon. Among the younger heifers Mr. J. Kerr got a good one in Poppy at 41 guineas, and Mr. A. Lawson another in Welcome Benson, 35 guineas. Mr. Ecroyd gave 45 guineas for Brayton Millicent and 48 guineas for Brayton Buttery 14th.

The bulls also sold well. The old stock bull Morello realised 60 guineas to Mr. T. Bambridge; Morpheus made 54 guineas to Mr. J. Dickinson; and the remainder made from 30 guineas to 40 guineas. It was considered a most satisfactory sale.

Mr. Shore's Jerseys.

A portion of Mr. J. H. Shore's well-known herd of Jerseys at Wheatley House, Frome, was brought under the hammer on Thursday by Messrs. J. Thornton and Co., and despite unfavourable weather there was a good attendance. The herd was established in the year 1878, and is now one of the oldest in the West of England. Frequent visits to the island of Jersey during a period of many years have enabled the owner, with his keen appreciation of all the principles of breeding, to secure the best strains of blood obtainable. The auctioneer, in a few preliminary observations, dealt with what Mr. Shore had done for the particular Channel Island cattle which brought them together, and alluded to his sale in November, 1900, when such an excellent average was obtained. A purchaser at that sale acquired a cow which had up to this year presented him with six calves, every one of which had been exhibited and taken a first prize. Mr. Shore, although so keen and successful with his Jerseys, was by no means a thick-and-thin supporter of the colour craze, preferring to ignore this when necessary in favour of shape and other form points.

There were in all sixty-one lots catalogued, fifty-eight being cows and heifers. Following the long-established custom, the females were first offered, and they went at prices which were certainly bargains to the buyers, for the average of the fifty-eight worked out at only £12 19s.

The bulls fetched poor prices, although there were only three catalogued, the first two—Lucerne's Chief (three years old) and Homestead King—fetched only 6 guineas apiece. Both being purchased by Mr. Phillips, a well-known district dealer, whilst the other, Guy Fawkes, a yearling, was passed. Lucerne's Chief paid the top price of the sale—viz., 33 guineas, for Lucerne's Queen, whole colour, calved July 7, 1902, Royal Sovereign—Lucerne's Princess. His lordship also took Linda, another by Royal Sovereign, at 28 guineas; whilst at 31 guineas Mr. H. W. Hill, of Heathfield, Sussex, secured Ville Au Bas Belle 2nd, broken colour, Kilmarnock—Ville Au Bas Belle, which took third prize at St. Owen's Show, Jersey, and highly commended at last year's London Dairy Show.

If you want a really good Compound Cake, write to CALTHROPS BROS., Ltd., 56, Nayland Street, Liverpool, or see one of their agents. They make the best Cakes of the sorts on the market. [ADVT.]

Dr. Corner, who lives within easy reach of the Metropolis, and who may be regarded as a comparatively new recruit in the Jersey world, bought quite a number of the lots, at prices ranging from 8½ guineas to 27 guineas. Other chief prices included 22 guineas for Arum Lily, purchased by Mr. Regnalt, and 25 guineas for Mignonette, who was secured by Mr. Currie, Southampton; the majority of the other lots went at prices well under 20 guineas.

Mr. J. L. Huxtable's Devons.

Mr. J. L. Huxtable, of Overton Farm, Bishop's Tawton, has decided to give up breeding cattle, and on Wednesday his well-known herd of pure-bred Devons were sold by auction, Messrs. Sanders and Son officiating.

The herd was established in 1882, and has been bred with the object of securing size with quality, robust constitution, and dairy properties—an object which has been achieved—whilst animals from the herd have met with success in many showyards, and prize-winners were amongst those offered on Wednesday. There was a good attendance of breeders, and the sale was a satisfactory one, though the two bulls Duke of Overton and Overton Ringleader failed to reach the reserve. Joyful Maid fetched the top price—viz., 35 guineas, and her b.c. realised 20 guineas, the respective purchasers being Mr. P. Skinner and Mr. G. M. Styles. Mr. T. S. Morgan gave 34 guineas for Denty 2nd, and also 31 guineas for Lady Luscott, the latter figure being also the price at which Mr. S. Kidner got Lady Luscott 2nd. Other prices ranged up to 29 guineas.

Lord Radnor's Red Polled Cattle.

The sale of a draft of thirty head from Lord Radnor's Longford Castle herd of Red Polled cattle took place at Messrs. Walters and Rawlens's repository, Salisbury, on Tuesday. Cows and calves made 19½ guineas, 18½ guineas, 16 guineas, 16 guineas; in-calf cows, 15 guineas, 14 guineas, 14 guineas, &c.; yearling heifers, 6 guineas to 9 guineas each; bulls, from 11 guineas; two half-bred heifers and calves, 29 guineas and 18½ guineas respectively.

Sale of South Devons at Totnes.

At the autumn sale of South Devon pedigree cattle, which was held at Totnes on Thursday, the mistake of sending in too many animals, which was made at the spring sale, was not repeated, there being an entry of twelve cows and heifers and nearly fifty bulls, which was well within the demand. After such a dry season, the bulk of the animals were in surprisingly good condition, but this year's private sales, and the very inclement weather experienced during the afternoon, doubtless had a tendency to keep down the prices, and, with the exception of the 45 and 35½ guineas given for Mr. Wood's yearlings by Messrs. T. R. Bilbith and F. W. Rowe, none were particularly high, though on the whole they were satisfactory. Many of the lots went to Cornwall, a large contingent of Cornish breeders being present and bidding well for the animals they fancied. Mr. F. W. Rowe sold Merry Boy, the winner of the Devonport Challenge Cup at the Bath and West Show, and many other first prizes this year, for 35 guineas. Mr. W. Morrison's (Brixham) Lixton Favourite, a well-known prizewinner, calved January 8, 1903, went to Mr. Richards, St. Buryan, for 22½ guineas; Mr. Ben Luscombe's (Aveton Gifford) Jack 2392 was got by Mr. Lakeman, Kingsbridge, at 27½ guineas; and his Duke of Devon 2nd, 2349 by Mr. Robins, Trescow, for 25½ guineas; Mr. F. B. Mildmay, M.P.'s Red Prince 2469 to Mr. Batten, Saltash, for 20 guineas; and Lord Nelson 2413 to Mr. Lilliput, Menheniot, for 20½ guineas; whilst Mr. J. S. Wroth's (Aveton Gifford) Joe Chamberlain went to Mr. Martin, St. Dominic, at 21 guineas. Other sales at over 20 guineas included Mr. E. B. Luscombe's (Woodleigh) Sally's Champion 2491 to Mr. Sobey, Menheniot, 26 guineas; and Mr. J. S. Ford's (Yearmouth) Duke of Life 2353 to Mr. Hosking, St. Germans, 20½ guineas.

Lord Amherst's Farm Stock.

Following the successful sale of Red Polled cattle at Didlington Hall a fortnight ago, Lord Amherst of Hackney, through the agency of Messrs. Salter, Simpson, and Sons, on Thursday disposed of the remainder of the live and dead farming stock upon the Home Farm, Didlington, which he has let. There was a representative gathering of agriculturists, while many doubtless attended out of mere sympathy, obviously regretting the cause for such a gathering, but there were many others who could not be so prejudiced as to give good prices, well knowing that excellent stock could be relied upon. The implements and

Contractors to the Yorkshire Agricultural Society.

carriages sold well, while a good demand was experienced for the horses, a bay gelding realising 60 guineas, a brown gelding 50 guineas, whilst the majority made over 30 guineas. The neat stock included a number of Red Polls, the best of which, a heifer, made £17; two others going for £13 apiece, while a fourth fetched 10s. less. £15 and £9 were the prices for the best of the cows. The steers made up to £14 5s., six going at that figure; a second lot, six in number, realised £9 5s. a-piece, yet another batch, comprising four, going for £7 5s. each; 170 South-down wether lambs averaged just over 20s. apiece, the highest being sold at 34s. for fifty, and the lowest 25s. for twenty.

The Late Mr. Bett's Lincolnshire Red Shorthorns.

On Thursday Messrs. Dickinson, Riggall, and Davey sold by auction the herd of Lincolnshire Red Shorthorns, the property of the trustees of the late Mr. Tom Bett, at Benniworth Walk, Donnington-on-Bain, Lincolnshire. There was a large attendance, and the bidding was brisk throughout. The calves were a good lot, and sold readily at prices up to 30 guineas, but the two-year-olds and yearling heifers hardly made their value, the best figures being 20 guineas, 25 guineas, and 24 guineas. Cows and heifers made up to 40 guineas, whilst the best price for a bull was 30 guineas, given by Mr. Proctor for Salford Boris. The following is a summary of the sale:—13 cows averaged £24 14s. 3d.; 23 cows, heifers, and calves, £30 12s. 7d.; 9 two-year-old heifers, £19 12s.; 7 yearling heifers, £16 10s.; and 5 bulls, £26 15s. 6d.; the average for the 57 lots working out at £25 9s. 9d. per head.

Sale of Mr. John Graves' Shorthorns.

On the day following Sir Wilfred Lawson's sale at Brayton, the herd of Shorthorns bred by Mr. Graves at Hesketh, Newmarket, was sold by Messrs. Thornton and Co. The hillside farmers came in hundreds, and although the sale was not quite so largely attended as that at Brayton, there was a first rate company, and useful paying prices for a good lot of dairy Shorthorns.

Among the largest buyers was Mr. Harold Sessions, who took into Oxfordshire, lot 1, Strawberry Belle, 25 guineas; Meadow Pearl, 27 guineas; British Primrose, 20 guineas; Bright Blossom, 22 guineas; and Pearl Princess, 24 guineas; also the young bull, Queen's Answer, 29 guineas, and a particularly good bull calf from the highest priced cow at 21 guineas. His dam was Ruth Strawberry, a roan three-year-old heifer which Mr. Thompson bought with good judgment on behalf of Colonel the Hon. W. Lawson for 70 guineas. The Marquis of Winchester's agent paid 55 guineas for Eileen, a grand dairy cow, but a somewhat plain red and white in colour, and a guinea more for Strawberry Cream, one of the best milkers. Fair Charmion, a white three-year-old, was bought by Mr. H. W. Doddington, at 42 guineas. Mr. K. Parker got four young cows, Sweet Vernal, 27 guineas, and Ripe Blossom, 26 guineas, being perhaps the best, and for the young stock Mr. W. Burnyeat kept several of the best in Cumberland. He gave 41 guineas for the two-year-old Rich Blossom by Caldwell Prince, also 42 guineas for First Gift and 44 guineas for Sweet Gift; both these were calves by the celebrated bull God Gift, that realised 850 guineas, a record price, at Birmingham last spring.

The bull trade was not so good, 30 guineas given by Mr. Price for Bold Archer being the best price. Mr. Turnbull gave 28 guineas for a red yearling, Heirloom, and Mr. H. Riley 24 guineas for a roan, a few months younger. The average was £26 2s. 10d., and the total of the sale £1,377 1s. 6d.

The second of the series of sales of outlying portions of Lord Lonsdale's estate took place at York on Thursday. The properties offered, which form part of the Seamer estate, have an area of 6,410 acres, and comprising a number of farms, small holdings, &c. There was only a moderate attendance, and bidding was not particularly brisk, with the result that the reserve prices were not reached, and not one of the lots was sold.

THE Melton Constable celebrated Herd of Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cops Smithfield. Sows recently exported for Continental and Colonial herds.—Apply R. OWEN GODDARD, Estate Office, Melton Constable, Norfolk.

Unique Harvest Festival.—The vicar and churchwardens of Allhallows Barking, by the Tower—the parish church of Mark Lane and the Corn Exchange—are inviting parishioners connected with the corn trade and others to join in a short, simple service of thanksgiving for the harvest on Monday, Oct. 15, at 1.15 p.m., when the Bishop of Stepney has promised to preach. It is surely fitting that corn-growers should give thanks for the harvest; we hope that many will spare half an hour from "the nine ket" for this purpose, and their parish church may be filled with a large and representative congregation. The collection will be given to the Corn Exchange Benevolent Society.

SHEEP.

SALES OF THE WEEK.

Retford.

At Retford October 1st and Tuesday, something like 6,000 sheep were forward. Twelve Lincoln shearling rams, bred by and the property of Mr. F. Ward, Quarrington, Skeaford, sold at prices ranging from 6 guineas to 12 guineas each. A flock of pure-bred Hampshire were offered by Mr. Shaw, Peterborough, and fetched £4 10s. to £5 6s. each. Mr. Ludlow, Mansfield Woodhouse, disposed of his Oxford lambs at £3 6s. each, Oxford shearlings at £3, and Suffolk at £5, whilst some Hampshire ram lambs fetched £4 10s. Lincoln breeding ewes fetched 48s. to 60s. Lincoln gimmers to 55s., lambs 38s. to 45s., secondary breeding ewes 35s. to 45s., and feeding ewes 30s. to 31s.

Wansleydale Bluefaced Sheep.

The Wensleydale Bluefaced Sheep Breeders' Association and Flock Book Society's annual show and sale took place at the Helliwell Auction Mart on Tuesday, when abt 300 farmers and sheep breeders attended, and some satisfactory prices were realised. Lord Bentinck's first prize winner in the aged ram class became the property of Mr. Inman, of Dundall, near York, at 14½ guineas, and the second prize taker went to the same buyer for £13. Lord H. Bentinck's Blue Prince II. (1906) made £25, the buyer being Mr. Horsham, of Richmond. The second, Lawkland Blue (1905), went to Mr. Inman, of Candall, for £11. Mr. Burra's premier honour ram lamb realised £14 5s. from Mr. Sedgwick, of Sedbergh. The third prize winner made £24, Mr. Rhodes being the buyer. Other good prices were £16, £12 16s., and £15 5s.

Bridport.

The October fair at Bridport took place on Wednesday, when beautiful weather prevailed, the heavy rains of the previous two days giving way to a fine day, which had considerable effect upon the business of the fair. Messrs. Morey and Sons had several thousand sheep penned in the Fair Field, St. Michael's Lane, and there was a large company present from all over the county and distant parts. The sheep were sold by Mr. George Morey, and the cattle by Mr. W. C. Morey. Off going horn ewes, 35s. to 46s.; horn wether lambs, 25s. to 36s. 6d.; horn chivver lambs, 23s. to 26s. 6d.; horn rams, 35s. to 3 guineas; Down ewes, 38s. 6d. to 45s.; Down wether lambs, 24s. 6d. to 34s.; Down chivver lambs, 25s. to 34s. 6d.; two teeth Down wethers, 36s. to 43s.; Down rams, 38s. to 60s.

Inverness.

The Northern Counties Breeding and Fat Show Club's twenty-fourth annual show and sale of pure breeding sheep took place on Tuesday in the auction premises of Messrs. MacDonald, Fraser, and Co., at Inverness. There was a large display of Border Leicester and Blackfaced tups, which were representative of leading Northern flocks. In the Border Leicester section Messrs. Cameron, Westside, Brechin, won the leading prize with a tup of outstanding quality. They also obtained the silver challenge cup presented by Mr. Cameron Lochgorm, for the best pen of ten pure-bred Border Leicester shearling rams. In the Blackfaced section Mr. G. Smart, Dalbog, Forfarshire, carried away the premier prize with a tup of excellent breeding and quality; the second prize went to Mr. J. M. Allan, Easter Duthil.

There was a large and representative attendance of buyers in the two rings. In the Blackfaced ring animals of the best breeding met a good demand, but for tups of secondary quality trade was slow, and prices showed a marked decrease compared with last year. The top price for a single tup was £19, which was paid by Mr. Perrins, of Ardross, for the exceptionally finely bred first-prize tup belonging to Mr. A. G. Smart, Dalbog. This was the highest individual price secured in both rings for the day. One of the same lot went to Guisachan at £15 10s., and Mrs. Jackson, of Swardale, purchased one at £11. The second prize ram, belonging to Mr. Allan, Easter Duthil, was sold to Sir Kenneth Matheson at £8. The third prize ram, belonging to Mr. MacDonald, Dalmore, went to Mr. Fraser, Knockie, at £8 10s. Mr. Perrins purchased the highest priced tup in the Arabella lot at £9.

In the Border Leicester ring an animated trade was experienced, and prices proved very satisfactory to sellers. Major Andrew Mackenzie, of Dalmore, purchased one of the Westside, Brechin, lot at £12, and others from the same place made £9 15s., £9 10s., and £9. Colonel Ross, of Cromarty, C.B., bought one of the Navity lot at £8 15s., and Captain McGregor, Balmach, purchased one at the same price. Mr. Allan Stintman bought one belonging to the Countess of Cromartie, Tarbat House Farm, at £9, whilst Mr. Munro, Muckovic, purchased one of the Allanfean farm at £12 5s., and Captain MacGregor, Balmach,

one at £10 15s. The other lots also secured satisfactory prices, which ranged up to £9 10s.

The Westdean Southdowns.

On Wednesday Messrs. A. Burtenshaw and Son, auctioneers, of Hailsham and Eastbourne, conducted a successful sale of pure-bred Southdown ewes, lambs, and rams, and other farm stock belonging to the Duke of Devonshire at Westdean Farm, Westdean. The Westdean flock was founded in 1901 by a small draft from the Duke of Devonshire's prize-winning Compton flock, and lambs from the same source have been added annually. In 1902 100 ewes were obtained from Mr. R. K. Verrall's Palmer flock, and in 1903 100 ewes from Mr. A. M. Singer's Michelgrove flock. Purchases have also been made from other well-known flocks. The rams used had been bred by Messrs. F. N. Hobgen, R. K. Verrall, and Luther Martin, and other rams employed came from the Compton flock, containing Colman, Goodwood, Ellis, and Hobgen blood.

A large company of buyers was present at the sale, and generally satisfactory prices were realised. The best four rams were 9 guineas, paid by Mr. W. Brown for Farmer 2nd, a six-tooth ram, bred by the late Colonel McCalmont. Other rams ranged from 2½ to 7½ guineas. Shearling ewes sold at 56s., 55s., and 52s.; down to 42s.; four-tooth ewes, 70s., 62s., 60s., 59s., and 57s.; 52s.; six-tooth ewes, 57s., 56s., and 54s.; to 40s.; full-mouthed ewes, from 45s. to 40s.; over-aged ewes, 40s. to 33s.; ewe lambs, 35s. to 24s.; and wether lambs, 35s. to 26s.

The Lavant Southdowns.

Under instructions from Messrs. Waters and Son, who are relinquishing sheep breeding on account of the ill-health of Mr. Isaac Waters, Messrs. Stride and Son offered for sale at Manor Farm, Lavant, on Thursday, the pure-bred Southdown hill flock (Registered No. 230), consisting of about 900 head. The Manor Farm is one of the Duke of Richmond and Gordon's largest hill farms, the Down extending up to the racecourse and the well-known Trundle Hill, one of the highest points of the Southdown range. The flock was established at Lavant in 1895 by the purchase from Mr. Jay, of Flock No. 26, which had long been bred from the best strains of blood. From this solid foundation, Messrs. Waters and Son spared no expense in keeping their flock up to the highest standard of excellence.

There was a large attendance at the sale, and some good prices were realised. Mr. T. Roberts bought a four-tooth ram at 7½ guineas, and two ram lambs at 2½ and 2 guineas; Mr. Moore, a ram lamb at 6½ guineas, one at 4 guineas, and one at 3½ guineas; Mr. McKerron, a four-tooth ram at 5 guineas; the Hon. R. F. Nevill, a ram lamb at 4 guineas; and Mr. Dallyn, two four-tooth rams at 2 guineas. Ewe lambs made from 34s. to 42s., whilst ewes sold as follows:—Shearlings, 42s. to 61s.; four-tooth, 48s. to 65s.; six-tooth, 58s. to 65s.; full mouth, 43s. to 61s.; draft ewes, 31s. to 40s.; and over age ewes, 33s. to 46s. 6d.

Shrewsbury.

Messrs. Alfred Mansell and Co. held their final sale of rams and ewes at Shrewsbury on Wednesday. Ewes made 3s. to 5s. per head over the earlier sales, and good rams were in great demand. The small but choice flock of Shropshire sheep, the property of Mr. B. Howard Mander, also came under the hammer, and excellent prices were made. The seventeen ram lambs averaged 10 7s. 8d. Mr. J. J. Brewin paid 42 guineas for lot 3, and 29 guineas for lot 7; the Hon. Victor Cavendish paid 25 guineas for lot 5, whilst others bought by the Duke of Sutherland, Mr. A. Tanner, and Mr. F. Bibby, made 20 guineas, 10 guineas, 8 guineas, 6 guineas, &c. Ewe lambs also sold well, and averaged £2 19s. 6d., the best price being 5 guineas per head, bought by Mr. Blatherwick. The breeding ewes were keenly competed for, and averaged £5 4s., the top price, 8½ guineas, being paid by Mr. Bibby, whilst others in the 5½ guineas, Mr. R. H. Gwynne, 5½ guineas and 5 guineas, Mr. Brown; and 4½ guineas and 4 guineas, Mr. Bickford.

Lord Onslow, opening a Conservative bazaar at Perth, on Thursday, and in reference to the Small Holdings Bill, that it was most unusual and improper even to introduce a measure on a subject upon which a committee was about to report. While he would not divulge the contents of that report, he would be surprised if his signature appeared under proposals analogous to those put forward by the Secretary for Scotland. Speaking of the Land Tenure Bill, he said the only object of it was to be to put money into the pockets of lawyers and estate agents, and do mischief between landlords and tenants. A more useful measure would be to appoint an official to decide between an outgoing tenant and his landlord.

Sale of Captain Clive's Herefords and Shropshire Sheep.

Despite a heavy rainfall, there was a numerous company of breeders at The Vallets, Whitefield, near Hereford, on Thursday, at the dispersal sale by auction of Captain Percy A. Clive's pedigree Hereford cattle and Shropshire sheep. The herd was founded by the late Mr. C. M. B. Clive about the year 1881 with cows of Adforton, The Grove, The Rodd, and the Bage blood, the sires recently in service including Adjutant, Monarch, Twin, Balfour, Whitefield Captain, and Whitefield Chamberlain. The majority of the cows and heifers for sale were in-calf to Whittier Standard, bred by the late Mr. R. Green. There were a hundred Herefords catalogued, every lot but three believed to be eligible for entry in any Hereford Herd Book in the world. The sheep were pedigree Shropshires, all of them entered or eligible for entry in the flock book, and sires having been secured from Lord Chesham, Messrs. Evans (Shrewsbury), Beach, T. S. Minton, A. P. Turner, T. Fenn, and Tanner.

The prices realised for the cattle were nothing like so good as had been expected, and many of the buyers got some splendid bargains. Cows and their calves were first offered, and it was this section that secured the top figure of the sale—namely, 52 guineas, a sum paid

by Mr. H. A. Christy Brecon for Janet, Mr. Pennefather, Kinnersley Castle, got Winnie 2nd for 43 guineas, and also Molly for 32 guineas whilst Mr. F. Crawley, M.P., gave 30 guineas for Annie, and a similar sum for Winnie. The above were the cows sold at 30 guineas or over, the majority of the others selling at prices near 20 guineas. Top price for two-year-old heifers was 21 guineas, whilst the best for yearling heifers was 17 guineas, and for bulls 40 guineas, paid by Mr. J. P. Evans for Whittier Standard, the other three bulls going at 23, 21, and 20 guineas.

The sheep sold well, many of the pens of ewes realising over 50s., and some of them over 60s., the two highest figures being 66s., given by Mr. H. Weston (Much Marcle), and 71s., given by Mr. Davis (Crickhowell). Ewe lambs reached 52s. Lord Glanusk gave 6 guineas for a shearing ram, and the ram lambs ranged from 30s. up to 45 apiece.

The Late Sir J. Miller's Shorthorns.

The Manderston herd of Shorthorn cattle, founded fourteen years ago by the late Sir James Miller, Bart., was dispersed by auction on Friday. The sale took place at Boxley, the home farm on the Manderston estate, near Duns, and brought together a representative gathering of Shorthorn breeders. There were in all thirty-

two cattle. The top price of the day was 140 guineas, paid by Mr. Duthie Collynie for Scotch Marigold Fourth—a very promising red heifer, which was undoubtedly the best female in the herd. Scotch Marigold Third, a handsome six-year-old red cow, bred by Mr. Duthie, was sold to the Duke of Northumberland for 85 guineas; Loan Fancy, a thick short-legged roan heifer, was sold for 80 guineas to Mr. Lee, of Congleton, and Cherry Princess, another roan heifer, also went at 80 guineas to Mr. Dean Willis, Wiltshire. The two-year-old red roan stock bull, Monarch's Fancy, bred by Mr. Duthie, sold at 67 guineas to Mr. C. Dunbar Buller, County Down. The result of the sale was most satisfactory. Twenty-two cows and heifers averaged £51 1s. 7d., bull calves averaged £33 18s. 4d. and quay calves averaged £30 19s. 6d.

A conference of fruit growers will be held at the South-Eastern Agricultural College, Wye, on October 22, when discussions on Methods of Planting, Fungus Diseases, Insect Attacks, and Strawberry Culture will be opened by S. U. Pickering, F.R.S., E. C. Salmon, F. V. Theobald, and W. P. Wright. The chair will be taken by Laurence Hardy, M.P. Those wishing to attend the conference should send their names to the Principal of the College.

9	Messrs. Saul and B. C. Salby, Sutton-on-Trent, Newark	Live and Dead Farm Stock	Skegby, Markham, Newark	Messrs. Casswell Bros.
9 to 13	Messrs. H. Manley and Sons, Crewe	Horses and Foals	Crewe Repository	Various.
9	Messrs. Simons and Sons, Reading	Horses, Cattle, and Pigs	Manor Farm, Reading	Reading Corporation.
9	Messrs. Macdonald, Fraser and Co., Perth	Shorthorn Bull Calves	Tillycairn, Old Meldrum	Mr. Duthie and Mr. J. Marr.
9	Messrs. Davis, Newland, and Hunt, Chepstow	Live and Dead Farm Stock	Trelleck Grange	Lieut.-Colonel C. M. Comp-ton Roberts.
9	Messrs. J. Harris and Son, Winchester	Cart Horses	E. Worldham, Hants	Mr. H. Turvill.
9		Dartmoor Ponies	Okehampton, Devon	Various.
10	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Newton Inch	Messrs. Gordon, Wilson, and Simmers.
10	Mr. F. Charles, St. Albans	Horses	St. Albans Repository	Various
10	Messrs. Perks and Lanning, Waterloo Place, London, E.W.	Live and Dead Farm Stock	Tollshunt D'Arcy, Essex	Mr. T. G. Binney.
10	Messrs. Thornton and Son, Lichfield	Live and Dead Farm Stock	Park Farm, Elford	Mr. W. Slater.
10	Messrs. Wright and Scruby, Cambridge	Live and Dead Farm Stock	Hixton Grange, Cambs.	Mr. F. Diggle.
10	Messrs. Hinks and Lawrence, Sleaford	Shire Foals	Leicester	Various.
10	Messrs. F. Lloyd and Sons, Wrexham	Shire Horses	Worcester	Members of Worcester-shire Shire Horse Soc.
11	Messrs. R. Harrison and Son, Carlisle	Store Cattle	Carlisle	Various.
11	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Aberdeen	Various.
11	Messrs. J. Thornton and Co., London, W.	Jersey Cattle	Magdalene Laver, Ongar	Mr. E. St. John Phillips.
11	Messrs. F. Lloyd and Sons, Wrexham	Horses	Wrexham	Various.
11	Messrs. H. J. Austen and Sons, Wadhurst	Live and Dead Farm Stock	Buttons Farm, Wadhurst	Mr. J. C. Drew.
11	Messrs. A. D. Edwards, Leominster	Horses, Cattle, and Sheep	Chadnor Court, Leominster	Mr. J. C. Jones.
11	Mr. F. L. Sanders, Chesham, Bucks.	Shetland Ponies	Chalfont St. Peter, Bucks.	Various.
11	Messrs. T. Ensor and Son, Dorchester	Shorthorns and Berkshire and Large White Pigs	Wimborne Dorset	Mr. H. Stanfield.
11	Messrs. Ambrose and Foster, Maidstone	Yearling Rams	Maidstone Fair	Mr. C. P. Wykeham Martin.
11 & 12	Messrs. Boulton and Cooper, Malton	Sheep	Malton	Various.
12	Mr. F. Austen Binsted, Sittingbourne	Sheep	Sittingbourne	Various.
12	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Inverness	Various.
12	Messrs. R. Fawcett and J. W. Sisson, Penrith	Cattle and Sheep	Kirkby Thore, Westmoreland	Mr. W. Graham.
13	Messrs. Warner, Sheppard, and Wade, Leicester	Horses	Leicester Repository	Various.
13	Messrs. Macdonald, Fraser and Co.	Shorthorn Cattle	Perth	Various.
16	Messrs. J. Thornton and Co.	Jersey Cattle	Tring	Various.
16	Messrs. Winch and Sons, Cranbrook	Live and Dead Farm Stock	Wardbrook, Lechlust	Lord Rothschild.
17	Messrs. Dickinson, Riggall, and Davy	Lincoln Red Shorthorns	Keddington Grange, nr Louth	Mr. C. Powell.
17	Messrs. J. Thornton and Co.	Jersey Cattle	Bletchley	Mr. E. H. Cartwright.
17	Messrs. Macdonald, Fraser and Co.	Clydesdale Horses	Perth Auction Mart	Various.
17	Messrs. J. Thornton and Co.	Shorthorn Cattle	York	Various.
17	Messrs. J. Risdon and Son, Wiveliscombe	Devon Cattle	Exeter	Members of Devon Cattle Breeders' Society.
17	Messrs. R. Harrison and Sons	Store Cattle	Ca'Fisc	Various.
17	Messrs. Ambrose and Foster	Sheep	Maidstone Fair	Various.
18	Messrs. Sexton, Grimwade, and Beck, Louth	Shire Horses	Riddington, Nottingham	The late Mr. P. L. Mills.
18	Messrs. Sexton and Burman, York	Horses	York	Various.
19	Messrs. A. Mansell & Co., Shrewsbury	Cattle and Sheep	Shrewsbury Cattle Mart	Various.
19	Messrs. Sexton, Grimwade, and Beck	Shire Horses	Peterborough Repository	Various.
19	Messrs. R. Harrison and Sons	Shorthorn & Cumberland Ball-Hereford Cattle	Carlisle	Various.
23			Barley Court, Leominster	Mr. E. Speakman.
23	Messrs. R. Harrison and Son, Carlisle	Galloway Cattle	Caslemilk, Lockerbie	Sir R. V. Buchanan-Jardine, Bart.
24	Messrs. Dickinson, Riggall, and Davy	Lincoln Red Shorthorns	South Lincs.	Various.
24 & 25	Messrs. Sexton, Grimwade and Beck	Horses	Derby	Various.
24 to 26	Messrs. Frank Lloyd and Sons	Horses	Crewe	Various.
25	Messrs. J. Thornton and Co.	Berkshire Pigs	Faringdon, Berks.	Sir A. Henderson.
26	Messrs. J. Thornton and Co.	Barks, and White Yorks, Pigs	Motcombe, Shaftesbury	Mr. A. Hiscock.
29	Messrs. J. Durrant and Sons, Harleston	Horses, Cattle, Sheep, and Pigs	Harleston Repository	Mr. J. B. Dimmock.

Further Particulars of many of the above Sales will be found in our Advertisement Columns

VETERINARY.

Advice of a Veterinary character, by an M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Warts.

(Concluded from page 398).

The principle on which it acts is by cutting off the supply of blood by which the growth is nourished, thus causing it to atrophy, or die and drop off.

Large warts have blood-vessels of considerable size, and when a clean cut is made the hemorrhage is often great, and may be dangerous.

The success attending removal by ligature depends largely on the degree of tightness with which it is applied. Unless the constriction is sufficiently great to interfere with the blood supply, they will not atrophy, while, on the other hand, there is no necessity to draw the cord sufficiently tight to at once cut deeply into the neck of the growth.

It will easily be understood that the ligature method is not applicable to all kinds of warts. Those that have broad spreading roots or a diffuse base, or warts of the encysted variety, must be treated differently. Only those growing by pedicles can be ligatured; but, as a rule, large growths are pedunculated—that is, grow from a stalk, neck, or narrow attachment to the skin. The material employed varies with the size of the growth. For small excrescences suture silk, or waxed button-hole twist, or flourishing thread, borrowed from the housewife's work-basket, is stout enough. For large excrescences there is nothing superior to the "wax-end" of the shoemaker or harness-maker, or a piece of fine whipcord.

The ordinary "granny" knot, or any other that will slip, is useless, and either the artery ligature or doctor's knot, or the double hitch or scaffolder's knot must be employed.

The last-named is preferable, as if the ends are left long enough to grow, the excrescent nodule can be taken at them, and the cord tightened as it cuts into the growth. The double hitch, moreover, requires no tying; it is very simple in its formation, it can be drawn very tight, and cannot possibly slip.

It is made by forming two circles with the silk or cord, the ends being within the connection of the two rounds, and when these ends are pulled the connecting portion presses upon them and keeps them firm. If this explanation should prove unintelligible, any sailor would give a practical demonstration in a few minutes. Removal with the knife or hot iron is quicker, and they are sometimes necessary where the ligature cannot be employed. Some times they are used in conjunction; first because of the considerable hemorrhage resulting from a clean cut, and second, to prevent a recurrence of the growth. Cautic agents are not, as a rule, satisfactory; their action is slow, they are useless for large growths, and in some situations they are dangerous.

Warts on the teats can be removed in three or four applications of the following dressing:—Arsenious acid, powdered safin, and powdered gum arabic, of each 30 grains; simple cerate, 9) grains. This forms a very adhesive application when made semi-fluid by heat, which can be applied with a small camel-hair pencil direct to the warts without touching the surrounding skin, which must be carefully avoided. It is a good plan to soak the warts with warm water before applying the dressing.

Cautic agents, particularly an arsenical paste, must not be applied to warts on the teats of cows in milk, as some soreness is sure to be caused, and unless the teats were very carefully washed before milking, the milk might get contaminated. If it is absolutely necessary to deal with warts on the teats of a cow in milk, a trial may be made of painting them daily with 1) Salicylic acid, 1/2 drachm; collodion, 3/4 drachms, after softening them with warm water. M.R.C.V.S.

Stable Flooring.

SIR,—Will you kindly tell me what you consider the best floor for stable in which good hunters are kept?—MARCO.

As the question relates to a stable for hunters, it may be useful to quote from "Notes for Hunting Men" what its author, the late Captain Corbitt Mackenzie, has to say on stable floors:—"For perfect health, the foundation of the stable should consist first of all of a foot or more of hard gravel, on the top of which should lie a bed of good concrete, one foot deep. Above this the flooring, which should, for the purposes of drainage, be at least a foot above the ground level. Local considerations must to a certain extent affect the choice of a flooring, and I do not propose to go into details. The essentials for a

good floor are: that it should be impervious to moisture, should afford facilities for surface drainage, should be easily cleansed, should be as near as possible level, and not slippery. The old-fashioned cobble-stones are objectionable, as they are difficult to clean. Ordinary bricks are porous, wear irregularly, and so afford receptacles for filth. One of the best bricks I know is the blue Staffordshire brick, which has a groove running down its centre. This has the advantage of making the drainage run down the brick and not along the joints." Blue Staffordshire bricks are more expensive as a stable flooring than materials locally available, but where "good hunters" are in question expense is generally a minor consideration. Further, there is nothing so durable, and therefore so economical in the end, and these bricks approach more nearly to the ideal perfect stable flooring than anything else we know of. We occupied a stable so paved for many years, and found it most satisfactory, while it promised to prove practically indestructible.

POULTRY.

Popular Breeds.

In the spread of poultry keeping, many breeds which are formally unknown have worked their way into the front ranks of popularity. It is a fact that all the most popular breeds of the present day have some excellent utility qualities to recommend them; and those breeds which are useless, either as layers or table birds are declining in popularity.

This is very significant, and proves that utility poultry keeping is receiving the practical attention of interested people in all grades. Those breeds which were at one time popular, but which have deteriorated from the utility point of view owing to having had various points about them developed with a view to their becoming typical show birds at the expense of their useful qualities, have had to take a lower place in the esteem of poultry keepers, and are at the present time steadily declining.

If fowls are to be popular they must possess some qualities to recommend them, as beautiful feathering and perfection of markings is not sufficient to ensure success. It is only necessary to recall a few of the breeds which have declined in popular favour to prove the truth of this statement.
